In the high temperature tag of the disclosure, a transponder is placed between at least two thin layers of compressible high temperature material, preferably a high temperature textile. The preview manager process renders the interactive configuration in a graphical format that allows a user to distinguish between the

designated content and the remaining non-designated content in the document. Each array of patterns corresponds to a surface treatment product type, such as floor treatments, upholstery, textiles, wall treatments and solid surface materials or laminates.

1459826502-9f5e20eb-4de0-4261-8374-555a18405614

A fuel cell separator unit having a crosslinked rubber layer is fabricated by coating a rubber-containing coating agent on the periphery of the surface of a separator to form a thin, unvulcanized rubber layer, and then vulcanizing or crosslinking the thin rubber layer. The payphone customer dials a long distance provider primary intralata carrier code followed by a number sequence. The liquid immersion mechanism has an inclined surface, which is opposite to a surface of the substrate and is inclined with respect to the surface of the substrate, and a liquid recovering port of the liquid immersion mechanism is formed in the inclined surface. The second diode may be configured for connecting the parasitic element to the ground plane via the one or more capacitors.

1459826502-b2a5e98a-5163-4457-af3f-607c45aa01f6

An ink composition includes a colorant represented by the following formula ; water; a guanidine-based compound; and a colorless water-soluble planar compound having more than ten delocalized  $\pi$ -electrons within one molecule:wherein Pc represents a  $\pi$ -valent phthalocyanine nucleus represented by the following formula ;wherein the symbols in the formulae and are defined in the specification. The novel compounds of the invention have very excellent PTP-1b inhibitory activities, act selectively only on PTP-1b among protein tyrosine phosphatases, and are substantial PTP-1b inhibitors which are effective in preventing or treating diabetes or obesity. Each of the sub-pixels includes a single first electrode, a single second electrode provided in a lamination direction of the first electrode, and a light-emitting layer inserted between the first electrode and the second electrode in each of the light emission regions.

1459826502-b70adac8-f1c2-4864-b2e8-279d288b92c5

Techniques for recovering from session failures between clients and database servers are described herein. The movable insert has a parallel-sided cavity which slidably receives a retractable core. The USB key includes a second USB connector for connection to the first USB connector, a memory unit, and a decrypting unit. The organic EL panel includes EL sub-pixels, which are luminescent and which are arranged in correspondence to liquid crystal sub-pixels of the liquid crystal panel. The data format converting unit receives image data having a first data format, and outputs the image data having a second data format, wherein the first and second data format are either a data format dedicated to the image processing apparatus or a general data format. As a result, the bit line is easily stepped down to an optimal potential level in accordance with a potential and a load capacity thereof without being affected by variability in devices or operation conditions.

1459826503-2ed149bc-c7d2-411f-a0ca-8f34197ca13a

A non-volatile memory system is formed of floating gate memory cells arranged in blocks as the smallest unit of memory cells that are erasable together. Each wing frame is configured to support a plurality of row units and is positioned forward of a respective wing tool bar. The mound material is comprised of gravel smaller than the bed material, such as volcanic gravel, and includes organic matter.

1459826503-eb32c90a-77d4-4be8-b561-3bcafeee5f1c

A simple structure capable of preventing a cam part of an actuator from coming out of position when the actuator is in an open position. The digital imaging-based bar code reading device employs a multi-mode bar code symbol reading image processor that is dynamically reconfigurable in response to real-time image analysis carried out upon captured narrow and wide area images. To generate a fine uniform gas-and-

drop stream of a high kinetic energy and space-uniform distribution the cylindrical segment length exceeds the channel diameter at this segment.

1459826504-f7bec2d3-9c23-4489-9ef4-e09fe7d63e1d

An apparatus having a parser and a circuit is disclosed. Each disk control unit includes: at least one channel controller having an interface to a host computer; at least one disk controller having an interface to a disk device; and an internal coupling for connecting the channel controller, the disk controller, and a cache memory for temporarily storing data to be written to or read from the disk device. In one embodiment, the present invention provides a method comprising oxidizing a hydrolysate of a chemical agent to produce an aqueous layer and an organic layer, the aqueous layer comprising an organophosphorus concentration and the organic layer comprising an organosulfur concentration, and separating the organic layer from the aqueous layer. Using the logical address, a NVM driver can determine the priority of data being stored and can process the data based on the priority. The channel IF unit 11, the disk IF unit 16, and the memory unit 21 are connected to each other through the switching unit 51, and an encryption and decryption processing unit 201 is provided between a host IF unit 101 and a transfer controller 103 in the channel IF unit 11. The powders can be formed into active cathode materials in Li-ion and Li rechargeable batteries.

1459826505-6bd4b7c5-3ca5-4bd7-9e55-317541d2c4b7

The disclosed invention consists of an improved gypsum based, cellulosic containing board and method for applying a resin to an untreated board at a spray station where PMDI resin is sprayed onto the front and back side of the board. The regulator includes a body having an inlet port and a pressure chamber. Furthermore, a device for coupling the capacitive near field to the person carrying the key is provided. The inner surface can have a textured visually wettable surface, such as an etched surface, to provide a visual indication of leakage from the interface between the skin penetrating members and the skin. The selected service code is then conveyed to the client computer, such that responsive to the selected service code, the client computer displays the service component on the host page. The housing includes a plurality of magnetic members embedded between the impeller and the impeller rotational torque generation section for transmitting a magnetically attractive force generated by the impeller rotational torque generation section to an impeller body.

1459826505-be972d0e-17c2-44dd-93e9-6e5f760cac6c

A multiuser detector that detects and decodes synchronous or asynchronous CDMA subchannels having different spreading factors with reduced computational complexity. In one embodiment the mattress is an air mattress formed of transparent polymer, such as transparent PVC Vinyl sheet material. When no identification code is provided from the device, or the database fails to include specifications for a particular device, the user is prompted to enter minimum information or specifications necessary to carry out communications with the device. A side surface of the encapsulating layer is formed inside a side surface of the substrate. Thus, a semiconductor device, of which production cost is reduced, and in which electrical short-circuit and falling off of an interconnection are suppressed, can be obtained.

1459826505-f2ee9249-6b16-4f81-ba6d-d3510c69bd7c

Provided is an emission treatment system and method for simultaneously remediating the nitrogen oxides, particulate matter, and gaseous hydrocarbons present in diesel engine exhaust streams. The film growth and transfer are made using an epitaxy lateral overgrowth technique. These network resource access requests may, for example, be provided via a user interface which may be implemented by a personal computer, telephone, or other device capable of providing a display and receiving user input. At least one fastening arrangement preferably extends outwardly beyond the board or panel to engage a fastening arrangement located on an away facing

board or panel side. The belt tracking mechanism includes an annular recess, an annular flange, and a circumferential rib.

1459826506-24b187a4-3bbe-4e06-9df9-402aafb3b9a8

An apparatus and method for winding a sheet of aligned parallel yarns onto a beam is described. This base layer improves ink acceptability of the unbaked ceramic member particularly for low viscosity ink such as jet-ink, and prevents oozing, draining, uneven thickness. By selectively monitoring the representative nodes for the changes in status, the representative nodes create a capability for scalable monitoring of the network.

1459826506-77b865d9-ff96-48e3-bad8-fdc238c91a

A polymer includes at a terminus a cyclic amine radical bonded to the polymer through a ring nitrogen atom. For electrostatically actuating the deflectable elements, an array of electrodes and circuitry is provided and positioned proximate to the deflectable elements. Accordingly, an NTSCPAL encoder 24 can output a preferable video signal, which has been subjected to an appropriate contour correction.

1459826506-fa356789-f152-4677-80ec-cd84802134db

A technique for testing a signal path while an operational signal is present is disclosed. The system includes multi-service servers associated with access points adapted to allow end-user devices to access the service provider network. The observation devices, the data recording device and the data processing computer are connected to a network, so that a required graph may be produced by processing data at a place remote from the observatory. A plurality of different underground objects can be simultaneously detected and their different locations can be simultaneously indicated to a user via audible sounds and/or visual images on a display. A structure is adopted in which obstacle detecting sensors which scan the raising and lowering path between a carriage and the load port of each semiconductor manufacturing apparatus, and which detect the presence of obstacles, are provided on the carriage with attached hoist.

1459826507-3dcd6580-d837-4d8e-a296-9e414899c2f0

A fluorine-containing allyl ether polymer having a number average molecular weight of 1,000 to 1,000,000 and consisting of chains of at least one repeating unit of the formula: wherein A is an organic group having 1 to 100 carbon atoms. Particular arrangements of input devices may provide enhancements in ease of use. A call manager communicates with the end offices and the ATM facilities to process signal messages from the end offices, and send corresponding messages to interfaces between the end offices and ATM facilities. After a first metal layer with a first workfunction is formed on the first and second parts of the second dielectric layer, part of the first metal layer is converted into a second metal layer with a second workfunction. The prohibitive costs may be diminished by redirecting part or all of the cost of providing the recommendation service from the providers, e.

1459826508-c064486b-269d-4e7b-8b50-2780021e1837

USB self-idling techniques are described. In one embodiment, the techniques are implemented as a method that includes receiving outputs from a three-axis geophone, computing a magnitude signal based on the x and y axis outputs, determining locations of each local peak in the magnitude signal, computing a bearing estimate for each peak, and computing a median of the bearing estimates. In one embodiment, a mobile telephone may have a wheel, slider, or other mechanism that may change a rating based on how fast and how long a user may activate the input mechanism. Second data may be received while the first data is rewritten to the normal recording area.

1459826508-d08b43a3-f749-4e86-8be4-829d1b5f6dab

An intrusion delaying barrier includes primary and secondary physical structures

and can be instrumented with multiple sensors incorporated into an electronic monitoring and alarm system. The PTT server will use the Request Deny message as an indication that an inter-SGSN RAU may be occurring. The control system selectively varies a viscosity of a fluid comprising the viscous coupling to control the stiffness of the interface. In another embodiment, individual links are collectively contoured, preferably after arrangement on a support such as a mandril. When the logical address is read, the physical-to-logical address map is used to read the new physical address instead of the old physical address. The reconfiguration of the first configurable circuit does not follow any sequential progression through the set of operations of the first configurable circuit.

1459826508-dcba0ef1-2891-4068-b7c5-0a4e3489e295

A method, system, and computer program product for adjusting a unit image area within an input image according to information importance within the unit area. or less, comprising the steps of providing a curative comprising an effective amount of a light-stable isomer of a 2,4,5-triarylimidazolyl dimer, such as bilophine; activating said curative by application of an activator selected from the group consisting of solvent and friction; and combining the activated curative with the polymerizable material. A method of securing a sliding door in a closed position in a sliding door assembly is also disclosed.

1459826509-4f7a52ee-dc05-421e-a903-8b536ab84d0e

A reflective mask blank and a reflective mask each have, on a multilayer reflective film, a protective film that protects the multilayer reflective film from etching during pattern formation of an absorber layer or a buffer layer formed on the protective film. In this regard, an RFID transponder may receive RF signals via a leaky wave antenna and modulate an amplitude of a backscattered signal associated with the received RF signals by switching between a plurality of feed points of the leaky wave antenna to vary an input impedance of said RFID transponder. The method also comprises deconvoluting each peak to isolate each target compound present in the peak, and automatically verifying the identity of each target compound against a target compound library. A Newton root step is followed to traverse separately Pareto curves of each low rank component and sparse component. A swaging process is used to form tubulated ends on the converter. According to an embodiment, a method may include computing, by one or more computing devices, one or more dynamic hints based on a finite set of executions of a computer program.

1459826509-532082d2-c966-4b36-9b80-493ce7195712

Clock recovery for a data receiving unit is disclosed. 3 m, is capable of improving transmission characteristics of the whole optical transmission line and allowing the dispersion to be compensated for efficiently and the size thereof to become smaller, and has a structure for improving the total dispersion slope of the optical transmission line while in a state fully compensating for the dispersion of the single-mode optical fiber. Second control circuit applies second voltage lower than first voltage to selected second line, and to dummy lines, third voltage by which potential difference applied to memory cells at intersections of selected first line and dummy lines becomes lower than on-voltage of selecting element. The output resistor is connected to the output of the operational amplifier serially to generate an output current flowing through the output resistor. The string may comprise three or more diodes. The coating composition may be applied to a substrate to form a printable film.

1459826509-b500774b-b40a-4b8a-a5b3-51c7b16f7982

A centralized high voltage interlock system includes an electrical source, an interlock control unit electrically connected to the electrical source, at least one high voltage component disposed in direct electrical contact with the interlock control unit and a high voltage electrical interlock disposed in electrical contact with the at least one high voltage component. The method may include receiving subscriber input for a temporary service account for a user associated with a

portable device and creating the temporary service account. The incident beams are reflected to respective sensors thereby providing head position signals. The piston is disposed within the housing for axial movement with the shaft. An IC chip is provided on the first major surface and connected to gates of the first and second MIS transistors. Pulsing a zirconium-containing precursor onto a substrate, pulsing a first oxygen-containing precursor, pulsing an aluminum-containing precursor, and pulsing a second oxygen-containing precursor to form  $ZrAlxOy$  by atomic layer deposition provides a dielectric layer with a relatively high dielectric constant as compared with silicon oxide and with a relatively low leakage current.

1459826510-5ed938d4-c4f4-495a-964a-6750d312844b

The present subject matter relates to apparatus and methodologies for allowing old telephone line capacity to provide near DSL or superior DSL quality telephone connections. The spacers are designed to have an optimum size and to be positioned such that they act as a detent mechanism for the switch to minimize problems caused by stiction. Furthermore, the lower rib collector descends due to the elasticity of a first elastomer disposed between the upper rib collector and lower rib collector further addition of impacting the hook device of the central pole.

1459826510-64bbacd3-0939-459f-b7a4-280d078e0d79

A system and method for providing automatic scheduling and establishment of telephone conferences over a network such as the Internet. The organic light emitting diode includes a luminescent device and first and second transistors for driving the luminescent device, wherein the first and second transistors have different resistance values. Chemical mechanical polishing may be used to achieve high fabrication throughput and high polishing uniformity. A method for facilitating fabrication of a first article from a second article is also provided. Also provided is a method for improving the efficiency of an electrochemical cell for target ion destruction.

1459826511-25fbf4c8-30c3-4b19-b01c-5b447d30dda3

A method and circuit control a quiescent current of an amplifier including a preamplifier, error amplifiers, and output devices driven by the error amplifiers, the error amplifiers having an input-referred offset voltage. A communication device is structured to input at least one of the displayed companion codes and transmitted to a remote processor facility. The wall bracket cover nests within the wall mount bracket and prevents access to the heads of the lag bolts. The server stores the key reference frames. Fourthly, an opaque to-be-solidified film is formed on the substrate, and each of the conical frustums extends through the to-be-solidified film. The substrate is then cured in an oven until the ink is dry.

1459826511-894c686a-af33-47b6-9df6-8c740dc7685f

Level shifting and amplified level shifting circuit topologies are provided that include two or more level shifting or amplified level shifting circuits. The electronic assembly includes a first substrate having an integrated circuit formed therein and a second substrate. The sizing of repeaters on a substantially parallel portion of another transmission line, is chosen to propagate a second signal transition at a different rate.

1459826511-cf8b1329-c344-4e1d-b231-4dfaaee53f87

The object of the invention is to perform a constructive exchange of information between a user and a provider of products in virtual reality. The light-mark can have a size, as measured along a major axis, of greater than or equal to about 10 micrometers. In addition, 'Frosty' produces more lateral limbs on the tree terminal resulting in thicker branches as compared to a typical Fraser fir. A thick insulator layer is then deposited in the trench such that the film at the bottom of the trench is much thicker than the sidewall of the trench. Nonlinear distortion is then compensated using adaptive techniques with a plurality of equalizers that filter a plurality of orthogonal, higher-ordered-basis functions

generated from the forward-data stream.

1459826512-94db64a1-257d-4c7a-8020-be13dca9b8bf

A microcontroller comprising a central processing unit and a further fault processing unit suitable for performing validation of operations of said central processing unit. Propagating wave electromagnetic sensors monitor excitation sources in sound producing systems, such as machines, musical instruments, and various other structures. The multiplexing module combines the data from the various data streams received by receiver module into a single stream of chunks. The invention uses a novel data structure for recording destination addresses in the sequence of on-chip memories, having the property that moving information about destination addresses, or otherwise responding to changes in network topology is flexible, while at the same time maintaining relatively dense usage of the on-chip memories.

1459826512-9d96c6e2-fc6b-4a52-9a78-e10af35cfe12

Systems, methods, and apparatus are provided for determining relevance of documents to queries. R is selected from the group including strontium, calcium, magnesium and zinc and combinations thereof. Alkaline hydroxide reacts with decomposition products in the crystallization unit. 0 kJm<sup>2</sup>, and an elongation of 400% or less. In an embodiment, scripts are generated to perform export and/or import functions.

1459826512-adf5a607-aea8-42eb-9cab-e622bbe33c1a

The present invention relates to novel compounds, in particular novel pyridinone derivatives according to Formula wherein all radicals are defined in the application and claims. An event indicating that the material has stopped impacting the surface of the vehicle is detected. An assembly is created such that the slope of the upper edges of the reducer drain members is not parallel to the drainpipe axis, allowing the upper edges of the reducer drain members to correspond to the slope of the ground surface. When a processor of the handheld electronic device detects one of the navigational inputs, the handheld electronic device outputs an audible sound in the form of a spoken word of the digit that corresponds with that navigational input. Moreover, the present invention can be used to demonstrate the features of ground station application systems.

1459826513-6ccfe0a4-09ee-4bd1-9d72-89e2c4b85b60

A surface repair patch for closing an opening around a fixture which is adjacent to or protrudes from a surface is provided. At a fine grinding step, the grinding point can be cooled with a small quantity of coolant in so far it is reliably supplied to the grinding point. The high temperature developed during this combustion heats the zirconium nitride to a temperature well above the heat treating temperature, thereby causing the zirconium nitride to be transformed into a new post-HT layer including zirconium oxide that is scratch resistant and durable.

1459826513-6e200433-409e-4ade-b25b-2220980395e7

A modular and scalable Matrix-type Fault Current Limiter that functions as a variable impedance device in an electric power network, using components made of superconducting and non-superconducting electrically conductive materials. Upon the failure of an internal component of the protective device, the spring driven lockout mechanism is released by I<sup>2</sup>R thermal action which causes a resistor to burn in half, or in the alternative, to melt solder mounting the resistor, thereby eliminating the hold-off and locking out the reset mechanism. In a preferred embodiment, the aqueous KGS solution is concentrated up to or beyond the limit of solubility prior to the esterification process, preferably by catalyzing a homogeneous or heterogeneous catalyst, especially sulfonic acid, at temperatures of 50 to 120°C. A field plate extends from the top of the gate electrode down one side of the gate electrode as far as the sub-insulation film covering the gate insulation film, filling the opening.

1459826513-6fabbcf8-f16a-400d-b2bb-e6b316b69fb7

System and methods for facilitating the settlement of financial accounts across different entities utilize a host computer system that tracks financial transactions made at each merchant location or store and uses this information to reconcile accounts across different entities. The screw part has a helical member with an outer end capable of penetrating the rear face of the panel when rotated by an elongated drive rod projecting from the outer end. This compound also has little, if any, calcemic activity and therefore may be used to treat immune disorders in humans as well as renal osteodystrophy.

1459826514-1ba964fd-f799-4d0a-aed0-eb69fc0f0d01

Embodiments of an invention for using a processor identification instruction to provide multi-level processor topology information are disclosed. The polymeric powder includes a polymer curable under the influence of electromagnetic radiation. The physical system create the environment for the packaged product, controls the environment of the packaged product, enable distribution of the packaged product, monitor and log the data from the environment and of the packaged product. Alternatively, the catheter may include a tubular body having a first opening and a second opening. Each stage also has a FET load driven by the logic gate and electrically connecting to a third independent voltage source.

1459826514-8b9af8e5-6289-4cf1-8501-0bfe0cfe3545

An elongate mesh pack for filtering a fluid defines a mesh pack axial opening. The hospital bed includes a plurality of siderails configured to extend the width of the deck. Current information such as defect information and test case information associated with the at least one current software testing project are received. The respective planes to the dot merger unit may include three contone color planes and a bi-level spot plane and the color mask register may be loaded with bits that are selected to split a K plane into C, M, and Y channels for output to a print head without K. The approach includes a step of detecting whether a computer system is coupled to a packet switched network via the first communications line and if the computer system is coupled to the packet switched network, a step of concurrently enabling voice communications over the first communications line using a first voice telephony device coupled to the computer system. A semiconductive polymer capable of luminescence in an optical device is provided.

1459826514-9bccd726-79da-436d-b3e6-1b409a6a366f

A gas turbine engine includes a compressor, combustor, and high pressure turbine operatively joined together. The system includes a base for selectively retaining a portion of thread, a clamping device for receiving a first end of the thread, a tensioning device for receiving a second end of the thread, and a weldingcutting assembly configured to join a first section and second section of the thread to form a loop and to form a tapered end on the first section of the thread. The non-defective column of memory cells is proximate non-defective column of memory cells following the defective column of memory cells in the sequence of columns of memory cells that is available to replace the defective column of memory cells.

1459826514-a6169702-b9c2-423d-a3d4-e6e6d195167f

A non-volatile memory system is formed of floating gate memory cells arranged in blocks as the smallest unit of memory cells that are erasable together. The balls are disposed in axial grooves of the inner shaft and in axial grooves of the outer shaft. The first gate structure and the second gate structure each comprises of a dielectric layer, a first conductive layer and a cap layer.

1459826515-68d70371-2cae-4801-bd1d-a02fe5777e92

In a wavelength converting method, an ambient that is in contact with a surface of a non-linear optical crystal from which wavelength-converted light is outputted is a gas that is lower in content of nitrogen than air. Each memory cell may include a

plurality of transistors coupled in a cross-coupled inverter configuration. The bus module communicates, through a signal bus, details with respect to the predefined destination story of the person or item or details with respect to the access authorization of the person or item to the zone. ; wherein the ratio MFRIMFRII is from 5 to 60; and B) 10%-50% of a copolymer component of ethylene and at least one C3-C10 \u03b1-olefin, containing from 15% to 50% of ethylene; said masterbatch composition having a value of the intrinsic viscosity \u03b7 of the fraction soluble in xylene at room temperature equal to or higher than 3. The first electrode surface and the second electrode surface of the second electrode are at generally the same distance from each other, over their extension. The levels of IgM-type anti-GlcGlc or GlcGlc or GlcGlc antibodies in serum act as diagnostic markers for MS disease and as prognostic biomarkers for the conversion of CIS patients suggestive of MS to clinically definite MS within 24 months.

1459826515-6efb8e32-c79c-41fe-9cd2-a2ebbc28514e

Disclosed are systems and methods for protecting secret device keys, such as High-bandwidth Digital Content Protection device keys. The various embodiments can protect against unauthorized access or duplication of unprotected content once the content has reached a rendering device such as a user's computer. The linear motor gas bearing has a gas introduced from the motor stack into the recess pocket and flowing between the platen and the bottom face of the stack. This output is connected to the control input of a controllable clock signal generator, which provides the clock signal for the at least one circuit unit.

1459826515-a40d14e4-fc70-4261-88d5-2746e0742f31

Method and system aspects for authenticated communication of messages among computer systems in an insecure network are described. The method includes: forming a chamfered mandrel on a substrate, the mandrel having an angled surface; and performing an angled ion implantation to obtain an implanted shadow region in the substrate, the implanted shadow mask having at least one sub-lithographic dimension. When accessing the removable storage medium, a user is required to input a password, the inputted password is compared with a predetermined password, and if not coincident, access is inhibited, and further, if coincident, it is permitted to access only one part of an area of the removable storage medium. A first induction receiver is spaced apart from the transmitter and is adapted to measure the induction field.

1459826515-db9e3b98-2928-4834-966d-ec4af556e189

A method includes executing, in each of a number of nodes of a cluster communication system, a specialized instance of an operating system privileged to control a corresponding hypervisor configured to consolidate one or more VM on a system hardware. When in use, the apparatus functions to prevent the soccer goal from being moved, thereby, making it considerably safer and more sturdy than an unsecured soccer goal. A seal material arranged along the periphery of the pixel region. If not all of the orthogonal codes are in use, the present invention determines another selection of orthogonal codes that yields lower cross-correlation under current delay conditions.

1459826516-194b350b-5e6e-4d26-8cf9-ed2a3492e02e

An information processing apparatus is presented that includes a first determination unit which determines whether a processing target frame is a frame of a predetermined type and a second determination unit which determines whether an interval between the frame and a frame of the predetermined type located temporally nearest in the forward direction, exceeds a predetermined frame count. The DNA encodes a protein that may exist as either a heterodimer or homodimer. A process to make the light base oil fraction, comprising hydroisomerization dewaxing a waxy feed in a series of two or more reactors, and recovering the light base oil fraction having a low wt % Noack volatility. Hybrid maize seed, plant or plant part produced by crossing the inbred line PH907 or an introgressed trait conversion of

PH907 with another maize line. A request handler can receive service requests for processing jobs, process handlers can identify tasks to be performed in connection with the processing jobs, and task handlers can perform the identified tasks, where the request handler, the process handlers, and the task handlers can be distributed across a plurality of networked computers. The relative movement in certain direction of the frames may be limited during the relative rotational movement of the frames.

1459826517-ac241248-8cac-4f0e-93d9-25ed4458c5ab

A liquid prime mover can be used to position a component on a substrate. A method of treating a well in a cementing operation comprises pumping the spacer into a well ahead of a cement slurry, thereby minimizing or preventing commingling of drilling fluid and the cement slurry. A joint seating device is provided on an upper end of the central column and a swivel arm is arranged in a pivoting manner about a horizontal axis of the joint seating device. The NSRF value is calculated as  $\text{equaling ZWLM slack value}$ , where ZWLM is a Zero Wire Load Model value of timing wherein all wire parasitics are removed from consideration in the timing. As each membrane on the outer surface of the chordboard is pressed, an electronic circuit is closed activating a solenoid driver.

1459826517-aee78a24-361f-4908-b411-e28b22099386

Pyrimidone compounds of formula :are inhibitors of the enzyme Lp-PLA2 and are of use in treating atherosclerosis. The trailer is provided with wheel assemblies that can be moved longitudinally on the trailer's frame to adjust the load on the tongue of the trailer and is provided with rails that can be adjusted in width for receiving the pontoons of boats with different pontoon spacing. A system in accordance with a present invention includes a host device and a fuel cell apparatus with an information storage device. The information processing device is equipped with a first write request section that requests to write data in the first storage device according to a first communications protocol, and a second write request section that requests to write data in the second storage device according to a second communications protocol. A shaft weight is not larger than 55 g, and a torque value is not higher than 6.

1459826517-c84c5a93-6bcd-4180-ae97-9dbda6a4d9b4

Instead of buying blanket licenses for all licensable components of its CE devices, a manufacturer enables users to activate licensable components on a device basis and then obtains the necessary licenses individually. 55H as measured vertically from the distributor plate based on the first determined level. Ventilation openings allow airflow and can be formed to be both functional and decorative. And, said metadata use permission judgment judges the metadata use permission based on the metadata provider identified in said first signer identification information, said second signer identification information, and signature verification. Each direction angle of the deflecting element is determined such that a final beam trajectory in the predetermined area before being introduced into a wafer substrate is matched to each other in both an operating mode and a non-operating mode of the deflecting elements. The sensor system has a positioning device with which at least two sensing positions for the sensing system can be set and adjusted.

1459826517-e32f6543-4bf2-4191-90e5-2d45d61880d5

A system that facilitates generation of data that can be employed in connection with training a classifier. The base includes main ribs in the form of grooves that are open towards the outside and extend approximately radially, passing through an annular zone that forms an approximately flat seat by way of which the base can rest in a stable manner on a flat support. The base, the upright form, and the plurality of rails cooperate to define a plurality cavities in fluid communication that shape and allow sufficient curing of a combination of fluid concrete and concrete reinforcement to form a retaining wall of a selected configuration. Between the two cores is a substantially constant voltage when the actuator is in

the second state. Alternatively, the ultrasonic energy may be generated intermittently.

1459826518-d4591eca-e795-4539-afdf-d76a0812c09a

A surgical instrument includes a main unit and a suction conduit. The artificial annulus is formed by inserting a tool into the coronary sinus, and adjusting the tool to force the wall of the left atrium to form an annulus above the artificial valve, this locking it in place and forming a hemostatic seal. The programs include video, audio, data and so forth that are subjected to data compression in digital broadcasting.

1459826519-dafba22f-4028-4285-b233-cfeea6b98029

A device for determining the absolute angular position of a turning device with respect to a fixed structure, including an encoder provided with a main multipolar track and a multipolar track called \u201ctop turn,\u201d and a measurement means. The second direction is different from the first direction resulting in a bend substantially at a selected position of the at least one carbon nanotube, the method of producing carbon nanotubes providing the production of the at least one carbon nanotube having at least one bend substantially at a selected position along the at least one carbon nanotube. Additionally, a second dielectric constant measurement is used to determine the source fuel level of a fuel tank providing source fuel to the fuel cell. The PV cells can be interconnected between the conductive spacers. A pressurization limiting means is provided in the wheel assembly for limiting an operation of the pressurizing means in accordance with a pressure of the air inside the tire. The bottom images are detected at the imaging location.

1459826521-8601c5bb-3124-4c4f-ad3f-1f2d8a7f97ee

A novel product composed of a ceramic phase particle dispersoid in metal, including uniformly distributed, finely sized carbide phase particles formed in situ in a molten metal and a novel method for producing such a ceramic phase particle dispersoid in metal are disclosed. A zero-sequence voltage is generated for each phase of a three-phase voltage command according to the index and the voltage command and the operating mode of the inverter drive, thereby injecting the zero-sequence voltage into the voltage command with a feed-forward configuration so as to fix the voltage command. A body region is disposed between the source region and the drain region and overlying the insulative layer. A moving-side electric wire is arranged on one of the sliding door and the vehicle body, and a fixed-side electric wire 3b is arranged on the other of the sliding door and the vehicle body. The instructed program is displayed on a display. The recording layer contains at least one particular polymethine pigment selected from polymethine pigments having 1 to 4 carbons in the methine main chain, so as to obtain a sufficient recording sensitivity for a red wavelength range of light.

1459826522-4c48a861-8309-4684-bd66-4849007be872

This invention relates to a method for the natural topical treatment of portions of skin of a person afflicted with a skin disorder such as dry skin, eczema, itchy skin, red skin, itchy eczema, inflamed skin, and/or cracked skin for the removal of itch and the restoration of the affected areas of skin to a normal condition. ROM cells are located at the intersections of stripes in the surface SOI layer with orthogonally oriented wires on a conductor layer. If the membrane is torn, the carrier in the background can then easily be detected. The video data stream is then synchronized to the adjusted audio stream. A channel widthlength ratio of the first thin film transistor is different from a channel widthlength ratio of the second thin film transistor. The film valve includes a base layer made of glass fiber and having two opposite side surfaces, and two wear-resistant coating layers applied respectively to the side surfaces of the base layer.

1459826522-dcbfde57-989c-4d36-9f46-302869845976

A method and system for the protected storage of downloaded media content via a virtualized platform. The electrode also includes a seat formed in at least the exterior surface of the unitary ring. Each of the first lens, the second lens, and the third lens includes an aspheric optical surface. The accumulator may include a receiving surface to receive the sod roll from the transport conveyor. Thus, the silicon nitride does not cover the silicon oxide adjacent to charge storage regions of the memory cells, which can improve device operation. The specific wavelength of light is the result of the spontaneous transition of photons.

1459826523-494515c9-9e64-4bf3-98bb-623cff3e44d1

There is provided a technology for realizing an PCI expansion adapter for a PC card which is connectable to a desktop type personal computer PCI expansion connector using a low profile PCI. The first support member having a first side, the second support member having a second side. Each offer includes an offered price and an offered quantity. For ease of retrieval and use, each reference image has its associated Z-plane images are formed in a stack that is sent over the Internet, or Intranet to a local computer storage for quick retrieval when a viewer wants to mimic a focusing up or down to better view a detail in an image.

1459826523-a137879b-ffd6-43da-9a31-1eff2afdbf8d

This invention discloses a communication device to facilitate the communication abilities of speech-impaired individuals. The playback unit is displaceable by means of a worm gear and can be locked in several positions. The method includes analyzing one or more backhaul uplinks and one or more backhaul downlinks between a controller and one or more Base Transceiver Stations. In one form, the CVT includes a pair of rotatable countershafts mounted to pivot relative to one another. The ballot may be printed on demand or mailed to the voter along with a return envelope and an anonymous ballot envelope.

1459826523-bbca3c5c-1abc-430a-baf5-dc06cd2ffcd8

A method and apparatus for detecting the launch position of a projectile is described. The extensive device includes a rod, a polygonal sphere, a socket and a retaining element. The ends of the cut lines turn into the picks. The first voltage is approximately equal to the first reference voltage and tracks process, temperature, power supply voltage and biasing condition variations.

1459826523-e33974c2-a6bb-42d4-b093-9d26e7402212

A method of manufacturing a shell element for an electronic device, said shell element having a front part and at least one part that is angled in relation to said front part. The displacement unit may be moved when subject to an external force to move the conducting units moving to either side to press the connecting unit on one side to generate circuit signals. A predetermined distance proportional to the radius of a control port separates at least two ports in the work string. The viewer may direct the program guide to order a given video-on-demand program, and set a desired broadcast time for that program.

1459826524-b42c0f5e-82cd-470b-9870-54955f747139

An image sensor having a photo-detector and a reset contact that are electrically connected by a discharge path disposed between the reset contact and the photo-detector. A version of software running on the computing device is identified and compared to a version of the software in a recipe that is previously determined to be a correct version of the software. The semi-solid material is configured to transfer electric current from the rotating member to the non-rotating member. A torque mechanism is located between the handle mechanism and the closer and selectively transmits torque in the closing direction and the opening direction to the closer.

1459826525-8a927a58-fb27-4d40-bd7a-f16bf347bb09

An anti-seismic device is adapted to absorb the vibration energy of a structure,

and comprises a plurality of vibration-reducing units, each of which includes a mass, a hydraulic cylinder, and a resilient element. Source and body regions of opposite conductivity types are formed, with the body regions separating the source regions from the drift regions. One output delay line is configured to provide gradient elements. Thus, captured objects may be released by the operator, or by applying sufficient force to separate one or more of the prongs.

1459826525-942cea0b-259a-4e3f-ad51-3d18e50fdb53

Non-volatile memory devices and methods for fabricating non-volatile memory devices are disclosed. The method includes the steps of providing at least one opening in a face of the solid surface and inserting a plaque support into the at least one opening. The device may be the external defibrillator itself, or a separate testing device. Gold is electroplated into a photoresist to form a first set of 3-D capacitor elements on the second gold seed layer. When separated, the bottles and jar can rest on a flat surface, or be readily held in one's hand, such that the bottles and jar can be used independently of each other, in any sequence or order, without danger of spillage or contamination.

1459826525-b647839d-0abf-4691-9923-875c9bfd425c

A soybean cultivar designated S090246 is disclosed. The attachment member is movable to a first position, in which the attachment member generally extends from the elongated housing in a direction parallel to the longitudinal axis, and to a second position, in which the attachment member generally extends from the elongated housing in a direction perpendicular to the longitudinal axis. The metallization layer as well as the electronic component is embedded and packaged while the substrates are laminated via a lamination process. Responsive to successful completion of one or more tasks related to the electronic message, the address of the electronic message is deleted from the associated queue, and responsive to completion of all tasks related to the electronic message, the electronic message is deleted from the message store.

1459826526-6ee8c61f-87df-408f-8333-ceb659aad778

Various systems and method for distributing electrical power are provided. The first and second program binaries are disassembled using the translated symbols. The input data word being compared with a respective stored data word to detect a match that is indicated along a match line by the check array structure.

1459826526-c77d263d-45b0-43bc-a06b-a8e55d487a47

A system and method for applying for a credit card, preferably at a point of sale, is disclosed. A support arm is mounted to the second rotatable mechanism a support tube receives therethrough at least a part of the distal length of the fluid tubing and a bearing member rotatably supports the support tube in the support arm whereby upon rotation of the first and second rotatable mechanisms the fluid tubing is free to one of rotate with and rotate relative to the support tube. A sample set of pair-wise preferences among a subset of the alternatives is obtained and a model of preferences is generated by iteratively generating a set of candidate models and evaluating the candidate models using a fitness measure which is based on the sample set of pair-wise preferences. The steerable trailer allows a user to control the trailer steering independently from the tow vehicle and adds up to two more points to steer more accurately and safely in close areas, for example. The reflector defines, together with the transverse fins, a plurality of elements set alongside one another of a generally parabolic shape.

1459826527-5584fafb-8f36-43c0-a273-0e322626dfb5

A device positions a bottle close to the user's mouth, while automatically returning the bottle to a more upright position when released by the mouth. The pumping voltage is a function of an amplitude of the at least one clock signal such that an absolute value of the pumping voltage is larger when the amplitude of the at least one clock signal is larger. The channel supplying layer may include a

second oxygen treated region that extends from the first oxygen treated region towards the drain electrode, and the depth and concentration of oxygen of the second oxygen treated region may be less than those of the first oxygen treated region. A matching and attenuating circuit reduces impedance mismatches on the input terminal side and the output terminal side, and attenuates the radio frequency signal.

1459826527-6b008956-c359-4e14-b1f4-15bc060166f5

The present invention, relates to the preparation of a patch antenna with a specific effective dielectric constant; and a reduced dissipation factor. It has been found that reliable operation of the soot filter is possible only if an active regeneration is carried out from time to time by increasing the exhaust-gas temperature to the soot ignition temperature. A building comprising a building component coated at least in part with such a polyurea is also disclosed, as is a substrate coated at least in part with such a polyurea, wherein the ratio of equivalents or isocyanate to equivalents of amine groups is greater than 1. Network selection is performed according to the network selection list stored in the UICC and the network selection list stored in the ME. An operation method includes measuring a temperature of a refrigerant into the evaporator, and a temperature of a refrigerant into the compressor, and decreasing an open degree of the variable expander when a temperature difference between the two measured temperatures is less than a predetermined first value.

1459826527-730cd758-e502-4e01-8ee7-6f9a0dc33cf9

Signage is presented comprising an in-mold plastic plate portion having a slot. The secondary battery is in a form of a thin battery having a larger width than a thickness, and two opposing surfaces of the secondary battery are composed of a first flat surface and a second flat surface. The base plate being substantially planar having three parallel plates, which is placed in two planes, where the first and third plate is placed in one plane, are arranged on either side of the second plate, which is placed in the second plane, and where the two parallel planes define a space between the two planes to obtain one of the plates of the uniting plate. At least one harmonic in the combined output may be at least partially rejected. Further, the electronic storage medium may be identified using the tracking identifier on the electronic storage medium in order to afford authorized use of the information contained on the electronic storage medium.

1459826527-7a19d733-547f-4d21-83a5-0dd20787313d

In a gas-phase treating process of a semiconductor wafer using hydrogen, there is provided a technique for safely eliminating the hydrogen in an exhaust gas discharged from a gas-phase treating apparatus. The first voltage generating circuit generates a second voltage, a voltage level of which is lower than that of the first voltage. The method further includes determining a content type to be sent to a mobile device based on preferences provided by the user. Associated methods performing the sensing and eradication of the obstruction including purging and deicing are disclosed.

1459826528-21b594a7-9f2f-400f-8531-72a7aeb38514

A synchronization method of a plurality of digital image signal processors when the digital image signal processors are to be operated simultaneously. The cores of the D-fibers are held in close proximity to one another at opposite sides of a thin evanescent coupling region that is fabricated from a doped semiconductor based material. The belt tensioner further comprises a cavity between the arm and the support member and a bushing comprising a bowed flange positioned in the cavity. The restrictions this orientation imposes on rotation allows for the preparation of polar esters that have little or no water solubility, and provide both moisturization to the skin and emolliency by reducing transepidermal water loss. Such tracking can be accomplished using any known technology including the use of the customer loyalty cards that are assigned to specific customers.

1459826528-345ba59e-258e-40d0-bfaa-71f8216a42b8

A method, apparatus, computer program, and system is provided that includes handling traffic management in a communication network system. The system includes a monitoring component, a repository that stores a plurality of rules, and an analysis engine. Molten solder is placed into the reservoir, high melting point metal particles are charged into the molten solder, stirring is performed with the stirrer to uniformly disperse the metal particles in the molten solder, and then the molten solder and dispersed metal particles are cast into a mold. The second interlocking circuit couples with a third switch and a fourth switch, controls whether to conduct the third switch according to the logic levels of the first signal, the third signal and a fourth signal, and controls whether to turn on the fourth switch according to the logic levels of the third signal and the fourth signal. This allows PRT to be mapped onto deforming models which re-orient the local coordinate frame. The ultrasonic flow meter includes a first ultrasonic transducer disposed about a fluid flow path, and a pressure balancing system configured to pressure balance the first ultrasonic transducer relative to a fluid flow along the fluid flow path.

1459826529-9db1eee4-3615-4bef-9965-1afcd47f6014

A structure for attaching a striker, having an attachment bracket including a base fastened to a panel, and a protruding portion joined to the base. In the hydrated state the microparticulated protein component particles have a mean diameter particle size distribution ranging from about 0. The secondary combustion system includes an injector for transversely injecting a secondary fuel into a stream of combustion products of the primary combustion system.

1459826529-acd1b3ac-1ecf-4218-a2da-150d79d79427

There is provided an aldehyde oxidase gene which is a 4. A plurality of the die packages are formed on a single carrier by applying a body of molding compound across a carrier with an air cavity defined in the molding compound about each of a plurality of device regions of the carrier. Additional circuits and systems are disclosed. The foldable card guides incorporate spring-loaded bullet pins and radial locators at the points where they are pivotally attached to the connector housing, thereby allowing them to be locked in either an open or closed position.

1459826529-b4eab3bf-cb9e-4d8f-b790-163d334b51e7

A ramp bracket for a curtain airbag is constructed so that an open space between a front and a rear is divided into two portions, that is, an upper chamber and a lower chamber by a partition, and the front and the rear are separated from each other at an area defining the lower chamber. The first comparator has a first input that is coupled to a first reference voltage. The mesoporous zeolite material according to the invention displays both the catalytic properties associated with zeolites containing strong Brnsted acid sites and the large mesopore surface area associated with mesoporous molecular sieves. In order to solve this problem, the epilator has a hair removal unit following the epilating unit in the direction of use, such that, in at least one operating mode, the hair removal unit removes the hairs that have not been pulled out by the epilating unit.

1459826530-4c38893c-8c49-4e69-a24c-ad32993e4f6e

Aqueous coating solution having a pH of from 3 to 8, comprising 0. In addition, the device includes a fastening device for fastening the curtain in the aircraft passenger cabin. A Link-Status-Notice message detailing at least one phone client associated with the client-link failure is sent from a primary telephony server to a secondary telephony server via a server-link.

1459826530-be15706e-b2cc-459a-8dc8-9a1c640cf09e

Novel antagonists of MCP proteins, in particular of MCP-1 protein, can be obtained by generating MCP mutants whose GAG binding site, located at the N-terminal of MCP

proteins, is eliminated following non-conservative substitutions. A cylindrical end face at one extremity of the primary transformer component is positioned on the bottom plate of the primary housing opposed to the secondary housing, and the printed circuit board is provided on an opposite cylindrical end face which is at the other extremity of the primary transformer component. The cage frames are optionally also provided with lifting bar guide collars to receive a lifting apparatus comprised of one or more lifting bars. In accordance with a measured result, a control signal is sent to a driving mechanism of the feeding collet to drive the feeding collet, and the position of the semiconductor laser element is adjusted on the matching stage.

1459826530-eff30b9e-1d3e-4d0e-b7c5-7a8943edba9f

A donor element is described for use in a thermal imaging process. A supporting leg section is attached to a predetermined position of the main frame to support the main frame in a substantially horizontal orientation at a predetermined height. An insulating layer, a semiconductor layer, and an ohmic contact layer are formed over the substrate to cover the gate line, the gate electrode and the pad. A first content affinity is calculated between the first sub-volume and a third sub-volume, and a second content affinity is calculated between the second sub-volume and the third sub-volume.

1459826531-061c26c6-033c-4ffb-9218-cb8b1a1bab72

An electronic cigarette atomizing device is provided. Credit limits are adjusted by calculating the exposure in each currency at the relevant time and then converted into the credit limit currency equivalent. One nodal point is positioned as close to the read-write head as possible at one end of the actuator, and the other nodal point is positioned at the center of the active legs of the VCM coil at the other end of the actuator. The string-to-string edits allow conversion of one arbitrary length character sequence to another arbitrary length character sequence.

1459826531-283c58d2-4544-4704-8bee-9b0771b588e7

A LED includes a red light emitting unit, a green light emitting unit, a blue light emitting unit, and an optical grating located on a same plane. The plastic feed is maintained in a heater at preferred temperatures of 150 C. Each chord of the supporting legs is inverter driven to ensure a bi-directional full rated torque control of the associated pinion assemblies at very low speeds. The gain stages are inverter based gm stages and the total gain of the receiver is 35 dB and in-band IIP3 at mid gain is +10 dBm.

1459826531-7007ab88-10e6-42cd-aa4c-9ada7e798ab8

A cathode active material for a battery includes a material of the formula  $MgxMn_{204}$  wherein  $0 \leq x \leq 1$  and the material has a crystal structure having an open channel formed in a single dimension or along a single dimensional axis. In one embodiment, the method includes forming a first edge along a first cellular core panel section. The method involves starting to scan an element of the said multi-element detector synchronously with a sampling signal based on a reference signal of an interferometer, and scanning the element at a higher frequency than a sampling frequency of the sampling signal. The resultant gated signal is low pass filtered to produce a second fully demultiplexed signal. The cap has an aperture cut into it through which the cable passes.

1459826532-4a1dfbf4-77ae-4d9f-ade4-90aa0f445545

A system including, a mineral extraction component, a conduit fitting coupled to the mineral extraction component, a floating seal insert disposed in the conduit fitting. Then, the current frame data and the preceding frame data are added up in a correction circuit and the result is subjected to an overdriving processing. Once a location is determined, a database of satellite radio advertisements is searched to identify advertisements directed towards a specific location, and these advertisements are transmitted to the satellite radio receiver across a satellite

radio network. There are no restrictions on node types, and thus nodes may represent graphic objects, rules, attributes, properties, behaviors, finite state machines, and any other user-defined component. A nano-object array can be created by exposing troughs in a corrugated surface to nano-objects and depositing the nano-objects within or orienting the nano-objects with the troughs. The alumina-containing raw material contains from about 40% to about 55% alumina.

1459826532-74605198-1fc8-4766-bd8f-dbd20b9afabb

An improved storage system includes a plurality of individual storage units enclosed in a secured perimeter with security gates for entry and exit. The refrigerator and refrigerator door include a transparent member provided behind an exterior member defining the exterior of the refrigerator, a light emitting member provided on an extending line of an outer end of the transparent member to radiate light toward the transparent member, and a diffusing portion formed at one side of the transparent member. The printing control apparatus also includes a generation unit configured to generate an input screen for entering a value of the charging destination of the job if no value is set to the charging destination of the job or that an invalid value is set to the charging destination of the job. The invention also provides a method of preparing hydrophobic surface-treated silica particles. A pickup gear rotates interlockingly with the passive gear, and a second link is provided, with one end rotatably installed on the rotation shaft of the passive gear, and with another end coupled to a rotation shaft of the pickup gear.

1459826532-f035e3e2-c675-46c8-be5a-8a0a9d513cbe

A demodulator for processing a PWM signal includes a variable capacitor, a charging unit, a discharging unit, and a tuner. The switching element may be formed on the insulating substrate in a pixel region defined by gate and data lines adjacent to each other. A charge trapping layer and a third insulating layer are formed over the substrate. The present invention asks the suspect questions that only the legitimate computer account owner can verify correctly. Rather than updating the control signals directly on the sampled sensor data  $y_k$  as it enters the computer, the control computations are done on the harmonic components  $a_k$  and  $b_k$ , or equivalently on the magnitude and phase.

1459826533-910e2c95-09d1-4f7e-a8a0-2bf8bfd1b121

A flat panel display comprises the following components. The system includes a printer for generating literature associated with each order and a packer for packing the prescription containers and the associated literature into a package. The plate precludes gripping of the cutting edge of the knife and a pivoting mechanism for the plate is coupled to a switch. The temporary artifact and the latest version of the first artifact are merged to create a synchronized version of the first artifact. The endless link defines an opening and is located in the slot so that the opening intersects the channel.

1459826533-a0cb1a22-3c7e-4e55-9e23-512cf03e81c6

A logic state transition sensor circuit. In some embodiments, the apparatus accelerates a mass using mechanisms built into the tool and causes the mass to strike the borehole wall. A series of result signals from the sense amplifier indicates when the bit line voltage is approximately equal to the reference voltage.

1459826533-b0401cc7-60f4-4acb-8167-7df8cade1b51

A system and method of managing assets on a distributed grid enabled network. The catheter body includes first and second deflection wires that extend through the catheter body from the distal end of the catheter body. The towel dispenser may include a motor for driving dispensing of the towel from the housing and an associated sensor.

1459826534-16d9ef3d-c077-403c-9f0a-53cee372786b

A process is managed by creating a future revision of a base. The conductive substrate is configured to form a conductive path of the electrical connector. The surface of a circuit board is formed with a control circuit and a base conductor portion electrically connected to the control circuit. The integrated evaluation and simulation system includes a user interface operably coupled to at least the computer system to selectively input data into the causal network model and receive information from the causal network model and at least one virtual simulation system. With this mechanism, a predetermined set of properties is collected from the GUI object that is subject to the test script and for which the lookup of the runtime control failed. Impact-absorbing members made of a polymeric material are mounted in pockets contained in the pivot support structure of the snow plow blade support structure, and portions of the snow plow blade frame impact the impact-absorbing members prior to the snow plow blade reaching either a tripped position or a trip return position.

1459826534-20c88f19-2680-40ba-bc72-67f2ea001610

Busbar assemblies are disclosed. The first end of the arm is pivotally attached to the base. In the structure of the lead-frame matrix of the photoelectron devices, pins of the first lead-frame array and pins of the second lead-frame array are alternatively inserted. Also, a pressure difference is positively generated between the inside and outside of the motor. and less than the melting point of the PTFE film for the range of 5-120 minutes. A scaling factor is simultaneously updated according to the adjusted length of the image capture area.

1459826535-04fbb38a-f924-431e-8c30-e9224c443d70

A method and system is disclosed for dynamic adaptation of reverse-link power control based on the distribution of ATs implementing different protocol versions. The probe includes a solid core surrounded by a sense coil. The invention further relates to genetic complements of plants of variety CH042217.

1459826535-0b0ef7fe-145e-4c71-b097-f9772fec146b

A fiber optic cable having at least one optical fiber such as a microstructured bend performance optical fiber disposed within a protective covering. The present invention includes a blank or a container including a bottom panel with first and second bottom sidewall panels, front and rear opposing wall panels, and first and second box corner locking constructions. The frame is principally covered by the cover body and comprises a hinge, wings that swing about the hinge to open and close the protective cover, and fastening means at free edges of the wings. The compounds of Formula also include prodrugs of the Notch inhibitor compounds. The crystal comprising the two components, and minor amounts of water, shows improved properties such as crystallization behavior stability and decreased hygroscopic behavior.

1459826535-b57753c5-ae46-4f9b-9ddd-50e7c80e6f33

Single horizontal wells drilled through heterogeneous reservoirs are capable of greater oil productivity than vertical wells, often with lower produced GOR with WOR. A user interface is connected to the lead-lag input filter and enables an operator or other control personnel to view and change the operating characteristics of the lead-lag input filter to thereby provide the control loop with any of a number of desired response characteristics. The first layer comprises a first metal line. The characteristic is selected as being representative of the transition from the expired airway phase to the alveolar phase. Methods for their manufacture, and their use in assembled transformers are also disclosed. The width of the retainer is preferably greater than the length of the shank so that once attached, the end of the shank is below the endface of the retainer.

1459826536-0e184a05-3308-45c6-8575-4536a48edca6

Methods of and systems for illuminating objects using planar laser illumination beams having substantially-planar spatial distribution characteristics that extend

through the field of view of image formation and detection modules employed in such systems. In one implementation, the device may include a first interface to a power-over-Ethernet connection and a second interface to provide a connection to receive fiber optic cabling. In another arrangement, the motorized wheelchair includes left and right drive wheels, left and right motors, first and second rate-of-turn sensors, input device, and controller arranged to combine signals from the sensors and input device in a manner that controls the motors using an integrated turn rate error.

1459826536-2e830b9d-6b36-442e-8aed-4d7e1e5b7720

A resistive memory device and a method for manufacturing the same are disclosed. The supporting member is configured to, while holding the developer container, move between a light exposure position where the light exposure member is located proximate to the photosensitive drum and a separation position where the light exposure member is separated from the photosensitive drum while the supporting member holds the developer container. By a proper selection of the monomers and their ratios in the polymerization, the emissive polymers covering the full visible range even extending to the near-IR range can be prepared. In a communications system the measurements may be associated with a handover. Accordingly, in contrast to conventional techniques, a significant amount of computations or bookkeeping to track of several other variables are not required. A fixing element fixed in the receiving recess has a damping plate punched outward beyond the lateral wall.

1459826537-5db13beb-d056-40b0-96a3-5f15bdc5976c

A method of forming a discharge lamp and the resultant discharge lamp include providing an arc tube having first and second ends offset from a central arcuate or curvilinear portion of the discharge chamber formed between the arc tube ends. In the earth metal fitting 27, two sets of cylindrical-shaped portions 26 are separately arranged in an interval, and a floating portion 27a is formed. When driving the first or second pixel, two of the scan lines are turned on at the same time, and the two turned-on scan lines are positioned at two opposite sides of the driven first or second pixel. The first and the second heat dissipation paths are in communication with each other and are exposed to an exterior so that heat generated by the receptacle power contact and the plug power contact can be dissipated therethrough. The compound or a salt is useful as a ligand of inositol-1,4,5-trisphosphate receptor.

1459826537-b04a5602-ab29-4e7f-b2eb-0bb07eb6cda0

An improved method of manufacturing active matrix displays with ESD protection through final assembly and in process testing and repair capabilities. Trenches disposed penetrating the semiconductor layer of the second conductivity-type form a planar striped pattern; and a gate electrode is disposed therein through a gate insulation film. The tether is attached to the portable article and a support so that the portable article is movable relative to the support and confined in movement relative to the support by the tether within a range dictated by the length of the tether.

1459826537-d5404c37-8b2f-48e2-94f8-634437fa5092

A hernia repair device includes a surgical mesh configured to extend across a tissue defect and a plurality of filament loops coupled to the surgical mesh toward an outer periphery thereof. The device according to the invention is characterised in that the detection means is disposed and configured so as to be in a predetermined, fixed relationship to the ink-jet printing means and/or to detect at least the distance between the ink-jet printing means and at least one surface to be patterned of the respective workpiece to be patterned, at least during printing. Then, a correction coefficient processing unit performs a processing of multiplying the correction coefficient to the image signal similarly performed with multi-resolution decomposition.

1459826538-4f5c1938-f5af-4148-9880-52adc332be06

A foam control composition comprises a polydiorganosiloxane fluid comprising units of the formula where each group R, which may be the same or different, is selected from an alkyl group having 1 to 36 carbon atoms or an aryl group or aralkyl group having up to 36 carbon atoms, the mean number of carbon atoms in the groups R being at least 1. In this piezoelectric thin-film resonator, at least a part of the outer periphery of the piezoelectric film interposed between the lower electrode and the upper electrode overlaps the outer periphery of the region formed by the upper electrode and the lower electrode facing each other. The delay control element is configured to modify the initial time delay by a selected value and to apply a phase delay in an amount equal to the selected value and at a frequency of the signal. Additional aspects of the invention include disposing a pair of toroids about the current return conductor; disposing a toroid about the current return conductor and configuring the toroid as a transformer. A global row decoder decodes the major rows and a page row driver and a page source driver enable the individual rows and sources that make up a given array. The radio frequency measurement antenna is disposed proximate the fluid chamber and configured to measure an electric field and a magnetic field of the first electromagnetic field.

1459826538-fdb1bb86-da54-4eee-ab0f-87f6ef29adf7

A semiconductor device includes a package and a cooler. Additionally the present invention has a bendable region for easier manipulation of the straws drinking end into one's mouth. An amorphous layer containing the elemental metal and elemental oxygen that constitute the ferroelectric is formed over the titanium layer, and a crystallized ferroelectric thin film is formed by heat treating this amorphous layer. An elongated pusher system formed of several assembled components and extending from the frame to the endoscopic section is provided for individually advancing at least one staple at a time distally for positioning adjacent the surgical mesh and the body tissue. In response, the first vehicle transmits a request for updated second vehicle location information using a coordinating satellite identifier. Then, a characteristic value calculating unit calculates a plurality of characteristic values indicating a state of a ground surface which is the observation target based on the positioned radar image data.

1459826539-1c08deb9-a6e2-43f7-8828-d9e6545025a6

An X-Y digitizer system is described for embedding within a host device, such as a tablet PC, a mobile telephone, a personal digital assistant or the like. The acceleration device resides in a communication path between the iSCSI initiator and the iSCSI target. The radiation signal is modulated by the blocking effect of a chopping wheel or a fixed polarizing filter and a rotating polarizing filter. Direct fulfillment and post-sale transactions such as returns and equipment replacement are also provided. The device has end surfaces that oppose each other when extended, the opposing end surfaces being arranged to be suited to serve as a longitudinal compression abutment while enabling the thus-made hinge to fold back at least in a direction away from the extended state. The innovative structure, allow to all specialized operators to move forward underwater even if the immersions will be made in depth and for prolonged for long time periods, through the use of a motorized propulsion module.

1459826539-6cb5ceb4-8bb9-4991-92a5-aa2ec5f7c064

The present invention relates to Class-D amplifiers, and in particular to bit-flipping sigma-delta modulator implementations of such amplifiers. The inlet end is configured to receive an exhaust gas from an engine. Laws of set theory are applied to the structured database schema data to identify data definition language and data manipulation language scripts that are associated with a particular version of the relational database. The whole preassembled drive means unit is held in position by the mounting aid, although one or a plurality of the drive means wheels of the drive means unit are not installed. In two embodiments the beam splitter has an internal surface including three zones. The standoffs are also used to determine

a preferential tool position.

1459826540-19029a2f-c4a6-4ff3-bec8-0f1455a897d2

A method of marking an absorbent article which has a liquid pervious top sheet, a liquid impervious back sheet, and an absorbent body enclosed there between. The aim of the invention is to be able to replace the casting rolls with minimum mounting, and to simultaneously reduce the thermal load of the casting rolls and the adjacent units. The system and method may be used to provide upgrade information for a plurality of networked computers.

1459826540-75a9514f-0524-4dda-b70a-38a230eea2e1

A gel tray to be inserted into an electrophoresis trough having stop members and a stop plate as well as engaging members to securely abut the plate to the trough body. The ball valve assembly includes a body with a cavity therein and a ball positioned in the cavity with a passage therethrough, and a low-pressure valve seat and a high-pressure valve seat for locating the ball therebetween. The inner circumferential face of the rotor is provided with a magnet 5. More specifically, for maximum-phase channels, the filter coefficients are computed based on the channel estimates reversed in time, and the filtering and equalization operations are performed with the received block of symbols in a time-reversed order. A multi-section probe for an impedance tuner system may include a plurality of probe sections and a holder structure for mechanically supporting the plurality of probe sections.

1459826541-349c6df4-526e-49c2-bb76-306f26d5504d

Erythropoietin, a member of the cytokine superfamily, is a pluripotent molecule that is involved in a number of signal transduction pathways that include the stimulation of the production of red blood cells and the protection of the central nervous system from acute injury and ischemia. Moisture is added to the shredded paper particles at the bonded fibercellulose product line, and bonded fibercellulose insulation products are produced with the bonded fibercellulose product line from the diverted portion of shredded paper particles and loose cellulose insulation is produced from shredded paper particles that are not diverted from the shredded paper particle line. The method further includes posting the second data to the network for delivery to the second node; receiving the second data at the second node; and from the received data, delivering the first data to a second ULP operating on the second node.

1459826541-5b7133ce-8e22-40b4-ae0f-becc7fa61eec

The profile of a structure having a region with a spatially varying property is modeled using an optical metrology model. As a result, unnecessary lock-out operations can be prevented and a program operation or an erase operation in a semiconductor memory device can be executed stably. Also, an invocation to the newly created method is added at the copied-from location and the intended pasted-to location or an invocation to the newly created method is added at the copied-from location.

1459826541-63106339-acef-4854-85d2-02bc5446cdfd

Digital signals are transmitted on a bus at given instants selectively in a non-encoded format and an encoded format so as to minimize the switching activity on the bus. Also provided is a method of polishing a substrate using the chemical mechanical polishing pad. Preferably, the pins are made of the same material as the beamsplitter and compensator, and all three components are made of Potassium Bromide or Calcium Fluoride such that the optic instrument can operate to scan into the mid or far infrared. The probe is configured to address each of the cells of the array individually, and to be chemically isolated from all of the other cells of the array. This allows high-precision alignment with little or no dependency on pattern density or shape, differences in luminance between images, and uneven luminance within individual images.

1459826542-9949be8a-afa6-4fdd-895c-6283a7269f57

In an electric power steering device, an actuator generates steering assistance power in response to torque transmitted by a steering shaft, the outer circumference of which is covered by a torque sensor detecting the torque. A list of the common media content of the first terminal and to the second terminal is displayed via the first terminal and the second terminal. The grenade is armed after a sequence of events have occurred including reaching a desired depth and a desired passage of time. The profile may be downloaded a physical handset for implementation of a user interface at the physical handset based on the personal preference and usage information of the profile. In particular, font generation and typesetting methods that are applicable in a 3-D gaming environment are described. The second insulating layer has a relative permittivity that is lower than the relative permittivity of the first insulating layer.

1459826542-edbaca64-a77b-4e05-93c9-936bbfdf897a

To provide an endoscope objective lens which has a lens constitution of a relatively small number of three pieces, a short total length of lens, and various kinds of good optical performances starting with curvature of field. The positioning or spacer block is a generally rectangular block having corded-out cavities to reduce weight and tabs or projections for cooperatively engaging the sides and top of a support post as well as the edges of the guardrail during roadway safety barrier system installation. The pre-sintered PCD table may be substantially free of leaching by-products in a region at least proximate to the interfacial surface. A variable resistor is used to set the regulated level of the voltage output.

1459826543-2a5652b7-109c-44f9-a338-cb76bd6cad6a

The invention describes a point-type, spring-supported suspension means for noise protection sheets. The system incorporates a real-time digital signal-processing algorithm that detects the impact signature, processes it, and calculates the time-of-arrival. Also provided are therapeutic and diagnostic methods using targeting ligands that bind an irradiated tumor. Any number of attachments may be used in a stacked manner. The device has two jaws which can be moved together in a housing by means of the drive and, at least one end, are each in zero-play contact with an arm of a scissors-type arrangement, the opposing arms of the scissors-type arrangement being in zero-play contact with an output drive element which is rotatably mounted and connected to the adjusting element. In an alternative embodiment, a laser interrogation technique, a first incident light outside the absorption spectrum is reflected off the metal contacts leads, and a second incident light within the absorption spectrum is directed at the detected locations of the reflected light, those portions of the polymer in turn dissolved by the developer.

1459826543-3338460b-c7ac-4527-9705-1d2329d6292b

An improved catheter system having an ultrasonic imaging transducer coupled to a drive cable disposed within a lumen of a flexible tubular catheter body. Each memory cell includes a storage element, such as a pair of cross-coupled inverters, that is connected in series with a pair of power switch transistors between a power supply node and ground. When data is sent from the controller to a module, half of the data is sent to the module in one direction along the ring and half is sent in the other direction, through the other module. The substrate includes a rigid substrate material, which has a surface region capable of acting as a handle substrate. Application to the production of rare earths or nuclear waste processing, especially to recycling operations carried out on spent nuclear fuels is also discussed. Pressure transducers are provided to monitor and report pressures at the wound site or internal to the canister.

1459826543-aa581029-2847-41d0-af48-375942b8c5db

An implantable device for delivering cardiac pacing therapy in order to improve

cardiac function is programmed to allow some amount of intrinsic activity to occur without otherwise disturbing the pacing algorithm used to deliver therapy. Upon printing, an external server conducts an authentication process. The emoticon is then transmitted from the sender to the recipient along with the link or association such that the recipient can hear the audio when the emoticon is displayed. The controller is movable in the radial space of socket between a locking position and a releasing position.

1459826544-a1c6da05-f993-4ac9-9688-d0d8fc3e9b7c

The invention relates to a novel emulsified composition comprising major amount of an aqueous phase, a minor amount of an organic phase and a minor but effective amount of at least one emulsifier to emulsify the aqueous and organic phase resulting in a water in oil emulsified lubricants, in particular an emulsified greases. When docked, the top cover on the traffic board provides a weatherproof cover. The boost type power converting circuit receives an input voltage and generates an output signal at an output terminal thereof according to the input voltage, and outputs the output signal to a load. The multi-modal vinyl ester resins may contain a reactive diluent, though generally, lower reactive diluent contents are required for such resins than for similar, commercially available vinyl ester resins. When the resource availability equals or exceeds the resource requirements for a group of instructions, those instructions can be dispatched simultaneously to the hardware resources.

1459826544-b80439d6-0960-4680-b8d5-91a9c0d2c1cc

Techniques are described for securitizing, administrating and trading various index shares securitized by derivative, cash-settled instruments on the underlying index. The gradient barrier with a composite structure of metalmetal salt of different compositionmetal such as  $TaTa_{N1}u_{2212}xTaTa_{N1}u_{2212}xTa$  is proposed to replace the conventional barrier for copper metallization. Even when an electrostrictive vibration is generated in the multilayer capacitor upon voltage application, a joint surface joining a substrate connecting surface and a terminal connecting surface together in the metal terminal can flex, so as to mitigate the electrostrictive vibration, thereby preventing chattering noises from occurring. The injection of the wastes or other materials may be carried out continuously or intermittently.

1459826545-3ece3952-cf85-4707-ae2b-406ff84df8b0

The present invention provides a small fuel cell system including a secondary battery, in which deterioration in the secondary battery is suppressed regardless of a temperature condition. The improved integrated circuit package provides increased operational bandwidth between different circuit devices, e. The displayed marks convey golf club head configuration information. A main portion of a first conductor that supplies the first voltage to the digital circuit of the pixel driving unit and a main portion of a second conductor that supplies the third voltage to the digital circuit of the signal processing unit are isolated from each other. The finally calculated result is used as falsification detecting data for detecting whether the data to be encrypted is falsified data.

1459826545-690985db-bba4-4bfa-adc2-e5a55076f251

A method for error simulation in a data storage subsystem providing abstractions of one or more storage devices. A second connection connects the system to the power bus of the portable electronic device. Therefore, it is possible to provide a user with a single PIP image in which various sub-images are graphically represented in 3D. When the arms are connected together, the intake valve performs an ordinary open/close operation.

1459826545-7c8e532b-d4ea-4421-af94-02006a6cc19b

A method of manufacturing a screen device for permanent placement of a screen within a plastic structure. The created time signal may be a real-valued signal as

well as a complex-valued time signal which closely resembles an arbitrary initial time signal, including initial time signals which are standard transmit signals for radar systems, and which have Fourier transform magnitudes with notches and stop-bands at prescribed frequency values. The diagnostic tool may comprise a near-point card on which tests for heterophoria and fixation disparity are printed, as well as a graph indicating the expected or normal relationship between the results of these two tests. Animation of one or more 3D objects can be used to trigger a gaming criteria, event or condition. The medical fluid may be fed into the organ from an intermediary tank having a low pressure head to avoid organ overpressurization.

1459826546-739f7437-5c77-4486-bb89-0507488d93cd

A wireless station comprises a transmitter. The test stand supplies a hydraulic fluid to the chamber, and controls the pressure of the hydraulic fluid to simulate pressure cycles in the chamber. The holding element includes means for engagement with engagement elements of the sensor plate. Streaming parser APIs include raw streaming parser APIs, non-validating streaming parser APIs, and validating streaming parser APIs. The knowledge of how the K factor varies with binding efficiency and strength is a powerful tool that can be applied in multiple circumstances. A button contacts the pusher when operated.

1459826546-ceadf4ca-4335-48dd-809c-61d66da14202

Methods and apparatus are disclosed, including an apparatus that has a memory cell array with a memory cell selectively coupled to a bit line. A controlled current source controls the output stage quiescent current in response to a quiescent current signal during a start-up cycle. If a directional event is triggered within the second time period, disable the select event and enable the directional event. The APCI probe is configured to shield the electric field from the corona discharge region while allowing penetration of an external electric field to focus APCI generated ions into an orifice into vacuum for mass to charge analysis. Wherein when the trigger is operated the system is substantially simultaneously actuated moving the window to the open position, moving the door lock system to the unlocked position, and disengaging the release connector from the first connector of the seat belt system.

1459826547-52dc633e-f950-40ef-b790-203df727b25d

A water draining exterior wall structure for a building having a building framework is disclosed. More specifically, compounds for use in the treatment of conditions such as epilepsy, cancer, pain, migraine, Parkinson's disease, depression, schizophrenia, psychosis, and tinnitus are disclosed. In one embodiment, the substrate is moved in the same direction around the reels, with conditions within the chamber periodically changed to result in the continuous build-up of deposited material over time.

1459826547-9c0e4c41-391f-4181-93b6-236472562481

Methods and devices for implementing a camera restriction on a wireless handheld communication device. The unit has a disposal bag dispenser, at least one disposal bag, a receptacle, and a liner for the receptacle. Thus, the power amplifier circuits are provided within the same IC chip to enable a size reduction. Layers of reflective varnish can reinforce reflectivity.

1459826547-fc8b2438-a03b-432c-9b47-4e1930e3e8f8

A catalyst system for the polymerization of olefins is prepared by initially charging one or more compounds of the formula I a or I b, . The particulate polymer and organic polymer binder can be distributed substantially across the work surface the polishing pad, and the pad can have a percent pore volume of from 2 percent by volume to 50 percent by volume, based on the total volume of said polishing pad. The processor divides the required lamp travel into a number of stages dependent on execution duration data sent with the position data, and calculates, for each stage, a new value for pan and tilt angles for the lamp. Since the accuracy of each

process is improved, however, the number of times the judgment is repeated is reduced for a higher processing speed.

1459826548-1e50fe88-a697-4b8b-98c8-fec3556c1d44

A temporary needle holder having one or more lateral surface needle holder apertures configured to receive needles therein. The vehicle also has a functional device operated by a torque generated by the internal combustion engine. A collection tray is secured to the open lower end of the collapsible bag portion. The respective positioning motors are controlled by a controller. The apparatus effectively prevents the steerable wheels from skidding while transmitting power to the steerable wheels when turning the vehicle.

1459826548-9e656f87-a32d-4da1-be43-d6f45106db2f

Aspects of the present disclosure are also directed towards a method that includes maintaining a transmission period which has a start time and an end time synchronized to metrological time. The process includes directing at least three successive gas beams at a molten metal stream inside an atomization chamber, the at least three gas beams being oriented in different directions. The top member is an integrated piece having no separate mechanical button disposed thereon. The processor sends the configuration information to the configuration unit and the configuration unit provides configuration information to the operation unit. A second detector may be included for collecting an X-ray fluorescence signal generated by bombarding the sample with the X-ray beam.

1459826549-0f6c0ea2-d792-4f8d-8b4e-cdf95a8bf371

A graphics display system is provided. A turning support system of the spool comprises a two bearing system, a main shaft and a core shaft. Removal of the selected portions is achieved by forming an opening in a valve septum at a desired location.

1459826549-90c8b3b1-4c97-4bfe-9f31-7ac7843c3ac5

Systems and methods of automatically or semi-automatically loading patient chart information onto a patient room computer system. An autotelic component in the system uses a mapping mechanism to produce an output based on a set of inputs. A second image is accessed that includes multiple blocks, one of which is a second-image block that has overlapping content with the first-image block. The poppet is pressed against one wall surface of the housing by a biasing mechanism, that biases the poppet in a direction perpendicular to the center axis, vibration of the poppet is thereby suppressed. The battery chamber includes ventilation elements for the purpose of increasing the lifespan of the battery.

1459826549-9a1bd8b6-acf1-4331-b144-41b6fffc5743

A timepiece with a multiplication table display is provided. Moreover, the following conditions are fulfilled: B203=0% by weight, or Al203B203u22671. Optional hangers are also used to hang the top edge of the cover to a support structure. A chroma blurring technique to reduce false color artifacts is also disclosed.

1459826549-eb54301b-f15d-4c94-8480-5bfa032bfe26

A method for forming a sub-quarter micron MOSFET having an elevated sourcedrain structure is described. The fixed body includes a peripheral wall, which defines a cut-out portion at an upper end. The process continues when a data packet is received via the source virtual network.

1459826550-aa082687-74e5-4975-b5ad-1fa17d6d04a3

A reticle for use in a photolithography process for exposing a photoresist layer in the production of a component which is formed from a plurality of adjacent exposed areas. Engagement portions on the tools are clamped by the clamping blocks comprising a connector assembly; the tools may be C-clamps, bar-clamps, pipe-

clamps, coupling devices, brackets, standoffs, and like implements. 35 mm, the distance between two adjacent dots of a same line being comprised between 0. Compression techniques are used to aid in the data transfer over an intra-system bus interface. The subsets are assigned to neighboring cells in the system to reduce interference between neighbors. The alternative representation preserves the information content of the actual data values from the original source of data while reducing the storage requirements for storing the information on a medium.

1459826551-15c3360e-0184-4f38-bf79-ff55a051bd00

An apparatus for digging a trench including a cutter device for cutting through a ground surface and a guide with a loading end located rearwardly of the cutting device and adapted for guiding earth from the loading end to an off loading end as the apparatus moves in a forward direction. The grasping device includes an upper grasping unit that grasps an upper part of the bead ring and a lower receiver that receives a lower part of the bead ring. The mobile device can include a display and a processor module communicatively coupled to the display. A control system permits independent variation of pressure, temperature, cooling fluid and fluid velocity, as well as mechanical loading on the test object. Each plane in which a loop lies forms an angle greater than 30 degrees with any immediately proceeding, and any immediately succeeding, plane. The present invention also relates to yarns made from the filaments, and fabrics made from the yarns, as well as methods of making the yarns and the fabric.

1459826551-788db638-53eb-49ed-b4a9-b77c5141bcb8

The invention provides a method of optical imaging comprising providing a sample to be imaged, measuring and correcting aberrations associated with the sample using adaptive optics, and imaging the sample by optical coherence tomography. The sweeper includes a slip clutch mechanism to protect the primary agitator and the motor in case the agitator become jammed. Using a number of pulsed emissions and the transverse spatial oscillations the received signal is influenced by transverse motion and a new autocorrelation estimator is used for determining the velocity vector.

1459826552-9f31f62c-be2d-472d-96c2-1443150daffe

A toner cartridge includes a toner container which contains toner, the toner container having at one end portion thereof a discharge port which discharges the toner, and a member which is attached to an outer peripheral surface of the one end portion. In one example, a portion of a subframe in the navigation data for each of a plurality of occurrences of the subframe in the bitstream is obtained at a satellite signal receiver to produce a respective plurality of subframe portions. The panoramic imaging system and methods are specifically designed to accommodate the long acquisition times of low-cost digital image sensors, despite the motion of the camera during image capture. In a large-angle inclined state of the telephone, first and second engaging sections of the second leg are in engagement with first and second engaged sections of the first leg, respectively. The interlink module selects pixels of the frames from the processed data of one of the processors based on a predetermined pixel characteristic and outputs the frames that include the selected pixels.

1459826553-60fd13b3-8bfc-4c0a-8abb-db40a470b166

A track-based mobile system for use with processes generating air-borne pollutants, for preventing contamination of the atmosphere. A predetermined number of 2D focal plane frames in a boundary area of a previous regional data cube close to a current regional data cube are included in a training set used for codevector training for the current region. The frame includes a top wall and two side walls and two arms extending downwardly from the top wall. The dispersion medium is non-toxic, creates lines having good contrast and can be easily erased without permanently forming black marks on the screen.

1459826554-41587cea-67d2-4d43-86c3-200d88ef6039

A method and apparatus for actively controlling the gram load on a disk drive suspension assembly and to a disk drive using the present disk drive suspension assembly. The insulative housing has a tongue extending to the receiving opening and a cavity under the tongue and communicating with the receiving opening. At least one of the layers has pores therein, and at least one other layer has pores therein and contains, as catalyst components, a noble metal, alumina and a complex oxide mainly containing ceria, zirconia and one or more rare earth elements other than cerium. The value of the measurable capacitance can then be determined as a function of a representation of a charge on the filter capacitance and the number of times that the charge transfer process was performed.

1459826555-92ab31f9-597a-433b-a04d-329c789ef114

A method of forming a base for a color filter layer of an image sensor is disclosed. The blotch may be in just one of several separations and multiple separations may be used, for example, to identify the blotch. The main electrode layer is deposited such that a {111} plane as a closest-packed plane of the main electrode layer has a constant gradient with respect to a surface of a substrate, and thus electromigration or stress migration can be suppressed in the interdigital electrode sections. According to the invention, during the coupling phase, one hydraulically-pressurised chamber can be communicated with an atmospheric pressure chamber, using at least one longitudinal groove or similar element which is disposed in the tubular coupling part or in the outer tubular part. The fitting section of the male holder is fitted into the insertion hole of the female holder. , both the inductive element and the capacitive element are sized such that the oscillation frequency is between 30 and 300 gigahertz.

1459826555-d8eb4ee4-49a9-4e5f-a411-86a43af514a5

An apparatus for securing a component in a computer system includes a housing having a component bay including a first and a second positioning device in a first sequence. A selected picture is switched on the basis of the change of the sound, and in the meantime, a composing method of a frequency-analyzed picture and the selected picture is changed on the basis of the change of the sound. Using the aggregated payment amounts, a first payment total and a second payment total are calculated and distributed to the host of the event and a second entity, respectively. The invention can include a graphical user interface that permits rapid and easy selection of various options for nodes displayed within a network diagram. By this method, the conventional eight masking steps are reduced to six masking steps, and as a result, simplification of the manufacturing process of the x-ray detector is accomplished, thus resulting in reduction of production costs and enhancement of productivity is accomplished by minimizing the possibility of occurrence of inferior products. In one aspect, a computer system adapted to play audio files comprises a system CPU, memory, at least one drive comprising compressed audio data, and an audio controller coupled to the system CPU, memory and drive.

1459826556-8e78006a-5e19-46e7-9f1d-17c2c04c771c

An electronic whiteboard capable of being drawn by using marker pens of several colors and one penholder, and a penholder for use in such an electronic whiteboard are disclosed. A pair of arms are pivotally mounted to said upright support, generally at the top thereof, for rotation from a collapsed position, in which the arms extend generally side by side upwardly from and generally in alignment with said upright support, outwardly to an operating position in which they extend outwardly in opposite lateral directions away from one another. The MMW oscillation module generates a modulated MMW signal based on the modulated data.

1459826556-d43c2e89-85b5-424c-9296-709ed95ba3c7

A system for automatically processing claims is disclosed. The third ceramic layers and the first and second outer layer portions contain a perovskite-type compound

represented by AB<sub>03</sub> where A contains one or more of Ba, Sr, and Ca, B contains one or more of Ti, Zr, and Hf, and O represents oxygen) as a main component. The charges of the first charged sectors of the first and second plates have a first sign and the charges of the second charged sectors of the first and second plates have a second sign that is opposite the first sign. The server computer checks the subscription file stored on the network for any changes which may have occurred to the file since the previous checking of the subscription file preferably by comparing the last save time stamp to a time stamp on the subscription file stored on the network. Thus, some embodiments may prevent two different gate conductive layers from overlapping with each other in the border region. The rear flexible blade includes at least one aperture extending between the outer surface and the inner surface and spaced from the wiping edge.

1459826556-d4bd30f6-9673-433f-bf7f-c0bd305b70c5

An air-floating carrier type wind power collection device includes a pair of ailerons provided on each of front, middle, and rear sections of a floating body. Between the channel region and the drain region, a region having a higher resistivity is provided in order to reduce an Ioff current. In a further alternate embodiment, an offset is provided in the drive system.

1459826557-2023b446-7c3c-421c-897f-0e6f86f0de8f

A method and system for adaptive aggregation of data in a Wireless Sensor Network is disclosed. Unauthorized transactions may be stopped before processing through an account to enhance the security of transactions and decrease fraudulent transactions without the account holder seeing a negative transaction in their account. The emitter of the bipolar transistor is connected to a node between the input terminal and the DC blocking capacitor. The vending machine receiving, from a customer, a selection of a first product that the at least one inventory group includes. Thus, pitch of the user can be measured based on the body motion component both when the user is running and walking. A hybrid encryption mechanism, based on public/private key pairs enables signed and secure communication.

1459826557-a125fe4c-a86f-4799-a218-ff664dd32dca

Embodiments of a method and apparatus for variable sensing using the frequency domain are taught herein. The multi-symbol encoder circuit is operable to encode data into a plurality of symbols, each symbol uniquely defined by a signal transition and a signal region in a carrier signal. The upper unit includes a slide mechanism which can be pulled out both forward and backward.

1459826557-fe6e1e45-2b4f-4841-89e7-6a8770f3de2d

An inkjet ink composition includes water and effective amounts of one or more of: derivatized 2-pyrrolidinones; glycerol polyoxyethyl ethers; diols; or combinations thereof. The compounds have a general Formula I wherein B, R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, R<sub>4</sub> and R<sub>5</sub> are d. The CF<sub>3</sub>CClu2550CH<sub>2</sub> is preferably converted to CF<sub>3</sub>CFClCH<sub>3</sub> using a SbCl<sub>5</sub> as the catalyst which is then transformed selectively to 1234yf, preferably in a gas-phase catalytic reaction using activated carbon as the catalyst. The flexible lower electrode also may be patterned to establish a second current flow path between portions of the patterned flexible lower electrode through the chemical, if present, upon application of voltage between the portions of the patterned flexible lower electrodes.

1459826558-552e8656-6402-4d98-8c06-076c09f1d885

A liner for use with a prosthesis comprises an inner layer, a cushion layer, an outer layer, and a bead defining the upper edge of the liner. A movable mass is disposed at the overlapping position, and the rotatable member rotates relatively to the body by hydraulic pressure. A valve is located in the fluid supply channel and is moveable from a first open position to a second closed position where fluid flow through the channel is substantially restricted.

1459826558-74598410-db9b-4a5a-a6be-2fdc6e904f8c

The present invention provides a method of designing a redox flow battery system that can prevent system efficiency loss caused by weak generation power or load power at the time of electric charge or discharge, without using any lead storage battery, and can also provide further improved system efficiency. For each of the pixels forming image data, each pixel in the image data is assigned to a printing element for outputting a pixel value of the pixel. The fixed critical flow nozzle has an orifice throat with a fixed effective cross-sectional area.

1459826558-d9b6b3ef-cdc2-443b-9be8-309114e361d4

The disclosed subject matter, in one embodiment, provides techniques to signal inter-layer texture and motion prediction from different direct dependent reference layers. Specifically, the invention provides male external catheters having a drainage stem designed to reduce or prevent kinking that can occur during use when a drainage hose fitting and drainage hose are attached to the catheter. The algorithm detects and counts the pulses in order to determine the number of revolutions the shaft has rotated.

1459826558-f53b3f64-599b-4ea7-8e9e-408e4ea2a4db

A gas-fired water heater is provided with a combustion shutoff system which precludes further combustion within the water heater's combustion chamber in response to a combustion temperature therein reaching a predetermined level correlated to and indicative of a predetermined, undesirably high concentration of carbon monoxide present in the combustion chamber. The connector holder has a flange for holding the grommet, and includes lock arms for holding the connector holder on the panel by engaging the front edge of the mount hole. The exterior envelope of the module housing is configured to be plugged into the receptacle assembly. A detecting member is vertically movably fitted into the detecting hole. A gate contact is formed over the thin film of nanoelements. The human organs are then measured to assist in the patient's diagnosis.

1459826559-d56f656b-f7e0-414e-b8b9-374a1855bd70

A wired transmission path includes first and second differential transmission paths. The hole trimmer also includes an actuation mechanism for reversibly moving the first and second cutting surfaces towards and away from each other. The combination of the centrifugal force and the electromotive force increases the removal rate of the polishing byproducts. At least one surface of the promotional token has promotional indicia visible thereon. In certain embodiments, PlGF ligands may be administered to subjects to ameliorate other angiogenesis related conditions, such as macular degeneration.

1459826560-45b1c796-cbb6-4177-a57a-2a4708ecb14c

Systems and methods are disclosed for creating a self-extracting file from any given input file type with minimum user interaction. This is done by checking these PIDS and other information in three states; key on engine off, key on engine cranking, key on engine running. Thus the quality of the LCD can be improved.

1459826560-7ccde620-894c-4d05-b744-81e39c1163ad

A self testing fault circuit interrupter device comprising a fault circuit comprising at least one line monitoring circuit, at least one line interrupting circuit and at least one fault detector circuit which is configured to selectively operate said at least one line interrupting circuit when a fault is detected. The suction roller is independent of format and therefore can be universally used for transporting flat material blanks, particularly label blanks. In addition, a device for implementing the method is provided. The compass includes a magnetized material floating in the fluid, wherein the magnetized material is operative to indicate Earth's magnetic north.

1459826560-d82951c5-2374-4ad8-8383-01f972d18482

The present invention is directed to methods for removing CO<sub>2</sub> from air, which comprises exposing sorbent covered surfaces to the air. Provisioning information may be updated in the network using provisioning information provided by the client and vice versa. The coronary vein electrode may be coupled to a single sense amplifier to detect the cardiac signals. After exposure, the fiber is desorbed at the injection port of GC-MS. In these methods, the ion channel modulator compositions and formulations are administered locally to an individual afflicted with an otic disorder, through direct application of the ion channel modulator compositions and formulations onto the auris interna target areas, or via perfusion into the auris interna structures.

1459826561-03ee6828-36d0-4755-899a-da2e041ffdc5

An exemplary method of reducing the volume of a stomach comprises providing an adhesive applicator and a biocompatible adhesive. The method includes receiving by a processor via a communication network supply temperature data indicating a supply air temperature in a duct coupled to an HVAC unit. The ground defines a void having: a central portion occupied by the positive electrode in use; an annular channel surrounding the central portion; and a plurality of lobes, each being positioned with respect to the central portion in a manner analogous to the placement of the planet gears with respect to the sun gear in a planetary gear. In a method of providing an output voltage near the power supply voltage of an amplifier, a first stage output voltage ranging to within a transistor turn-on voltage of the power supply voltage is produced. As a result, the transmission basic unit does not require elements for generating an axial force that supports the case cover on the wall of the case.

1459826561-08655867-c4c9-4707-b07e-d997cbfaadfd

An input/output circuit operable in input and output modes and including an input/output terminal, pull-up and pull-down output transistors, and first and second logic circuits operated in accordance with data and an enable signal. The bottom plate layer is formed to define a receptacle, and a rim which defines an opening to an interior of the receptacle. The central server hosts a training administration module which has access to a user database, a course library and a course creation module. Active treatment cells are defined by spaces within the spiral winding and by interleaf spaces thereof. The motor controlling section controls the brushless motor based on the simulated signal and the normal magnetic pole signals when the signal generating section generates the simulated signal.

1459826561-80196cbc-99e0-4b4b-97fd-8ab2cd7d3403

An image processing apparatus is provided with an area sensor which is formed by arranging sensor components for a pixel in a two-dimensional array and is attached in an inclined manner with respect to a reference installation position. A ridge depends inwardly from the jaw face toward the longitudinal center axis. A transmission policy is determined in response to the classification and contextual information.

1459826562-560a12f0-c4d7-40fd-83c9-7efd09fab0b1

A lawn mower fluid dispenser includes a fluid dispensing device for a riding lawn mower having a front end and a rear end. The main pipe section has formed thereon a curved section provided between the exhaust gas inlet sections and curved in a shape protruding to the side opposite the exhaust gas inlet sections. While the second p-type semiconductor layer is grown, a p-type impurity other than magnesium is added to the second semiconductor layer. When the system is operating, the data detected by the pressure gauges, power meters, and flow meters are compared with the built-in data to obtain the optimal energy-efficient conditions as the operational criteria of the system of the present invention.

1459826562-d0554993-c289-4b2c-96b5-35293ab06897

This invention relates to an electrophoretic display comprising cells of well-

defined shape, size and aspect ratio which cells are filled with charged pigment particles dispersed in a solvent, and novel processes for its manufacture. The computer system includes a database which maintains data for a plurality of known products, each known product associated with a respective standardized product code. The invention discloses isolated DNA molecules and DNA constructs encoding C2GnT3 and derivatives thereof by way of amino acid deletion, substitution or insertion exhibiting C2GnT3 activity, as well as cloning and expression vectors including such DNA, cells transfected with the vectors, and recombinant methods for providing C2GnT3. Transconductance differences of a plurality of adjustable differential pairs among the differential pairs are obtained according to the original transconductances.

1459826562-f210530f-6f30-48b6-b5a4-8be591eb26d5

A light-emitting structure includes a p-doped region for injecting holes and an n-doped region for injecting electrons. The computer accesses the primary data of this patient and outputs them to the user via a visual display device. In a further embodiment, the RFID tag includes a passive loop in proximity with the RFID tag to improve the signals received and transmitted by the tag. The wear surface is not disposed on at least a surface portion of one of the first and second flank surfaces and the edge surfaces. When a user steps on the mat, the detection module and the control module detects the orientation and position of the footprint to determine whether the user is facing or facing away from the toilet and sends control signals to the automated toilet seat and lid lifting and closing device to operate accordingly. Managed objects associated with the feature monitors usage of the feature and such that the feature can be disabled when a threshold usage has been reached and the trial period is over.

1459826563-182a86e6-c684-4b69-9e38-21aaadd3375a

A Safety Instrumented System for use with a process control system receives pressure of process fluid in the process piping. The method includes the steps of receiving an incoming offer by a node, filtering the offer by an in-throttle to determine if the offer is permitted to be processed by the node prior to processing by the node, processing a permitted offer, and sending the processed offer to a designated target. The proxy server permits a given user's initial POP check to proceed on through the network to the mail server. Any change in the biomarker in the subject relative to the biomarker in the control subject provides information to evaluate therapeutic efficacy of an administered drug or a toxic effect and to develop the compound further if desired. 210H-60P and its ester derivatives are antiglucocorticoids for the treatment or prophyl axis of diseases associated to an excess of glucocorticoids, in particular for treating Cushing's syndrome, iatrogenic hypercortisolism or depression.

1459826563-1acedbf6-ce71-43bb-890a-c8452417ce4d

Tunnel field-effect transistors are regarded as successors of metal-oxide semiconductor field-effect transistors, but silicon-based TFETs typically suffer from low on-currents, a drawback related to the large resistance of the tunnel barrier. The target system exposes data through multiple web services. The radiator fin is bent in the form of continued rectangles to form a hollow grille with multiple segments. The pluralities are angled with respect to each other by less than about 90° and intersect each other so as to form total internal reflection structures.

1459826563-6df1e9e0-3688-4a64-8859-bff80a6bc840

Systems and methods are disclosed for processing information associated with monitoring persons devices and weapon fire location information. The image processing apparatus including an authentication unit adapted to execute user authentication, and an execution unit adapted to execute processing on image data with a plurality of processes as a sequential processing flow while cooperating a plurality of different functions with one another. The system also includes a clock

and data recovery device configured to receive the first plurality of electric signals.

1459826564-b7d2991a-0463-4897-9a36-167307392c9a

A gas exchange control mechanism for an opposed-piston engine which opens and closes inlet and outlet slots provided in the cylinder irrespective of the position of the pistons. A known corrector for correcting third-order and fifth-order aberrations of the objective is embodied with eight quadrupoles and three octupoles. The mechanical lock aspect of the user interface may comprise simulated rotating elements that may be operated by user-induced sliding interactions upon the user interface. The sensed temperature is used to detect any cold spots that may dynamically form on the evaporator surface. The decoder is non-symmetrical to the encoder for decoding merely a part of the encoded input image with improved subjective perception quality. If a paper sheet remains in the stacking section after the double-sided image forming mode is completed, it is also determined that an accident has occurred and the double-sided image forming mode is executed again.

1459826564-fab1ce76-5fd2-4577-8281-26f9a8db9acc

The current generating unit in the transmitter generates output currents in accordance with a plurality of logic values. This is to provide an elevator car which can be preassembled outside of an elevator shaft as a unit ready to be installed, with as many functional parts as possible. In one embodiment, authentication is performed by comparing the real time captured heart beat profile against a reference heart beat profile. Onset of the torque exchange delays until the short-term torque capacity is sufficient for receiving all torque load from the offgoing clutch without affecting output torque. The compounds of the present invention are cyclic polyketides that include . In this context, the weightings  $G_i$  that are used for the route calculation are varied as a function of the time of day.

1459826565-2f75be30-8c50-4957-a665-14d02ef2e5c7

An apparatus and a method for arraying beads that allow a bead array having been difficult in mass production to be manufactured easily and accurately are provided. The present invention enables the emulation of persistent group reservations on a non persistent group reservation-compliant device, including a shared disk, to enable the disk's implementation of persistent group reservation-reliant algorithms. The message sent from the L0 network is received at the node in the L3 network. Advantageously, a plurality of outsole elements is provided that are adjustably mounted on the sole portion independently of the other outsole elements.

1459826565-b56d088d-a24b-4760-94af-22d1d7ff297d

A tool for subterranean use employs relative movement between a housing and a piston by pressurizing and removing pressure in a variable volume defined between them. It may also retain a second information device, such as a memory drive, separate from the first information device. The repeated REU includes the two registers, two Galois Field adders, a Galois Field multiplier, and multiplexers to interconnect the elements.

1459826565-fb154488-aa7f-486c-98a2-a68bb2ada6e6

This invention relates to a laminate which changes in dimension to such a small extent as not to cause curling and warpage when the ambient humidity changes and is useful for flexible printed wiring boards. There are arranged a brush roller for temporarily collecting post-transfer residual toner, and an electrode of which inwardly-curved face being in contact with the brush roller in a toner charge apparatus. The filter outputs are combined to form one signal for digitization.

1459826566-2c352efe-76aa-4a81-b0ac-de60584a83a1

The invention features somatostatin antagonists having a D-amino acid at the second residue. A cache size of a computer cache memory is determined, and a first data

block is placed within a main computer memory. Shell is moveable with respect to shell to provide the helmet with two configurations.

1459826566-721e91bf-6a2e-43ae-bb3f-557217f982b7

A liquid crystal display includes first and second pixel electrodes, first to fourth data lines, and a first gate line. A fluidity resistance path is provided in the flow path between a nozzle plate portion surrounding the nozzle and a portion of the flow path member opposing the nozzle plate portion. If the process is executing inefficiently, the processing unit may alter power consumption of the portable communication device. These cells may be utilized as either an expression vector for promoting angiogenesis or for cell transplantation and fusion through myogenesis. The method includes determining for the active window a scale value and an offset value associated with the display of the associated one of the documents. The paint brush head is detachable from the paint brush handle.

1459826567-1a90dd42-de95-4a29-a1a5-7db0605d0098

A container has a lid and a locking mechanism. The electric power supply system is constructed by a vehicle fuel cell provided on a fuel cell vehicle, a stationary fuel cell provided in a stationary power supply system, and a power converter for converting direct current powers from the vehicle fuel cell and the stationary fuel cell into alternating current powers. If the transmission-independent control module fails during transmission emergency-mode operation, the startup shift element is capable of actuation by means of the electrical triggering of the emergency-operation mode shift valve via the transmission-independent control module. The hydrogen optimization system may use both a genetic algorithm configured to evolve a population of solutions to improve the quality of solutions over time as well as directed heuristics to identify a superior operating state for the hydrogen pipeline network. The second lobe may be fixed for rotation with the second shaft and adapted to open a second valve in communication with the engine combustion chamber.

1459826567-296d0b03-f80c-483c-85f5-fa0a66032245

An information provision system 11 is provided which provides in advance a travel data package 10 via the Internet 1, in which data effective for measuring the current position such as the longitude and latitude information of a travel site location is stored based on itinerary information in such a manner as to be associated with an itinerary. Heat stored in exhaust from an auxiliary generator may be used to convert urea to ammonia used by a Selective Catalytic Reducer system, and/or the auxiliary exhaust may be used to heat the main exhaust flow before entry into an SCR. The flexible member provides flexible mechanical support to the connector member with respect to the insert. The submodules are electrically connected in series.

1459826567-5c76d979-2fbb-4ce4-b532-fab55b654b13

A fuel reformer burner in which fuel gas and anode-off-gas may be burned and backfire may be prevented during combustion of AOG includes a fuel supply portion, an anode-off-gas supply portion; and a combustion air supply portion. A means is presented by which any desired number of parallel implemented turbo decoding processors can be employed to perform turbo decoding that has been performed using a QPP interleave. The production tubing is sealingly attached to the tubing hanger, and the perforating gun assembly is coupled to the production tubing. The reduction ring carrying the filament is deployed adjacent a mitral valve annulus and the filament is translated relative to the reduction ring to deploy the barbs through the exit ports and into the annulus and to further translate the reduction ring with deployed barbs to reshape the annulus. 05, wherein the maximum emission wavelength of light emitted according to electroluminescence of the element is longer than the maximum fluorescence wavelength of the fluorescent compound.

1459826568-2a1e08ab-993e-4606-af29-87c07e12cf6a

Audible navigation system produces direction updates, scheduled at predetermined time windows, during which the audio environment is monitored for the existence of a conversation. The APU includes a fuel processor and a fuel cell, the fuel processor being provided with steam, air and dimethyl ether. A traction roller transmission mechanism is disposed in the rotational power transmission path between the power generator and the coupling portion. Each of the detachable heads includes a receiving region having a receiving member and temperature sensing circuitry, as well as a food piercing member for sensing the temperature of food at an internal location thereof. The radio frequency absorber, according to various embodiments of the present invention, is configured to reduce cavity oscillations and/or cavity modes and resonances within an integrated circuit device, such as a device that houses a monolithic microwave integrated circuit. The brake assembly is preferably operable to releasably hold the tool plate at a position relative to the connector and the handle on operation of the actuator.

1459826568-3fb75f21-b209-45c6-a730-de0f6010be9f

A method and apparatus for accessing a document-processing device is provided. The integrated circuit further comprises a plurality of scan channels. Through the use of the power converter circuit in accordance with the present invention, high switching losses are avoided thereby resulting in an increase in the overall efficiency of the power converter circuit. The proximity head is configured to perform operations including applying a fluid onto a region of a surface of the substrate, such that the fluid is continuously flown so as to substantially fill the region between a surface of the proximity head and the surface of the substrate. In some embodiments, the monitoring devices include a camera and a microphone. Accordingly, if the apparatus discovers a remotely powerable device attached to the computer network, the apparatus can provide power to the device remotely.

1459826568-ab036297-4845-416a-a2ab-d29754689b6c

In the typical embodiment of the invention described in the specification, a prismatic semi-membrane LNG tank is assembled within a support carriage surrounding the top and side walls of the tank and is connected to the tank by a plurality of load bearing insulating support blocks affixed to T-shaped beams on the tank and received in channel shaped members on the support carriage. The component is used to process a work piece within the process chamber. A pair of tether portions is coupled to the clip by the coupler. The bullet nose is rounded and unperforated.

1459826568-b9da1dc6-c53a-424e-afe3-43d3a8a6ed98

A vacuum hold-down for a hard copy device comprises a platen having plural vacuum zones arranged in a side-by-side array across the platen. An internal cavity is formed between the ends and holds a volume of propellant material. A device according to the invention can be used in for instance mobile phones, streaming internet applications and cable television.

1459826569-4d16bc78-8188-4e03-9bd3-e7f054dda8eb

Methods and systems for assessing and treating vestibular disorders can include displaying a graphic and providing relative movement between the graphic and a user's head. This multilevel memory bus system includes at least one DMA controller coupled to an intermediate bus; a flash memory bus; and a flash buffer circuit between the intermediate bus and the flash memory bus. In particular, the fluidity of aluminum powders having mean diameters smaller than 10 micrometers was considerably improved by the process of the present invention.

1459826569-d9ff9d19-7235-46db-837e-1a98d3da8720

A method of operating a cooling system for a hardware component is disclosed. In one form, a displaceable plunger or piston is disposed within the body portion to extrude the dental material through the discharge orifice and attached flow through applicator. A non-common data identifier is used to identify the at least one non-common data piece.

1459826570-6f17a2a4-3954-418d-a1e2-edad969b1155

Handling problem tickets in a computing environment, in one aspect, may comprise identifying a plurality of tickets generated in the computing environment that are candidates for consolidation. The method includes selecting a small plurality of test solvents from a large plurality of perspective solvents. The injector is compatible with combustion devices that inject only gases, for example, a reheater that provides initial combustion in a power generation cycle or a reheater that recombusts a discharged gas from a gas generator and turbine.

1459826570-db49b88e-f7d6-4645-9a7e-90e48a1d090c

According to one aspect of the disclosure, there is provided an apparatus for performing electrochromatography. The memory device has a package configuration that is compatible with an SDRAM. A first comparator is connected with its positive input to the line on one of the two sides of the sense resistor and with its negative input connected to the line on the other one of the two sides of the sense resistor. An assigning part assigns the Dch and Lch data symbols to subcarriers constituting OFDM symbols and outputs them to a multiplexing part. The arrestor system has a base with at least one tile made of a plurality of particles being arranged such that the particles form a plurality of water drainage passageways and wherein the at least one tile has a compressive strength which will fatigue upon a force being imparted thereto which is greater than the compressive strength of the tile.

1459826571-5fb15f71-521a-45e0-9686-baaf32b86737

An aircraft for unmanned aviation is described. The video camera is composed of a camera body, a video recorder, a monitor, and a digital thermometer; the image processing system is composed of the camera body mentioned above, a computer and a color monitor. When formed into the second position, the end and side panels are folded generally perpendicular to the base to form an open container shape. The lock request includes a request to obtain a lock for the storage resource, and a request to perform an action by the lock-holding node on the storage resource if the request to obtain the lock is not granted immediately.

1459826571-7278116d-d2ae-41aa-9d8d-02f2e0dd98bf

A method of mounting electro-optical devices on an optical element using an auxiliary substrate is provided herein. The inertial mass is mounted and guided on a guide disposed on the slide button and/or the housing. In further embodiments, the mapping may be provided by a data input.

1459826572-2b4ad777-0be8-4e4e-bef0-a6b120250506

Processes for hydrophobically coating a pipette tip by wetting at least regions of the outside and inside of the pipette by with a wetting solution are disclosed. Movement of the ramp portion toward the deployed position rotates a hub in a first direction, and movement of the ramp portion toward the stowed position rotates the hub in a second. These incident reports are combined with host information and contact information and are transmitted to the analysis server. A hydraulic pump in fluid communication with a sump containing hydraulic fluid has a first pump member fixed for rotation with the first rotary member and a second pump member fixed for rotation with the second rotary member such that relative rotation between the first and the second pump members generates a fluid pumping action. If the condition is not met, then the conditional payout terminates.

1459826572-372c1dff-c20e-4c76-85b9-50917b85763c

Insulated-gate field-effect transistors, both symmetric and asymmetric, suitable for a semiconductor fabrication platform that provides IGFETs for analog and digital applications, including mixed-signal applications, utilize empty-well regions in achieving high performance. An audio frequency actuator, which is preferably a magnetostrictive actuator, is acoustically coupled to an end face of

the rod. The counter of the shoe to be donned is positioned within the clip space and the individual is able to maneuver the shoe as required since the shoe is securely held in the clip space. Furthermore, the protein can be produced by gene engineering.

1459826572-fdaa1f12-0ab0-4d28-9f5a-927dbc32b0e3

A computer-implemented system and method are provided for automatically determining rebate eligibility for purchased products. After configuring the first configurable resources, data previously stored in a buffer of the programmable logic device may be retrieved to overwrite at least a portion of the configuration memory associated with the boot-strap configurator. A first engagement surface is supported by the first arm and a second engagement surface is supported by the second arm. If a predetermined count value is reached, the main BIOS is invalid, or CMOS is invalid, then booting is completed using the backup BIOS. The new apple is notable for its attractive appearance, superb texture, improved flavor and long shelf life. Various other aspects are also presented.

1459826573-4ee96e7a-31f9-4823-be96-0cfbabd95994

The multi-layer tape wrapped tubing for effectively impeding the diffusion of vapor is made in a continuous in-line process and has three distinct layers: an inner tubing layer, a middle diffusion barrier layer and an outer jacketing layer. A method of operating the fuel processor for a fuel cell arrangement includes supplying safe gas to the fuel cell arrangement in a first mode of operation, supplying synthesis gas to the fuel cell arrangement in a second mode of operation and supplying processed hydrocarbon fuel to the fuel cell arrangement in a third mode of operation. The base station then transfers the enhanced frame to a network controller.

1459826573-d4a403f6-0b55-446e-a7e0-1e55627dc4ca

A fluid separation apparatus suitable for separating a mixed fluid with different properties and capable of separating a complex fluid mixture efficiently is provided. One system includes a regenerative braking system, a non-regenerative braking system, and a stabilization system. The electrical connection structure includes a through hole formed through the terminal and a connection part formed around the through hole on an opposite side of a piezoelectric element on the terminal. The sleeve portion extends in the axial direction beyond a side surface of the bearing inner ring and is disposeable about a shoulder diameter of the bearing inner ring.

1459826573-eac66c31-1dfb-454d-94e5-cefa826ea44f

A delay locked loop apparatus includes a first delay unit converting a reference clock into a rising clock. The subject invention also concerns methods for synthesizing the compounds of the invention. Feet are connected to the lower section, or to the lower extension section or lower extension arms if provided, and provide a stable base for the ramp on the lower surface on which it is deployed.

1459826573-f5c0268c-124d-4c49-904f-070b258c6cd3

A floating non-volatile memory has a substrate and source and drain regions disposed in a surface region of the substrate and spaced apart from each other with a channel forming semiconductor region disposed therebetween. The interconnect feature may contain an accumulation of the the electropositive dopant at interface boundaries of the interconnect feature to reduce electromigration of the metal during operation. Furthermore, the method may include adjusting the output voltage if the output current reaches a threshold value. The second lens includes a second engaging face facing away from the optical axis and a second engaging structure formed on the second engaging face for engagement with the first engaging structure of the first lens. An inner channel formed through the resilient lead body is adapted to receive a straightening element. Therefore, they have excellent flame resistance and good handling properties.

1459826574-14a577df-649e-4dca-8715-c6d03cacb1f4

A method is provided for calibrating ultrasonic signals passed through a crimp formed with respect to a deformable body via an ultrasonically-equipped crimp tool. By avoiding a separate, onboard data layout engine on the flash devices, the latency associated with operation of such a data layout engine is also avoided. Hence, by comparing a peak of the reflection intensity with the predetermined threshold value, it can be determined whether the detected object is a vehicle other than the host vehicle. The stinger is supported at its upper end in the lower part of the firing line. The present invention defines methods for network intrusion tolerance in terms of the various state transitions that maximize the overall effectiveness of an intrusion tolerant communication network.

1459826574-17401d72-e96a-4fe2-808a-ba9da43e91d9

Embodiments of the present invention provide methods and systems for automated distributed testing of software. A gate insulating layer, a semiconductor layer, an ohmic contact layer and a conductor layer are sequentially deposited, and the conductor layer and the ohmic contact are patterned to form a data wire including a plurality of data lines, a source electrode and a drain electrode of the display area and data pads of the peripheral area, and an ohmic contact layer pattern thereunder. The passive sensor detects changes in a temperature signature around the washroom device.

1459826574-44b508b5-6888-4aa8-8ddf-c1456c9adb5d

A device and method for dispensing a liquid with a gas includes an instrument having a cannula and a low-pressure tip. The first profile portion has a defined width transverse to a longitudinal direction of the profile strip, and the first profile portion comprises a separation line running in the longitudinal direction of the profile strip. The outer containing device is formed by a stent of biocompatible resilient material having memory effect, in a predetermined nominal position, suitable for extending elastically for engaging the outside of the duct, and returning to said nominal position, with containing function, thus preventing the diameter of the duct from increasing and without compressing the duct.

1459826574-67ab9cf5-831c-4cbf-9c50-6d8531ad4188

A system and method for encoding and transmitting data with a spread-spectrum packet-switched system. The purpose of the pet window is to facilitate access to the exterior environment by a pet from a location inside a vehicle or within the confines of a truck bed when access by the pet would otherwise be denied by said window section. The judgment portion determines an area designated in advance, that includes the three-dimensional coordinates detected by the sensor portion. By selectively adjusting a page size the memory bank, the block size is correspondingly adjusted.

1459826575-598e3e10-d207-4c52-9f72-2ef1d996e57c

A method for communicating in a passive optical network, includes receiving traffic from a plurality of optical network units transmitting in an upstream transmission channel, wherein each of the ONUs may transmit at any wavelength within a wavelength band associated with the upstream transmission channel. In one embodiment, a server system is provided that includes a first interposer card that operatively connects one or more server cards to a midplane. Air from the plenum chambers passes out to film cool the interior surface of each respective segment.

1459826575-de479643-926d-4d3a-9ef1-983cbe296321

An indication of the elasticity of a non-Newtonian fluid is obtained by extending a fluid bridge between a pair of relatively movable surfaces that hold a fluid sample therebetween, and continuing a timewise progression of separation between two opposed moveable surfaces in a controlled manner until the displacing extension is great enough to cause a break point in the fluid sample. It permits the fault-

tolerant gathering of dynamic data documents on the World Wide Web. Then, an automatic defect classification is performed according to a predetermined defect database having a defect classification recipe generated from a second semiconductor process. The table data is designed for the recognition of a specific set, or library, of input patterns. Each support arm being pivotally coupled to the printing system for movement about a pivot axis extending substantially in the lateral direction. The structures are realized with phase-locked loops that include half-rate frequency dividers to provide loop output signals with a wide range of output frequencies and with frequency dividers that provide quadrature signals in response to the output signals.

1459826575-f91f79d5-68c8-45a1-b0f6-1df6e2acac8c

Delays in selecting word lines of a NAND memory device are reduced by respectively connecting conductive straps to word lines of a subset of the word lines of the memory device. The controller is configured to control the hydration fluid administration subsystem to administer hydration fluid to the patient to prevent dehydration of the patient. This produces greatly reduced AO registration errors and improved AO performance to enable high order aberration correction in a patient eyes. Modulated light from the various light sources is converted by the sensor into an electrical signal. An additional, complimentary base station, constructed to transmit when the first base station is receiving and vice versa, can be co-located with the first base station to provide full time and spectral efficiency within a coverage area serviced by the base stations.

1459826576-0fbcd070-1e5b-438d-a433-06845efb054e

Disclosed are an image processing apparatus that can decrease such a misjudgment that an area including an extremely small-sized character is judged to be a halftone-dot area when a judgment of a halftone-dot area is performed based on a number of isolated pixels in a predetermined area, and an image forming apparatus that utilizes the image processing apparatus. The rotating starting acceleration of the electric motor is mechanically converted into rectilinear acceleration, and the electric motor may be supplemented with an energy supply obtained from a previously charged energy accumulator which is triggered simultaneously with the start of the electric motor. Methods of slowing or accelerating the hydrolysis and dissolution are given, and addition of bridging-promoting materials is included. The stop flow valve has a biased valve head that engages a seat until the pressure exerted on the valve head by the fluid exceeds a threshold level and the valve opens. A joining tool, composed of a punch and a die having an anvil, is used to jointly displace metal sheets, profiles, or multi-sheet connections, out of the sheet-metal plane, under the action of forming energy introduced by ultrasound, compressing and integrally connecting the same. As a result, providing additional cooling equipment with the drive circuit in the motor-driven compressors is no longer necessary.

1459826576-63675588-9c58-4ec6-92eb-a3bc9e0c13b3

Methods for manufacturing semiconductor devices with contact bodies extended in a direction of a bit line to increase the contact area between a contact body and a storage electrode is provided. The flange structure includes a body portion adapted to extend through a mount hole in the panel and having an outer peripheral portion, and a transverse flange portion having an outer size larger than the hole opening. The plate is shaped such that when it is partially inserted under a heavy object, a forward edge of a lower face of the plate rises above the floor such that the slide will pass over obstacles. Each remote unit is designed to process at least one secondary signal selected from amongst the secondary signals into which the main signal is divided.

1459826577-6ab7c0e0-524d-4909-8e7c-982debe495c1

A device for connecting functional elements is indicated which are arranged in a sliding door of a motor vehicle, with at least one supply source present in the body of the motor vehicle through lines which extend between the functional

elements and the supply source. The forward section is in a generally triangular configuration. The plural attachment straps include two vertical and two horizontal attachment straps each having a bottom surface and a top surface.

1459826578-a5ff6119-4a7a-4eb5-b4f4-6c8d43ae849f

Methods, apparatus, and systems for alternating quadratures differential binary phase shift keying modulation and demodulation radically increase overall energy efficiency of a communication system due to the combined effect of efficient utilization of transmitter power, high noise immunity of modulation and demodulation, fast synchronization, and simple implementation. The comparator comprises a first transistor and a second transistor whose gates form the inputs of the comparator. This distribution is then statistically analysed to determine a compliance probability. Through use of drag or lift-producing devices, the system may be recovered and reused. The source storage disks are migrated to the respective target storage pools. The radar activation component is communicatively connected to the radar network and configured to determine a contentious state at a time division in the period of operation.

1459826579-20f258c9-f3bc-49b4-b028-f4328d3a9f57

An optical device and method for making the same is disclosed. In one embodiment and by way of example, a method for facilitating management of data in an on-demand services environment is provided. The marker deployment tool may further comprise a magnet at or near the distal end. In a second position, light projected by the light source passes through a filtered section of the lamp cover.

1459826579-72695354-9e7e-46cb-bc72-bade374827b8

A method for influencing behavior in young, adult or aged pet animals which comprises systemically administering a behavior influencing quantity of an omega-3 fatty acid or mixture of omega-3 fatty acids. The voltage regulator accommodates multiple configurations of a tertiary winding and a potential transformer connected across source-side bushings or load-side bushings. Methods are used to improve the compression and transport as hybrid DPCM and a dynamic shift of clip range of prediction errors. A thickness of the spacer layer controls a manner of magnetic coupling between the first free layer and the superparamagnetic layer. 5 to about 8 and comprising one or more vinylamineN-vinyl formamide polymers composed of about 10 to about 99 mole percent vinylamine monomer and about 90 to about 1 mole percent N-vinylformamide monomer; b) pressing the paper web against the creping cylinder to effect adhesion of the paper web to the creping cylinder; and c) dislodging the paper web from the creping cylinder with a doctor blade. , open circuit, according to temperature variation.

1459826579-97a91af8-61ec-4855-a6d1-0fe3d62cda47

A receiver with baseline wander correction for correcting a received input signal. Content information of the application is transmitted to the braille display and displayed in a first display area of the braille display. Additionally, the magnetic field applicator is composed of a magnetic yoke having two parallel vertical yoke elements of identical geometry spaced apart a distance from each other, and two transverse yoke elements disposed between said vertical yoke elements. We realized that these discolorations occur when the gradient of the source image is preserved too insistently, at the expense of preserving object and background color. Furthermore, the variation components of the push-pull signal corresponding to the pre-pits are also reflected to a properly small extent in the reference voltage. According to this network management method, when the structure of the bus connected to a preceding communication station of its own communication station is changed, a notice indicating that connection bus information are changed is supplied to the network, whereby all communication stations making up the network can share the connection bus information.

1459826580-49cd3da0-cb09-4434-b198-7bd315551888

Methods and systems for monitoring consumer generated media are disclosed herein. The method may also include detecting an occurrence of a predefined aspect of the tone signal, and setting a local time based on the occurrence of the predefined aspect of the signal. Optionally delay may be used to further enhance the effect. During installation in a sealing apparatus, a heated mandrel engages the inner diameter of the spout aperture thereby pre-heating and physically supporting the fitment during the installation process. A liquid crystal layer is disposed between the first and second substrates of the liquid crystal panel.

1459826580-4d44dc06-2b8e-4531-8a1a-dec9518ecd52

Faults resulting in reception of a still, but unknown, frame are recognized by comparing each received frame of the video signal with its predecessor, incrementing a counter in the event that the difference between the frames falls below a threshold; and generating an alarm signal in the event that the count of the counter exceeds a predetermined count. 3 and a process for its production comprising: coating a substrate with a liquid layer which comprises the organic semiconductor and a material capable of reacting to form the binder; and, converting the liquid layer to a solid layer comprising the semiconductor and the binder by reacting the material to form the binder. The containment device has a spool, and a flexible bladder extending about the interior of the spool. The transfective film partially reflects and transmits light incident onto the film.

1459826580-8aa68916-8faf-4e5b-bce2-9cf763259753

A silanol condensation catalyst including at least the zirconium metal salt expressed by Formula below. The FEC module is configured to receive data and to define FEC code words based on the received data. The first N-channel MISFET has a source connected to the first input, a gate receiving a power supply potential, and a drain connected to the first output. The first optical waveguide includes a first core layer, which has a planar layout having periodic convexes and concaves, and a pair of electrodes, which vertically sandwich the first core layer. If the actual force curve corresponds to the characteristic force curve, then, in addition to the electromechanical clamping force, an additional clamping force of the additional braking device is also taken into account for obtaining the setpoint clamping force.

1459826580-9af76dda-64ab-42fa-b07a-40eaa855b0aa

An intake air control valve of the invention has a valve body and a valve holder, and is attached to a communication hole on a partition wall separating a surge tank chamber within a surge tank of a multiple cylinder internal combustion engine by fitting and inserting a valve holder. A control system controls activation and de-activation of a hydraulic actuator for an engine brake. The closure system includes tensioning elements corresponding to the belt members, and a pulley system connecting to the tensioning elements. Queries may be presented to a user in visual, audible, or both visual and audible format. Next, an edge printing process is performed on the memory layer so as to form M normal memory portions aligned with the M design normal regions and N sacrificial memory portions aligned with the N design sacrificial regions.

1459826580-b159af9f-1b1d-4bb4-84b6-3a129dbca860

A method of selecting an object out of a group of objects. The method further comprises detecting a fault in a volume of data stored in the mass storage subsystem, determining a severity of the fault, and selecting a course of action in response to the fault, based on the severity of the fault. The rise times of the currents are measured and used to interrogate a stored table of rise time against rotor angle for the known current level. The housing assembly also includes a second member that covers the second portion of the biological material container. The polymer formed on the top surface can be efficiently separated from the remaining portions of the polymer structure to form the free edges of the leaflets. A device of the invention has, between the inlet conduit and outlet conduit, a

deflection conduit with a separation element, by which the liquids are separated out and therefore do not reach the measurement element.

1459826581-7c2a579f-eda8-4672-8d8c-7132f1ba653f

Embodiments of the present invention generally pertain to implantable medical devices, and methods for use therewith, that detect exposure to magnetic fields produced by magnetic resonance imaging systems. The method receives an academic unit of time for a healthcare student and identifies one or more corresponding clinical competencies for the academic unit of time to be satisfied by the student. The control mechanism is constructed and arranged to adjust from regulating the flow of a first gas to regulating the flow of a second gas. The slicer foot has a plurality of ribs that are sized and shaped to be inserted between the blades such that the ribs extend beyond the blades when the upper and lower handles are rotated together. The above combination of features of the polymeric material forming the buffer layer provides an optical fiber which is effectively protected during installation operations and during use, and at the same time can be easily stripped by an installer without using any stripping tools, simply by applying a small pressure with his fingertips and a moderate tearing force along the fiber axis.

1459826582-3527e0c7-175b-47a5-bdfc-3ea383f4c06d

The presence or absence of putting round of a yarn is detected according to whether carriers are positioned on a near side or a far side and according to the relationship of connection between loops, and the result is displayed on a monitor. The compositions may be applied to the skin and/or mucous membranes and are useful for treating microbial infections including viral infections. The sustain electrode and the address electrode may be elongated in a lengthwise direction thereof. Such a dielectric layer may be used as the gate insulator of a MOSFET, a capacitor dielectric in a DRAM, or a tunnel gate insulator in flash memories, because the high dielectric constant of the film provides the functionality of a thinner silicon dioxide film, and because of the reduced leakage current when compared to an electrically equivalent thickness of silicon dioxide. These translator object classes have utility either as part of the DFI library or as a sub-library separate from dialogue implementation.

1459826582-77679319-1e83-419b-b393-91c6de2de670

Disclosed herein is a process for preparing 4--1,2-diol sodium salt, at ambient condition and in the presence of a buffer and an initiator, from vinylcyclohexane-1,2-diol. Each contact includes a recess and a pattern of leads cantilevered over the recess configured to electrically engage a bumped contact. A second fiber optic element is inserted into the housing from an opposite direction to position a free end of the second fiber optic element in the housing confronting the first fiber optic element free end. The modules can be implemented by a computer system or systems, software and networks, or by other means, such as paper-based means. The fourth lens element with negative refractive power has a concave object-side surface and a convex image-side surface, and the surfaces of the fourth lens element are aspheric. The reach package format is a format for storing paginated documents.

1459826583-5469f89a-36ec-4049-bf1a-662866d0b3c6

A digital signal processor includes a functional unit configured to execute instructions. A clamp for engaging one stroller handle is located at each lateral end. Each final turn has a tip area which is in contact with an adjacent intermediate turn, the final turn being separated from the adjacent intermediate turn by a first distance which increases from the tip area to a maximum value within a predetermined angle following the tip area. The support frames are fixed to the top corners of the containers with twistlocks, and the support frames support a crane bridge with a hoist.

1459826583-b45c3ff6-e21f-408b-8a71-c58f1fa77e0a

A susceptor for a microwave hybrid heating system is provided, including a hollow member made of a heat resistant material that does not substantially absorb or reflect microwave energy at room temperature and a substance contained within the hollow member. The invention also provides a composition comprising a fluoroplastic comprising bromine atoms, iodine atoms, and combinations thereof and units derived from a fluorinated monomer, peroxide curable fluoroelastomer gum, a peroxide curative, and optionally a coagent. In addition, the present invention provides a full-rail differential logic circuit with shut-off that is more resistant to noise than prior art full-rail differential logic circuits. From the turbine a low-pressure exhaust gas line extends to an outlet.

1459826583-ce5f5a5b-c61f-4f4a-a9b1-dec5e1bcae95

This invention provides for the fully automated, hands free, packing of chromatography columns by means of delivering a pre-calculated volume of slurry and using two different packing modalities to stop the packing when either 1) this volume has been delivered in the column, or 2) when the adapter is moved to reach a bed height corresponding to the pre-calculated volume. This improvement in thermal efficiency is attained without involving a complex mechanical structure or an enlarged engine size. The microcomputer further corrects the corrected sine wave signal or the corrected cosine wave signal to have the same amplitude therebetween.

1459826584-516be8fe-13fd-4597-962a-89a5ceb979aa

A method of constructing an active matrix pixel device uses a universal active matrix comprising a matrix array of switching elements whose spacing defines a base pitch and a pixel array comprising a matrix array of pixel electrodes whose spacing defines a pixel pitch. Oxide spacers are formed on opposite sidewalls of a first mandrel. The uncoiling mechanism selectively uncoils sheet stock from a sheet stock coil indexed to the uncoiling position to thereby provide sheet stock to a downstream processing station.

1459826584-7d567fab-fac3-4f74-b7c4-28b5c6c7652a

A method and device for measuring flow rate of a liquid through a gate in a channel. The light shield comprises a structure formed above a point between a photo-sensitive element and adjacent circuitry. The control system can be operated either through wired connections to a local computer or processor, or through a wireless system, or a combination of both, depending on the specific application. A value of the cooking quotient is compared to the cooking end value using the evaluation circuit, and an appliance function is triggered. Preferably, the pressure under the sealant layer is reduced by expanding the volume of the enclosure space and thereby decreasing the density of air molecules under the sealant layer. A reference phase signal is provided which corresponds to timing information of the scan of a stripe of light provided by the prism.

1459826584-f2716174-dac5-48d4-b279-fe3e37c3826a

A squat exercise apparatus for use with a hip belt comprising an elevated platform with a hole, a weight holder and a guide rod or other guide, as disclosed herein. The hanger has at least four stationary article gripping members and four mobile article gripping members which are fastenable to respective ones of the stationary gripping members. A fiber Bragg grating device and a flow cell device are also provided. If the list of eligible capacitor banks includes at least one capacitor bank the method includes selecting a capacitor bank from the list of eligible capacitor banks and transmitting a switching command for the selected capacitor bank.

1459826585-15d1071f-836a-4cd1-8910-061a8bd441f3

A semiconductor device includes a first insulating layer having a through hole; a first interconnection having a first conductive layer, a first barrier layer, and a first main interconnection; and a second interconnection connected to one of the first conductive layer and the first barrier layer. The function control mechanism

includes a first ratchet that is mounted to rotate with the drive spindle, a second ratchet that is slidable from a first position to a second position, and a ring controller. Once a color period begins, volume transactions are transmitted to the assigned backup component.

1459826585-1bd4e03e-8dc8-4ad4-8e1b-07e41b83e627

Systems, methods and apparatus for a distributed security that provides security processing external to a network edge. The portable modular lift system generally includes a support base having a plurality of base wheels, a plurality of mast sections connectable to one another to form a vertical mast, a support platform movably positioned upon the vertical mast, and a drive unit connected to the support platform to elevate and lower the support platform upon the mast sections. The carriage has an arm with a disc picker that can be moved to hold and release discs in a desired location. Host traffic can still utilize connections between tiers, such that standard routing and networking protocols can be utilized.

1459826585-55bd0f0d-1cf0-49ac-8a1e-ef4cb85c01fa

A method and apparatus for installing conductor casing for offshore oil wells. The transmit stage comprises a multi carrier power amplifier having at least two independent power modules for transmitting signals on at least one traffic channel and control and pilot signals on at least one control channel. In the registered mode, the controller may cooperate with the wireless communications device and the vehicle position determining device to determine and send vehicle position information to the monitoring station.

1459826585-769a7e4f-4c9d-44f9-8c02-75098432b36b

An improved solar panel attachment system for a roof and method for its use include a pedestal that has a plurality of protrusions and keyways located along its bottom wall surface and extending along the length of the pedestal. An apparatus may include a base with a substantially elongated mandrel mounted thereon. The second emitting portion emits sub-heating light for providing heating spots on the recording medium. The system also allows the end user to perform critical business logic operations even on the new entities defined by the end user after the deployment of the business application without requiring recompilation of the business application software. A media manipulation or sensing apparatus, where the media type detector is arranged before a picking mechanism, with the media type detector including a force applying mechanism to apply force to a housing sled that is aligned onto the media, and with the housing sled being able to rotate with the media as the media tilts. The invention also includes a method for endovascularly replacing a patient's heart valve.

1459826585-f4e103bb-8cde-4815-b246-e7e0ba88a923

The invention relates to crystallizable aluminosilicate magnesium-containing glass which is used for producing extremely solid and break-resistant glass-ceramics having an easily polished surface. A mechanism is described for providing transaction-aware caching that uses a cache hierarchy, where the cache hierarchy includes uncommitted caches associated with sessions in an application and a committed cache that is shared among the sessions in that application. The first microstrip line is parallel with the second microstrip line without having any contact. , based on a predefined schedule and/or on whether other mobile stations served by the same base station are receiving the same media content. The method then resumes the IO to the metadata for the thin-provisioned volume.

1459826586-241e05fe-558a-4550-a133-4e60a66a3ff2

A semiconductor device includes a capacitor formed to have an approximately elliptical cross-sectional shape and extending upwards from upper surface of each said storage node contact. In addition there is a polymer layer for absorbing limited amounts of water that might after all pass through the diffusion barrier layer. Buck boost mode control circuitry controls the buck boost voltage regulation

circuitry using peak current mode control in a buck mode of operation and valley current mode control in boost mode of operation responsive to the monitored input current. The control system electrically energizes the heating element during system operation. At least one of the rings is adapted to have an impeding member that may be endoscopically adjusted in order to alter the size of the effective orifice area of the opening or outlet.

1459826586-28aab458-895c-495b-92a8-39d2f1e85cfb

A method and system for time-stamping and managing electronic documents are described. The hollow handle having a plurality of auxiliary tools pivotally mounted therewithin, the spring adapted to keep the jaws in a partially open position. It is further disclosed an apparatus for transmitting wireless frame, including: a selection unit and a transmitting unit, where the selection unit is configured to select any access category for a beginning frame for performing the channel information measurement; and the transmitting unit is configured to transmit the beginning frame. The highly resistive wire can be used as a single strand, or as a bundle of strands, as wiring in a structure prone to transient electrical or electromagnetic events, such as static discharge or lightning strikes, that might otherwise lead to damage of the structure. A second electroabsorptive element is coupled to the phase adjustment element and blocks transmission of the phase-shifted optical signal when the second electroabsorptive element is activated using the low voltage.

1459826586-5d391e5d-0369-4dc5-b2f5-41f707439c8e

A high resolution projection system has a light source for generating and emitting light and a plurality of digital micromirror device imagers configured to receive and reflect the light. The magnetic transducer includes a main pole and at least one coil for energizing the main pole. At least one of the trays moves to a position within the bottom region, a tray on which an original document is placed moves to a document feeding position, and another tray moves to a document receiving position. For example, one reversing unit is used for reversing the substrate before a back surface cleaning processing by the back surface cleaning unit or for other purposes, and the other reversing unit is used for placing the substrate W after a top surface cleaning processing by the top surface cleaning unit or for other purposes. The method and apparatus further include transmitting a single report for the calculated receiver class to a server including a worst indication of channel condition for the determined receiver class. One or more airflow passages are formed by the configuration of the barrel and extend along the length of the barrel to vent air from mouthpiece to the short milk tube.

1459826586-cfc57b5a-0c27-45ba-b2d8-787eacdcffc2

The present application provides methods and compositions that modulate fruit dehiscence in plants. A multilayer stretch wrap film with at least one outer layer of polypropylene and other layers of blends of polyethylenes. An upper wall is hingedly coupled to the upper edge and is positionable in an open position exposing the opening or in a closed position closing the opening.

1459826587-0bbac443-6146-4eef-9e2d-0e2b6068cc0d

Systems and methods of electric power generation are disclosed. The splash plate may include an outer periphery having a plurality of corners and an inner periphery defining an aperture and an annular flange. At the proximal end, the bioabsorbable tissue anchor has a flat, disk-shaped head for engaging tissue, and slots formed in the head for engaging a driver. An ancillary power request for powering components of the fuel cell system during shutdown is determined. The audible indicator is a speech playback unit, or it produces an audible sound or tone.

1459826587-67284998-30ed-49a6-8120-29863cf2ed8d

A magnetic recording disk drive uses a disk having pre-patterned servo sectors extending generally radially across the data tracks. At least one implantable

system control unit produces electrical pulses delivered via electrodes implanted in the brain and/or drug infusion pulses delivered via a catheter implanted in the brain. The holder can embrace or frame and consequently receive the circuit boards. Thus, the weights of each of the swinging devices produce a successive torque by an inertia action to operate the generator so as to generate an electric power successively so that the generator outputs the electric power stably without interruption. The PRNS may include a display unit capable of outputting data concerning the route to the predetermined destination, and a transmitting/receiving unit capable of transmitting the data to a mobile information unit of the user of the vehicle.

1459826587-e107c17e-e04f-4111-92f7-ced7f2239e30

A control apparatus for controlling a compressor driven by a driving unit generating driving power by a gas turbine and an electric motor includes: a temperature detection section for detecting an exhaust gas temperature of the gas turbine; and a control section for generating a motor torque instruction value for the electric motor based on the detected exhaust gas temperature. The handle assembly is coupled to a handle extension that extends from a part of the device and that has an end with an extension axis. The clock delay data for each data signal is formed according to the states of a set of adjacent data signals. The hollow structure thus covered is subjected to cooled-sizing through a plurality of horizontal and vertical pairs of rollers, and then cured in a hot curing tank. Finally, it comprises based on a received result of the URL policy processing, transmitting the client request to the destination server.

1459826588-4dfbaf61-f152-4b19-a4ce-669be60fccf6

An optical quantitative detection device comprising: an optical quantitative detection device comprising: a nonlinear birefringent waveguide sensor with a top surface for interacting with a target molecule, wherein optical excitation of the sensor enables quantitative, spectral discrimination of the target molecule. The axle module may further include first and second shafts arranged within the ring gear assembly, and first and second inner hubs rotatably fixed to the first and second shafts, respectively. The nut is moved axially by rotation of the screw with respect to the nut, assisting mechanical actuators in changing axial spacing between the pulley portions. Based on provisional allocations to the segments, the computing resources can then be allocated to the sub-plans within respective segments. A controller is coupled to the actuator and retracts the fairing. The actuator for the mirror pixel may be configured as a crenellated beam with one end fixedly secured, or configured as a scissor jack.

1459826588-e99c2612-8f14-4256-81ef-062153b84702

An X-ray imaging apparatus and an X-ray imaging method can alleviate the influence of scattered X-rays relative to the obtained image. Specifically, the present invention is related to aminopyrazine derivatives useful for the preparation of a pharmaceutical formulation for the inhibition of malaria parasite proliferation. These features allow the use of the scanner to be easier and more user-friendly than the prior art. The method further comprises returning a response message from the destination endpoint to the source endpoint responsive to the request and indicating an end-to-end secure call between the two endpoints. The damping springs are compressed against the fixed contacts when the hit contact comes into contact with the barrier. The trenches formed in the substrate reduce a stiffness of the substrate, which provides less resistance to shear.

1459826589-12bf8b4f-56c0-4dec-87e5-94ecaa0177ec

A connector module and motor utilizing the same. The housing body has a base plate, two side plates extending up from the two sides of the base plate and a top plate connected to the upper front of the two side plates. One which contains degraded bitumen is treated with at least 0. The pocket is worn in the interior of a brassiere cup or bathing suit top to provide convenience and safety and is shaped

and contoured appropriately to the interior of such garment.

1459826589-1c3ffba0-efdc-404c-b5c3-d89e81b35003

A real-time, global system and method for controlling payments risk, liquidity risk and systemic risk arising between financial counterparties active in payments-based transactions. Preferably, the initiator comprises an iodonium salt, a visible light sensitizer, and an electron donor compound, wherein the initiator has a photoinduced potential greater than or equal to that of N,N-dimethylaniline in a standard solution of 2. The method involves applying forces to the contact surfaces of the specimen to deform the specimen over a period of time. The plural-bit data read voltage is larger than an upper limit of one of plural threshold voltage distributions and smaller than a lower limit of another threshold voltage distribution. Such fasteners can be formed in a variety of configurations, e. Then, the control portion performs winding prevention control of the roll sheet around the fixing member and the pressurizing member in accordance with a winding direction of the roll sheet and/or a roll radius of the remaining roll sheet.

1459826589-6ba6ad14-cd24-4ad0-b798-315d45fe99fc

An improved torch providing high visibility of the work zone to the operator, an increased viewing angle, and a reduced obstruction angle. At least one composite CI is utilized in the CMDDB. The modulation circuit generates a modulation signal based on the determined number of pixels and the clock signal generator spreads the frequency of the imaging clock signal across a frequency range based on the modulation signal. The insertion end and the bundled microtube and sensing fiber distal ends are positionable in or adjacent of cell tissue thereby providing rapid evaluation of cell parameters by optic fiber sensing, fiber sampling of cell parameters, and precise delivery of therapeutic fluids or additional treatment measures. The pilot valve has an open position in which fluid can flow from the first fluid conduit to the second fluid conduit and a closed position in which fluid cannot flow from the first fluid conduit to the second fluid conduit.

1459826589-e6c2731c-1d3b-4162-9086-27043ebd908e

Methods for matching semiconductor processing chambers using a calibrated spectrometer are disclosed. The device includes a first current generator outputting a current proportional to temperature. Accordingly, a digital copying machine having a facsimile function can be provided in which automatic printing is not inhibited unnecessarily. Each bettor of the plurality is enabled to provide input regarding at least one portion of their respective at least one wager prior to the event. A secondary cutting blade angle is formed by the pair of secondary cutting blades ranging from 35 to 105 degrees, and a primary cutting blade angle is formed by an imaginary intersecting point between the pair of primary cutting blades ranging from 15 degrees to 35 degrees.

1459826590-0692f794-92ec-4133-bd60-aa342a4945dc

A MEMS filter has an input layer for receiving a signal input, and an output layer for providing a signal output. The method includes defining a proximity limit and automatically generating a transaction for a tradeable object. Methods for producing a maize plant that comprises crossing maize variety 10096210 with another maize plant. The system also includes a processor to receive the query, retrieve a set of comment clusters, select engaging comments from each comment cluster, aggregate the engaging comments, identify a plurality of independent comments and display a list of engaging comments to the user.

1459826590-3f1f3011-601b-4e0c-92dc-9d2fe51fa542

Methods and apparatus for programming a memory cell using one or more blocking memory cells facilitate mitigation of capacitive voltage coupling. Weight selectors are movable laterally into and out of engagement with respective weight plates to secure them relative to the handle. In this heat-peelable pressure-sensitive adhesive sheet, the heat-expandable pressure-sensitive adhesive layer before

heating may have a center line average surface roughness of 2  $\mu\text{m}$  or less and a maximum surface roughness of 5  $\mu\text{m}$  or less.

1459826590-dcb839b3-46a2-4d09-9965-6580c9223631

The semiconductor device includes a semiconductor substrate, a diffusion layer, an interconnect layer, a contact plug, a contact-inspection hole, a via plug, and a via-inspection hole. A housing includes a lower portion designed to move over a flat surface, and a casing portion engaged by a palm of a user's hand. A second packed data operand having at least two data elements is then accessed. Techniques are presented to address recovering data lost during the standard data transfer mode in an efficient manner and preferably without the use of the file sharing mode. The entertainment system may in addition drive a plurality of speaker devices.

1459826590-f879902c-9e07-4875-bb96-78f0657b9879

A programming implementation providing support for reusable software units built in a hierarchical and modular form. The housing has a mounting body and a mating body coupled together and separated by a gap. The wader includes an adapter strap configured to couple between the shoulder strap and either the front portion of the bib or the rear portion of the bib.

1459826590-ff638374-b77c-48b4-a519-83b20f9e71fc

A control device includes an input member drivingly coupled to at least one of an internal combustion engine and a rotating electrical machine as driving force sources of a vehicle. The circuit can be divided into net-partitioned blocks. The filling system also includes a pressure sensor can produce a pressure signal representative of the pressure within the enclosed environment of the disc drive. A heads-up display module can provide an informational display in any of at least two of the optical modules or both.

1459826591-29ba950b-31ed-4ec7-b8b2-4a59deb5c75e

A thin-film multi-layer high Q inductor spanning at least three metal layers is formed by forming a plurality of parallel first metal runners on the semiconductor substrate. The output control system is configured by an image output apparatus 1 and a plurality of information processing apparatuses 7. In one embodiment, signal-to-noise performance is optimized even if some of the binaural cues are sacrificed. Each of the sub-circuits is equipped with the data input from the data bus, the input of the counter, the activating input, which determines the presence of the given protocol header in the packet, and with the input of the position of the header start in the packet.

1459826591-62c14371-6e8d-4d88-bec2-6402c5a90ccc

A new and distinct Lantana plant named Baluclem, characterized by its yellow flowers upright mounded habit and dark green foliage. So that the parking brake system or its electromechanical actuating unit only needs to cope with relatively small load situations, it is proposed that, when, for certain operating conditions, the parking brake system has to maintain brake forces which are greater than the brake forces it is able to generate itself, the service brake system generates the additionally required brake forces. Each pair of input signals is detected by one of N phase-frequency detectors, which produce N pairs of detection signals indicative of phase differences between the reference and feedback signals.

1459826591-aabf434f-8d47-4546-ab32-78b138372399

A power tool includes a housing having a handle configured for a user, the handle defining a first axis, a motor supported by the housing, the motor defining a second axis along a length of the motor, a tool element movably supported by the housing and drivingly coupled to the motor, the tool element defining a third axis along a length of the tool element. The flows may include feeding back design transformations that are performed during either flow so that a later performance

of the other flow will necessarily include the same transformations, thereby helping to ensure functional equivalence. A tool is automatically configured using the obtained tool type and tool setting, where the tool is associated with manipulating the composition.

1459826591-bc6dd057-069d-44ba-8a75-a10421b195da

A remote control device when actuated by a user transmits a visually perceptible coded signal to a sensor associated with a doorbell which receives the signal and causes activation of the doorbell as desired. The method also includes automatically determining variations between the first image and the second image. This preserves the fuel for later use and helps reduce the risk of environmental contamination. The gate is disposed on one side of the metal oxide semiconductor layer. All of the spectral peak information is then used to augment a feature vector. A tongue-shaped coverplate is provided that extends from the standoff and provides safety features by covering the keyhole feature.

1459826592-9f495bf6-a742-4ce7-a5e7-acba0168cf0f

A cable management system includes an equipment system, and at least one patch panel having a connectivity interface. The sliding panel may move linearly with respect to the fixed panel and outer frame along the length of a header, and a guide bracket cooperatively engaged with the sliding panel may be partially positioned in a guide track formed in the fixed panel bottom rail. A water nozzle with a pan and tilt capability can direct water where it is needed.

1459826593-21667cc6-a62d-467c-b136-861903b1e441

Sub-aquatic sediment is covered with capping material by a capping system comprising a template barge and a spreader barge. A wireless transmitter forms blocks of symbols by inserting training symbols within two or more blocks of information-bearing symbols. The lens is shaped to have a recess near its center, and is shaped so that a moving radius increases as a polar angle increases within a range of 0 to 80 degrees. At least one of the wick fibers is formed of a pyrophoric material. Also, at least some of the transaction information is sent to an intermediary computer system that is configured to interact with a plurality of banking networks in different countries.

1459826593-30071a94-fee4-4207-9028-db82ac5f3a71

Elevated levels of cathepsin E are demonstrated to be diagnostic of intestinal forms of cancer, such as colorectal cancer. The moving object can be located through a detection unit, such as a voice sensor, a codec, a color sensor and an IR sensor, and be automatically tracked by suitable adjustment of the rotation angle of a camera. Such an adapter provides universal mounting for specialized faceplates which are designed and intended for junction box mounting. The resulting electrode couple is activated by a nonaqueous electrolyte. Orientation of the playing surfaces may be varied during play to achieve a more comfortable position for either the fingering hand or the strumming hand thereby improving ergonomics of the instrument.

1459826593-85a40e25-1767-40a4-955f-ea763dba21e4

An electronic handheld device with remote cable release mechanism, a handle portion and method for performing the same. The music signal can be created by the musical instrument or from a file, e. As the piston moves between retracted and extended positions the bolt carrier is moved between closed and open positions. The manufacturing operating system is then installed on the virtual IHS. The retaining rim includes a locking surface engaging structure, most preferably provided by a plurality of outwardly directed flutes spaced circumferentially thereon and a second securing structure located on the retaining rim between the flutes. The invention describes various types of anti-CD26 antibodies and modes of administration.

1459826593-ea7d659f-30e5-445b-a3f6-c35251b80c5f

A system for charging lapping plates incorporates the use of individual ceramic inserts that are mounted into a stainless steel frame to form a novel charging tool. At least one other opening proximate to the open end serves to admit air into the mixing tube for mixing the air and the gas fuel. The compound modulation transfer function can include a combination of modulation transfer functions at a plurality of distinct frequencies. The hardness of the first region exceeds the hardness of the second region to thereby selectively improve the strength, toughness and fatigue resistance of the first region. The data line is set to the high impedance state when the periods T1, T2 are changed over and the voltage level of the data line is preliminarily changed to the VDD side or the VSS side before driving by positively utilizing the parasitic capacitance between the counter electrode and the data line.

1459826594-3a3b8faa-ac0f-41eb-bbab-e2875634d7fe

A method for actuating an electromechanical parking brake device for a brake that can be actuated by an electromechanical actuator comprised of an electric motor and of a reduction gear connected downstream of the electric motor and provided for converting a rotational motion into a translatory motion. The method includes local control and relative priority lookup of incoming ATM cells and packets to support output decision. The housing, clip, ferrule and fiber optic cable are supported by a pallet assembly. The multiplexed signals are then transmitted over LH or ULH network to a second primary terminal where the signal is then demultiplexed from other optical signals and transmitted to the proper extension terminal.

1459826594-da612ffb-2d13-4a84-900f-a2414fec29e6

An image forming apparatus includes a first toner image bearing member, a second drum, an intermediary transfer member, or belt, a secondary transfer member, a toner charging member, and a controller for controlling an operation in a single-color image forming mode and an operation in a multi-color image forming mode. The stack package includes: a first package; and a second package stacked on the first package, wherein external leads of the first package and the second package are directly connected to one another and inner leads thereof are arranged in different shapes so that the Chip Select signal of the second package are input through a No Select pin of the first package. Also disclosed is a method for making such a lens. The power control unit resumes the power supply to the first bus device and the bus bridge in response to the recovery signal.

1459826594-eeeeedf16-bea1-4fe0-b908-e9adc56cb04d

The invention relates to methods and computer-readable medium to implement computing the propagation velocity of seismic waves in the earth. The semiconductor device generates variable heating loss. The damper piston comprises at least two coil windings on the outer surface of the damper piston, wherein the damper piston is capable of generating a magnetic field between the damper piston and a wall of the damper cylinder. Preferably, two inserts having a collar and a stem have a combined length that reinforces the predetermined spacing within a predetermined tolerance when compression is adjusted. In one embodiment, the first turbocharger configuration results in a motor speed of 1500 RPM and a frequency of 50 Hz, and the second turbocharger configuration results in a motor speed of 1800 RPM and a frequency of 60 Hz. In another configuration, some or all of the lugs may be contiguous.

1459826595-6033d362-9cb2-44e8-b063-3d49c89085dd

A system and method for improving the dynamic performance in an analog-to-digital converter by randomizing the differential mismatch. with a high frequency or ultra-high frequency at 10 KHz or higher to remove the diffusive hydrogen which is involved in hydrogen embrittlement, or to transfer an existing state to non-diffusive hydrogen which is not involved in the hydrogen embrittlement. The digital video receiving apparatus further includes a video decoder, an audio decoder and a

data decoder for decoding signals outputted from the demultiplexer. The waste is treated in the reactor substantially without agitation, and a sufficient amount of oxygen, moisture and/or nutrients is added into the waste material. The overall checker sensitivity numbers can show the robustness of the check system.

1459826595-a4558510-74aa-41c9-b437-157fd590998e

An operation member is provided with a planar input device, and a detachable display sheet is overlaid on the surface of the planar input device. 3 mol % or more based on the total number of the constituent units of the resist polymer :in the formula, L is a divalent linear, branched, or cyclic C1-20 hydrocarbon group which may have a substituent and/or a heteroatom; R11 is a g-valent linear, branched, or cyclic C1-20 hydrocarbon group which may have a substituent and/or a heteroatom; and g represents an integer of 1 to 24. A card reader optically reads the script printed as an array of dots on one surface of a portable card, which has a visual example of the likely effect of the script on a second surface of the card.

1459826595-fec916aa-a66b-4070-bc38-e3c796fb74d1

A method, for use with an advanced function printer, for automatically printing a source document in a print copy format having the largest acceptable print page image size on the fewest number of print copy pages. According to one embodiment, a first signal is provided from a desired location that includes an unwanted signal while a second signal is provided from an alternate location. The lens cap detection system further includes a processor that communicates with the lens cap detector.

1459826596-494ffffaf-d368-4169-b283-68f4362175ef

Disclosed are compounds, compositions and methods for treating viral infections caused by a flaviviridae family virus, such as hepatitis C virus. The lift has a carriage that can be moved by a cable and a motor upward or downward and which includes a platform that has sensing means for controlling the motor for stopping downward movement of the carriage when it engages the ground. Based on time managed by a time management unit, a time of the image processing request and the image processing restriction information, an image processing restriction corresponding to the first function or the second function is determined based on the received image processing request for image processing of the corresponding function. The interactive video player in operation creates in real-time a custom video that includes a plurality of video segments. More particularly, the 5-fluoro-1H-pyrazolopyridines of the formula are suitable for preparation of the compound of the formula which serves for production of medicaments, for production of medicaments for treatment and/or prophylaxis of cardiovascular disorders. The strength of the base member is increased by setting the width of the bend-formed portion at the root of each of the rising pieces in such a way as to be larger than the width of any other part of the associated rising piece.

1459826596-751d0c30-d7d3-4f73-9831-fa64492c1f13

A real-time system changes a combination of coil elements and channel assignments for each echo by using a pulse sequence, and collects data without performing phase encoding. The active area includes a first doped region of first conductivity type and a second doped region of second conductivity type. Variable resistors of a power supply connected to such filters, systems and methods provide for controlling and adjusting for any undesired voltage excesses and/or shortfalls within these filter tanks so that the fluid flowing exiting these filter tanks is unbiased to generate a filtered fluid having balanced electrostatic charges. The guide is rotatable about the guide rod so that it may be swung away from the working surface when the guide is not in use. The roughness of the surfaces of the light-sensitive material satisfies the relationship of formula :. One method includes establishing an initial estimate of a property distribution of an object, using a first reconstruction process to reconstruct an estimate of the actual property

distribution and using a second reconstruction process different than the first reconstruction process to further reconstruct the estimate of the actual property distribution.

1459826596-75bc58a4-fd0e-48ed-89f9-fe66cb988a7a

A pixel structure and a pixel circuit having multi-display mediums are provided. Various device class protocols can be realized at the interface application level of the semiconductor storage device, which makes it possible to simulate and realize the storage functions of various storage disks. The proximal end of the movable operating member 5 is pressed downward by a guide pin 6 in response to a reverse action of a bimetal 7.

1459826596-a0620d18-c425-49ba-8a7b-fa4b1e9126a4

An improved multi-port memory cell circuit which has a smaller number of write lines and/or transistors than conventional multi-port memory cells, and hence occupies a smaller area, is provided. The inventive search engine has an associated crawler function wherein display images of the web pages are rendered and stored as snapshots, preferably when the pages are indexed. The metal oxy-nitride or metal-silicon oxy-nitride material has a higher dielectric constant in comparison with a silicon dioxide, providing similar or improved electrical characteristics with a thicker thickness.

1459826596-ba9293f2-a1f5-4b84-87b7-80b6ea269f02

There are provided an optical disk device and tilt correction processing method for performing recording/reproduction by rapidly acquiring an optimal tilt correction value for an optical disk having a plurality of recording/reproducing layers. An architecture description language description of a processor/memory system is accessed. The present disclosure enables a remote radio head unit to be field reconfigurable and support multi-modulation schemes, multi-carriers, multi-frequency bands and multi-channels. This allows the identity of the container or its contents to be communicated to a remote location. A closure covers the opening and is sealingly attached to the neck to contain the aerosol within the plastic bottle.

1459826598-093551c4-c032-4da4-b840-7eeb17467ca5

A plasma display device which improves the adhesion rate of a thermal conductive medium. The malleable tip is configured for passage of fluid therethrough and includes a malleable member. A radially expandable member is disposed about the exterior surface of the first tube. It is possible by means of the geometry to generate low-loss gap vortices, in order to increase the overall efficiency of an axial compressor including the compressor blades. When the game is run for a predetermined number of times, the gaming machine ends the chance mode. Thus, less precise AGC units can be used, thereby reducing production costs as well as the size and complexity of the AGC unit.

1459826598-ba53a45f-3a4f-447c-8d33-0c4d66f93d7f

In one aspect, the invention involves an acoustic logging tool for performing acoustic investigations of subsurface geological formations. The tool may be used in co-operation with an apparatus for providing information. Or, the steroid may be associated with a polymeric coating having one or more openings effective to permit the steroid to be released into an external environment. A sensor measurement signal output device is provided for outputting the sensor measurement signal from the sensing device.

1459826598-daa5b616-7b0b-4d18-8136-ac01e1ff1b1b

A device, a remote control unit and method for controlling a plurality of devices, the method including receiving one of a plurality of user commands as an input; and transmitting one of a first and a second of the plurality of control commands in response to the one of the plurality of user commands. A blue light type white

color light emitting device including a 410 nm\2013470 nm blue light InGaN-LED, a fluorescence plate of ZnSxSe1-x doped with more than 1\% Al, In, Ga, Cl, Br or I for absorbing the blue light, producing 568 nm\2013580 nm yellow light and synthesizing white color light by mixing the yellow light with the blue LED light. The electronic circuit is also configured to identifying a driver, compare the identity of the driver with a predetermined list of drivers of the vehicle, and change a plurality of operational parameters based on the identity of the driver. When it is determined that the estimation result satisfies the reporting condition, the controlling means retrieves the capture information associated with the estimation result and causes the retrieved capture information to be transmitted with the estimation result to the external center. At least one of the enabled functions taking a substantially shorter time for enablement, thereby allowing at least two of the plurality of functions to share a common driver output enabling signal. The temple fastener, in one embodiment, can be hollow plastic tube with one end inserted in a press fit into the end of the temple.

1459826599-2555d9ae-b6a1-463a-93aa-4103a0a176fa

A system and method are provided for allowing users to verify the presence of personal items. The method includes entering input details corresponding to a clients' software service usage data. The pressing rod is pivotally arranged on the base and has a protrusion. A method for connecting a mobile device to a destination base station in the wireless communications system, may include steps of receiving a mobile device measurement report, transferring context information from a serving base station to possible target base stations, and receiving admission control information from possible target base stations. The braking elements slidably move from a retracted position to an extended position. A process of manufacturing the resin composition and a method of preventing the melt dripping during combustion of the resin composition.

1459826599-5b1d9472-f249-4ae3-b931-7418bbc1d95a

Secondary content is encrypted for distribution to client terminals by selecting at least a portion of raw encrypted audio-video data that is provided on a media article as an encryption key, encrypting secondary content using the encryption key, and storing encrypted secondary content at a remotely located host. The method and system includes generating a phonetic transcription of a portion of the audio file, analyzing the phonetic transcription and identifying a vocal segment in the generated phonetic transcription that is repeated frequently. The contacting members are each configured and arranged to contact the user over a limited contacting region, which corresponds to a junction of the orbicularis oris facial muscle, the zygomaticus facial muscle, and the risorius facial muscle. The distal portion of the shaping element may taper so as to have a reduced cross-sectional area in the distal direction, where the portion of the shaping element distally adjacent to the juxtaposed proximal portion and core paddle is enlarged. In particular, the invention relates to quinazoline and pyridopyrimidine derivatives which exhibit protein tyrosine kinase inhibition. A toy has an appropriate wireless signal receiver and control circuit responsive to the tone signal that controls one or more electrically operated devices that can provide at least two different, electrically activated responses of the toy apparent to an observer.

1459826599-e90ebd6a-211e-4083-b631-00f58d22acbb

A method of forming a polished semiconductor structure comprises polishing a surface of a semiconductor structure by chemical mechanical polishing. The device is obtained from a retailer and worn as a badge while at the cinema or while listening to the radio or TV. In turn, a network device is coupled between the dedicated domain and the public network, and is further coupled to the cloud server via the private network. , to simultaneously satisfy both pattern addition and modulation/demodulation. After the win judgment module has judged that a reimbursement set threshold is reached, stop execution of the reimbursement game

module. A portion of the filling layer and a portion of the fins are removed, using the patterned mask layer as a mask, to form second trenches in the substrate.

1459826600-026bb544-a778-42f1-8a14-471a59278dcd

A user control assembly is provided for use on a vehicle having a processor, a steering wheel, and a plurality of vehicular systems controllable by the processor each having first and second adjustable features. One of these cup sleeves is selectively fixable to a cup using a temperature-dependent adhesive that is effective to fix the cup sleeve to a disposable beverage cup when the cup is holding a warm or hot beverage. The chute is secured at an inner edge to the post and at an outer edge to the wall. This system avoids the use or creation of water, and liquid MSA is an amphoteric solvent that increasing the solubility and reactivity of methane and SO<sub>3</sub>.

1459826601-29d0b123-cf6b-48d8-98ae-128a943c58a3

Music selection systems and methods are disclosed. The magnetic toner has a weight-average particle diameter of from 3 m to 10 m, a magnetization intensity of from 10 Am<sup>2</sup>/kg to 50 Am<sup>2</sup>/kg under application of a magnetic field of 79. A technique is disclosed for transforming a combination or strategy contract with an arbitrary number of buy and sell legs with an arbitrary volume ratio for each leg into a form that can be used for rapid implied order calculations. The menu may be dynamically configured according to the context in which the display device is being used. When the node requires a service, it can inspect the registry and the cache to determine where the service can be obtained. When the period for investing expires, the donor may relinquish investment control, and the asset and any proceeds realized by its investment may be transferred to the donee.

1459826601-bb5e81dc-c547-40c8-b19c-7c89a29989b7

A charging device includes a charging member that charges a surface of an image bearing body. The cartridge includes a sample processing portion that is in fluid communication with a sample retention structure. Self-jamming is prevented by inverting a portion of the received signal in the first mixer and then coherently detecting the partially and synchronously inverted signal in the second mixer. Such modified membranes have use as reverse osmosis membranes.

1459826603-3c4bc8f6-5511-45c6-8a06-e7733480337a

A computer implemented method for acquiring and presenting data for business analysis, and a computer readable media having program instructions for enabling the same are provided. In one exemplary embodiment, a quick release nut is provided that includes an upper body portion and a lower body portion that are rotatably connected to one another. The flexible portion may be detachable from the rigid portion, which allows the flexible portion to be disposable while the detachable portion is reusable. The underlying cushion and/or base wall define a spring constant that varies along a length of the seal. The method includes receiving a neighbor sounding signal from a mobile station in a neighbor cell, obtaining an interference information signal based on the neighbor sounding signal and transmitting the interference information signal to a neighbor base station, the neighbor BS which is a BS in the neighbor cell. In one embodiment, the technique is realized by assigning a transmit duration for each one of the plurality of outstations by the head-end; and assigning a transmit frequency for each one of the plurality of outstations by the head-end; wherein bandwidth for each one of the plurality of outstations is adjusted dynamically at the head-end.

1459826603-aaa02147-9451-44aa-98a7-84386d684f21

A dual damascene process is disclosed, in which a contact via and trench pattern is etched into insulating layer. The readwrite capability regulating circuit individually sets a writeread capability of each of the writeread circuits. In one embodiment, the systems and methods can be applied to networks that use a layer-1 redundancy scheme. A flexible or pliable jamb is provided in the kit.

1459826604-a126555d-7e01-4981-9387-d9f5ce07682c

In one aspect, an arrangement for cooling of an electrical machine is provided. The flexible container includes a patch having at least a portion of the patch overlapping an opening of the flexible container. The next layer, which in certain embodiments is the middle of the sandwich, comprises a relatively thin plate with spring arms.

1459826604-d56a2675-bec8-4c94-887b-218f5aecaff0

An outer casing of a non-aqueous electrolyte battery is capable of being mass-produced as well as thin and resistant to damage. A position detecting part produces a position signal in response to a rotation of the rotor. A control module relatively near the source's local area network and another control module relatively near a destination's LAN are utilized to complete the initial TCP session establishment within the source and the destination's respective LANs, thereby substantially eliminating the first round-trip time delay before the actual data flow begins. The side access garbage container allows the user to remove the garbage bag without lifting it from the container, but simply by sliding the filled bag out from the access section. As soon as dew forms on the surface of the element, the optical signal will exhibit selective absorption due to the interaction of the evanescent tail of the optical signal and based on the chemical nature of the condensate. By this means, it is possible to secure variations so that there are no positions where there is no pulse at all while achieving a reduction of the number of bits used when coding stochastic codebook pulses in order to attain a lower bit rate.

1459826605-c9ced5c6-d149-4363-89df-14ee12e5d1c7

A memory controller that includes an interface to a first memory and an interface to a bus coupling the memory controller to at least one processor. The device includes a display disposed on the device for displaying video captured at a second device. In embodiments, the cluster stickiness index is generated by comparing cache keys shared among a plurality of front-end clusters. A developer may provide a software command associated with the gesture.

1459826605-cbc3cff9-cbec-475e-bcbe-586ee69defab

The present invention relates to the calibration and alignment of an X-ray reflectometry system for measuring thin films. The icicle-shaped bulbs are serially connected by a set of wires. The second circuit may be configured to generate one or more pairs of complementary output signals and a plurality of open-drain outputs in response to a third control signal, a fourth control signal, a fifth control signal, and a sixth control signal. Suitable mechanical action includes performing a brief tungsten CMP step on the tungsten features or scrubbing the surface using, for example, a commercial post-CMP scrubber. Thus, exhaust ability can be improved, and error discharge due to crosstalk can be prevented from occurring. The mounting assembly has upper and lower mounting elements detachably engaging with each other in the coupling direction.

1459826605-f9049584-1039-4ab7-8692-1595ed009bbf

A computer-implemented method and apparatus includes displaying a plurality of network devices on a display screen, and enabling selection of one of the network devices for configuration. A signal processing and control unit controls the photoreceiving unit so that the output signal increases in strength as a blinking cycle count increases in each detection period. The strap assembly includes a strap bracket; and a buckle insertion member; a strap to secure the flexible cover in a rolled up configuration proximate the front bar when the flexible cover is not in use to cover an opening defined by the perimeter of the cargo box. The proximal end of the spring member is affixed to the cannula, and the distal end of the spring member is movable to apply a compressive force to adjust the size of the opening of the loop member and compress tissue disposed within the opening of the loop member.

A cradle socket is fixed between the first and second arms, and the cradle socket is configured to secure the cross piece bar within the cradle socket where the cross piece bar is struck with an impact force less than an impact force capable of causing a horse or rider to fall.

1459826606-0ab7b6f2-237c-43b9-a336-67419d88ebd7

The present invention relates to a header structure for a TDD system which uses preferably an OFDM transmission system. The invention also relates to a device for conditioning products displaceable along a guide track. Further, if an execution of a first instruction in the VM completes successfully, control is transitioned to the VMM following the successful completion of the execution of the first instruction. A checksum compute module is written in a second programming language different from the first programming language. In a multi-media application, the amount of data that is transferred between the processor and sub-components is substantially reduced, and the efficient partitioning facilitates parallel processing.

1459826606-2898b02e-c912-44b7-8b5e-7a93c20f87ba

At least one implementation herein enables interleaver and deinterleaver buffer modification during Showtime. The compounds include those of formula I, . A pressure check piston having a fluid flow orifice along its longitudinal central axis slidably engages the inlet socket and the outlet socket.

1459826607-150b52e8-f9b4-47fa-92a7-0fb5aa10c3ab

The invention relates to a process for reaction of a carbonylatable compound using a metal complex catalyst comprising a metal of transition group VIII and an organophosphorus ligand and in the presence of a stabilizer based on a sterically hindered secondary amine. These extents are annotated with statistics about the information they contain. An exhaust-gas turbocharger has a turbine and a compressor, which is driven by the turbine. When a user follows such a link and then makes a purchase, the system preferably awards a commission to the associate. The interrupt scheduling scheme of the present invention is operative to perform the scheduling of interrupts used to configure a data transfer device to effect the timely transfer of data from a hardware based chip rate processor to a memory buffer for subsequent processing by software running on a DSP or other processor platform.

1459826607-8c9023a0-c249-4599-8f95-2e02b2499034

An antireflection film wherein, even where exposure light enters obliquely in a liquid immersion lithography technique, a sufficiently reduced reflectance can be achieved at the interface between a resist layer and a silicon substrate. The user input mechanism combines two existing and prevalent forms of user input: cursive handwriting and keyboard input. The thicker second wall is engageable with the item in efficient heat transferring relationship.

1459826607-fc8fab4a-a5a2-4570-97ce-d5cfdde2b1b6

The present invention relates to the compounds of the formula and salts thereof. In preferred embodiments of the instant invention, the activatable deprotecting reagent is a photoacid generator and the protective groups are DMT for nucleic acids and tBOC for amino acids. The controller chip writes data inputted from the host apparatus into the flash memory chip or the IC chip and transfers data read from the flash memory chip or the IC chip to the host apparatus, based upon commands from the host apparatus. In wells where one or more antimicrobial agents are present only pathogens resistant to the antimicrobial agent grow. The addition-crosslinking silicone rubber mixture comprises at least the following constituents:. The LED based lighting systems may include fixtures with one or more of rotatable LED light bars, integrated sensors, onboard intelligence to receive signals from the LED light bars and control the LED light bars, and a mesh network connectivity to other fixtures.

1459826608-3313bc86-7872-420c-b53d-33a63be0a689

A method, apparatus and program storage device for updating a non-volatile memory in an embedded system is provided. The dual shoulder strap assembly includes first and second shoulder straps, and a lower end of the first shoulder strap is received in and connected to a pocket on the body. For example, a relatively high dose of HIFU can be used to permanently block nerve function, to provide a non-invasive alternative to severing a nerve to treat severe spasticity. A second receiver module may be adapted to receive a communication signal characterized by the first set of signal characteristics. Each of the wells receives one of the first and second ends.

1459826608-ee6fb35d-53bf-4d4d-bb70-fb8271659bca

An intermittent lift plunger includes at least one seal mandrel, a bottom sub and an upper valve assembly. The method includes providing a solution comprising a solute dissolved in a first solvent. The rotational axis is along a transverse direction, the transverse direction being substantially perpendicular to the machine direction. Moreover, according to the design method of the IC, circuits having different specification can use the Dft circuit without performance degradation for original SD-ADC.

1459826609-46234474-c37e-4b9a-936f-f2aa46990ad1

A method and apparatus for producing molecular oxygen in the excited singlet delta oxygen electronic state for use as an excited species reactant in a chemical laser. The air deflector includes a deflector body with four side members, each having a pair of opposed ends and a mid-portion therebetween. Dopant diffuses from the layers of dopant into the layers of III-V compound.

1459826609-4d8e0cd7-d650-4ab1-8aab-5d0e24dadfe9

A system and method is described for controlling user access to a carrier's shipping services for delivery of a package. A controller is connected to a foreign-body detection device and to a first valve for controlling the actuator that controls the hydraulic pump. In some embodiments, the unique barrel device may comprise a non-newtonian type of fluid housed and contained in the barrel by a para-aramid synthetic material. The etalon filters the constructive signal with a transmission stopband imposed over the passband of the constructive signal. The weight discriminator sends the respective results to an airbag controller. One or more embodiments relate to optimal mixing.

1459826609-aadd6b5d-f558-4a6f-b43e-2b77dee920b1

A memory system is disclosed in which hardware assisted leases are utilized to control access to shared data resources among data users. It obeys commands received from a non-serving base station to decrease its transmission rate, it initiates the predetermined time period in response to receiving such commands, and it terminates the predetermined time period in response to a further command from the same non-serving base station. The first end projection of a first partition member of the plurality of partition members is alternately receivable in the at least one wall groove of the vehicle cargo area, in the at least one first end groove of at least one other partition member of the plurality of partition members, or in the second end groove of the at least one other partitioned member. The glazed section is provided with at least one continuous electrically-conductive transparent thin layer, and the seal is made conductive at least in part to ensure connection of the electrically-conductive transparent thin layer to the structure. The cerebral spinal fluid is aspirated from the first catheter to the pump, cooled to below body temperature, and returned to the second catheter. Other embodiments are described and claimed.

1459826609-b974a664-3b6b-497e-baf9-4c95ff942c8f

An inkjet printhead has a piezoelectric module including a plate with an integrated

ink chamber in flow communication with an integrated ink supply manifold and an integrated ink orifice. ; and a solidification step of rapidly quenching the molten metal produced through the above step, to thereby form the first RE-containing alloy, wherein the solidification step is performed at a cooling rate of 102 to 104\xb0 C. A coupling member attached to the vertical support is mountable onto a separate tree stand mounting apparatus. Such disorders include, for example, Alzheimer's Disease, cognitive deficits, cognitive impairment, schizophrenia and other central nervous system conditions related to and/or caused by the formation and/or deposition of plaque on the brain. Therefore, the belt-like article is provided with not only an application as the belt-like article but also an application as a storage body for various objects, which are functionally related to each other, so that it can be used sufficiently for practical purpose.

1459826610-1f2e6dee-43ea-4a41-b063-6a937098fbd4

An automated pill dispensing system includes an output chute configured to hold pill-containing vials and an optical sensor located at a predetermined location in the output chute. The apron may have two or more rows of self draining pockets arranged along its length for storing boating accessories and a fastener for securing the opposite ends of the apron about the mooring. The hydrophobic sheet has a first sealing-free zone extending, inclusive of a first lower edge, in a circumferential direction so as to be left free from the inner side of the diaper and a first sealing zone extending above the first sealing-free zone and bonded to the inner side of the diaper.

1459826610-4ef3bfcb-4b0e-47fb-81a5-267819549914

A storage apparatus comprises a storage controller and multiple storage devices. A machining electrode subjects a surface of the object to an electrochemical reaction to electrolytically machine the surface of the object. The probe structure of the present invention solves the conventional problems such as long fabrication time of the probe structure, difficulty in finely controlling the structure of the probe structure, complexity of the whole process, mechanical instability of the products, and difficulty in uniformly assembling a plurality of the probe structures. Each notification process determines, for each received notification message, the subscriber's notification preference based on the accessed profile information, and selectively outputs a notification delivery message according to a prescribed open protocol to at least one notification delivery process within the notification architecture based on the subscriber's notification preference.

1459826610-50af1259-afe3-4ea2-9db1-5c4340ed05b6

In the semiconductor integrated circuit device, a first P type buried layer formed as an anode region and an N type diffused region formed in a cathode region are spaced from each other in the direction of the depth. The steering wheel is provided with an opening in a portion to be grasped by a driver. In some examples, a quarter-wavelength stub is used to implement the filter. Corrected frequency information may be utilized to improve the reconstructed image. In other embodiments, methods of screening agents effective in blocking viral entry into a cell, including filoviral entry or entry of viruses having at least two different viral glycoproteins disposed in their lipid bilayer, such as togaviruses, are provided. Alternatively, an oxide semiconductor film with a small amount of defects is formed.

1459826610-68afdce9-4fbd-46f3-8827-6f51135419a3

A method of defining a quasi iso-gain supply voltage function for an envelope tracking system is disclosed. The docking device includes a device housing and a charging connector that is provided on a side surface of the device housing and is connected to a battery connector of a battery pack in order to charge the battery pack. Each emergency vehicle can be identified by the uniquely individual signal stamp. The parasitic patch, as well as the driven patch is surrounded by a metal wall cavity.

1459826610-692a31b1-78dc-4a0c-b6b5-bfe601dc20a2

This disclosure relates to radio frequency power converters and methods of operating the same. An oil repellent copolymer characterized by comprising a repeating unit having a polyfluoroalkyl group, a repeating unit having a fluorescent functional group, and a repeating unit having an ester bond other than an ester bond derived from acrylic acid, and/or a hydroxyl group. A tap portion of the connector assembly may also include insulation piercing contacts for electrically engaging the second pair of wires.

1459826611-14d1c6ea-6476-4199-85a7-0318891d7669

An array of optically coupled cavities of a semiconductor laser are defined by either an etch and/or by a native oxide of an aluminum-bearing III-V semiconductor material and are arranged serially end-to-end along the longitudinal direction. Tablet computer stand may comprise a T-shaped tablet computer dock, a dock rotator, a neck, and a U-shaped base. Bias RF power is then applied to a support member to cause permeation of a wafer W by the plasma. The cover member comprises, for example, pressure sensitive or temperature-activated tape, reject dies, or the like. A light emitter which emits light when the notification signal is supplied thereto is provided in each of the first lamp module and the second lamp module. The method includes creating a second logical partition that includes the second processor and assigning a second portion of the first set of physical computing resources to the second logical partition.

1459826611-3d16121d-3b2a-475b-b5d5-da4ad82252e6

An imaging section includes a radiation source that emits radiation, a detecting panel for detecting the radiation, and a rotating section for integrally rotating the radiation source and the detecting panel about a rotating axis. The biasing force normally applied to the back panel of a mail piece, such that the front panel maintains contact with a registration plate, is controlled by an actuator such that the force can be removed when the printing module is not performing the actual printing process. The multiple phases are then combined to generate a single clock signal having a frequency substantially equivalent to the number of phases multiplied by the frequency of the clock signal generated by the multi-phase VCO. If it is in the correct format, then the PostScript emulator sets the mode flag to the MacBinary state, and the code sniffer ceases any further filtering of control characters and disables any change of emulator command that may be received during this print job.

1459826611-5afb43d5-cd45-423c-96da-22497b8da7a4

A method and apparatus for providing simultaneous enhancement of transmission loss and absorption coefficient using activated cavities is presented. An electrohydrostatic actuator of realizing a snubbing mechanism capable of increasing energy efficiency, when used for a landing gear retraction/extension device of an airplane, can be provided. The first and second integrity checking values are compared and the first section of the JPEG image data is authenticated when the second integrity checking value matches the first integrity checking value. The rear portion has at least one strap constructed of at least two layers of material. This product does not contain Na or NH<sub>4</sub> ions. An encapsulating material is placed over the dice and lead frame, with the connecting sheet keeping the encapsulating material on one side of the lead frame.

1459826612-50661cf4-d70b-4754-a118-ec1d6e82cdb2

Systems and methods for authentication generate keys from secret credentials shared between authenticating parties and authenticators. By such arrangements, it can effectively reduce the volume and the sensitivity of the lens system. Also, because the aluminum nitride is formed from a mixed hydroxide co-precipitate, the distribution of the dopants in the powder is substantially homogeneous in each particle.

1459826612-dc407af0-e016-4572-9f1b-8eb1148f8775

An apparatus for transporting animal feed in an aqueous body utilizing a container having a wall portion forming a chamber. The incorporated current-limiting layer reduces the occurrence of current spikes during the programming of the resistive switching memory device and the incorporated current-reducing layer minimizes the overall current levels that can flow through the resistive switching memory device. A plurality of wheels are attached to the chassis adjacent the rear end, and a hitch assembly is attached to the chassis adjacent the front end. The film may additionally include at least one textured surface for the low scattering of light. A dental implant is inserted into the socket.

1459826612-f92b03b6-9193-41e4-b890-76f7c7cc4db7

A monitoring system in kit form to retrofit to motorcycles or other vehicles that do not have self canceling turn indicators and as an aid to the hearing impaired. It operates by measuring a change in capacitance when one plate is fixed and one is mobile. When a data recovery procedure starts, the stored disk read data in the read sample buffer is detected. OAM functions provided by echo messaging enable OAM functions despite service volume along a core network, path or set of paths.

1459826613-0d35ce65-6f24-432d-9d7c-a0ce9551d778

A method of producing a hydrogen storage material including the steps of: forming a magnesium-nickel melt having up to 50 wt % nickel; adding up to 2 wt % of a refining element to the melt under a non-oxidizing atmosphere, the refining element having an atomic radius within the range of 1-1. The loom includes bias fiber holders, bias shuttles, and independently controllable bias arms to interweave the bias fibers. The plant also has a heating section in which the de-aerated vegetable product is heated from the starting temperature  $T_1$  to a final temperature  $T_2$ , with  $T_2 > T_1$ , obtaining a heated de-aerated product. Any cards in the initial player hand that match any cards in the house hand are automatically changed into a wild card. A deployment device rotates each of the control elements and the struts radially outwardly beyond lateral peripheral dimensions of the vehicle to a fully deployed position.

1459826613-24899e12-bd96-4738-837e-7f260f91f21f

A foldable cart assembly which is arranged to provide trackable transportation to a product or a person. The invention enables the preparation of stable suspo-emulsions containing a variety of active ingredients and components and containing large quantities of oily components. Reactive and meditative chemicals may be injected into the air flow either through the net nozzles or adjacent to the net nozzles.

1459826613-4dd46655-2856-4205-9c59-256fbbabb787

A computer implemented method and system is provided for validating a user associated with one or more social networks. The heater device can be separated from the module casing by an insulating layer or by a thermal switch. The earphone housing has an outlet passageway from the ANR component to an auditory canal.

1459826613-89866cae-c789-40f6-96b6-e98ffbbbf247

A valve system for a vessel has a valve body, and a valve stem extending through the valve body and terminating in a plug for axial movement between open and closed position as the stem moves through the valve body. The module provides network-assisted optimization of utilization of the GPS receiver and other resources by activating the GPS receiver and associated components when fine resolution location data is needed for provision of the location based services, and deactivating the GPS components when coarse resolution will suffice. A bracket is attached to the circumferential flange and secures the collar on the top part of the post while still allowing it to flex on the post. The custom zooming application determines to render one or more of the plurality of objects with at least one different level of

visibility with respect to other ones of the plurality of objects based, at least in part, on the respective degrees of relevance, the level of zoom, or a combination thereof. The variable capacitance component can also include a constant capacitor.

1459826613-d2090a4b-8f15-4872-bdd6-93ff3ff4584c

A park assist system for parking a vehicle in a target parking space includes a first sensing system which determines whether there is a sufficient slot length in a target parking space in which to park the vehicle. In accordance with the invention, the metal washer, interposed between the screw head and the mounting surface formed at the bottom of the housing of the cover, includes two radial wings diametrically opposite working together with internal parts of the housing butting and preventing a rotation of the washer during tightening of the fastening screw. In at least one embodiment, the method periodically issues bundle version identifying signals to different nodes of the network. The collar is movable along the axis between first and second operative positions. Once the scroll wheel is rotated, the revolving shaft is driven to rotate together. The test circuit models a function of the integrated circuit device and generates the test result signal when the power input has reached a sufficient voltage to perform the function of the integrated circuit device.

1459826613-eca0352f-3284-42a9-bcbc-c8e7df6364ee

A continuously variable transmission includes a one-way clutch, a plurality of linking members, and a variable gear ratio mechanism. The apparatus and method also allows for the assessment of valve function and intraluminal flow using conventional imaging modalities such as ultrasonic and magnetic resonance imaging. The first is a crossing catheter having a prolapseable or curved tip.

1459826614-2e1bf47d-d53b-4e4b-8a6c-13bd26f8e689

A semiconductor device has an alignment mark which can be recognized by a conventional wafer prober. The rotary actuator has a pivot axis, and the rotatable HSA portion has an installed HSA portion center-of-gravity. The cover accommodating chamber has at least one assembling portion. The method uses fixing-pressure-exerting means which are designed to exert a fixing pressure which acts on the mass in the mould cavity after the filled mould cavity has been closed.

1459826614-d62a1334-0c40-4bca-9dd5-3ee1bdd0ad28

A ballot processing system for processing a plurality of ballots having one or more voting selections marked thereon. A support block extends from the rear of the fixed clamp arm and a pressure spring is disposed between an outside wall of the pivoting movable clamp arm and the support block. Characteristics that may be sensed and recorded include frequency, amplitude, and duration of the acoustic events. A CIM provider may access HMC objects through a common interface, so that different repositories are allowed to be used without significant changes to the underlying server code. A magnetic resonance imaging system and a method of tuning the RF body coil are also described. The invention provides kits for diagnosis and prognosis.

1459826614-e82302fc-ffb7-450c-bf82-df0b135797b0

A method and system for carrying out a handover between base stations of a telecommunication network. According to a preferred embodiment, a call data record server is provided in communication with a prepaid calling system such that account refillcredit information is provided to the call data record server. A housing body is connected to the holder so that an annular contact portion is pressed toward the holder. Each element may be accompanied by appropriate attributes. When water passes through the supply channel, the mixing solution supplied to the dilution chamber is diluted with from the sustained release outlet. If at least one of the excluded structures is found, at least one exception handling operation can be performed.

1459826615-54fbcf5a-eedf-4670-b7d5-9f06932af664

The subject disclosure pertains to relationships between items. Then, the frequency deviation of the received signal is determined on the basis of the detected frequency deviation of the first signal and the second signal. A clearance is formed between each armature engagement members and the corresponding airbag module engagement members when the module is mounted to the molded armature. Method of generating ions in a gaseous medium having the step of applying a radio frequency voltage between two electrodes separated by a dielectric material so as to generate a plasma ion source. Also described are molecules that block proteins that promote the formation of ADDLs. The length of the grating lobe mitigation fins is established in accordance with the degree of suppression of the grating lobes produced by the aligned acoustic power sources that is desired.

1459826615-eefea984-0bd5-473c-8f2d-f455e3cad081

An electric fence for deterring animals from an area with one or more supplies of feed and at least one separate feed processing machine, wherein the fence comprises an electrically conductive member, an electric power supply connected to said member for energizing the member and arranged to provide an electric shock to an object coming into contact with said member. An example method includes identifying an approximate position of a receiver antenna. When the clip reaches its position it latches in place, freeing the user to use both hands to lift the mat and insert its upper edge between the clip and the base of the hanger. For each particular pixel, two matrices are formed that include a subset of the pixels spatially related to the particular pixel. Each trace output circuit is configured to transmit trace information to the adjacent downstream segment when in the disabled state. A dummy latch latches the test output signal at substantially a same speed as an operational latch during a normal operation.

1459826616-0f30a8e8-4a59-4ff6-8010-e081b3e1da9f

A RF front-end having two antenna switches operatively connected to two separate antennas. Normally, a safe place for firemen. A tubular insert is mounted in the housing for rotation around the axis and axially displaceable. In each instance, the quality of service may be maintained, even if reduced, to meet or exceed the minimum acceptable quality of service for the subscription. The qualifications are verified, the response data is validated, and anonymity and privacy are maintained by associating the mobile device and other pertinent non-identifying information with an encrypted identifier.

1459826616-5b1eecf6-a8bf-467e-8614-041cf90444b4

The present invention provides a method of treating a leg ulcer comprising contacting the leg ulcer with a collagen biofabric. 03% sulphur is blended, in a minor amount, with an oil of lubricating viscosity, in a major amount, to give a trunk piston marine engine lubricating oil composition for a medium-speed four-stroke compression-ignited marine engine. Next, a second fluid which is more volatile than the process liquid is supplied to the upper surface of the substrate from the fluid nozzle, while the wafer is being rotated. Information is then received via a network from a user of the user computer system to complete a rebate claim for the purchased product. The lens is prescribed as a standard unifocal lens.

1459826616-7da69493-a7b2-4b65-acc7-b4fadf6b7b56

A curb or other structure is formed by a moving slip form mold receiving material used to form the structure from a hopper. The target site may be accurately located by the UAV, and the manipulator system may accurately locate the payload at the target site. In addition, the controller is configured to calculate an elapsed time from the ignition off time to the ignition on time and determine whether the elapsed time is equal to or greater than a predetermined time. Such a mat is anticipated to be useful in service environments, such as hair styling salons,

retail outlets, or restaurant kitchens, for example. Such a seat section is adjustably pivotal about a horizontal fulcrum axis passing through the A-frame apexes.

1459826616-d72e816b-598f-45c0-b475-9b066f4be6f0

A universal memory IO generating apparatus includes a defining module, a retrieving module, a generating module, and a layout module. The process analyzes an image in terms of perceptual constructs of the human visual system and searches for patterns among analyzed abstractions of the image. By using a plurality of speakers at least one of which has a bass reflex enclosure, a monophonic system is provided with a flat frequency response. The second thermal head is arranged on the upstream side of the first thermal head in a paper feed direction.

1459826616-f7dfa9c7-8048-4b5b-bdcf-cf50254e4493

A toy figure having multiple articulating limbs connected to the torso by pivot joints that are molded in a vertical injection molding step that forms and pivotally interconnects, in situ, one member of the pivot joint to a second, pre-formed member of the pivot joint. Reagent disks are arranged at inside and outside of a reaction disk. The method further includes sensing values associated with a bucket velocity parameter, such as bucket tip velocity, during interacting with the material, and controlling the velocity parameter via commands which control a sequence of bucket orientations whereby an implement system of the machine interacts with the material, responsive to the sensed values.

1459826617-1c1adc5e-fda9-4dad-89ae-b6063b7d2ae0

The invention describes a method, system, device, and computer-readable medium having computer-executable instructions for classifying faults on an electrical power line. An interlayer insulation layer is provided between an edge of a first electrode layer and an organic light emitting layer that constitute the pixel and the distance between the edge and a second electrode layer is secured sufficiently. The support arm is adapted to lift and support the cross arm, whereupon the replaced pole may be disengaged from the cross arm and removed.

1459826617-34f32a2c-03a3-430a-9a8e-01106cab0da2

The invention relates to a method of computing a disparity, a method of synthesizing an interpolation view, a method of encoding and decoding multi-view video using the same, and an encoder and a decoder using the same. A variable ignition rate for igniting the engine permits an optimal use of the igniters and thereby prolongs their life as well as its associated maintenance schedule. Then, the electric signals are digitized and the data is processed by discriminating the data corresponding to the video image of the real object from those corresponding to the apparent video image generated by the interface. Kits for forming such implants are also provided. A phase of the equalized ISC signal may be adjusted using the generated phase adjustment signal, to generate a phase adjusted partial response signal. Depending upon signal type and/or signal strength, the power levels of certain components are adjusted and/or certain components are added to the tuner.

1459826617-7e4297bd-28d3-413b-bf80-23b5ecf4e6e7

A fuse box includes a semiconductor substrate having a fuse region, and a lower line in the fuse region that has a first region and a second region. The method further includes biasing a well of at least one transistor of the semiconductor device in response to the received testing activation signal. The composition is applied to a surface and allowed to evaporate leaving a coating of antimicrobial polymer. The digital controller is powered by the DC output voltage and adjusts the DC output voltage by controlling the output stage. E\u2032 of not less than 5\u2219 dyn/cm<sup>2</sup>. Preferably, the yttria-alumina complex oxide contains at least a garnet phase, and may further contain a perovskite phase.

1459826617-c219e497-2b6c-4d56-b40b-04abc4158508

An improved electrical connection between an inert anode and a conductor rod is disclosed. The side surface of the main pole intersecting the cross track direction is arranged on the track center side perpendicular to the track width. The first shaft and the second shaft may also be secured to one another at the distal end of the first shaft according to the invention.

1459826618-d0953d3a-2ed6-4519-84d3-dc34ce45b039

A system for monitoring the connection on an integrated circuit ball grid array comprises a connection indicator circuit coupled to at least one monitor pin of the BGA and configured to detect a pin connection failure of the BGA based on a signal change associated with the at least one monitor pin. The method includes providing a structure which includes a memory layer and a sidewall image transfer layer on top of the memory layer. As a result, incident light projected by a defect detecting system attenuates less when reaching the bottom defects. The planar structures use diffraction to force the input field to converge to a spot on the focal plane. The wireless device receives signals carrying the data packets from multiple cells.

1459826618-dc30b4bf-638f-463a-a3ce-41fe8312c3ba

The invention relates to methods, compositions and kits for raising marine fish in freshwater. The memory system includes a pair of transmission lines, a transmitter that outputs a pair of differential signals to the pair of transmission lines, and a receiver that receives the pair of differential signals via the pair of transmission lines. When the switching device is turned on, a charging current outputted from the rectifier charges the power supply unit and the power supply unit simultaneously discharges to supply power to the lighting unit. Further, a transistor with low off-state current is used as the transistor included in the voltage conversion block, whereby storage of the output potential is controlled.

1459826619-24ddeab3-fb2d-435f-8455-afd65a561162

The invention relates to a monocanalicular nasal and/or monocanalicular intubation assembly particularly intended for lacrimonasal imperforation including a probe made of a first material, in particular a flexible material such as silicone, the probe having a substantially cylindrical shape along a longitudinal axis; and a device for inserting the probe into a lacrimal canal or canaliculus. The polarization generation part adjusts the polarization state of the illumination light emitted from the light source on the basis of predetermined illumination conditions and the polarization analysis part adjusts the polarization state of the illumination light emitted from the light source on the basis of predetermined detection conditions. The second module determines a value based on the expected response and a measured response of crankshaft speed due to combustion within the cylinder of the engine. Collection of the filtrate substance within the pores of the particles rather than within the interstices of the bed enhances the filtering capacity and does not impede the flow of fluid through the bed of particles.

1459826619-520a326b-b44c-4839-aac1-86347e66eae5

When a fuel cell system is to be stopped, a controller 3 decreases the coolant flowrate to a fuel cell 1, decreases the cooling performance of the fuel cell 1 and continues operation of the fuel cell 1, and performs a temperature rise operation wherein the temperature of the fuel cell 1 is increased using the heat generated by the electrochemical reaction in the fuel cell 1. Mechanisms for reducing the number of transactions in a multiple cluster system are provided. The support bladder may be selectively pressurized when needed based at least in part on sensed physical characteristics. The polyurethane foam is an effective adhesive medium, thereby forming the core and connecting the sidewalls to form the package.

1459826619-cef0d6f0-4005-47ac-869c-1394a2fe3b06

A vehicle includes a vehicle frame, a dielectric panel mounted to the vehicle frame, an antenna unit mounted on the dielectric panel, an electrically conductive

bracket connected with the antenna unit, and a resilient ground plate connected with the bracket and the vehicle frame. The shoe cover is useful for muffling sound of the wearer. A second aspect of the invention relates to a process for dehydration of an azeotropic mixture, including a first alcohol and water.

1459826619-d11dcc3a-6f7a-456a-8f8b-583ccc0e7e30

Gas barrier layers and composites contain a low gel sheet produced from a composition containing a thermoplastic polyurethane, a hydroxyl functional copolymer, and a gel reducing additive. The decision as to whether or not to initialize and/or update the false echo memory is made using at least one value for the sensor-inherent noise, container noise and/or EMC noise for this purpose. The timeframe is divided into at least two sub-frames. Mix xanthophyll crystal or its fatty acid ester with food-grade glycol or propylene glycol, for full dissolution under 60-90°C. The device also includes a comparison module for comparing, such as by performing a cross-correlation operation, the generated frequency spectrum data and the stored frequency spectrum data in order to determine whether the weather condition is present in the atmosphere. A distal end of the shaft is coupled to the component whose movement is to be controlled and, in use, a control force is applied to the shaft to control movement of the shaft from a first position, retracted, position to a second, extended, position.

1459826619-d3d88d3a-242b-4a6d-8c17-73d614748872

A mixture which contains a) a copolymer or block copolymer A comprising one or more copolymer blocks A which are respectively composed of from 65 to 95% by weight of vinylaromatic monomers and of from 35 to 5% by weight of dienes, and whose glass transition temperature  $T_g$  is in the range from 40°C to 90°C. Different pilot signals are produced and a different pilot signal of the plurality of pilot signals is transmitted on each of a plurality of antennas. The backup data is assigned to one of a plurality of deduplication nodes based at least in part on the locality-sensitive hash key. The engineered nonmagnetic tunneling barrier layer has a tuned resistance area product. The multilevel-data creating portion creates multilevel data based on image data. There may be an alignment bar on the drum, not higher than flush.

1459826619-fa84d6ba-9f74-4f1b-a428-346650c5d2f7

A novel technique for partially improving wear resistance of an input portion of a drive ring, where power of a shifting drive is input from an external actuator, in an adjustment mechanism incorporated in a VGS type turbocharger for concurrently rotating adjustable blades, without specifically attaching a separate member afterwards is provided. A pharmaceutical composition for an iontophoresis according to the present invention, is characterized in that the composition contains a nonionic synthetic polymer, betamethasone sodium phosphate and solvent. The tolerance ring improves mass eccentricity by radially displacing the first tab at a second radius about the axis such that a radial gap is formed between the first tab and second tab. Cells may bind to one or more microspheres. In one embodiment, the power source includes a battery and a DC-to-AC converter for converting the relatively low battery voltage to a relative high AC voltage suitable for driving the electroluminescent lamp. A graphical tree view, a list view, or an artboard view may be presented to a user in order to facilitate the selection and editing process.

1459826620-5a08c6f5-b0de-49b3-a028-e42925fb8374

A fuel injector for vaporizing a liquid fuel for use in an internal combustion engine. The system operates by receiving a machine name and a domain name associated with a client at a server. Each of the first and second pixel electrodes has a pattern scattered from a center in such a manner to form four domains. Packet processing units typically are one of: a kernel module residing on the hypervisor, a virtual appliance running a packet processing engine, and a software agent running on a virtual machine and that processes packet flows between and among

associated virtual machines. The data link is then flushed each time new voice data is ready for sending by the transmitting device.

1459826620-87521684-2792-4c7b-82c9-8ccd8a755b6d

A method for manufacturing an electronic device with a plurality of lead frames for individually supporting an electronic component 6 surrounded by a casing 8, which method includes the steps of charging a resin 10 into each casing 8 on a substrate 5 on which the plurality of supporting lead frames are disposed, and cutting the substrate 5 into individual lead frames. The TFT panel includes a plurality of scanning lines and a plurality of common lines formed in one layer and extending in a row direction, and a plurality of signal lines extending in a column direction. The ribs, arcuate sections and inner ring cooperate with each other to define openings for accommodating electric wires, ropes and the like therethrough. The polygon is sufficiently big so as not to obstruct a top hatch of the vehicle. 5 atom % of quaternary carbon atoms, and a significant number ethyl branches, terminal isopropyl branches, and branching at the C3 position relative to the hydroxyl carbon. The receiving section operates with the same immunity to disturbances as a fully balanced structure, even though the transducer is not connected between two balanced outputs.

1459826620-b0558a58-b71c-4145-a5f5-87f03cc9133c

A method of charging an imaging member having an outer surface with an imaging region and a seam region. A sense circuit includes a series combination of a diode and a resistor in the path of the current to be sensed, the voltage across this series combination coupled to drive a light emitting diode. Data is destaged from a write cache to the plurality of sub-regions on the target storage devices in an order such that a minimum number of sub-regions can be combined to restore the complete copy of the data image. An emitter is arranged facing the reflective surface. , as a positive electrode active material for the secondary battery.

1459826620-e6ca6308-d76c-4f4a-b238-c7298e37bf84

A wheel assembly is disclosed for attaching to or integrally forming with an object, such as a plastic-molded tub or cooler. A trenched gate with insulated sidewalls and base can deplete the intermediate region. The disabled communications path may be dynamically moved in a logical or physical manner in an event of a communications link or node failure to maintain a \u201chorseshoe\u201d topology in the ring network. The network server may also conduct certain actions responsive to voice requests received from users at mobile units. The adhesive is used to combine the first combination portion and the second combination portion. Phase lock to a signal may be achieved after determining carrier offset in receivers by correlating successive symbols in successive headers.

1459826621-29cddca0-1314-4576-a47a-c8a3f795bf14

A substrate heating system for an inkjet printhead. Thus, light from another device is distinguished from stray light based on the idle codes. The excitation region is coupled to at least one of the non-inverted spiral section and the inverted spiral section, wherein, when excited, the interwoven spiral antenna has a circular polarization. Such freshening compositions may be used to reduce malodor and/or microbes on inanimate surfaces or in the air.

1459826621-406b1188-9682-4c81-b4f1-988594868e19

The present invention relates to RFID devices, including handheld RFID devices, and applications for such devices. The captured omnidirectional-like image is mapped onto the determined representation format. The DUV can pass through the optical fiber module.

1459826621-89d65e18-31de-493d-a777-33efa8551740

Various embodiments of the present invention provide systems and methods for data processing. The blend of surfactants is typically a cationic surfactant and an

anionic surfactant, which may or may not be used in conjunction with non-ionic surfactants. The surgical screw includes a slotted head at one end and a tapered threaded rod attached to the head.

1459826621-edaf508b-488e-488a-aa6d-b3f4b11b0922

An engineelectric generator system includes an internal combustion engine, a primary electric generator driven by an output shaft of the engine and providing electrical power. Then, an initial coupling coefficient function is calculated with respect to a distance between two adjacent ones of the resonators, and is set in a coupling coefficient function. The refresh operation can move data to different physical storage locations and extend the life of a non-volatile memory by avoiding repetitive erasing and writing of the same data value in the same memory cell.

1459826621-f3451ff9-71b5-48a1-9da1-8a42ceca56da

A sub headlight unit for use in a vehicle that leans into turns includes a plurality of sub headlight light sources to illuminate, at one side with respect to a width direction of the vehicle, an area ahead and outward of the vehicle with respect to the width direction of the vehicle. The arrangement includes, but is not limited to a concealable feature adapted to be mounted to an interior surface of a vehicle. Various parameters of the system can be monitored, and the system can be reconfigured automatically based on the observations. First and second actuator buttons protrude from the lower surfaces of the first and second switch units. Inputs to a system that incorporates the technique can include a functional job and related emotional and consumption jobs, if any; importance levels; satisfaction levels; job executors; and willingness-to-pay. The apparatus also includes a housing for containing the receptacle and mounting lugs for mounting the apparatus.

1459826622-601eae20-7d90-4f51-abe4-50fa48aabcb6

An optical fiber plug for high density optical fiber connections is proposed for matching with an optical fiber adapter, and includes a body with an elastic buckling member to buckle the adapter, and an ejecting assembly actuated at the same time when the buckling member is actuated to release the body from the adapter. The container body includes a conversion demarcation, which defines a conversion section. The self timing path uses active low signalling throughout as this can be implemented with predominantly n-type transistors matching the n-type transistors which dominate within the array 24. The shape produces a stagnation zone that minimizes flow separations at the bow wave and has a pressure coefficient that approaches zero such that wake signatures of the mast are reduced. The selected objective wavelength components may preferably have different light path lengths. Nano-tips are disposed on the walls of the channels.

1459826622-c17718f5-6e56-4f84-96f6-dcdd48a81acb

A binding device is provided which allows reduction in profile. The hook includes a hooked portion that receives an item to be mounted thereon. When the threshold conditions have been met, the method uses the calculated internal resistance to estimate the capacity of the battery element. The other of the first pinning layer or the second pinning layer is formed from an antiferromagnetic material, such as IrMn or PtMn. Ash-free, turbostratic carbon particles perform at high efficiencies in certain direct carbon conversion cells.

1459826623-510e2c01-4cc0-4786-b982-4953eeee20b2

A guide shoe for a shearer loader, in particular for a shearer-loader drive assembly, comprising at least one base wall, comprising a guide projection, on the base-wall side, for engaging under a rack drive of a rack drive arrangement, and comprising a guide surface for engaging behind the rack drive. The active integrator is configured to receive from the touch sense array a response signal having a positive portion and a negative portion. An average dielectricity constant of this materials, at applied frequencyies, exceeds 20% of an average dielectricity constant of the load. Providing the correct data needed by the user for that

particular time, location and job function. The LED chip is selected from a group consisting of a blue LED chip, a UV LED chip, and a violet LED chip.

1459826623-5957c33f-f73b-4302-a7cc-feffbc506a7d

The therapeutic treatment of a patient using intensity-modulated proton therapy is described. The apparatus enables selective positioning of the magnifying glass, from a position directly atop and flush within to a position 180 degrees forwardly from the apparatus top. Subsequently, the copper is solid-phase diffused into the first bonding portion and the second bonding portion. The activation of the secure reset signal is independent of the system reset signal. The enlarged end portion is provided with a concave articulating surface substantially congruent with the convex articulating surface of the metacarpal insert member, and the elongate shaft portion tapers generally towards a distal end of the phalangeal insert member, and is provided with a plurality of axially spaced second fins projecting therefrom. The method is initiated with setting at least one of the spherical aberration coefficient and chromatic aberration coefficient of the imaging system of the microscope to suppress attenuation of a contrast transfer function due to an envelope function.

1459826624-57fb6953-8643-471c-b93b-2ff67c8f8701

The invention is a system and method to measure network bandwidth. The carton legs provide improved free standing stability of the carton. The terminals of each battery unit contain a region of apertures which allow the adhesive of the envelope-like packaging material to seal more effectively by flowing through the apertures and sealing to itself, thereby eliminating or reducing the amount of leakage from an individual battery unit. A first motor rotates the support table and resin is urged by centrifugal force to flow along the length of each part mold until the fiber architecture is thoroughly impregnated with resin.

1459826624-6f5e1275-0a66-4944-904c-99efc10c61c8

An adhesive assembly is provided in particular for assembling a novel element on a structure or further for reinforcing a structure. The database contains multiple database objects. More specifically, the method involves the construction of a linear separator: training data is used to construct for each category a weight vector  $w$  and a threshold  $t$ , and the decision of whether a hitherto unseen document  $d$  is in the category will depend on the outcome of the test  $wTx$ , where  $x$  is a vector derived from the document  $d$ . The in-line inspection tool may include a frame extending in the axial direction and at least one magnet connected to the frame and positioned to generate a magnetic field. The adaptor includes a peripheral flange to which a segmented sprocket may be connected, and a ring extension that may be connected to a wheel hub of an irrigation vehicle. In some embodiments, heuristic botnet detection includes monitoring network traffic to identify suspicious network traffic; and detecting a bot based on a heuristic analysis of the suspicious network traffic behavior using a processor, in which the suspicious network traffic behavior includes command and control traffic associated with a bot master.

1459826624-8df5dcb6-b0c6-496f-9941-f2e80045c221

In one embodiment of the invention, a mow and row apparatus includes: a lawn mower including a mower deck, a handle, a lawn mower motor, and a lawn mower blade configured for rotation by the lawn mower motor, and wherein the lawn mower further includes at least one expandable and retractable trimmer. The second phase is added in the form of seed crystals having controlled sizes, shapes, and compositions. The actuating member moves a member such as a rotating cam, a rotating valve plate and/or a rotating valve such that changes in the suspension height rotate the member.

1459826624-db16b4fb-e1d2-4080-bad5-967cd592c0c4

Polynomial approximation based image filter methods, systems, and machine-readable media are described. A request is received conforming to a first data transfer

protocol at the initiator node to transmit to the target node. Transition metrics are completed with the aid of the real part of the signal sample. One of the languages may be selected for use in a given session, and the display representations for the selected language are then bound to the language independent representations.

1459826625-6b0bd360-8c14-470c-819a-2ef43026c8a3

An integrated energy production system and carbon dioxide reaction system for enhancing the energy efficiency and minimizing greenhouse gas emissions of thermally activated power production methods. Once an Active Set Update message is received, the data frame time offset information is provided to a timing block which may determine data frame boundary of each downlink signal. The assigned address is stored in a source storing field of an IPv4 packet.

1459826625-8947cce2-4b71-4c25-bdbf-09cf035f2e3d

The invention concerns multilayered constructions useful for forming resistors and capacitors, for the manufacture of printed circuit boards or other microelectronic devices. In one aspect, a method of improving retention of superabrasive particles held in a solidified organic material layer of an abrading tool, a portion of each of said superabrasive particles protruding out of the solidified organic material layer is provided. The carburetor has at least one air channel that supplies additional combustion air and that is provided with an air valve that is rotatably held via an air valve shaft.

1459826625-aab8f3ec-79a9-43ee-b512-98c126309692

This vehicle periphery monitoring device appropriately determines whether or not an animal detected by an imaging device is a high-risk animal which may possibly contact the vehicle. The elements are designed to be noticeable, relevant, important and engaging. The at least one line portion may extend between the at least two conductive pads and the at least one line portion may have a narrower width than the at least two conductive pads. The method also includes applying an event principle to each pre-event of the event such that a set of protected positions being augmented with an upward closure of the target, executing the event, if the actual target is defined and said event is consumable, and applying the event principle to each post-event of the event. For each support member, the first side and the second side have a top edge and a bottom edge, the top edge having a top edge length and the bottom edge having a bottom edge length, the top edge length being less than the bottom edge length.

1459826625-c31bf4d6-c478-4452-8f70-8d30f7cfafc2

A battery charging assembly includes a load management system, a charging cord with a battery connector, and circuitry for detecting cord removal or damage. A jaw is made by rolling and formed with a cam, two non-circular blocks extending from the cam and two shafts extending from the non-circular blocks into an aperture defined in each of the walls of the base. A separating film is provided on both outer surfaces, the separating film having a porosity of between 40 and 90%. The dripper insert is secured to the inner surface of the fluid conduit and is contained entirely therein.

1459826625-c4eaf798-4334-4a3f-b4f5-7d1c94837fc2

A differential amplifier circuit, a voltage regulator using the differential amplifier circuit, and a method for controlling the differential amplifier circuit. A spring-operated mechanism urges the pivotal part toward an initial position while allowing it to pivot in both clockwise and counterclockwise directions from the initial position, the sensor indicating the amount of pivoting in either direction from the initial position. Also, the developing cartridge can include an electrode disposed on the first sidewall adjacent to the developing roller shaft, the electrode electrically connected to the developing roller member, and a driven coupling disposed on the second sidewall. All the processors have access to all

regions on hits. Parametrized representations of style sheets may include bindings between parameters, which may result in more compact and efficient style sheet parametrizations in some implementations. The sequence that is used to access the received streams is irregular with regard to the output frames, and formulated such that the input and output frames are synchronized to a super-frame that corresponds to a least common multiple frame in a conventional synchronizing and mixing system.

1459826626-1fd95835-6ae7-4505-9ea1-9d1c0b854ffa

A method of preparing beta-spodumene bodies from a plastic batch comprised entirely of minerals, absent a glass component. If the motor is overloaded, the motor's output torque is not decreased and a drive circuit can also be protected. An overlay may be placed over the outer shell to conceal the areas where the sections making up the outer shell are fastened together. Even when the height of the rinsing container varies, it is possible to use the same top part and bottom group; the height of the single-part casing simply needs to be adapted accordingly. The distance between the peaks and valleys being determined by the value of the applied variable signal. The invention is also directed to a computer program product and computer system allowing for taking steps according to the invention.

1459826626-3a5c80ca-f3a6-4aaa-858d-0d13db3b9674

The invention relates to compounds of formula in which X represents halogen, and n represents 0, 1 or 2, to a process for their preparations and to their use as nematocides. Timing accuracy for the occurrence of the event commanded by each controller is synchronized in narrow range of time, preferably within a few milliseconds depending on the specific application and system. Data from an external microphone may be processed by an audio ADC and may be sent to a processor that may be adapted to perform digital signal processing operations. The pulmonary embolism candidate is presented to a user when the candidate is determined to be a true pulmonary embolism. In other words, the shock tube is on a side circuit of the main circuit used for product feeding during the fill operation. Each part then has radii stamped into the edges by the second station of the progressive die.

1459826626-c789a5bc-417e-40f5-aae6-6474ec82cfb1

Isolated nucleic acid molecules encoding human MEKK proteins, and isolated MEKK proteins, are provided. A locking protocol is performed that includes one or more explicit locking operations on objects in a first database of the database environment. The core tube is mounted longitudinally in the distal housing and has a distal tube and a proximal tube.

1459826626-f2e74a0e-8b98-40ca-a878-f2cd43aa065b

A rotary medical manifold, for delivering various fluids through a patient delivery mechanism is described. The convex region is formed protruding towards the main package body. This will cause the ECM, according to its normal engine management software, to derate the engine performance to a \u201cno air torque setting\u201d, thereby limiting the amount of torque that the vehicle operator can extract from the engine. A second sigma-delta modulator provides a second modulated control signal of a second fractional number. The user terminal receives data of a display schedule from the display apparatus, and requests the distribution apparatus to send data of content identified from the display schedule. The email forwarding address re-directs email addressed thereto to a target email address associated with the user.

1459826627-54e15d99-cb53-48c8-ac8d-ee05fd3e931b

Disclosed herein are various methods of forming a silicon seed layer and layers of silicon and silicon-containing material therefrom. In some embodiments, the backflow resistance module can include a variable-volume chamber configured to change in volume in response to a backflow-inducing event and a check valve configured to resist backflow. Instead of performing routing operations in the Internet Protocol layer of a networking stack, a \u201cmini-routing\u201d table is

created programmatically and is used to perform routing at the Data Link Control layer.

1459826627-6ebfea3e-cd8e-4ea1-9607-21c7a3613170

The invention is a digital signal processor architecture that is designed to speed up frequently-used signal processing computations, such as FIR filters, correlations, FFTs, and DFTs. Further, a method and apparatus that use a temperature-controlled keeper device to dynamically optimize an evaluation performance of a dynamic circuit are provided. In another embodiment, a method is provided that allows transporting binary XML data that does not conform to schema by also transporting the token tables that contain the mapping for the binary XML. The data structure provided by these objects allows for the reduction of necessary storage resources and the total number of stored objects. Such a design serves dual functions as a drift eliminator or regulator. Furthermore, since a discharge period can be relatively extended, the display quality can be improved.

1459826627-98c37716-4118-47f1-a2a4-9d9bd909fd93

A surgical penetrating system includes a cannula and an obturator. First, the MPEG2 data are read picture by picture, and a type of each picture is determined. One of the two elements is configured as a service flap and, by being opened, permits access to a component arranged there below without the other element of the windshield wiper cover also having to be removed for this purpose.

1459826627-b14d42dc-7e3e-4796-908b-99b86e856a48

Described is a data entry graphical user interface system for facilitating entry of incontinence product information by a consumer. The viewer program displays an application window. End shells are also attached to the modular shells. The recess can be shaped to releasably retain an ultrasound scanner connector.

1459826627-d1d0f3ea-4e51-4e4e-830a-eded332d6665

Disclosed is a method of configuring routing information in a network router linked into a network. The ortho-mode transducer may include a first surface having an aperture defining a common port, a second surface having an aperture defining a vertical port, and a third surface having an aperture defining a horizontal port. The bottom panels include a hopper bore defined therethrough. Based on locating a matching entry in the branch target buffer preload table corresponding to the search request and failing to locate the matching entry in the branch target buffer, a victim entry is selected to overwrite in the branch target buffer. Consequently, the complex functions of the apparatuses are controlled in a centralized manner.

1459826627-f6a883e8-de93-4a7a-87a8-f95053f6ade4

Optical components may be precisely positioned in three dimensions with respect to one another. An evaluation switch in series with the plurality of parallel non-volatile re-configurable resistance state-based memory circuits is configured to provide an output signal based on the programmed states of the memory circuits. The protruded guide portions contact the ink cartridge holder to move the levers in the opening direction.

1459826628-667776bb-9e54-4855-b6c8-55868c2f4f60

A syringe made of borosilicate glass and having a cone for fastening or mounting of transfer adapters and needles is provided. The handle portion is adapted to receive a pair of batteries therein. The source point devises an encryption-key chain via a one-way function, and encrypts combinations of the label information incorporated within the packaging and objects using encryption keys from the encryption-key chain to produce one or more encrypted label tags. A cap is detachably mounted to the top of the body to hold the resilient pad in place. The substrate includes electrical signal conditioning components mounted thereon. The vibration isolating member is provided at the clutch inner.

1459826628-8abce71e-d66f-493e-8f85-2d0f5e05f3c9

A method of operating a wireless receiver. When one of the barriers encounters a foreign object in a certain manner, the barrier moves towards its tripped position, thus causing a corresponding change to the operating characteristic of the lawn mover, be it a termination of the cutting process, the mower drive process, or both. The phase noise characteristics and frequency stability characteristics are not affected, since the start-up quickening voltage is removed after the predetermined length of time.

1459826628-a58808b5-ce32-4c33-966a-7b11da146e5f

A powder feeding container is made from paper, resin film, or a synthetic film made with paper and resin film, the container containing powder within, and having a peak at one end, which is formed from an incline that starts from a middle of one edge of the container. The protector comprising a flexible thin battery and a conductive layer disposed on one side of the battery. The laser beam diameter controller controls a beam diameter of the laser beam, and includes an aperture.

1459826628-c746cd26-da99-404c-9637-1d167551e0ae

A hydraulic coupling that is used for connecting hydraulic tubular lines includes a male plug which will mate with a standard tube end flare. A computer-implemented data mining system mines taxpayer data to identify taxpayer profiles for taxpayer compliance issues. A system, an MME, and a UE for preventing bidding down attacks during motion of the UE are also provided.

1459826628-e0c077e5-e6f3-4f14-a0c3-9b23b57c6980

An electrical connector including a circuit board, a contact spring insert, and an insulation displacement terminal insert wherein the contact spring insert is positioned between the insulation displacement terminal insert and the circuit board. Image information is stored into at least one buffer for display on a plurality of display modules. The present invention therefore is useful in producing low-cost and nutritious spreads with a pleasing texture and excellent spreadability. The top layer is coupled to the middle layer and the middle layer is coupled to the bottom layer. The code objects are definable and movable within the graphical white board area, and the inter-code object connections are creatable within this area. The invention relates to the seeds of soybean cultivar SY32157, to the plants of soybean SY32157 and to methods for producing a soybean plant produced by crossing the cultivar SY32157 with itself or another soybean variety.

1459826629-19ec6923-6e04-4380-8214-01396bc52b89

A new variety of Verbena named \u2018KLEVP11419\u2019, particularly characterized by having good flower quality, good branching, and flowers with large white eyes, is disclosed. The phosphor includes a phosphor composition including a rare-earth element employed in a compound represented by the equation:  $L3Si6N11$ , wherein L is one or more elements selected from La, Y, Gd and Lu, the rare-earth element is one or more elements selected from Mn, Ce, Pr, Nd, Sm, Eu, Gd, Dy, Tb, Ho, Er, Tm and Yb. The cam and the cam follower have at least first and second pairs of cam surfaces in which a first cam surface is disposed at a different cam or helix angle than the second cam surface.

1459826629-277ca983-6a64-42cb-a56f-b4c1b2cbd785

Provided is a method for producing a pigment, in particular, a metal phthalocyanine, in high yield and in a green process. It provides a highly efficient meta-analysis infrastructure for performing research queries across a large number of studies and experiments from different biological and chemical assays, data types and organisms, as well as systems to build and add to such an infrastructure. The method includes providing a host-site accessible to an on-line viewer and web-linkable to a retailer having an apparel site.

1459826629-31fc58fb-301d-440a-acf0-6c5b93c99af8

There is disclosed a suction dredge system and method. A liner is present between the opening and the copper including structure. The second layer has a melting point of at least about 210\xb0 C. The invention further relates to a medical system that comprises such an instrument.

1459826629-5aec8b07-2c68-4e9a-b050-472dfc3f2942

An aminocarboxylic acid chelating agent, preferably EDTA, or a salt thereof has been found to be useful for inhibiting particulate formation in piperacillintazobactam parenteral combinations. The process is performed reversibly. The attachment layers melt in a reflow process. in a first crystallization device and a second crystallization device connected in parallel, and subsequently cooled in a second stage of the crystallization to a temperature of 40 to 50\xb0 C.

1459826629-67953186-41c1-4c82-8440-07a74edb8a5e

The present solution provides systems and methods for generating DNS queries that are more resistant to being compromised by attackers. A first free end of the at least one strip is held in position securely in a groove formed in the steering wheel base body. Otherwise, the micro mirror reflects the light beam on the first path to follow a third, fourth and fifth path out of the projection lens. In one embodiment the scope is intended to facilitate insertion of an intubating device, which comprises an elongated semi-rigid stylet including first and second ends and at least one inner lumen connected to a module. In an embodiment, the adjustment amount is proportional to the difference.

1459826630-23ae3a14-d1e9-4a6a-9cf0-9550a5f9365a

A diagnosis and repair recommendation system for a railroad locomotive is disclosed. The originating and terminating devices exchange candidate information through a P2P server, except that the candidate information for the terminating device is altered before arriving at the originating device. To initiate or terminate a video visit, a data center establishes a data connection with each participant, and thus the flow of data between the participants moves across a computer network and via the data center. In a more particular implementation, nanotubes are produced on full-scale wafers and functionalized. The invention is also drawn to diagnosis kits for the implementation of the method. The display device further comprises a display controller having a data input for the analogue data signal, a sensing unit adapted to evaluate the overall light emission state of said frame and an output for generating at least one sparkling signal for the one or more display pixels having a high light emission state exceeding a sensed low overall light emission state of said frame.

1459826630-291a3112-d93d-40a6-a7a1-7611c9c9da95

A method for the design and layout for a patterned deep N-well. A hierarchical protocol stack having a plurality of interfaced protocol layers is defined. Other text which may be used as a basis for searching includes communications from other attorney terminals, from artificial intelligence objection messages, and personal notes. A bar code reading device in another embodiment includes reprogramming circuitry enabling the bar code reading device to be reprogrammed either by way of receipt of programming data over a radio frequency communication line or by way of processing memory stored image data.

1459826630-619d5fbb-1d4a-48ff-8180-1a65d0550fad

Provided is a method and system to transmit data to a configurable integrated circuit that features delaying a capture edge of a clock signal at a data latch to synchronize the receipt of data at the data latch that was transmitted in response to a storage device receiving a launch edge of the clock signal. Two ends of the outer pipe are connected with a stop member and a connection member, respectively. The transistor load is employed to provide high gain, low offset, and a large

bandwidth for the differential preamplifier. Electron-hole pairs are created by absorption of radiation, and the electron-hole pairs are detected by the current they generate between the anode and the cathode.

1459826630-674f4a30-4179-4f84-b42b-a6b868879a48

A door and housing assembly for controlling air flow through the housing. on a device such as a programmable chip to configure themselves based on parameter information. Aeration with slightly ozonated air facilitates a blend of aerobic and anaerobic microbes to quickly and completely digest large amounts of raw animal waste.

1459826630-6ed5ccaa-abe8-45bf-b1ec-5643b4dc4b20

A system for orientation assistance and display of an instrument that is inserted or present in the natural or artificially produced hollow cavity, and that is equipped with one or more sensor units. The assembly uses left and right side walls with flexible and resilient connector engagement members that provide at least some amount of outward \u201cgive\u201d or movement to facilitate assembly but are designed to spring back into place after insertion of the connectors. The stretch panels include at least one j-shaped upholstery channel coupled to the stretch panel, and the j-shaped upholstery channels are configured to removably couple the basecover border to a deckboard of an adjustable furniture item. A controller may have access to temperature data associated with an insulated exhaust after-treatment system, and the controller compares the monitored temperatures to the temperature data to determine whether a difference exceeding a predetermined threshold exists.

1459826631-686f68eb-244f-4e6c-8e93-8a866f593601

Asphalt cylinders or thermoplastic polymer modified asphalt cylinders or particulate forms are induction melted by magnetic field susceptor for a controlled distribution with felt paper to accomplish the construction of an industry standard BUR roofing system. A wing of the aerial vehicle comprises a pocket for insertion of the wiring harness. Each of a plurality of physical blocks included in the memory is associated with logical zones such that each logical zone comprises a different portion of the physical blocks. The restrict algorithm consists of a preprocessing stage and a processing stage. The system may also include at least one cushion strategically positioned to absorb impact forces.

1459826631-74576ab9-97bd-4e88-be06-5e0fc9f05c67

A mixer having dynamic biasing, comprises a mixer configured to receive a local oscillator reference signal and a radio frequency data signal, and a bias control circuit configured to reduce bias current from the mixer under a low power condition. Further, a peripheral portion of the first semiconductor film includes a protruded portion toward the outside from an edge of the second semiconductor film, and a surface of the protruded portion is roughened. The antigenic polypeptides and antibodies thereto can be used in therapeutic compositions for the prevention and treatment of C.

1459826631-849728ad-cc82-40d5-a608-bfe84ac5e6b1

An ink-jet head comprises a passage unit with an ink passage formed therein and a branching passage unit, and is constructed by laminating the passage unit and the branching passage unit with each other. A primary content provider transmits its multimedia stream to a first proxy that transmits the data to a destination multicast session. Various sizes and shapes of molds and micro components can be finely polished to obtain mirror-grade surfaces.

1459826631-86c3d471-8611-4cf9-a861-2689aa82f199

A process chamber includes a wafer support to mount a wafer to be processed in the process chamber, with the wafer having an annular edge exclusion area. A preferred embodiment of the invention provides an IP telephone that prepares a notification

regarding the receipt of a voicemail message. The interface module creates a parameter setting interface on the screen of the device to display a design with a plurality of to-be-calculated nets and select at least one net in response to the user's operation. The light source is adapted to produce a light beam adjusted for display on the writing surface. The sub-band has a center wavelength dependent on a voltage applied to at least one of the electrodes. The overall security score can represent an objective measure of the security of the network that considers potential security threats to the computer assets, counter measures deployed in the network to address the potential security threats, and the effectiveness of the counter measures.

1459826631-92e427e6-a76c-45d4-81dd-e4f1de33199b

A first content selection stored on a portable media device is associated with a first tag. A first of the planar surfaces is engageable by a test apparatus, in use. The resistors are aligned in a straight line.

1459826632-15ae1381-7aa7-476d-8930-de736d0cc1b1

A turbine bucket and wheelpost assembly reduces the number of buckets in the third stage of the turbine from ninety-two to ninety while reducing stresses at the assembly points of the buckets and wheelposts. At least two physiological variables, arterial pressure and distal coronary pressure, are detected by and derived from a guidewire-mounted pressure sensor. The polishing selectivity of metals to silicon oxide, silicon nitride and/or silicon oxynitride is increased by using a cationic polyelectrolyte. The pads can be left exposed to allow for subsequent connection to corresponding solder bumps on a chip carrier or a second chip.

1459826632-20b7ec79-e8b9-427b-b595-cb5cfb1f83e8

A dispensing nozzle assembly for dispensing a number of micro-ingredients into a fluid stream. The clip-on handle grip includes a grip body configured and adapted to engage a handle. The coaxial feedhorn antenna may also comprise a conductive choke-ring coupled to the outer conductive wall, the conductive choke-ring being coaxial with the outer coaxial horn portion and the inner horn portion. A processor calculates the magnitude of the grid image and evaluates the radius of meniscus curvature. The receiving portion, with or without the rod, may be rotated or pivoted with respect to the anchoring portion, and a set screw is threaded into the receiving portion to lock the rod within the receiving portion.

1459826632-41b29e25-b6a0-4e24-8ccb-caf4a73cb432

A computer creates a full backup of a target volume by copying sectors of the target volume. An advanced load address table is used to retain an entry associated with a location accessed by an advanced load instruction. The chip includes a bone conduction sensing pattern disposed within the chip and a microphone sensing pattern disposed within the chip. The chest door is thus retained in an open condition for access to the secure area for restocking a currency dispensing mechanism or servicing ATM components.

1459826632-acb7f094-9b39-42c1-ac12-8ae1ca5fa019

The present invention is directed to plants that display an improved oil quantity phenotype or an improved meal quality phenotype due to altered expression of an H10 nucleic acid. The circuit board analyzer includes a computing unit 110, a memory unit 140 connected to the computing unit 110, and an input unit 160 connected to the computing unit 110. A first protuberance formed on an interior side of the first side wall has a leading wall swept back relative to an entrance to the box, a trailing wall swept forward relative to the entrance, and a concave wall that interconnects the innermost ends of the leading and trailing walls.

1459826632-ec82128b-0d9f-41fd-9af5-9591b79d1ced

Method and apparatus for training a system model with gain constraints. The stack

of flow plates includes openings to form a coolant passageway that communicates the coolant and a reactant manifold passageway. The commodity selector selects at least one of the plurality of commodities to offer for sale which satisfies at least one criteria based on the analysis by the offer analyzer. A bulb is inserted into the bulb stem to provide illumination. A microstrip of the antenna may be formed on top of a printed circuit board and coupled to a transmission line such that the microstrip is operable to transfer electromagnetic energy fed to it by the transmission line to a dipole structure on the bottom of the PCB that, in turn, radiates a broadband electromagnetic signal.

1459826633-2578d2e8-c92d-4dee-abb5-9ccd118984e3

An apparatus having reduced wear and friction between CMC-to-metal attachment and interface of the apparatus, including a CMC component having a surface. When a radiation source is inserted into the radiation source tube and a guidewire is present in the guidewire tube, no portion of the treatment site will be obscured from all radiation emitted by the radiation source because, within the treatment region, the guidewire and the radiation source are not in a conventional, axially parallel configuration. Equivalence classes having generational ages are cloned if their generational ages are less than a threshold age. Valves and controls can vary the beam intensity and combine multiple beams. An electronic component is mounted to the bump pads and within the electronic component opening thus minimizing the height of the package. An internal combustion engine provided as an intermittent combustion engine in the aircraft has an air intake coupled through an air transfer duct connected to the air compressor to allow the transfer of compressed air thereto, and has in connection therewith a supply startergenerator unit with a coupling shaft extending therefrom to be engaged with the intermittent combustion engine power shaft.

1459826633-3836f646-a9bf-47e0-8477-a5baeb35499e

A system and method for automatic configuration upon installation of a network printer are disclosed. These compounds are MMP and in particular MMP2 inhibitors and can be used for treatment of MMP dependent diseases, in particular inflammation conditions, rheumatoid arthritis, osteoarthritis, tumors and pulmonary disorders. The air pathway defines first and second sections. The lithium adsorptiondesorption system enables lithium recovery through adsorption and desorption of lithium dissolved in seawater using a lithium adsorbent prepared with the manganese oxide in one system, wherein the manganese oxide can be used as a lithium adsorbent with high lithium selectivity. The program on the computer system at the second location may execute to programmatically analyze the graphical program via the network.

1459826633-9a945e96-b70c-40b0-8b44-fe8cb69d8fdb

A new and distinct cultivar of Euphorbia plant named \u2018Bonpridepcom\u2019, characterized by its compact and mounded plant habit; moderately vigorous growth habit; freely branching habit; strong stems that resist breakage; dark green-colored leaves; inflorescences with dark red purple-colored flower bracts; good post-production longevity; and relative tolerance to low production temperatures. The internal combustion engine also includes a front housing attached to the first end of the engine block. Limit stops restrict the degree of articulation between the adjacent elements.

1459826633-a43bf002-e788-497c-b2a5-6d1859358d89

A system and method for high-performance profiling of web-enabled application events are provided. The electrical, optical and/or mechanical change in sensor property varies according to the position, and a measurement of the property change tracks the change in orientation of a moveable portion of the optical element. The heating element includes a pair of electrical conductors separated by a positive temperature coefficient material wherein the localised resistance of the material is positively related to the localised temperature.

1459826633-b799d659-15b9-4acd-a134-4f222237e5d4

Unlike earlier methods and systems in which Radio Link Control performance was characterized in terms of the throughput, and the size of the higher layer Protocol Data Units or packets to be transferred was ignored, a method and apparatus is provided that is based on the delay of a higher layer PDU or packet. The database has a plurality of data records and is coupled to the data event agent. The subject invention also relates to processes for making such compounds as well as to intermediates useful in such processes. A load circuit 3 includes a polyphase current-to-voltage conversion circuit for converting a current value of the polyphase phase-shifted current signal  $I_o$  into a voltage value, and outputting an output signal  $V_o$ .

1459826633-dc2a48cd-d06a-40a2-bc7b-5cdec7ee7cd7

A system and method for determining a shape of a surface comprises a chromatic imaging optics for generating a dispersion in a measuring light. The varactor element has an exponential depletion capacitance-voltage relation, e. A first demultiplexer receives an output of the first flip flop and outputs peak data. Each of the collision portions protrudes toward an upstream side in the exhaust-gas flow direction, and a cross section of each of the collision portions increases from the upstream side toward a downstream side of the exhaust-gas flow direction. Besides, it is possible to recover phenols from foundry sands in the system and process described. In the manufacturing method, by executing the first circumference correction step and the second circumference correction step before and after the solution heat treatment, respectively, an expansion quantity for setting a circumference of each of the metal rings to become a predetermined length is attained.

1459826634-1349e2a4-ca15-49bb-8abf-fd34796520e7

An implant fixture is disclosed. The first layer is composed of oleophilic polymers and a photothermal converter which converts radiation to heat. After catalytic treatment, the solution is subjected to multi-stage distillation including with a thin film evaporator with a column attachment in order to recover ditrimethylolpropane and trimethylolpropane-enriched product streams. The burn pot is specially designed to accommodate the log cartridge of the present invention.

1459826634-42f96a24-5b73-49db-b02c-f35b29dc20de

A pixel structure including a substrate, an active device located on the substrate, a second reflective pattern, and a third reflective pattern is provided. The wall has a first surface and a second surface. The high voltage test probe includes a non-electrically conductive part, an electrically conductive ring substantially shielded by the non-electrically conductive part, and a high voltage contactor for electrically connecting to a terminal end of the spark plug. Even in the off-powered condition, the high pressure accumulated in the auxiliary pressure source can be used to adjust the required braking liquid pressure at the proportional pressure control valve. The digital watermark is used as a counterfeit deterrent and as an identifier. The method writes an object information block to the information storage medium, where that object information block comprises the first sequence number, the first blockid, and the second blockid.

1459826634-ca67de57-1d70-45af-9cb8-0fedd6840c5c

A mobile hospital patient bed scale is contemplated which lifts the entire bed with patient in situ on a load platform with an aperture to accommodate the undercarriage of many hospital beds such as a motor. A communications system can automatically detect when a user is placed on hold. The print drums are interlocked to each other by rotatable members including relay gears meshing with the drum drive gears, timing pulleys fixed to the relay gears, a timing belt, and pulleys for adjustment.

1459826635-822a0f2e-db98-4670-a4a6-a385c9148939

Devices and systems for ultrasonically imaging anatomical structures and performing ablation therapy within the body are disclosed. In one exemplary embodiment, a cannulated suture anchor is provided and it includes a suture-engaging member formed therein and configured to receive a suture therearound such that trailing ends of the suture can extend through the suture anchor. The wireless base station determines autonomously whether it provides the multicasting service for the plurality of wireless terminals. The porous valve metal film of the first capacitor element and the valve metal film of the second capacitor element are connected to one external electrode while the collector layers of the first and second capacitor elements are connected to another external electrode, thus providing a solid electrolytic capacitor. The mobile station identifies the GI length based on the reported frame format and the slot number, removes the guard interval, and performs processing. Processes for the preparation of such polymers and the preparation of ceramic materials from such polymers are described, as are the resulting ceramic materials and their use as ferromagnetic materials and electrically conductive materials.

1459826635-e7538e1f-f585-405d-9a0f-c28b80fbbb3f

A mould for vulcanizing a blank tire has an overall shape that is annular about an axis of revolution and includes a configuration for channelling a heat-transfer liquid in a substantially circular path about the axis. The method comprises irradiating the Fischer-Tropsch product with light and measuring the light transmitted through the Fischer-Tropsch product to determine the solids content in the Fisher-Tropsch product. The first program then digitally signs the authentication token using the dynamically-generated private key, and sends the authentication token to the second program. The invention also comprises methods for noninvasively monitoring the physiological characteristics. The display device includes a light source; a wavelength conversion member adjacent to the light source; and a display panel to which light output from the wavelength conversion member is incident, wherein the wavelength conversion member includes an inclined surface which is inclined with respect to a surface perpendicular to an optical axis of the light source.

1459826635-fca4346f-0ec1-4486-aa1a-11b26b50f3b8

A method of forming tubing with integral fins oriented parallel to its length, and to a heat exchanger tube produced by such a method. These compounds have pharmacological applications as well as uses in assays relating to TNF and other involved cytokines. Additionally, a shaker screen including a frame and a sealing element attached to an outer perimeter of the frame, wherein the sealing element is attached by one selected from thermal bonding and co-molding is disclosed. The lookup tables is scanned to identify each prefix associated with the search term.

1459826636-25ece22a-5dd6-4a24-9071-43a00fd0d0b0

A skin care element holder for use with a handheld body having a receptacle includes a substantially circular plate having a diameter between about 20 and about 60 mm. The method includes generating a hyperlink database including a plurality of hyperlinks and a uniform resource locator associated with each hyperlink. The invention is now based on the object of ensuring sufficient protection of fusesanti-fuses on integrated circuits.

1459826636-3b530435-0929-4151-97c2-bdb857213427

Partial decode results that successfully decode a subset of bar code symbol components and a quality indicator associated with each component are stored. The image forming device notifies a document information management server of a deletion permitting instruction of a document only when two conditions, i. Accordingly, the present inventors devised new imaging arrays including redundant photodetectors to compensate for faulty ones. In one embodiment, a film may be formed on the substrate following the sequential oxide removal process. The

electronic clipboard is linked to a remote computer. When a unique ID for a next function to be profiled is written to the register, the old register value and the counter value are latched to one or more buffers and the counter is cleared to start the next count sequence for the next function to be profiled.

1459826636-3f0c19e5-b7f7-489e-9cdc-c59780f2387d

A working machine includes a blade seat movable relative to a sheet plate, and a safety protective device mounted on the blade seat to cover the blades of the blade seat and including at least one swing member pivotally mounted on the blade seat, and a protective board pivotally connected to the at least one swing member. A plurality of receptacles are formed into the base substrate through the outer surface. In addition to the first leads, the semiconductor package includes a plurality of second leads which are also segregated into at least two sets extending along respective ones of at least two peripheral edge segments of the die paddle in spaced relation thereto. The secure execution mode initialization logic provides for initialization of a secure execution mode within the microprocessor. The method uses Townsend Discharge Nitric Oxide Chemical Ionization Gas ChromatographyMass Spectrometry. This invention further relates to methods for producing maize varieties derived from hybrid maize variety X5K673 and to the maize varieties derived by the use of those methods.

1459826636-58f0a2f6-1463-48ad-bfe0-4ccd85d59acf

An automated method measures coronary calcium in a living subject using x-ray computed tomography. The converter includes multiple converter modules. An actuating mechanism causes the sheath to slide proximally upon which it becomes slit at its proximal end longitudinally by blades to expose the medical device.

1459826636-8af7b6a2-c69a-4964-a192-5dbf40b94818

An apparatus and procedure for extracting pin bones from fish. The method comprises the steps of: obtaining a string associated with an application on one of the or each remote computer; obtaining a password from a user of the client computer; combining the string and the password irreversibly to generate a secure password for the application; and providing only the secure password to the one remote computer. The rail comprises a central part and two lateral parts, which are equipped with opposing rail feet that mechanically support the carriage.

1459826637-0bcc9fc5-668a-48ab-a780-860afb7b9845

A nozzle for use in a gas turbine engine includes a nozzle door having a first end, a second end opposed from the first end, and a pivot between the first end and the second end. The seed value is computed by subjecting variable data to a Secure Hashing Algorithm, and truncating the right most, or left most, 16 bytes from the message digest generated. Such surfacing films may be incorporated into composite structures, for example, by co-curing, as an outermost surface layer. In one embodiment, information relating to network traffic is monitored both by a first set of devices associated with source addresses for that network traffic and a second set of devices associated with destination addresses for that network traffic.

1459826637-850747f0-923f-48f5-bc97-e1fab54a6e93

The present invention relates to nanocapsules consisting. In an embodiment of the invention, reflected light can be redirected outward. The first polymeric material of the first element and the second polymeric material of the second element are substantially chemically similar while the first physical parameter of the first element and the second physical parameter of the second element are physically different. A second measurement provides the information to eliminate this error. The mold release wax vaporized at the time of heating and fixing a toner image to a recording material is collected by a collection member, which is provided between a nip portion forming member and the frame of the fixing device, and kept at a temperature between the melting point and the sublimation point of the mold release

wax.

1459826637-f167f10c-3229-4ae5-ac06-d5110e5c24f8

A liquid crystal display comprises an array substrate in which a common electrode, a pixel electrode, a scanning signal line, a video signal line and a semiconductor switching element are provided, an opposed substrate, and a liquid crystal layer interposed between the array substrate and opposed substrate. The investment company issues one or more classes of shares that are bought from and redeemed with the investment company at a net asset value. The separators are disposed between the members, and separate the members to form a chamber having a height.

1459826637-fc8f4bcb-f1ad-4a97-8e81-d4c78c9feaff

A disclosed semiconductor design support apparatus reads circuit description information and generates information required for delay adjustment. The toner image transferred from the image carrier to the second image carrier is transferred to one side of the recording medium while a toner image is transferred from the first image carrier to the other side of the recording medium. The estimated code phases and/or the estimated Doppler shifts of the GPS CA signals can provide the pseudo-range measurements. The method also includes generating a mapping of the at least one function, the correspondent-defined code, and the user-defined code. The various components of the present invention, and the associated method will be described in greater detail hereinafter.

1459826638-87acf428-5d42-4e16-aa9d-88a9958c70ec

A process produces microelectromechanical components from a substrate that has a first side and a second side which is substantially opposite from the first side, and at least the first side has at least one microelectromechanical element. The coupling mechanism of the plunger drive ram is provided with first and second movable members, each having toothed, arcuate surfaces, while the coupling mechanism of the syringe plunger is provided with a knurled cavity. This synchronization process builds a baseline data structure of target data files. A confidence value for a classifier is modified by a confusion factor based on a correspondence between the confidence value of the classifier and the confidence values of mutually exclusive classifiers in the hierarchical classification structure. Different electronic devices may be so tested, including transistors and interconnect structures. The oligomers, cooligomers, polymers and copolymers contain at least one oxyamine group and at least one glycidyl-containing initiator group.

1459826639-6265dffa-3422-4041-a359-a5d16d860c12

The present invention relates to the process for the conversion of 1-benzyl-3-hydroxymethyl-1H-indazole according to formula, to the 1-benzyl-3-hydroxymethyl-1H-indazole according to formula. The system generates a search query that includes a search term and, in response to the search query, receives a list of one or more references to documents in the network. Thus, the radio transmission is used as communication means, and there is no cable connecting the display device and the body unit that transfers the display data, so that the user can operate the system freely while watching the display device. A capacitor short circuits the microwave stub to ground. The invention further relates to the use of said compounds for targeted intervention in local immunological processes, as well as effective and targeted treatment of pathophysiological and physiological processes related thereto, inter alia.

1459826639-c96ef09a-b2e7-48c7-a269-7f668d81f035

A circuit structure for a lamp set which includes a socket, a lamp assembly mounted onto the socket and an electrode portion. The jaw is then at least partially closed against the protrusion, and when the handle of the tool is pulled, the jaw is both urged shut and also away from the surface from which the protrusion extends. By using 12 detectors the range of neutron energies are covered. To prevent deadlocks,

an absolute minimum number of free buffers are reserved to ensure that sufficient free buffers for performing a buffer cache resize are always available. A third storage system includes a second storage controller and a third data volume and configured to receive second copy data from the second storage system and store the second copy data to the third data volume, the second copy data corresponding to the first copy data, the third data volume mirroring the first data volume.

1459826640-c59f91bc-f452-4a7c-ae89-30b8779cebac

An engine automatic stop and restart control apparatus is provided. The disclosure describes various embodiments for programming a target programmable device by a programmer. Many of the jitter pulses are greater than two.

1459826642-1361f532-044a-4430-a627-25c53a4f47cc

A method of optimizing pre-operative procedures in the field of neurosurgery. A partition wall partitions an internal space of an exterior cover into an engine compartment housing the engine and a cooling compartment housing the air blower. The inductor is compatible with integrated circuit manufacturing techniques and eliminates the need in many systems and circuits for large off chip inductors. A plurality of theoretical spectra is calculated using one of the plurality of recipe data in accordance with various theoretical thicknesses of one of the plurality of hypothetical multilayers. The lens laminated plate includes plural lenses, and each lens is located right above a LED of each LED package structure.

1459826642-675d6a17-e8fc-4876-8dd3-621ce4a96551

A topical composition, in particular a cosmetic composition, comprising, in a fatty phase, at least one wax and/or at least one nonvolatile liquid fatty substance, wherein the fatty phase contains at least one fluorosilicone compound. The seal cartridge has two distinct annular seals positioned within opposite sides of a unitary housing to inhibit fluid flow through the housing in both axial directions along a rod that is positioned through the housing. The apparatus may include a display for displaying the weight measure and the axle identifier. In one embodiment the digital camera is tethered to the computer system by a Universal Serial Bus and the camera device driver and bus interface software control access and usage of the USB. The error vector generation unit generates a plurality of error vectors by setting one of the vectors as a basic vector and performing a calculation on each of the vectors remaining with respect to the basic vector. The data structure may include not only ASCII characters, but also extended ASCII characters different from those used in the standard ASCII table and a double byte characters set.

1459826642-ed3319d8-3cd3-438b-a5f2-4605b63c3232

A gatherer stitcher for collating signatures made of paper, paperboard and the like, for stitching the collated signatures and for delivering the stitched signatures, includes a gathering section, a stitching station and a delivery station. A compressed foam block 300 substantially fills the compartment above the passageway entrance so as to leave a free space laterally adjacent to the passageway. The module has a projector for generating light images of the dynamic process images. The copy protection key is encrypted at the host receiver using a host-client pairing key shared between the host receiver and client receiver. An example use with address databases is described, including a method for converting an input address having a subject representation into an output address having a preferred representation.

1459826643-13f0d255-daa3-42a2-9e0f-f421d24bc7b9

A coordinated action robotic system may include a plurality of robotic vehicles, each including a platform and at least one manipulator movable relative thereto. The CPU determines the moving position of the workpiece, the tool, and the drilling tool according to the command from each channel machining sequence storage portion, and outputs the determined position as a command signal in response to the pulse

signal generated at the pulse signal generating circuit. Then, as items filling those preferences are purchased, a record is maintained of such purchases, and the orders are filled over a preselected period of time. The control device determines a geometric shape defined by a time axis and a lift-height change of the needle.

1459826643-837632aa-5e2a-47ea-944b-ce2ae1c46102

Systems and methods for pushing messages, arbitrated by a Control Manager, to local and remote client computer modules in a networked architecture. In one implementation, an intermediate computer linked in communication with the different segments relays data between the nodes and selectively substitutes the hardware addresses of its own network interface cards for the hardware addresses of the nodes themselves. The subject therapies also may include the administration of other actives such as chemotherapeutics, anti-coagulants, statins, et al. Preferably, x-ray, angiography, or other imaging techniques are used to visualize and position the catheter.

1459826643-89e02d63-53d4-40a8-bf35-fdce12830b6f

The invention concerns a method of providing service data towards a set of two or more network elements of a telecommunication network, as well as a service provisioning system and a computer program product for executing this method. The new variety is commercially suitable for indoor plant production. Each camera is placed so as to acquire the light emitted towards a predetermined area of the surface of the tire by N lights and reflected by the surface of the tire.

1459826643-8b4b0216-e9c9-435c-9ba9-8ab38089351c

The present invention relates to a polygonal rib structure having ribs directed orthogonal to one plane and intersecting each other to form polygonal shapes. The body region includes a charge trapping region. The second pinhole layout is formed by another four rows of pinholes, including third and fourth pinhole rows. A developer solution used in developing the exposed resist film includes no less than 80% by mass of an organic solvent. With digital control circuit, minimum energy point can be tracked with a lookup table stored inside.

1459826644-44df1fdc-3659-4210-b3b8-420def84dbce

A leveraged procurement network system for leveraging purchasing across company and company groups includes a front-end requisition and catalog system accessible by users from a plurality of companies in different company groups. The oxidizing catalyst bed as one or more oxidizing catalysts and the reducing catalyst bed has one or more reducing catalysts. The internal channel has an inlet to receive coolant and an outlet to exit coolant. During a read operation, the current-to-voltage converter, which is coupled to the voltage limiting circuit, converts a current pulse read from the chalcogenide storage element to a voltage pulse. The sub-assemblies include multiple function user interfaces, a user interface docking station for setting the interface to a home position, temperature monitoring and control systems, and various kinematic cable drive systems.

1459826644-b916af30-5282-4aa8-89fc-0f563edf7374

A device for switching an optical beam. At least one disk is mounted in the cavity. The method is carried out by the steps of an active initial movement of the mobile member for a first amount equal to only a portion of the amount of the movement corresponding to gearshifting; and an automatic final movement of the mobile member for a second amount equal to the remaining portion of the amount of the movement corresponding to gearshifting. In this configuration, the thermoplastic polymer material may join the first layer and the third layer to the second layer.

1459826644-d415ffad-f09f-47bc-9d36-df0f654afb4f

A widened contact area of a conductive feature is formed by means of self-alignment between an edge of the conductive feature and an edge of another feature. The internal surface and the external surface have different hardness characteristics.

Other embodiments are also disclosed and claimed. The first virtual interface is used for communicating data between the peripheral device and the first application through the physical interface, and the second virtual interface is used for communicating data between the peripheral device and the second application through the physical interface.

1459826645-4dc9fcc1-8220-4f99-a4d8-3d95f12abd29

A microscope apparatus and a microscopic method that uses the microscope apparatus for examining a sample or a specimen, such as but not limited to a tissue sample or a tissue specimen, includes a convex curved distal exit window at a distal end of the microscope apparatus. Through the analog multiplexing circuit, the analog-to-digital converter sequentially connects to each voltage source and converts the measured voltage level of the source to a binary word. The regulator includes a multipath control circuit for controlling the switch state and for controlling Vpp. The sheet metal portion provides a guiding surface for guiding a media from a printing zone to the vertical feeding path. The compositions enable improved lithographic processes which are especially useful in the context of subsequent ion implantation or other similar processes where avoidance of aggressive antireflective coating removal techniques is desired.

1459826645-bf8d9695-ceb5-4681-83de-7e8d9cc7fb11

A call from a caller to an interactive voice response system may be serviced based on behavior by the caller in one or more prior calls to the IVR system. The vacuum vessel has an internal vacuum. The programmable logic circuit receives information from the program. A determination can be made whether the mobile station is authorized to operate in the domain, based upon the mobile station identifier. The rack frame can have end members offset from the plane of the rack in the opposite direction of the projections.

1459826645-d244674b-e694-487b-ad21-60b06e408a3a

The present invention relates to interfacing with electronic ink. The invention comprises a collimator construction in which a primary blade element is moved directly by means of an actuator and where at least one secondary element is movable in connection with the primary element, but does not move dependent on the movements of it when the distance between the said elements is within at least one certain operating range concerning them. The arrangement includes an apparatus for combustion of blast furnace off-gas released by the bleeder valve. The proximal inlet end has inlet openings sized to allow blood and embolic material enter the filter body. The interior of the slide stop latch contains an elongated wire having an end that engages the frame such that the slide stop latch is biased in a down position. The device includes a plurality of bus control sections respectively connected with said plurality of buses.

1459826646-0a6b85e3-ab22-4a6b-9671-c2f22961f946

A method and system for customizing a mobile application running on a mobile communication device of a user. In particular, a drill stop is shown providing a way to control the penetration of a drill bit as an access hole into the brain is being formed. In the first state, which is the steady state, a current cryptographic key is used both for generating signatures for outgoing packets and for authenticating signatures of incoming packets. Polling delays and polling-related overhead processing may be reduced or eliminated by supporting real-time monitoring of port connectivity at the port level. The inner surface may further comprise a third concave surface of third radius.

1459826646-59f1c90b-2418-4ce0-8995-c79d042efa37

A method of making an absorbent structure having a three-dimensional topography includes placing at least a portion of the absorbent structure between opposed mold surfaces. This invention thus relates to the seeds of soybean variety XB005B06, to the plants of soybean XB005B06 to plant parts of soybean variety XB005B06 and to

methods for producing a soybean plant produced by crossing plants of the soybean variety XB005B06 with another soybean plant, using XB005B06 as either the male or the female parent. An annular channel is generally formed from one of the cartridges for selectively receiving a preload ring. Thus, the portable terminal can use a common interface to read the data from the RFID tag and also transmit the data having been read from the RFID tag to the mounting base.

1459826646-a7ae8205-ba30-4fa9-bce3-1fe2bb025994

A simulation program stored in a computer readable recording medium to execute a simulation of first and second simulation objects is provided. The display can be an LCD with a top polarizer and a bottom polarizer. A pair of lines of perforations is formed across the width of the first material. Immediately after the sealing member is attached, the initial moisture absorbent is allowed to produce an effect of removing the initial moisture existing inside the sealing member.

1459826646-c23e5fdd-dc35-4c05-9d36-d8b892e941e0

A wireless communications system base station, upon receiving from a mobile station a wireless transmission that comprises a suggested transmitter-receiver configuration, can respond by automatically transmitting to the mobile station a wireless transmission comprising an indication to use instead a default transmitter-receiver configuration. The valve includes a housing having a bypass opening, an inlet opening, an outlet opening and an internal chamber between the inlet opening and the outlet opening. Upper edges of the front flaps and lower edges of the lower flaps are sealed by respective upper and lower parts of a patient's mouth to form upper and lower evacuation channels when the body is disposed within the patient's mouth. The thread root transition zone is positioned on the shank such that, when the orthopedic fastener is operably secured into a specimen of cortical bone, the thread root transition zone is located outside of the specimen of cortical bone.

1459826646-ef6b52c8-dfaa-4fbd-9b90-8eb59a2ed076

A catheter arrangement is described that is arranged to permit a guide wire or other structure to be fed laterally from the region of an expandable working element. The compounds are useful as protein kinase inhibitors, especially as inhibitors of aurora-2 and GSK-3, for treating diseases such as cancer, diabetes and Alzheimer's disease. The activation devices configured to release an activator that increases a setting rate of the cement slurry. The progression of the removal of the damaged layer and the stage of development of a newly damaged layer are sensed by monitoring the change rate of the intensity of reflected probe light in the presence and absence of the exciting light, resulting in the formation of a semiconductor device having low and equal contact resistance. The shifted amount of the adjacent pads in the second direction is larger than a dimension of the electrode pad in the second direction.

1459826647-387cc29c-1f90-44e9-b0cc-a1874a630e93

The invention relates to a power converter comprising several semiconductors and direct voltage and alternating voltage buses for electric contact between the direct and alternating voltage connections of the power semiconductors. In one embodiment, the screen that has multiple groove angles to provide better illumination than screens with a single groove angle. The first transaction including a first data request to a first address. A control device is connected to the first liquid feed device and the second liquid feed device. The user sees the three-dimensional building structure by altering the views. A file system for storing a file.

1459826647-512843f0-c7b0-485c-afd4-67c34cee7e3c

A system and method for controlling server chassis cooling fans includes monitoring operating temperatures associated with each of a plurality of temperature sensors. In certain embodiments are disclosed early region 1 deficient recombinant

adenoviral vectors and complementing E1 positive host cells whose sequences are designed to avoid formation of RCA by homologous recombination between sequences in the vector and E1 sequences in the cells. The invention is characterized in that the yarn has an USTER coefficient less than 3% and a number of staple with arc-shaped section less than 30% of the total number of staples with hollow section.

1459826647-7211077e-ea23-4c60-a0e3-4ec7a1de7412

The present invention is directed to a method and system for automatically classifying an application into an application group which is previously classified in a knowledge base. The bottom hole assembly can have a series of screens that are separated with packers in between and above and below the screen stack. The lid also fastens to a second bead that is either located on the container, or located on a partial ring that is positioned adjacent to the first bead.

1459826647-94588f6b-b147-4433-8608-9720ac2970c5

A side impact door trim buckle initiator design is provided in a vehicle armrest and grab handle region. A conductive material such as copper is disposed within the trench to produce an inductor. A back plate is used to mount the brake on the mobile carriage. The modules are typically of a thin rectangular form and have a structure formed of either a metallic chassis 12 or a plurality of interconnecting panels with knock out portions 40 to allow for connection there through to the computer component's connection ports. The benefits and costs for rerouting a flight out of an AFP are input to an optimization framework for providing the best flight time and flight reroute options. The lift assembly comprises at least one lift cylinder for raising and lowering the room.

1459826648-6b673aea-5979-47d3-aa1f-5d0fa6431d14

An oil filler neck is provided for a cylinder head cover that exhibits an oil fill opening with an oil droplet and oil mist protection device. The method and system comprise detecting neutrinos emitted by a source, measuring the angle of arrival of the neutrinos, and tagging the neutrino measurements utilizing an accurate clock. A novel form of atazanavir bisulfate is also provided which is Form E3 which is a highly crystalline triethanolate solvate of the bisulfate salt from ethanol. The ion-sensitive passivation surface can be configured to receive the fluid.

1459826648-8da090ad-8424-416c-8977-88b6bb71dc17

An information processing method in an information processing apparatus that is equipped with a monitoring unit that acquires and retains information from a printing apparatus via a communication channel using an information request or an event registration is provided. A cuvette has a central bore positioned for receiving from the sample bore the flow of the sample fluid surrounded by and in non-mixing contact with the flow of the sheath fluid. Also, in order to stably perform a silicide process for reducing the resistance of the self-aligned gate electrode, the sidewall of the select gate electrode is recessed. The device also includes a first magnetic member mounted on the torsion bar configured to co-operate with a second magnetic member mounted on the frame for generating a position dependent torque about the longitudinal axis that is configured to at least partly compensate a torque exerted on the segment by the torsion bar. The coated super-absorbent material is typically present in said absorbent structure at least at a concentration of 50% by weight of the structure, preferably even 80% or even 90%. The damper is made of a rubber material having lower density in order to alleviate and absorb impact at the time of contact with the vibrator part, thereby making it possible to prevent vibration noise due to residual vibration generated at the time of contact between the vibrator part and the stator part.

1459826648-c562e0ce-25af-4781-a536-c189d72dcf90

A method for measuring the forward power output of an amplifier with improved accuracy with a mismatched load based on probing the amplitude of the AC voltage and current in the final amplifier stage. The invention includes a first

communication system that receives and processes the initial signal to select a call center resource processor and generates and transmits an address query for the call center resource processor. Fine position sensing is provided by linear approximation of the output signal with an offset appropriate for the specific transducer having the sensed positively sloped output signal. The method also includes determining an amount of water to circulate, and recirculating a portion of the separated water according to this determination. This can obviate the need to apply another flux composition to the solder balls prior to a subsequent component attach reflow operation.

1459826648-c79ac6e4-39c2-4f67-a52a-54cb522632b4

A nano-molding process including an imprint process that replicates features sizes less than 7 nanometers. The software architecture can be utilized for developing in-vehicle software applications for installation and execution on an in-vehicle computer system. The pressurized charge may then be discharged during a tip-in to either the intake or the exhaust manifold.

1459826649-32cae3f6-b65e-4b5a-95ba-57fd16f5efea

A wireless surface wave flow sensor can be utilized for monitoring the flow of fluid. The sense amplifier driver circuit is provided for each of the plurality of sense amplifier latch circuits and supplies the sense amplifier activation signal to each of the plurality of sense amplifier latch circuits. According to an alternative aspect the invention provides more effective frequency filtering and equivalent impedance conversion compared to the prior art when the same number of inductors are used. The insulin is delivered to the patient from a hand-held, self-contained device which automatically releases an aerosolized burst of formulation.

1459826649-3b3b38b4-01bf-4ab1-844f-504f7547187d

A therapeutic device, such as an exercise device, includes the principles of osteogenic repair by incorporating a loading mechanism into the exercise device. Micromechanical and/or macromechanical surface structures having various body forms are incorporated into selected segments of the surface of the base and of the bar that connects the threaded piece with the base to accelerate the healing process after the implant is inserted into the jaw bone and to make a critical improvement in holding the implant firmly in place without rotation. The first and second scene images may be imaged onto respective first and second focal plane arrays. By tracking use on a bur by bur basis, premature disposal of used burs as well as the incidence of bur changes in the midst of procedures will be minimized while helping to prevent the negative consequences of overusing burs. In this way, track misregistration during both flow-induced vibrations and during arm bending is reduced.

1459826649-40778b03-db74-4112-908a-affda18f17eb

A method for the application of liquid through viscid medium onto the surface of a pre-dried material web including the steps of applying a viscid medium to at least one side of the material web, routing the material web through a press nip and supporting the material web substantially without free draw. A model used in such analysis describes the shape of pulmonary nodules in terms of spherical harmonics required to delineate a unit sphere corresponding to the pulmonary nodule to a model of the pulmonary nodule. The present invention further relates to processes for the preparation of compounds of general formula I, to pharmaceutical compositions comprising compounds of general formula I as only active ingredient, or in association with other active ingredients. The inner surfaces of the pocket are also formed of hydrophilic material for comfort and heat protection for the hand of the user.

1459826649-5b825697-7c37-4166-a9c6-0a5ab4c37310

A polybenzimidazole solution comprises a polybenzimidazole dissolved in an ionic liquid excluding 1-butyl-3-methylimidazolium chloride, 1-butyl-3-methylimidazolium

hydroxide, and 1-butyl-3-methylimidazolium tetrafluoroborate. The air pressure gauge assembly has a compact design to extend the valve stem or wheel rim relatively little to avoid curb contact and interference with the wheel balance. The first composite structure may comprise a first skin, a second skin, and a core located between the first skin and the second skin. An in-line module is disposed adjacent the inserter, the module including a path along which each finished mail piece is transported. The rotation of the floating cylindrical body causes the first and second waterwheel sprockets to rotate and move the drive means which are connected to a generator and in turn create electricity.

1459826649-c07b58f0-c9cd-4182-a3c5-1a080d5adb77

A spectrometer arrangement is disclosed for the determination of a radiation wavelength of radiation emitted from a radiation source to be measured. In one embodiment, the method includes creating a bonding pad over a semiconductor substrate, and placing a mask layer over the substrate and the bonding pad. A control operation of the aberration corrector and a control operation of the feeder are conducted in parallel. This allows for a comprehensive design as well as a common look and feel for the web site.

1459826650-05355f44-244e-4d00-8b03-7237d334cc37

A punch for piercing and sealing hydroforming parts has a roll forming surface that produces an internal rolled edge portion in a formed part immediately following the punch piercing the part wherein the rolled edge portion acts to effect a tight high pressure seal between the part and the punch as the punch continues to form a required hole in the part. The inventive method comprises the following steps: a) ozone is supplied in a concentration of between 0.45, each having a specific resin-based composition. The toy outputs may include a play mode and/or a persona. It means that the processing apparatus judges whether the operating user is the authenticated user, each time when the user operates. A high-quality binary image, quaternary image, etc.

1459826650-12290a79-77b2-4e99-bbb9-2d1bcfae2705

A shock absorbing fabric structure is a one-piece webbing. A first end-plate of a flexible-bladder air spring has a retention projection fixedly attached to it and the retention projection defines a retention recess into itself in directions parallel to the first end-plate of the flexible-bladder air spring. % of a hard urethaneacrylate polymer or oligomer; and 2) 1 to 25 wt. In addition, the semiconductor chip is sealed by a resin sealing body with mounting-surfaces of the metal plate terminals being exposed.

1459826650-5b0416e4-7d3e-40de-9651-50731d24e72b

A motorized jigging device that can be used with conventional fishing rods and reels. The male member includes: a base; a pair of legs that project from the base; engaging portions that are provided on the legs to be engageable with the female member; and a linking body that links the pair of legs. Particles are driven by a particle system algorithm that is controlled by real-world attributes such as gravity, direction and dispersion. Even if no power curve data is present in the memory for a variety of reasons, it is possible to easily set an optimal laser power suitable for the characteristics of the optical disc device set, thereby securing a stable playback operation and guaranteeing high recording quality. A modem unit and the like broadcast data using the selected slot.

1459826650-8a1d1ab6-e82b-4c79-882b-93059c58154c

For supplying production and packaging machines, in particular for supplying lines for producing and packaging cigarettes, an intermediate store is provided for storing packaging material, to be precise for pallets with reels of web-like material. A controller receives a plurality of form images including a plurality of strokes. The facility then receives user input selecting one or more of the displayed item indications, and selects as seed items the items indicated by the

selected item indications. By controlled heating, the viscosity of a hydraulic fluid can be controlled.

1459826651-3598140c-3236-456e-a2f4-8057cd031381

A point of sale rebate method and system allows a consumer purchasing a product having an associated manufacturer's mail-in rebate to redeem the rebate at the POS. An external rigid deflector sleeve receives an inner extremity of the air bag module and ensures air bag movement toward a deployment location of the seat during inflation. Large blocks of hot material are dropped onto the conveyor inside the tank. The data store stores generated code artifacts, and stores the generated source library for the API description. Each set of variable data fields further includes a second data field printed with either a name and mailing address uniquely associated with a numeric code or with another representation of the numeric code.

1459826651-819e0065-b193-4b32-b95a-cbe29b444f6a

The invention discloses system and method for data authentication among processors. Execution of a first application, which is generated by a first application engine, is initiated. The method and various devices provide for diversion of blood during an inductor injection process and then return of the diverted blood back into the system after the injection is completed.

1459826651-a7e62553-4e06-4dd5-8743-b304ccc46889

A reconfigurable frequency selective surface includes a plurality of conducting patches supported on the surface of a dielectric layer, with selectable electrical interconnections between the conducting patches so as to provide a desired characteristic. The film-forming device is provided with a film-forming mask 5 and film-forming means for forming a thin film on the substrate 6 on which the film-forming mask 5 has been superimposed. A front laser diode is disposed in the arrowhead and is arranged so that a laser beam emitted by the diode projects forward from the arrowhead through an aperture in the tip and is coaxial with the tip's center axis. For atomic layer deposition, the metastable specie can be purged from the containment reservoir and the metastable specie can be compressed into the reaction chamber from the reservoir. Such compositions comprising such organosilicones are easier to formulate, and provide more economical and superior care benefits when compared to current silicone containing compositions.

1459826652-59359219-6089-41ed-9e4f-a5bd821ab981

A housing for a device operated under at least one of a vacuum and a protective gas includes at least one housing interior space, at least one receiving region configured to receive at least one getter material, and a connection between the at least one housing interior space and the at least one receiving region. The algorithm is non-blocking and may be performed in a parallel, multi-processor environment. The sheet conveyance apparatus moves the shift unit in the widthwise direction when it is determined that the overlapping portion of the sheets has reached the conveyance roller pair. This configuration can increase the mechanical strength of the shadow mask. The masking of the parallel storage device interface interrupt if no storage device is coupled to the parallel storage device interface allows the controller for the serial storage device interface to share the interrupt traditionally assigned to the parallel storage device interface.

1459826652-5b9dc19c-3bb5-4197-a686-038f09f891a9

Systems and methods that identify the Upper Layer Protocol message boundaries are provided. Rotating vanes are mounted on a shaft. Moreover, according to the number of terminals making an access, the number of terminals which perform the MIMO transmission can be varied. The ferrule holder includes an alignment key exposed to mate with a cam activation tool to lock rotation of the ferrule holder relative to other connector components. In the case discussed above, one piece of target image data and \xd7 pieces of pixel data relating to all comparison areas and

corresponding to this target image data are stored.

1459826652-c4468405-52a0-4239-91df-402f7516369b

A device for conveying powders through pipelines including at least one pumping device which in turn includes a suction inlet and a delivery outlet and a tubular chamber with opposite ends connected respectively to the suction inlet through an input valve and to the delivery outlet through an output valve. The item includes a main loop-like main body portion having opposed first and second ends. The regulating structure is provided with a triggering structure to act on different ratchet block. The engaging portion preferably includes two generally annular ribs and. The second D flip-flop receives a high level signal at a second input terminal and the first event signal at a second clock terminal and outputs a second event signal at a second output terminal.

1459826652-d3d1a8ac-1742-4f9d-9102-38258beb8b99

A spray pyrolysis method for producing pure metal and/or metal oxide particles uses a mixture of a carrier gas and a solution of a metal salt precursor, water and a co-solvent reducing agent. The tunable optical units tune respective optical waveguides, each of which includes an inner core disposed within an outer cladding. The motion of the forming roller in the forming operation is stored, the shape of the mandrel near the point of the forming roller contacting with the work is estimated based on the motion of the forming roller from a time point before one rotation of the mandrel, and according to the estimation, the rotational speed of a motor for rotating the mandrel is controlled for the forming operation.

1459826653-78758c66-d5d1-4d12-bddc-470ec91c3418

A Heating, Ventilating, and Air Conditioning Management and Control System that provides \u201cClosed Loop Adaptive Climate Control\u201d of heating, cooling, ventilation or any combination thereof to an occupied space using standard AC electric induction motor connected to a fan and other motor or electric powered devices. The disclosure utilizes autonomous navigation systems used with pantilt cameras, but eliminates the pantilt cameras substituting a plurality of video cameras. If the main arm 4 is detected to be in its pendular position before the counterweight balancing beam 5 is detected to be in its vertical position, the logic controller 16 controls activation of the solenoid valve 15 in order to add hydraulic fluid to the jack 8 in order to bring the balancing beam 5 in vertical position. The housing is connected to the support portion of the respective bracket through a flexure hinge that permits movement of the housing and supported ball in a plane generally parallel to the surface of the substrate having the optical pattern. The method includes providing a pedestal comprising a frame constructed and arranged to support the microfabrication tool and a plurality of supports connected to the frame, and laterally repositioning the supports relative to the frame.

1459826653-dceadf70-fe2b-42fb-9afb-587ee83a3d51

Hourly CO<sub>2</sub> concentration, amount of solar radiation, and plant distribution information are calculated through observation from predetermined satellites. These designs improve collection efficiency of the vane electrostatic precipitators. Subsequently, the photographer instructs zooming in the telephoto direction or the wide direction using the zooming instruction device as necessary to thereby allow fine adjustment of the composition.

1459826654-0565de55-7599-4d4c-9394-0429e066df50

A system relating to sample analyzers, and more particular, to sample analyzers that are simple to operate and have a reduce risk of providing an erroneous result to a user. One method includes having the receiving device generate a request for streamed media that specifies an initial requested error correction level. Each flow conduit hydraulically connects a flow bore of the base unit to an associated flow bore of the transmitter unit.

1459826654-3cfae3ee-ceae-4540-beb0-a1446759e158

An eyeglasses storage box includes a body connected with a transparent, and the body is pivotably connected to the cover by two pivotal members. 263 and MPEG-4 ISOIEC standards are compressed to reduce the amount of memory needed to store these streams. The discrete dose is less than a desired dose. A secondary wireless communication link may be established to initialize the establishing of the microwave communication link.

1459826654-4dc9f85d-959e-43e0-8196-9bc706b2d2b3

A non-volatile hard disk drive cache system is coupled between a processor and a hard disk drive. An adhesive is supplied to the inner surface of the open end portion of the case at four circumferentially spaced areas, and the open end portion of the globe is inserted into the open end portion of the case. The power supply circuit board is a multilayer rigid board or a single-layer rigid board, and between the wireless IC chip and the radiation pattern is connected by DC connection, magnetic coupling, or capacitive coupling. The first and second sub-electrodes include first and second metal nitride layers in which first and second stresses are applied, respectively. During virtual machine runtime the class loader queries the HASH table in order to directly access the appropriate applet component file to be downloaded and executed by the virtual machine. The heat generating element includes at least one PTC heating element having strip conductors on both sides of it for the electrical supply of the PTC heating element. At least one of the strip conductor is provided with at least one contact projection which protrudes beyond a PTC heating element locating face formed on the strip conductor.

1459826654-99ad1740-aaf0-4c29-99ce-c52c3fdeade6

A body-conforming booster cushion seat having a malleable filler material so as to permit the cushion to conform to the body shape of a user when the user is seated thereon. In the method, a substrate is provided, a catalyst nanoparticle is deposited on the substrate, a gaseous precursor mixture comprising a constituent element of the semiconductor material is passed over the substrate, and adatoms of the constituent element are removed from a lateral surface of the nanowire during the passing of the precursor mixture. In addition, the shift-down register and the shift-up register have a bit storage capacity larger in size than the bit storage capacity of the memory device from which the pixels are unpacked, or to which the pixels are packed. A friction-resistant coating is on at least one of the faces.

1459826655-105cffff-f684-4319-a1e8-807d61f2e3fc

A method and system that enable the recipient of letters, flats and/or packages that are addressed to the recipient to determine the identity of the person or group that placed an indicia and other information on mail, i. Masking material is formed laterally over at least elevationally inner sidewall portions of the trenches. The music information service system then matches the CD tag to music data stored in a database.

1459826655-76275550-1b5f-42a5-9bdd-e6aefddc9471

An apparatus for adjusting an etching area of a semiconductor wafer includes an adjustable shielding plate. A second display panel displays an environment image of the environment as viewed through the optical lenses, and the environment image includes opaque pixels that form a black silhouette of the virtual image. Each module bus is connected to the central databus by means of a module interface. 0 pH as a pathogen reduction agent is utilized.

1459826655-80aab018-4f61-4cb5-a4ce-48801bb4edb3

A combination structure for a shoe shell has a shoe body, a toecap mounted on a front end of the shoe body and at least one connecting part disposed between the shoe body and the toecap. The expressers each have a cup for fitting on the breasts and a cup outlet to which a vacuum created by the pump can be connected. The

accessory can use the power supplied during PCD hibernation to detect user input events and wake the PCD from hibernation in response to a detected event.

1459826655-d6762d20-7571-4299-97be-a8b6410a0156

Block loading may occur during the process of restoring an electrical grid after a blackout. The adhesive tape containers are comprised of two halves with circular side walls and outer walls intended to surround a portion, or all, of the roll of tape, and inner wall segments intended to engage the inside of a core of a roll of tape holding the ensemble together. The data can also be generated as a function of excitation polarization and polarization angle orientation with respect to film crystalline axes of the InGaN well. The area of the contact ring is controlled by shaping its surface. The number of stored conversion parameter sets is a fraction of the total number of pixel positions in the cross-process direction of the pixel data.

1459826655-f5733289-32a2-4595-aedc-cf88233b404e

An antenna apparatus has a ground plane and a traveling-wave linear antenna. The ground plane has a dielectric layer and metallic plates disposed on the dielectric layer. The tantalum oxide layer formed by depositing at least one precursor and ozone gas, the at least one precursor represented by the formula: . Also, when the shutdown signal is asserted, the shutdown delay timer begins.

1459826655-f5928f40-0258-4f42-8193-08e83eff49c6

An aqueous liquid suspension containing a coated drug-ion exchange resin complex comprising a core composed of an amphetamine complexed with a pharmaceutically acceptable ion-exchange resin and an uncoated amphetamine-ion exchange resin complex is provided. A method suitable for software implementation is presented in which indels may be readily identified in a computationally efficient manner. Methods for producing a maize plant containing in its genetic material one or more traits introgressed into PH1M1K through backcross conversion and/or transformation, and to the maize seed, plant and plant part produced thereby. The user service tickets within the ticket cache may be refreshed as needed. The method also includes etching the substrate to form a deep trench in the substrate, the deep trench undercutting at least a portion of the sidewall spacers.

1459826656-808afdba-ba6d-46ab-b2c3-5b071e771b29

The index of refraction of waveguide structures can be varied by altering carrier concentration. The starting sequence of playing card values can be computationally pseudo-randomly generated, where playing cards will be ordered, for example by printing or sorting, according to the sequence for distribution to the player and/or dealer. When the button is pushed, a list of standby player characters is displayed to display the character names and characteristics of the characters. The cleaned gas is either discharged through the engine exhaust system or re-circulated back into the engine combustion air intake. The 1st fraction on the one hand corresponds to a proportion less than or equal to 15% by dry weight, based on the total amount of HMDZ, and on the other hand is first brought into contact with the precipitated silica and the water. The catalyst prepared according to the present invention can provide improved conversion rate of carbon monoxide and selectivity for liquid hydrocarbons when used for Fischer-Tropsch synthesis.

1459826656-e094d75b-e374-47de-88d0-afc24f8aec80

The shaped charge device consists of an outer casing that has a removable cap on one end and a sealing plate on the other as well as an interior liner; the liner defining a plurality of forwardly opening conical cavities. The compounds may be used to promote promoting hydration of mucosal surfaces. Differences between the nodes of the two files are highlighted in a comparison tree and the user may resolve the differences to create a third file or optionally incorporate the selected differences into the base file. The handle 16 is fixed to the ball joint assembly 20 by a ball screw 24 extending from the handle 16 through the handle

shaft 32 and into the ball of the ball joint assembly 20 providing strength and durability and also allowing quick, inexpensive repair thereof.

1459826657-411dba19-f915-43e4-893e-b892dc9a6cf0

The present invention has an objective of providing an optical disk having a high resolution picture and a system for reproducing data on the optical disk, which are compatible with a conventional system for reproducing an ordinary resolution picture. The detector combines indirect radiation detection using a scintillator and photodiode and direct radiation detection by placing the photodiode and a high gain amplifier in the path of radiation. A broadcasting method is applied to the AV signal providing system. The helix angle is approximately equivalent to the following equation:  $\tan \theta =$ .

1459826657-7ace373e-0058-4831-b008-eb853237bdd

In a network device, a method for verified communication includes generating a network communication message using a selection of predetermined message elements having digital signatures generated with a private key. In order to minimize leakage current and resultant power dissipation a negative VGS voltage is established in the transistors during a standby mode and a boosted VGS voltage is established in the transistors during an active mode. To address such a challenge, a client application from the media provider may be installed at a virtual machine, and may be used to decode AV streams that are encoded in a format proprietary to the media provider. The connection unit may deactivate the USB interface by no longer providing power to the USB interface when the disc switch detects that the disc has been ejected or no longer is in the disc drive. Additionally, the method includes the steps of applying a passivation layer onto the first and second regions and removing the photoresist and the passivation layer in the active first region.

1459826657-920d60bb-4127-47ff-a4a9-c4202d6034df

A sensing method and apparatus using photonic band gap multilayered material. During rendering of an object, an environment texture sample is retrieved from the environment map based on a reflection vector stored in a pixel of the reflection image. 3 times harder than the rear portion of the golf club head due to the martensitic crystalline structure of the striking face portion foamed by heating and quenching the striking face portion of the golf club head. By contrast, a traditional headphone band can comprise a pair of engagement assemblies that extend from each opposing end of the traditional headphone band. The example method includes associating the at least one of the media device, the operation command, or the person with the audience measurement data. The present invention makes available compositions and methods that can be utilized, for example to generate and/or maintain an array of different vertebrate tissue both in vitro and in vivo.

1459826657-a17f84d4-ccb4-4b42-82aa-155f72ea113b

An improved catalyst is disclosed for a process involving the preparation of benzyldiene intermediates useful in the preparation of 1,4-dihydropyridine compounds and derivatives thereof useful as medicines such as for example felodipine. In the image and image-information search apparatus and method, a user can easily acquire his or her desired image file or image-related information while he or she is watching images, even when he or she does not know any detailed identification information associated with his or her desired image. The snap-back sensitive devices are protected by a voltage shifter circuit in series with the sensitive devices, to limit the voltage across the sensitive devices, even for a high capacitance output node at its highest output voltage. The master processing node includes a broadcast generator that broadcasts TOD update packets to neighboring processing nodes. The invention proposes solving the problem caused by the loss of power dissipated in the addressed resistor by choosing, for this resistor, a material with a negative thermal coefficient resistance, which enables the addressing output of this resistor to be increased. In accordance with a

preferred embodiment, a database induction module interacts with a user interface and a vendor provided database containing product information in the form of database files.

1459826657-c24d811b-888b-457e-ab4d-2c10a24a8f55

The present invention relates to a plate holder and a liquid crystal display having the same. The DA converter circuit has nm1 capacitors, and the supply and discharge of electric charge to one of the capacitors from among the nm1 capacitors are controlled by the lower m bits of a digital video signal. The virtual coupon is provided to the mobile device based on a set of conditions in response to a request made via the proxy for the virtual coupon, wherein the request comprises context information. The disk clamp comprises a ring-shaped body comprising an outer ring-shaped surface abutting the disk, and an inner neck spaced-apart from the outer ring-shaped surface, the inner neck comprising a plurality of independently flexing teeth for contacting the latching member.

1459826657-f62b8a69-fad5-4638-b605-9e88672efbd7

The invention is to provide a high-productivity method for fabricating a TFT device having different LDD structures on one and the same substrate, and the TFT device. In one embodiment, the system includes a laser printing assembly within a printer for printing on a print medium. First terminals of the first and the third non-volatile memory elements respectively couple to a first voltage and a second voltage. The method includes defining a data path in the router comprising a path through the router along which the data portion of the data packet travels and defining a control path comprising a path through the router along which routing information from the header portion travels. The blade weld surfaces and the rotator weld surfaces are inclined with respect to each other when facing each other in the axial direction. Outer conical nitrile seals have collars placed on extended ends of the bushings and have large radiused ends for contacting inner surfaces of outside sidebars that hold the pins.

1459826658-65aa9d6f-1e66-4a01-af8b-271f93d66014

A roll paper printer having a cover movable between an open and closed position with the printer having hooks on locking levers disposed to the cover to hold the cover in the locked position upon engaging pins located on the printer body side and having an opening lever to unlock the cover. The channel state signal generator generates first and second channel state signals that are each activated for a respective time period depending on adjustable state length data. A portion of the wicking layer is exposed from under bladder material defining a bladder. The movement unit and the drawing unit are actuated by the control unit detecting a pedestrian approaching the vehicle. A method of producing such an inventive cushioned floor mat article is also provided.

1459826658-70da3cf9-d2c5-40e9-aa48-1ff2af334fa5

An organic light emitting device is provided. The farnesane or farnesane derivative can be used as a fuel component or as a fuel additive in the fuel composition. 4 inches, a compression of about 44 or less; and a coefficient of restitution of from about 0. The second switch is controlled by a controlled delay which is synchronized by a sign change of current and/or voltage in the network. These instruments include a spacer trial or set of spacer trials for determining the appropriate size spacer required for a particular surgical procedure, a spacer introducer for grasping and positioning a spacer at least partially within a receiving bed formed in the intervertebral space, and a bone tamp for driving a spacer into the receiving bed.

1459826658-7e95531a-4c1a-4651-9019-b8b9f5b9d1eb

A connecting apparatus includes a first grasping member adapted to hold a first elongated member and a second grasping member adapted to hold a second elongated member. The extruded compliant layer is non-voided and comprises from about 10 to

about 40 weight % of at least one elastomeric polymer. A control system for maintaining a constant current at the transfer zone takes into account a current supplied by the cleaning corotron.

1459826658-b1aed0cd-a837-4aac-9cd1-2c7f6cd86568

The apparatus consists of a self contained lighting and identification device having a strap for attachment to a SCBA tank. The acousto-optic cell includes an array of transducers. The activation device is particularly applicable to electric window winder or sun-roof systems.

1459826659-2deccf17-c05d-40b6-9a38-3a6b8c40b0b3

Apparatus and methods for beaming some or all payload component loads out to surrounding support structure and adaptably coupling payload assemblies to a support structure are disclosed. It mainly uses a pair of rotating disks to adjust and fix the inclined angle of a computer when it is installed. The system further includes means for determining a flow rate of the diverted blood through the conduit. The staff and hanger clip are engaged by corresponding locking means configured in each, to selectively and temporarily lock the hanger clip at a desired rotation angle relative to an axis defining the elongated staff. The replica unit includes a replica circuit replicating a circuit in the device that decides the first output level.

1459826659-6bba8074-59fb-4c6e-b255-60cd5f1c31ee

Provided is a polyester laminated film having a double-sided heterogeneous coating layer, and more particularly, a polyester laminated film having an excellent antistatic property and post-processability. That is, n signals can be outputted from each pixel, and storage times of the n signals are different from one another. By remotely placing the payment functionality on the central system, payment data are never managed by the merchant or by the user. The adjustable band includes a plurality of openings for receiving a button attached to the bathing suit. According to other embodiments, the nano crystals include gold nano crystals and gold nano crystals. The supports are contained within support sleeves which are sewn onto the nylon webbing.

1459826659-b2e7939c-3098-46dd-8df8-b88ae73f7802

A device comprises a programmable communication interface and a processor. An active chip terminal is disposed on the active chip. The wick is embodied with different geometries, including cylindrical and flat.

1459826659-d658cba5-516d-4bcd-bb13-ec5db471f142

The invention provides compositions, methods and kits for high speed, high resolution of analytes by capillary electrophoresis starting with uncoated capillaries. The seating apparatus includes a stowable seat having a seat cushion supported on one or more legs above the floor, a seat back that is foldable upon the seat cushion for stowage of the seat, and a seat receiving recess in the floor for on-board stowage of the seat. The endless tracks support the spline balls for free rolling, recirculating movement during axial stroking of the intermediate race within the outer race through its full range of axial stroke.

1459826659-e2a2bb1d-c363-4a12-b18b-61506dbd9b13

Packets can be intelligently sliced by removing irrelevant portions of a packet, while retaining relevant portions. The first switching circuit switches between first and second states. Establishing the VPN tunnel comprises the mobile node communicating with the home agent at a public address of the home agent via a private network, a NAT device, and a public network and the home agent assigning the mobile node a first public address.

1459826660-b050503b-29b7-4eab-8a8b-b9f3c16028ce

The present invention provides an organometallic compound represented by the

general formula or, process for producing the same, metathesis reaction catalyst containing the same, polymerization process using the same catalyst and polymer produced by the same polymerization process: . A backlight and a mask form a plurality of light sources which are imaged by a lenticular screen at first notional viewing windows. The hull also has a seat surface for seating the hull against a complementary seat surface in a firing chamber of a firearm. A method for the determination of water content by means of Karl Fischer coulometric titration in a diaphragm-free cell, whereby the Karl Fischer reagent is used, and the coulometric titration is carried out in a diaphragm-free cell. Cleaning power is delivered from a capacitor through one of the SCR strings using a resonant circuit, the resonance which causes the SCR string to commutate off after the impulse has been delivered.

1459826660-bf767c3b-56a9-45fc-a6e8-5df65e905533

According to one embodiment, a solid state image capture device includes a multilayered interconnect layer, a semiconductor substrate, a pillar diffusion layer and an insulating member. The guidewire lumen for a rapid exchange catheter is provided with a narrowed or sealed section allowing for passage of a guidewire therethrough while preventing fluid flow while a guidewire is disposed therethrough. In a preferred embodiment, the ablation needle, when engaged with the delivery needle forms a coaxial connector adapted to electrically couple to an ablating source. The outer cover perimeter has a protective sidewall that extends upwardly, normal to the outer surface, for protecting the closet flange and facilitating the installation of floor tile adjacent the closet flange.

1459826660-ecce9799-70a6-4fef-9b88-bd8d35402848

A permanent magnet rotating electric machine comprises a stator having stator windings wound round a stator iron core and a permanent magnet rotor having a plurality of inserted permanent magnets in which the polarity is alternately arranged in the peripheral direction in the rotor iron core. The tire model is used in simulating vehicle response to a simulated ground profile. A fan unit includes at least one fan mounted in a fan housing that has an air input end connected to a rear open end of the housing, and an air output end opposite to the air input end. The pressure housing has opposed first and second viewports. The illuminating lamp is controlled by one of a rotary switch, a pressable switch, or a push-type switch. The throttle regulator regulates thrust provided by the thrust mechanism.

1459826661-20188411-2d37-4473-b5a3-44c3b5e0c7be

Security techniques and security mechanisms for wireless networks that transmit content such as advertisements. The image recognition process includes the following steps: an image capturing step for capturing image frame data by using an image capturing unit; and a lane line recognition for analyzing the image frame data for determining the lane lines. The magnitude comparator includes many non-least comparator cells and a P-channel transistor. The entrance surface of the prism is configured as a curved surface with negative power which is rotationally symmetrical with respect to the optical axis. A catalyst may be placed in a center of a toroidal recirculation chamber of the laser and may have integrated filters to prevent catalyst particulates from coating the chamber optical windows. The door edge protection member is driven via an eccentric lever mounted rotatably in the door.

1459826661-2f0b6068-ab56-4c72-b69d-920260ee0da0

The invention provides novel methods for measuring the metabolism of the heart. A sectional shape of a reflecting surface of the first auxiliary reflector taken along a vertical plane that is parallel to an optical axis is a shape of a parabola having an axis line downwardly extending in a forward direction a predetermined downward inclination angle with respect to the optical axis. The score can be a bi-directional matching score. When a higher traction shift exists, an operative connection is suddenly created between a controllable free-wheel unit and a

corresponding pair of toothed wheels of the new gear, and the operative connection of the old gear is at least almost simultaneously canceled. An electrical device such as a transistor or a diode can then be formed in each of the conductive regions.

1459826661-483d54cf-e1e6-4303-99e9-7b471aa20024

Provided are a nonvolatile memory device having multi bit storage and a method of manufacturing the same. The handle has a sleeve formed on one end and having a clamp and a shaft hole. A pass code is received from a second user. Optionally, one or more tools are defined by, or attached to, the cutting board. The load-enhancing device comprises a stator and a rotor arranged in such a way as to achieve a magnetic thrust load capacity enhancement by employing a number of permanent magnets, which produce an attracting force of an expelling force between the rotor and the stator.

1459826661-bc9d071b-c9a2-468e-b086-653dad864d3e

A desktop application program provides a single entry point for indicating that a file is to be sent to a recipient. At least one abrasive substance is contained in the metal matrix of the other sintered material of the reinforcing element. Each moving mean comprises at least one bar of a shape memory material and activating means to provide e. In an illustrative embodiment, the single-port memory device operates at a clock rate that is an integer multiple of a clock rate of first and second memory drivers that supply the input signals to and receive the output signals from the respective first and second ports of the multiple-port memory device. The gap extends parallel to the wall and has a length between 50% and 100% of the cavity length. The audio signal transmission method includes: wirelessly receiving an audio signal from a first external device; converting the received audio signal into audio signals of multi-channels; and wirelessly transmitting an audio signal of at least one of the multi-channels to at least one of second external devices.

1459826662-5da19dab-e056-4395-b64d-4c14ba8a9aba

A semiconductor device and method for fabricating the same which improves reliability of the semiconductor device is disclosed. Transfer function components and algorithmic transfer functions can be used to accurately measure signals that are within the frequency bandwidth but beyond the voltage range and voltage resolution capabilities of the measuring device. The pump is configured to deliver to the nozzle a mixture of water and said cleaning compound with the appropriate dilution ratio. The disconnection of the charging circuit may be conducted by use of a charging inhibition relay. Hydroprocessed effluents from both stages of hydroprocessing are fed to opposite sides of the dividing wall. The fan expanded beam produces an image of a corneal section by light diffusion; this image is captured by one or more video cameras.

1459826662-a7c87c60-1512-49b7-aa65-e8af0cfcbcb0

An antireflective coating compositions comprising a silsesquioxane resin a compound selected from photo-acid generators and thermal acid generators; and a solvent wherein in the silsesquioxane resin contains a carboxylic acid forming group or a sulfuric acid forming group. In the cleaning treatment, a spraying time of the cleaning liquid is five seconds to ten seconds. when its temperature is increased in a He gas flow at the rate of 5 to 10°C. Therefore, a reliable, quick, and less expensive device can be employed to improve measurements of ideality factors. In this case, the refrigerant-carrying pipes of the first and second regions are arranged in line with one another and have a width corresponding to one another, and the first and second regions have common, continuous corrugated rib. An equalizer device performs additional equalization of affected carriers in dependence on these interpolatedextrapolated properties, a bit loading device being adapted in dependence on the additional equalization.

1459826662-c7dfca90-67a2-41f3-b460-b020c4d06adb

A planar light-emitting module lighting circuit uses a lamp comprising an organic electroluminescence layer and electrodes sandwiching the organic electroluminescence layer as a load, and applies a current to the load so as to cause the organic electroluminescence layer to emit light. The lever arm has an end portion thereof disposed adjacent to the conveyor path so as to be deflected by an article conveyed along the conveying path. In at least some embodiments, an interface to the system is provided to allow prioritizers to be programmed and inserted to customize the behavior of the scheduler according to different print job properties. The housing turns integrally with the shaft.

1459826662-f0bd6f71-b75d-47fa-96dd-873a0591ce94

A three-dimensional optical inspection system reconstructs a three-dimensional image of the shape of the surface of an at least partially specular object resident on a printed circuit board by capturing two or more two-dimensional images of the object under different illumination configurations. A transom attachment member is provided and is attachable to both an engine and a drive unit to form a single marine propulsion system structure which can be lowered into an opening formed in a transom of a marine vessel. The second region is formed adjacent at least a portion of the perimeter of the first region and the third region is formed between the first region and the second region. The gaming device may then automatically determine changes in the values of other elements in order to maintain a constant house advantage.

1459826663-60ea02a1-6ddc-4798-98f8-670d54f3227c

Axially activated vial access adapter allowing repeated withdrawal of a medical fluid contained in the container by the use of a needleless device such as a syringe barrel or IV set having a luer connector. The sprocket has, on its circumferential edge, sprocket teeth arranged at the same pitch as the rubber projections. This may be followed by obtaining an elongated flexible planar member having a width and a length substantially greater than the width, the planar member having an upper surface and a lower surface. The device may include a chromatic dispersion compensation module which removes chromatic dispersion from horizontal and vertical polarization channels. The storage capacitor is quickly discharged to avoid a negative undershoot from occurring when the DCDC power converter is turned off.

1459826663-64582c19-9ea4-407b-ac19-5db426690138

Air is introduced from an intake chamber into a plurality of hollow fiber membranes in a casing. The specimen transporter including a specimen transport section that transports the specimen plate to the specimen imaging apparatus. , the ratio: D=percentage in equivalents of masking agents unblocking first at 110\xb0 C. The transaction, which comprises a first portion of code that is to be executed by the processor, is executed.

1459826663-73001339-ee71-483a-a558-a2563a1bb8bc

An imaging lens consists of negative first lens having a concave image-side surface, positive second lens, negative third lens, positive fourth lens, positive fifth lens having a convex image-side surface, and negative sixth lens, which are in this order from an object side. A scent material is received in the chamber. Each attaching structure is constructed and arranged to be inserted through an associated opening in a supporting structure and to be bent so as secure the choke to the supporting structure. Connectors may be placed within the opening of the flexible substrate and connected to redistribution layers of the flexible substrate. Each of these signal components is converted into a corresponding digital signal using a corresponding analog-to-digital converter.

1459826663-e3e22ef5-8602-4777-acd0-52e5f7e9e652

A flash memory and a flash memory fabrication method for increasing the coupling

ratio by HSG including forming a STI region on a silicon substrate to define an active region, forming a tunneling oxide layer on the active region, and depositing an amorphous silicon layer on the silicon substrate. When the storage-device system receives an access request to a file, the utilization of these databases allows the storage-device system to make the access to the access-target file. Connection identifiers associated with active connections and inactive connections may be stored in first-in first-out active and idle queues, respectively. The pad electrically connects the USIM chip to the mobile terminal when the USIM chip is inserted into the mobile terminal. Also, each of the one or more anonymous end-user applications is enabled for uses not requiring a link to the identified end-user. Relating a current location to one or more entries in an MMSS Location Associated Priority List enables scaling a range of entries in the PLMN list, indicating whether the MSPL apply to the entire list of PLMNs stored in an access terminal or to some subset of the PLMN List.

1459826664-43f471a2-635d-4cdf-a76c-8ca04b0853e8

A helmet-type PET device includes a helmet portion and an added portion. The sleeve protects the tube from damage if the sleeve is struck by a hard object, and creates an airspace around the tube to protect the tube from cold and prevent the escape of fragments from a broken tube. The application optimizes the existing procedure for the activating/deactivating of the ISR, enables the ISR processing at the network side and the UE side to be consistent in height, and thus avoiding unnecessary signaling expense. A selecting unit selects one of the encoding results obtained by the plurality of variable-length coding units. In at least the second position, the cleaning members engage the agitator, such as by engaging the friction surfaces, to remove debris.

1459826664-d75d2206-2fcb-4f91-9d43-6fc42b28d51f

A system and method for redundant transmission is provided. A surface of the heating plate making contact with hair is inclined by a predetermined angle relative to a horizontal plane of a handle, and a far-infrared ray device is installed on the surface of the heating plate. At least one processor in the system has a local storage. Three image stores are maintained, one for lesion images, one for \u201cnearby skin\u201d images, and one for reference-white images. By generating predicted data for the bit streams over a second time period, the present invention provides a longer \u201ceffective\u201d look-ahead window buffer time period without increasing system delay usually associated with increasing the \u201cactual\u201d look-ahead window buffer size. , occurring in the output during the transition from intermittent control mode to continuous control mode to hinder stability, responsiveness, and low power consumption.

1459826664-ec988ee6-da05-4180-ba60-66855f9acb1d

A filter for removing contaminants from water. The device includes a stretchable cloth member sized and shaped for positioning about the head and ears of an individual wearer. The optical amplifier system comprises an optical amplifier, a first and a second photodetector operable to measure the power of the input and output signals of the optical amplifier and an amplification controller with a control input. The clearance space communicates through the wall to the chamber, the wall being formed with a hydraulic passage, which carries lubricant from the chamber to the outer surface. The subset includes test case versions, if any, associated with the particular application program version and test case versions associated with application program versions earlier than the particular application program version. The amplifiers are driven by both power and a bias.

1459826665-18f6e6ad-b794-49c4-8b6b-0755ee2ce30a

A method of laser forward transfer is disclosed. The direction of transmission is selected responsive to the direction in which the best electromagnetic signal reception was received. The peripheral device can be a Multi-Media Card Secure Digital card. They can also be effected on the radially extending regions of the

recess and on the shrouds. The method and apparatus of the present invention can generate the communication frequency with a minimum number of calculations using simple binary addition, as opposed to prior art methods that generally require numerous iterations and complex calculations.

1459826665-40b658d6-2b69-44c8-afd8-1b0b4d0d6784

In the manufacture of a paper or board web, the web is slit or cut, the rising/lowering of the edges of a slitcut gap formed at the slitting/cutting point or the width of the gap is measured by means of a measurement device, and the curl of the paper or board web is regulated based on the result of measurement. The device may be utilized while the well is operating. At least one of one of the storage nodes includes an upstream communication buffer. The head end includes a service application that selects an appropriate telephone provider and transmits the telephone numbers to the provider. A relative distance of a third direction perpendicular to the first and second directions between the line sensor and the first surface changes in the second path below the first transmissive portion. The shaft may include a collection of plural recesses on the slide surface thereof.

1459826665-908f2d32-1048-45d0-bc95-ad638a0710f6

A molding tray and system for making molded structures using a moldable material. or higher and maintaining same at that temperature for substantially 30 minutes. One scheduling stage can select traffic for output based on class of service whereas the other scheduling stage may perform a further selection based on destination output port.

1459826665-d8d11c2e-c521-4a7c-b2f9-d45711791b3b

A portable foldable keyboard comprised of two housings, each of which contains a key assembly, and a central hinge. Examples of transient reduced insolation events include but are not limited to cloud-induced reduction in insolation, dust-induced reduction in insolation, and insolation events caused by solar eclipses. The base has a generally circular configuration. The first and second side walls are attached to the extending portion so as to be perpendicular to the axial direction of the convey roller.

1459826665-fb99065b-2d19-4da0-a377-82aedd44f5db

A method and apparatus for communicating and utilizing control plane congestion information in a communication network that utilizes a source routed signaling protocol is presented. The liquid crystal display panel of the present invention includes wirings made of a metal having at least 90% reflection over a wavelength region within the visible light region, where the reflectance of the liquid crystal panel over a wavelength range of 600 to 700 nm at the display surface is no greater than 150% of the reflectance at the wavelength of 550 nm at the display surface. The trusted entity authorizes the sponsor to generate the asymmetric crypto-key. At least one end of the stent is smoothly or conically tapered.

1459826666-5af70970-4569-4921-b844-b4991742c697

In a substrate in which a reflection coefficient of a surface acoustic wave per electrode is small, the invention obtains a Q value or a CI value level, which is equivalent to or higher than that of a related art product, at a device size which is equivalent to the related art product which addresses the problem that the size of a surface acoustic wave resonator becomes larger. The anti-traction material may include polymer particles capable of absorbing or being dissolved by a fluid and a fluid capable of absorbing or dissolving the polymer particles. A first contrasting color applied by the compressible roller to the image with a first force compressing the roller such that the color is applied to the skirt and planar raised portion.

1459826666-a32d78a2-1acb-4c21-b790-9c04bbcbdb520

A communication connector is described that provides an increase in the number and

type of communication circuits available on an electronic device without increasing the number and type of physical connectors. Opening of the pressure control valve is detected after the first limit is exceeded if a steady-state operating state is subsequently detected again, and if a characteristic of the closed-loop control system deviates significantly from a reference value. The needle hub is detachably engaged inside the proximal open end of the hollow barrel and has a needle mounted on the needle hub. The flap is capable of moving to a location that secures the container when the container is fully housed within the housing portion.

1459826666-a7f5a86b-67fb-43b1-9ac1-b0e28240ee46

Water tolerant Lewis acids are used in a process for the preparation of alkylene glycols by catalytic hydration of the corresponding alkylene oxide. The surface of the dielectric is roughened to enhance the subsequent dielectric-heat sink bond in which an adhesive is used. To complete the inductor loop, the first and second IO pins are connected by a conductive bridge between the pins. Thus, a multi-chip type image sensor having a smaller chip size with desired performance is provided. A method of assembling and positioning a grass screen assembly in an engine is also disclosed. Related fabrication methods are described.

1459826666-d8db7e15-5b85-440d-9546-5e3695ff3645

An instrumented golf club system having an instrumented golf club, an interface means and a computing means is disclosed herein. For example, at the time of steering to the right, when a vehicle speed is a predetermined value or less, only the right lamp is subjected to the deflecting operation, while when a vehicle speed exceeds the predetermined value, both the right and left lamps are simultaneously subjected to the deflecting operation. The solar module or solar collector, similar to a heliostat, is adapted to slowly revolve in response to the imbalanced water tanks filled with different amount of water. For each modeling element, the method and system determine visibility of the modeling element and produce a reduced data structure by storing in the structure graphic data representing the graphical entities and geometric data of only certain ones of the geometric entities determined as a function of visibility of the corresponding modeling elements. When the instruction receiving portion receives a display instruction, the display controller controls the display portion to display an operation guide image associated with an operative instruction reception image displayed on the display portion at the time when the instruction receiving portion receives a display instruction.

1459826667-644afbe8-8a75-492c-ac35-2ae8eebf5b33

A controlling device can remotely control various tasks associated with a controlled device, including the navigation of user interfaces associated with applications or an operating system associated with the controlled device. The main body receives an electronic device and includes a first holding member and a second holding member. The testing structures enable determining the quality of bonding and/or functionalities of packaged dies bonded. TES control module is adapted to deliver a biphasic electrical stimulation signal of 10 seconds or longer between the first and second electrodes having a frequency of 400 Hz or greater, a duty cycle of greater than 10 percent, an intensity of 3 mA or greater, with a DC offset.

1459826667-88ef1dca-b7ff-4e38-8d2c-e35d1b96f525

A clock-signal adjusting method and device is used for adjusting a frequency of a clock signal according to a frequency of an input data. The system includes a meter selection module configured to enable a user to select from a plurality of flowmeter types. The invention further relates to a method of modulating a function of GPR-9-6, and to the use of the antibodies, antigen-binding fragments and agents identified by the method of the invention in research, therapeutic, prophylactic and diagnostic methods. The occupant safety system may then be activated in a mode based upon the longitudinal location of the impact and/or appropriate for a spinning

vehicle.

1459826667-ac4cbe13-985f-4c07-aa23-ec5c04724c6e

A fastening element includes a holding part with a support plate and expanding cheeks, and a locking part guidingly received in the holding part. The computer system includes a program stored in the data storage device and steps of the program being executed by a processor. Metal interconnections are formed in the frame to connect the piezoresistors in a bridge circuit for sensing bending deformation or in a bridge circuit for sensing twisting deformation. Multiple page tables contain the translations for the multiple address spaces.

1459826668-3b6cb68c-c82f-4b2b-8f7d-6ee9835b98d2

A method of making a semiconductor device includes forming a pillar shaped semiconductor device surrounded by an insulating layer such that a contact hole in the insulating layer exposes an upper surface of the semiconductor device. The method includes obtaining a video stream from a camera placed above at least one region of interest, the region of interest classifying the payment gesture. Photoresists of the invention can exhibit significant adhesion to SiON and other inorganic surface layers. information that is irrelevant to creation of virtual machine data structures can be suppressed.

1459826668-4aeaf6fd-cea4-4c08-8765-880790fdf88c

A valve for use in a body lumen, where the valve includes a valve leaflet with delayed leaflet deployment relative an in vivo implant time. The first contact electrode contacts the uppermost surface of the gate electrode and a sidewall of the gate electrode. The housing further comprises a second opening located outside the platform. The seat pad overlies the seatback frame to define a forward surface.

1459826668-dd55a4f2-810f-4035-bdde-85a56485118e

A straw having a flexible portion. The apparatus includes a magnetic core presenting a pole face structure, an inductor means associated with the magnetic core, arranged to generate a time-varying magnetic field through the pole face structure, and a device for injecting gas into the chamber and through the chamber and through the magnetic core. The lens unit includes a reception unit for receiving accessory device data from the conversion lens device. The first dielectric material surrounds the second dielectric material.

1459826668-e365b74a-32fd-4dc5-a32f-c50ae71a9136

A melter apparatus includes a floor, a ceiling, and a wall connecting the floor and ceiling at a perimeter of the floor and ceiling, a melting zone being defined by the floor, ceiling and wall, the melting zone having a feed inlet and a molten glass outlet positioned at opposing ends of the melting zone. A rotating plate carrier is capable of placing several different optical elements into the optical paths of the system including at least one plane parallel plate to change the system focal distance. The management device may then communicate a quarantine request packet to the one or more nodes under attack, the quarantine request packet providing instructions to the one or more nodes under attack to alter their frequency hopping schedule without allowing the attacking node to learn of the altered frequency hopping schedule. Latency in this context refers to the time passed from when the client sends an IGMP JOIN message until it receives the first packet of the multicast stream. In this transmission, an ECU simultaneously PWM-controls all phases of one of inverters, and controls the other inverter to keep continuously the conducting state. In this manner, the coaxial cable connector is configured to attach to a coaxial cable other than by using a post.

1459826669-03fe9693-f620-4a2b-bfb0-c54c22a53948

A device for sensing analyte concentration, and in particular glucose concentration, in vivo or in vitro is described. On the basis of the predetermined tilt angle detected at the detection points, the apparatus estimates the

predetermined tilt angle at a radial position of the optical disk, and also estimates a focus bias. An insulator thermally separates the temperature control elements. The process utilizes a plurality of adsorbent beds, each bed having a feed end and product end, wherein the process includes the gas transfer steps of. Each frustro-conical roller member includes spring bias assembly for urging the rolling back of the rollable sheet after being rolled out.

1459826669-9f161910-dd7b-4ba9-9467-8aea64b9bc5a

The present disclosure relates to methods and compositions to offset, ameliorate and/or alleviate one or more unwanted and/or adverse gastrointestinal effects. On a high-frequency circuit board 100, by electrically connecting a bias line 11 to a high-frequency circuit 10 using blind via holes 106 and 107, it is possible to limit the route that has a possibility of producing resonance only to the bias line connecting the ends 106a and 107a of the blind via holes 106 and 107 to the bias line 11. The at least one pre-tensioning element causes a mechanical tension on the backplate material for a bending deflection of the backplate structure in a direction away from the membrane structure. The start signal may be produced when a locked loop achieves a lock between the read clock and the control clock. The lens apparatus may be fixed with respect to the body, or may retract at least partially into the body. The colorant is a dye complex comprising a dye, a nonionic surfactant and a complexing agent.

1459826669-df905a9b-f962-46d0-8f5a-1eba8fddd613

The disclosure is directed to an access terminal, and method for selecting an access point in a communications system. The communication and locator systems may be provided with one-way or two-way communication for locating charts or personnel, contacting needed personnel in the event of an emergency, or for communicating with healthcare workers. The next step is flowing the reduced surface tension stream through a port reducing the first pressure to a second pressure and adding oxygen. A rake assembly with at least one row of flexible rake tines disposed across the entire transverse width of the cutting deck is attached to the transverse frame and pivots therewith to contact the ground surface for raking.

1459826670-1bfccf01c-7c31-4f7b-a799-a7460f60f0f1

A computer with thermoelectric conversion uses a thermoelectric conversion module that connects between a heat generating device and a low temperature device to fully utilize the redundant heat generated by the computer. The flow guide units and the flow ways communicate with each other, whereby the air can uniformly flow to every part of the air space without generating turbulence and with the air pressure unified over the air space to enhance blowing effect of the hockey table face. The protection film formed on a bottom surface of the trench is removed by turning a third introduced gas introduced into the reaction chamber into plasma. , N before so as to output the calculated results as N symbol differential phase detected signals. An output is generated based on the estimated battery SOC.

1459826670-8ba78078-8440-4e70-a9c2-db5d09f7f2d8

A dual-mode mobile terminal, which can access synchronous and asynchronous mobile communication systems, includes a key input panel and a controller. The holder plate is formed with a center hole at a center portion thereof, the center hole having a size allowing a commutator to path therethrough, and a pair of elongated holes opposing to each other with respect to the opening portion, the elongated holes defining bridge portions with the opening hole. Each belt is retained in each slot by a flat belt which is sandwiched into each slot with the multi-ribbed belt.

1459826670-a2a5bdfa-da27-4cd3-83c6-5eed3532505b

A bi-directional single conductor interrupt line is used in conjunction with a master only initiated data communication bus, to allow a slave device to submit a slave service request to a master device and to acknowledge master service requests from the master device. The extendable squarer comprise a bit expanding circuit and

a plurality of operating units. In such an SOI substrate, adhesion between a buried insulating layer as an under layer and a single crystal silicon layer is high, and it becomes possible to realize a semiconductor device with high reliability. Intervals may be measured in the ventricle and/or atrium of the patient's heart. The probe having a triangular pyramidal or conical shape as required. The filter element is attachable to the filter housing using a bayonet lock.

1459826670-a345929f-552d-4064-a7df-fd44dbf13781

A series of games are disclosed which test the ability of players to ascertain and identify the existence of relationships between topics in a structured fashion. Instead of a buried subcollector, a buried P layer is used. The method further includes determining a health value associated with at least one of the first node, the second node, and the third node of the system based on at least one of the first fault model, second fault model, and the third fault model. A plurality of inserts extend through the first plurality of apertures, and a plurality of spacers extend through the second plurality of apertures.

1459826670-bd21b8df-5f08-4115-a879-81f2a5253005

The airbag of an airbag apparatus is provided with a slip member that is disposed on the outer surface of an occupant protection area of an airbag main body and can suppress load to an occupant by allowing the airbag main body to slide when the airbag comes in contact with the occupant while being developed and inflated. The structured data may be processed into a Binary mask Format file which may serve as a starting point for post-processing. Where the membrane occupied rates of the nozzle in a neighboring area and a non-neighboring area among membrane chargeable areas on the inside of the adhesively-fixed part at at least one adhesively-fixed end positioned near the nozzle and where the hollow part is opened are PA and PB, the ratio of the membrane occupied rates PBPA is 0.

1459826671-3a450daf-13a7-4135-99aa-455fc0780768

A method for collecting, recording, and broadcasting coded human or animal body waveforms. The expectation library can convert one or more descriptive assertions into a structured data model, wherein the one or more descriptive assertions describe one or more annotations. Each cylinder bore has a cross section formed of any other closed curve than a circle. An attenuator may be coupled between the output node of the TX path and a second port of the EBD circuit. Each of the lens elements is symmetrically disposed about an optical axis of the lens. The composition provides an incident energy absorbing property.

1459826671-79b8126d-e88b-46ac-88e5-a7cfbcd6aaaf

Systems and techniques relating to wireless communications are described. A plurality of contact structures is formed in a dielectric layer. The alarm unit sounds an alarm to remind occupants of the vehicle when a child is sitting in the child safety seat after the ignition of the vehicle in which the child safety seat is installed is turned off.

1459826671-8116a5d5-243b-405c-8c66-1221aa9306cf

Apparatus and methods are provided to decode signals from a communication channel to reconstruct transmitted information. The occluding body may be formed as a plug or tube of biocompatible material configured to occlude a bodily passageway. Trials have shown that the counter reading indicates an operating state in the circuit configuration and therefore represents a simple signal for assessing the operating state of the circuit configuration. When put under an oxygen or moisture atmosphere in the above state, this gas sensor can detect oxygen or moisture depending on a change in photocurrent due to the multiplication. In one embodiment, control processing circuitry initiates simultaneous capture of the first image by the first image sensor and the second image by the second image sensor; and image processing circuitry generates an enhanced monoscopic image comprising at least portions of the first image and the second image. The phthalate-free plasticizer according to

the invention includes a mixture of different triesters of glycerin, at least one of which meets the formula:.

1459826671-93ea3ee5-f6de-46aa-ba32-9264a409b013

The sensitivity and specificity of polynucleotide synthesis is increased by protecting the 3-end of an oligonucleotide used as a primer in the synthesis of the polynucleotide. The adhesive compositions are in the form of a liquid dispersion when stored at temperatures from about room temperature up to about 140\xb0 F. This new and distinct variety has shown to be uniform and stable in the resulting generations from asexual propagation. Then, the driving assistance system selects an avoidance line from among the plurality of secondary paths. Portions of the magnetic layer formed on this depressed portion have a non-granular structure, whereas portions of the magnetic formed on the crystal orientation control layer outside the depressed portion have a granular structure. The process can continue until there is substantially zero net power out of the engine.

1459826671-e0f8f167-b8dc-4476-a0b6-ff761ddf7f1a

A reflex-type screen includes a base which has saw-tooth appearance, and an optical absorption layer on one edge of each saw-tooth of the base. A primary motor is coupled to a primary input shaft via a clutch, a variable-speed secondary motor is directly coupled to a secondary input shaft, and the header unit coupled to a header output shaft. A side panel is attached to each cup.

1459826672-962ffe96-0342-4c87-9451-eeafd73d9bfc

A tool suspension device has a back plate and at least one tool bracket. On top of a metal wiring layer on a semiconductor substrate is deposited a dielectric cap layer followed by a sacrificial dielectric layer and pattern transfer layers. To reduce or even minimize the attenuation of PET radiation in a combined MRPET device and thus in particular to ensure a better signal to noise ratio for the PET measurement, it is proposed according to at least one embodiment of the invention that the surfaces of the wall away from the object are essentially tangential to the examination object.

1459826672-da0cc944-627e-4337-87a4-04db8533df66

To reduce the pixel size to the smallest dimensions and simplest form of operation, a pixel may be formed by using only one ion sensitive field-effect transistor. A first piece of said two pieces has at least one track and the second of said two pieces has at least one slider which slides in said track. Track following of the written servo patterns on the reference track is performed using a servo loop having a closed-loop response. Therefore, ohmic contact characteristics with the p-type clad layer are enhanced, thereby ensuring excellent current-voltage characteristics. Precharging of the virtual ground line may be deactivated substantially concurrently with activation of discharging of the virtual ground line.

1459826672-e3ae54b0-2da9-4756-9746-c57ceb248b3d

The work load spent on designing a trench-type, Levenson-type phase shift mask is lightened and the working time for the designing process is shortened. The detector resides on a station within a network using a framed format having a periodic time structure. The substrate is placed on a measuring stage traversable in the X coordinate direction and the Y coordinate direction, the position of which is determined during imaging using a displacement measuring system. The first and second magnetic field application device create a magnetic field in one direction from the first magnetic field application device toward the second magnetic field application device. One embodiment provides a semiconductor package singulated from a wafer includes a chip defining an active surface, a back side opposite the active surface, and peripheral sides extending between the active surface and the back side; a contact pad disposed on the active surface; and a metallization layer extending from the contact pad onto a portion of the peripheral sides of the chip.

1459826673-a837fcbb-4f0b-4dc3-b131-cfd52c566c3a

Oxidation on the surface of a film of refractory metal constituting a gate electrode is suppressed by forming an insulation film constituting a cap insulation film of the gate electrode at a temperature of 500°C. Also provided is that the protective device has an arrangement or is joined to such an arrangement by which the admission of gas to the sensitive component is able to be regulated. The processor reads out the maintenance ID of the exchangeable part from the memory, encrypts information relating to the exchangeable part stored in the memory and decrypts information encrypted by the processor. The MIMO physical sectors overlap to form an area of overlap. Further, the rotor assemblies can include a flux conductor shield disposed adjacent to the boost magnets, the flux conductor shield configured to provide return flux paths.

1459826673-eb934637-085e-41e8-a83a-d5bd2729a959

A chromatic dispersion-compensating fiber adapted to compensate the chromatic dispersion of an SMF or an NZ-DSF having positive chromatic dispersion presents chromatic dispersion which is negative and greater than or equal to 150 ps at a wavelength of 1550 nm, and a theoretical cutoff wavelength longer than 1800 nm. Then, there is counted the number G of the divided picture elements which become targets of the development among the divided picture elements. On the transmit side, an input data stream in a tunnelled format containing the user data to be transmitted is received, and a breakout device is operative to extract the user data from the input data stream and to output the extracted user data to the transmitter, which transmits the user data in the adapted format. The two drill pins are passed through the template and drilled into the humerus, and cutters are advanced over the corresponding drill pins to form the trough.

1459826674-c5a56e29-67be-4613-93bc-dd9abcec3925

A system and method for improving the usability of electronic products. The device comprises a feed, packaging means, weighing means and throughfeed means. When the computer delivers a document to the printer, either the computer will request that the PDL program from storage to be sent to the printer, or the printer will determine which PDL program is needed by inspecting the received document, and request it when provided the location. The spacer layer has an opening that has a via width.

1459826675-266a6c27-790b-435b-97ee-88dc0e017a72

A sigma-delta modulation sensing circuit and an analog-to-digital converter for an imager that eliminate the erroneous conversion of non-zero analog voltages to zero digital voltages is provided. The invention provides rapid automation of the synthesis of an electronic circuit model by incorporating one or more synthesized electronic model components that are selected from a larger plurality of synthesized electronic components whose structure and electromagnetic characteristics are rapidly and automatically synthesized in response to the electromagnetic analysis data. A solenoid is used to select a smaller or larger air volume to control the characteristics of the air spring and, in turn, the dynamic response of the hydraulic mount. An application for the proposed technology is to significantly improve the measurement sensitivity of impedance measurements on blood cells, leading to a better differentiation between different types of white blood cells. In one embodiment, a thermal press method can be performed by placing a laminated display assembly including the flexible substrate, an ink layer, an adhesive, and a cover on a temperature controlled fixture. The receiving unit receives an individual key encrypted by the random number from the key issuing server.

1459826675-691122a5-9d82-4392-b260-4e19f03e9614

A width and a thickness of a bit line are represented as W1 and T1, respectively, a thickness of a digit line is represented as T2, and a distance from a center of the

digit line in a thickness direction to a center of a free layer of an MTJ element in the thickness direction is represented as L1. The wire coil is arranged to form a plurality of layers, thereby forming a cylindrical shape, and the upright portions, at which the adjacent wire segments contact each other in the circumferential direction thereof, are electrically connected to each other. When it is determined that the received data has already been archived, an image is outputted based on that received data. The computer-based tool then performs factorization to solve for the multiplication constraint and to determine a set of potentially valid factoring values for the random variables used in the multiplication constraint. A transformer has fifth and sixth terminals, the fifth terminals are electrically connected to the fourth terminals of the auxiliary power supply disconnect. A faster indication of the saturation condition thus results.

1459826676-71e4f5a9-0774-428e-8632-e49af4491a41

A self-propelled agricultural tool carrier has a lifting carriage mounted between the front and rear sets of wheels. In general, the system of the present invention includes a target machine, a production machine, a playback file, a playback machine, a playback controller and a network information editor. At least one electrical connector extends through a wall of the lens, with one end provided inside the cavity and connected to the LED board, and another end disposed outside the cavity and connected to a power source. Image-forming plates of the portal imager and the diagnostic imagers are positioned perpendicular to the therapy beam central axis, and perpendicular to the central axes of the diagnostic sources.

1459826676-a2fb4498-3cb0-48c2-a1a3-37fdd80a6de3

A robot operates accurately while canceling an affect of pitch-axis, rollaxis, and yaw-axis moments, these moments being applied on the robot body during a leg-moving operation such as walking. The beam isolator includes first and second isolating pads, each defining openings. Further still, the invention provides TGF-\u03b23s, or fragments or derivatives thereof, comprising a substitution of the Glutamic acid residue at position of full-length wild type TGF-\u03b23 and/or the Arginine residue at position of full-length wild type TGF-\u03b23. The biosensor can be any biocompatible sensor, suitable for short- or long-term use. It is then determined whether sufficient space is available for the first output data.

1459826677-22c294ce-a441-45e1-9521-718cdfc19bd7

A method and system for approval by a verification computer of an online transaction between a user computer and a merchant computer over the Internet. The cam pack includes at least two cams and at least one adjusting member for axial adjustment of the cam pack. Then, the brightness values of each of the subareas are converted into 0 and 1 codes, and then the codes are combined to generate the codes representing the entire focus area.

1459826677-e9a32511-c596-41d7-8a00-dec3c006b9b3

A broadcast encryption for acquiring an encryption key which is used to decrypt a session key by a node receiving services, with less computation overhead. Control signals manipulate the drive system to rotate each mass at optimal speed, direction and phase to reduce noise induced in the system by the rotating member. The protocol supports a plurality of data formats, such as PCM voice data, IP packets, ATM cells, frame relay and the like. Opening portions are not formed in the first and second peripheral walls. The metal gate electrode includes a sufficient amount of an impurity to shift the workfunction of the metal gate electrode by at least about 0. A latch member has a first position, which holds the switch member apart from the conductor, and a second position, which releases the switch member to permit the switch member to pivot toward the magnetic core and engage the conductor in response to the arcing fault current.

1459826677-ee007b9f-cc97-4d67-b33e-66e35118fbd5

A paper dispenser has a dispensing opening for paper and also a first roll, which

is located in a dispensing position, and a guide path, which leads into the dispensing position and contains a storage position for a reserve roll. A plurality of assets containing text, graphics, and video are stored and then gathered. A hoist carriage, for example a monorail trolley hoist, is movably secured on the cantilever support, and is connected to a transport chair that can be located over the dock at a convenient height for a handicapped boater to seat and/or secure himself. During a first stage, a current in a first direction is supplied to the first current line, and a current in the first direction is simultaneously supplied to the second current line. The system also routes an incoming call to a device associated with an enterprise communication network to a plurality of telephony devices including wireless devices and other remote devices. In turn, a scheduler is coupled to receive the frequency profiles and the leakage power profiles and to schedule an application on at least some of the cores based on the frequency profiles and the leakage power profiles.

1459826677-f4e5c198-b8c5-4b5b-8341-a538d9de079d

A structural joint configuration is formed in an automotive frame in which the frame members are bent into an angular orientation and joined together to form a structural joint in the automotive frame in which loads imposed on any of the frame members forming the joint will be transferred to and shared with the other frame members in the joint. An LCD comprising a backlight unit on which a point light source is efficiently disposed and an efficient arrangement method of a point light source are provided. The methodology of the present invention then determines a deviation of the laser beam's refracted target position from its intended target position.

1459826678-5c4a10d0-6442-4f3f-9a1b-aefd54cbb1e5

A combination paint container and tray that includes a container for a supply of a paint product including a base and an upper peripheral closure edge, and a lid constructed and arranged as a paint tray structure having first and opposed second peripheral edge elements. Each receive-signal path may be associated with a different receive direction. The digital X-ray detector may be formed as an array having a plurality of detectors, and the device may have a plurality of arrays.

1459826678-a6379446-5d60-46aa-b566-06b5ed9089e0

The liquid crystal display device of this invention includes a plurality of picture element regions each defined by a first electrode provided on a face of a first substrate facing a liquid crystal layer and a second electrode provided on a second substrate so as to oppose the first electrode via the liquid crystal layer sandwiched therebetween. The container is filled to a level above the partition to ensure that the device is submerged in the fluid. Some of the conductive material is removed effective to recess an outermost surface of the conductive material to from about 100 Angstroms to about 200 Angstroms from an outermost surface of the insulative material after said removing of some of the conductive material. In certain embodiments, the apparatus may include a connection strap for connecting the exercise sled to the frame backpack in the second mode of operation such that a user may pull the exercise sled while wearing the frame backpack.

1459826678-d5dfb5a7-3c6f-4405-ba1e-50d4ad67c496

A method for tracking a transmission status of one or more data elements to one or more devices. In one aspect, a rapid thermal processing apparatus is used to selectively oxidize a substrate by in-situ steam generation at high pressure in a hydrogen rich atmosphere. In particular, the control of the execution threads maintains thread ordering as well as ensures that a context swap occurs after the critical section execution has been completed by each thread of execution. The at least one second drilling insert has first and second portions which engage and machine a work piece in a drilling operation to form a spot face and a seal form.

1459826678-d7c55c7b-d4f9-466a-898f-67b0d4951c65

A device for detecting the occupancy status of a vehicle seat with an electrical capacity sensor device that is arranged in a seat belt buckle assigned to the vehicle seat and whose electrical capacity is altered relative to a reference potential by the presence of a person occupying the vehicle seat and which, as a result, emits an electrical seat occupant presence output signal. The storage device of the present invention comprises an elongated storage box having a front wall, rear wall, bottom wall, top wall and a pair of side walls forming a box assembly having an interior storage area. The resulting AFUs can be locked so that users cannot view proprietary and trade secret information as to how they accomplish their tasks. A request to receive alternative audio content for the audiovisual content segment is transmitted. Also disclosed is a method for forming a composite material employing the formulations.

1459826678-f9c7dde8-9b4c-4746-ac3a-194137732b02

A ventilation assembly for a heat exchanger of a motor vehicle, has plate-like support structure with a main flow opening. The inductance and the permanent magnet are arranged such that, under a vibration on the circuit arrangement, the permanent magnet is moved relative to the inductance such that an electrical induced voltage for supplying the functional unit with electrical energy is induced by the inductance. The lighting device is deactivated when the mating surfaces are placed proximate to each other and is activated to illuminate an interior of the accessory when the surfaces are separated.

1459826679-46bf3255-036a-4d0d-80c0-fe0d3bd310aa

A method according to the invention comprises: starting plasma discharge for forming the gas barrier layer in a film deposition chamber; and producing the gas barrier layer by using a plasma after a first predetermined period of time has elapsed from a start of the plasma discharge. Hot air generated by the generator impinges as a high-speed impinging jet on the object from a nozzle hole located in a ceiling plate. The sun visor is operated by a dash-mounted switch. The low pressure area suppresses an increase in the speed of the airflow therein that causes the abnormal outward airflows.

1459826679-52c677e7-7be2-4d59-9529-8f2e6d89c4a8

In one embodiment, a radiation shielding composition comprises lead oxide or lead composite material of predetermined particle size, and an adhesive, wherein the composition comprises free flow property. A telop area in which the motion vector is set in advance and which has a magnitude greater than or equal to a predetermined magnitude is detected. An interior space having a sealed waste ink flow passage for connecting the recovery section to the waste ink absorber is provided, in which a flow passage absorber is accommodated so that a gap is formed from a connection with the discharging port of the pump to a connection with the waste ink absorber and is further connected to the waste ink absorber. Another form of instrument includes a working sheath and an obturator. A disposable shackle system allows the customer to replace the cut shackle and return the lock to its original condition for reuse. Preferably, the indication system is incorporated into the interior trim.

1459826679-67dd937d-726f-4f69-a4a2-e01245aa6353

The invention is directed to multispectral multifield optical combinations that are intended to be integrated into an optical device. The plurality of point light sources are arranged in a first direction and also arranged in a second direction orthogonal to the first direction. The reflected signal selectively includes a level pulse representing material level and an interface pulse representing interface level. The core threats, associated threats and predictive overflight threats can be displayed using the first, second and third colors, speckled areas, and wedge-shaped symbols. This enables data analysis to obtain information about the value of the data that is present.

1459826680-23f470fe-0d2e-4a7a-99f0-1b9b7fe6aedb

A computer identifies a first candidate document at a first data source and a second candidate document at a second data source in response to a request from a user, wherein the request includes one or more keywords. In some embodiments, methods for sanitizing anomaly detection models are provided. An electric field produced by the electrode and voltage source limits the degree of post-nip toner scattering by applying an electrostatic force to toner particles on media sheets passing along the media path. The transducer is actuatable to heat the treatment agent to affect at least partial vaporization thereof for release adjacent the heating elements and application to the hair. The rotary pressure member presses against the stationary pad via the belt to form a nip therebetween.

1459826680-50140e4d-079a-4b67-9451-6cc5cba9d426

A clock enable control circuit is provided between a memory control circuit and a SDRAM. The novel compound has excellent skin whitening effects. The device has a flexible conductor arrangement with a plurality of interconnects. In this way it is possible to limit the ejection of RV inks in the region of high lightness and to improve the ink granularity in the region of high lightness. The mounting bracket connects to the archery bow and is infinitely adjustable along a length of the at least one support rail to adjust a position of the sight component toward and away from the archery bow. The generic universal resource indicator having a generic parameter corresponding to the parameter of the selection may be created.

1459826680-8c9c2610-5e06-445e-934b-c296525b076d

A Hands-Free Wall Mounted Bottle Holder apparatus enables a practitioner to prepare in advance a set of medicine bottles required during a medical procedure, mount the bottles in the proper position on a flat solid surface in an ergonomically preferred secure and locked condition, and then withdraw medicines in sterile fashion during the procedure without the assistance of another person. The number of files to be displayed and start point information related to the start point of a file list to be extracted is acquired from a client, and a file list is extracted from files stored as a partitioned data set in a storage device based on the number of files and start point information acquired. The spindle may be disposed in the hole and may have first and second spindle circumferential surfaces. The signals are representative of the radiation.

1459826681-184a1a8c-4796-4210-b653-faa76035a104

The present invention provides a method of treating fungal infection by administering a pharmaceutical composition comprising an extract of the leaf of M. The column or row circuitry includes a number of redundant column or row circuits. An operation reaction force generated by a reaction force actuator 9 is applied to the steering wheel. Screen assemblies are disposed on the opposite side of the cell frame such that the screen assemblies rest on the protector portion, within the cell frame.

1459826681-270cba5e-bab8-4a0e-a9b0-120fdcb82e78

A drive system for driving a sheet pile member at a desired location in the ground. The optical fiber has an outer sheath of a material that is compatible with the material constituting the outer coating so that a cohesive bond forms between the outer sheath of the optical fiber and the outer coating of the insulator while the outer coating is being vulcanized. A plurality of adjacent heat transfer members are connected to the heat exchanger body and spaced apart by a predetermined distance for defining a plurality of flow passages between the heat transfer members. The pusher is formed of sheet metal with lower and upper flanges that lie against upper and lower portions of the cover, the pusher being confined to solely slideable movement and the lever being pivoting mounted about a pivot axis on the support. The oxidative hair colorant composition contains a foam stabilizing agent and is essentially free of surfactant. Moreover, the central unit can receive signals that characterize both the machine speed and pattern signals, on the basis

of which the yarn feeders of the particular group that is to respond at that time are switched on and off or speeded up or slowed down.

1459826681-56265e6f-f380-4671-be67-3aa4748f569e

A signal detector is configured to detect a signal of interest in a received signal. The reflection surface is configured to receive light from a light source associated with the reflection surface in an ink delivery system of a phase change ink imaging device. 0, and the triboelectrostatic charge amount is from \u2212300 to +300 \u03bcCg. The transducers may be part of directional arrays. The silicon carbon layer is exposed to a dopant. A mechanism in the computer inhibits the movement of the lever and cam assembly into the first position, thereby preventing the disconnection of the base from the cover when the module is installed in the computer.

1459826682-0ac40553-c024-4c03-af00-d2df2aab98d2

A new and distinct variety of *Nemesia* plant named \u2018Innkarwhi\u2019, characterized by its compact, upright and rounded growth habit; vigorous growth habit; freely flowering habit; white-colored flowers; and strongly fragrant flowers. First, a layout of an integrated circuit with an exposure intensity specification is provided. The actuator includes a movable end that is cyclically movable from a first releasing position adjacent the sidewall, to a second engaging position, transversely spaced apart from the side wall, responsive to a track follower moving along a track inclined transversely to the side wall of the box. For example, a kernel-based classifier analyzes the set of character-string pairs using a kernel function.

1459826682-7f686dea-2c0d-4413-87b5-099dc6f626f9

A new and distinct variety of interspecific tree. In one embodiment, a clinical support pad includes a plurality of support cells formed in a first film layer of material sufficiently impermeable to a fluid contained in the cells such that each cell is configured to be alternately and repeatedly inflated and deflated with respect to one or more adjacent cells. The prescription vial is illuminated with a first light source and a first image is recorded.

1459826682-bd717d5d-d4ab-4634-93dc-d79be12ab5ac

A method and a device are used for determining a characteristic value for the perfusion of modified, in particular pigmented tissue regions in organs of living beings, for example the skin. The fibers are held substantially parallel to each other in the draw assembly. The functional macros consisting of one or more microcircuits have a fixed and complete physical layout similar to a conventional standard cell library macro set. In an embedded option, the SLSM resides within an existing server.

1459826682-c9df367b-a27f-462a-9ec4-13fd80000fab

Aspects of the present disclosure relate generally to wireless communication systems, and more particularly to a coordinated multi-point network and protocol architecture. The first strap portion and the second strap portion are coupled to one another and the anchoring device is configured to hold or secure the coupled first and second strap portions such that the first plurality of loops and the second plurality of loops extend substantially symmetrically away from the anchoring device. Furthermore, the analytical model may be a predictive model markup language model. The apparatus may also include a manifold adapted to contact the thermal channel.

1459826683-02effd58-935d-49ee-9623-b926c44c5b04

A new and distinct cultivar of *Antirrhinum* plant named \u2018Balumsum\u2019 characterized by its purple and white bi-colored flowers, medium green-colored foliage, and vigorous, trailing growth habit. The engine control microcomputer is programmed to execute a monitor program. One or more channels attached to or

formed, in part, by the panel member are in fluid communication with an opening in the panel member and a plurality of orifices located on the channels. Synchronous transfers allow on-the-fly redundancy operations for improved performance and reduced hardware complexity. The fabric material on the upper section defines a first arm opening adjacent a respective side rail and a second arm opening adjacent an opposed side rail.

1459826683-16d10c0a-705c-4c98-b795-8f758c7cdb4a

A green phosphor having a magnetoplumbite-type crystal structure, which contains at least Mn, La and Tb, which contains at least Tb and La but does not contain Ce or which contains at least Mn, La and Zn. The green rubber tread stock is held from above for moving by inserting a plurality of transfer pins downward into both edges of the green rubber tread stock such that each transfer pin is angled toward a closest laterally outside edge. A portion of the first conductive line in contact with the first diffusion region is doped to an opposite conductivity type as the first diffusion region. The output switch is configured to isolate the low power path from the high power path in the high power mode. In addition, the present invention can reduce the power consumption while simplifying the circuit construction by allowing a programread operation to be simultaneously implemented on a single sense amplifier circuit. The missed call information includes the voice of the originator requesting the PTT call, and the voice of the originator is output when confirmation of the missed call information is requested.

1459826683-7ebb88b7-da43-4e49-a90f-a328c3919d5f

A thin film transistor substrate includes a substrate, first and second pad sections, a signal wiring and a pixel array. This sauna apparatus provides air having uniform temperature distribution and uniform humidity distribution, and allows temperature and humidity to be controlled easily. During a power outage, the matrix converter is immediately disconnected from the power supply, and the resistor unit is connected to the input terminals of the matrix converter in such a way that the amplitude of a voltage applied to the resistor unit equals the amplitude of an actual capacitor voltage space vector, and the speed setpoint is set to zero.

1459826683-a95b4725-e5df-4aa8-a144-c49edff2809a

A modular refrigeration system having an evaporator, a condenser, a compressor, and expansion device fluidly connected by a plurality of conduits. The present invention also provides methods for using and preparing compounds of Formula I. A warning indicator is seated within the internal bore of the piston. This prevents calling costs from being incurred when transferring the information of the terminal to be called. Also, characters may be included on the bandages which correspond to the scent released. An aperture stop is positioned between the imaged object and the second lens element.

1459826683-e8bb54c4-e872-466d-bb50-22b85ea8f6d3

A carrier having a foot member, a post and a top member. The column select line signal has a first pulse width when the column select line signal generator is in a first operational mode and a second pulse width when the column select line signal generator is in a second operational mode. In response to power supply control commands from the host computer, the controllable power supply provides various power outputs at various external connectors, including main power, ATX12V power, and peripheral power to be used for peripheral devices corresponding to a DUT test apparatus. The resultant first interleave block 54 and second interleave block 55 are recorded alternately on an optical disk. At least one second electrode is provided at a location removed from the first electrode. Actuation of the valves within the cylinder head selectively opens and closes specific flow paths within the lower part of the cylinder head to control the flow of fluid between upper and lower portions of a dampening chamber.

1459826684-3f93e8dd-ca89-4437-97be-e76ab000143f

A passive particulate filter assembly for filtering exhaust. A host lists prospective attendees to a meeting in an electronic calendar application. Nanotube electrodes are formed by growing arrays of aligned nanotubes between two metal underlayer platforms.

1459826684-5327cc4c-efaa-4ecc-bd02-15e6a0677465

A system for stabilizing gravity-based offshore structure anchored in a seabed includes a plurality of upper locking element sets installed in a keel on the bottom of the structure; a plurality of caissons embedded in the seabed; a plurality of inserts, each of which is removably installed in one of the caissons; and a lower locking element set in each of the inserts. The wavelength compensation output waveguide 105 has a tapering connecting portion connected to the output side slab-waveguide 105. The event detector may be configured to detect an event associated with a main video content. This invention also relates to pharmaceutical compositions containing these compounds and to a method of treating disorders in which histamine H3 receptor blockade is beneficial. An out-of-band examination of registration signatures generated at the two devices can be performed to help ensure that there was not a man-in-the-middle attacker involved in the key exchange. The feedback transconductance stage is operably coupled to produce the feedback current signal based on the output voltage signal.

1459826684-8675613a-7253-47b5-ab8a-b18b6a9ea7dc

A well tolerated oil-in-water emulsion useful as a delivery vehicle of hydrophobic ingredients such as pharmaceutical drugs, wherein the emulsion particles have a net positive charge and comprises 0. The capacitors exhibit desirable dielectric properties, excellent performance on highly accelerated life testing, and very good resistance to dielectric breakdown. A hydraulic lift cylinder is mounted between an inboard end of each lift arm and the adjustable width toolbar at a selected mounting point in the center section.

1459826684-96478351-f2da-4ed5-b716-39cd6feee866

The invention relates to an improved industrial apparatus for the large-scale storage of energy and a process for storing and transporting electric energy by means of this apparatus. The data comprises coded content information comprising a time synchronous media, together with various other sources, synchronized to appear at predetermined time points in the media presentation. The valve may include elements for biasing the cuff outwardly with respect to the stent body when the stent body is in an expanded condition.

1459826685-094109d1-9125-4e2b-896d-852ed8417fd5

A pump system includes an inlet port, a discharge port, a drive aperture and a drain aperture. The search engine obtains user information data from a user from a single submission to provide automatic access to all indexed registration information sources, as may be required by the search query and the selections of respective classification categories selected for narrowing the search. An acidic material is added to the cellulose acetate solution, and the filtration is preformed. Methods, systems and algorithms of the invention can be embodied in any computing device or portion thereof, and are adaptable to describe, analyze and predict the folding and other three-dimensional aspects of the structures of biomolecules such as nucleic acids, carbohydrates and glycoproteins. At the delivery destination, an operating device that is also supplied is used as a mobile operating device for issuing control instructions for the traction operations of the base vehicle, in order to drive the base vehicle with its own drive units off the load transport vehicle over a ramp or the like and thus to set it down. The invention may be implemented within a virtual protocol interlayer between the link and network layers.

1459826685-48f4ec10-86da-43ac-a023-2ab5f7603139

A receiver architecture featuring a decimation filter and a bypass around said decimation filter is disclosed along with a method for optimizing said receiver's sampling phase and programmable gain amplifier. At least part of that connection can utilize a standard indoor/outdoor stove support bracket. The gain adjustment portion can output a first gain adjustment signal based on the first packet or can output a second gain adjustment signal based on the second packet. The Node B retransmits a data block including the expected TSN to the UE in response to the TSN status report message. A pusher member is spaced behind the pin keeper.

1459826685-6b2ea518-ce54-4a46-97ec-7a257bc69a96

In accordance with the present invention, it has been discovered that PPAR is expressed consistently in tissues associated with each of a variety of disease states which result from neoplastic cell proliferation. The present invention further discloses a fabrication method of the array substrate and a display device comprising the array substrate. A row of balls is arranged on at least one ball race arranged against the inner shaft. The signaling may be for acknowledgement. The recording medium may contain at least one segment area which is an area on the disc controlled by a plurality of valid PACs and if the designated segment areas overlap with one another, control information of the respective PACs which control the overlapped area may be applied to control the overlapped area.

1459826685-7cc4c064-0fae-4ce1-a186-4fe06580b6ae

Systems and methods are provided for cooling an electronics rack and a computer room from a single unit, which includes a heat-generating electronics subsystem across which air flows from an air inlet to an air outlet side of the rack. The first storage device is switched into connection with the voltage source until the voltage on it reaches a predetermined level. The improvement allows the low power Scan and Scan-BIST architectures to achieve a delay test capability equally as effective as the delay test capabilities used in conventional scan and Scan-BIST architectures.

1459826686-63bd1bbf-62c5-46fb-bf2d-6f3159b31f6c

A new and distinct Hosta plant named 'Hudson Bay', characterized by medium plant size with good growth rate, rounded leaves having very wide blue-green margins, and leaf center that develops to near white center later in season, The near white flowers are held just above the foliage on thick light green-colored scapes in early summer. The terminal stage is movable at least in a direction orthogonal to a direction of the connection between the first and second terminals while being installed inside the case. Thereafter, responsive to determining that the lock indicates the first thread does not have access to the adapter, a sequence to obtain access to the adapter is initiated where the sequence includes writing the adapter context corresponding to the first thread. The first pattern includes a plurality of rectangular regions arranged in a first direction, and for each rectangular region, a sideline in a second direction is longer than a sideline in the first direction, wherein the first direction is perpendicular to the second direction.

1459826686-ade940f4-d7e6-4556-b2b5-0e630c364abf

A lighting fixture, such as a recessed or can type lighting fixture, has an external housing containing a number of LEDs used to provide light. In this assembly, the first of the two connecting profiles possesses a base attached to the first sheet pile wall, a neck strip projecting from the base in a predetermined direction, and a head strip of larger cross section on the free end of the neck strip for engagement with a claw strip partially surrounding the head strip. A comparator compares the filtered error signal with a reference to generate a provisional PWM switching control signal for controlling the PWM amplifier. After a cementing operation, the plug devices are opened to permit flow through the transition joint sidewall. The communication is active as the transponder utilizes stored power for transmission and reception of signals while the transponder can be

passive and is powered by the reader's signal energy. The data cache unit returns 8 bytes of unaligned data.

1459826686-e5cc2f08-23e8-4062-8954-08d52629bddd

Water in a fuel cell accumulator is kept above freezing by a hydrogen/oxygen catalytic combustor fed hydrogen through a mechanical thermostatic valve in thermal communication with the container and connected to a hydrogen supply. A plurality of fins are in conductive heat transfer relationship with the forming tool. A plurality of indicator variables are subsequently calculated from the energy absorption measurement data. The loading pan is wider than the screen box and has sloped sides forming a funnel on the upper end of the screen box to retain the side portions of a load until most of the central portion has been moved to the screen box. The bottom end may be open and debris collected by the collection device may be channeled by the collection device through the open bottom end. A location key is generated that identifies each slice and the further device to which each slice has been sent.

1459826687-21e7fb15-785a-401d-91b8-4afa804ab607

The present disclosure relates to the field of spine disc implants. A selection of a plurality of priorities available for transmitting a wireless communication transaction on a wireless network is provided, wherein the priority to be selected corresponds to the speed and allowable delay by which the transaction is to be transmitted. The gaseous fuel passes through the seat, which is coupled to a rim surface of a retainer portion of the attached nozzle, and into a flow passage that further communicates the flow of gaseous fuel into one or more flow channels. The retainer has locking protrusions for redundantly locking the terminal fittings in the cavities. Each of the request counters corresponds to one of the plurality of source controllers and stores a number of credit requests received from that source controller. Each of the stringers has a stop for preventing said slider from separating there from at each of its ends and the stringers are free to separate from closed position at the first end when a force is applied in a predefined direction adjacent to the first end.

1459826687-a323d7d5-e5fd-4dbc-8ee2-87cf91668cdd

A wrench compatible for use in limited access areas is made up of two components. A first CaS inlet 40 and a first CaSO<sub>4</sub> inlet 64 are also defined by the reducer reactor 12. The invention also provides a method for statically displaying sub-regions of this large digital image at different magnifications, together with a reduced magnification macro-image of the entire sample. Aligned arrays of these carbon nanomaterials are prepared by filtering the nanomaterials with ethanol.

1459826687-aad76074-2985-4373-b8d8-41cd5f33ee6e

In a fuel injector with a swirler creating swirling fuel flow, a projected portion is formed as an orifice nozzle tip at an opening end of a nozzle hole. A satellite list including the coordinates of satellites is made, the redundancies of the satellites are calculated, at least one satellite having a maximum redundancy is eliminated from the satellite list, and channels of a GPS receiver are assigned to an intended number of satellites if the intended number of satellites remain in the satellite list. Two or more of these rows may be set in essentially parallel orientation, which further defines a primary space in which a portion of the rocker arm is located. Odor control may be accomplished with the addition of a urease inhibitor, pH buffer, an odor eliminating agent, and/or fragrance. A connecting member is connected to the operating member, and received in the notches.

1459826688-0951461d-0c38-4477-8fcc-e8b5b644f271

An apparatus and method of creating a seal between two coaxial tubulars so as to create a hanger and a packer. The gift package also includes a cover which covers a portion of the gift card holder. Prisms or other optical features are formed in the top wall of each opening to reflect light in the lightguide towards a light output

surface of the lightguide so that the side-emitting LEDs do not appear as dark spots at the output of the backlight. The airbag folded like this is enhanced in housing performance for the vehicle, and increases in stability of the deployment when the airbag is inflated and deployed. The sealing and connection between the pole piece and the coil and/or the pole piece and the valve housing is effected by means of respective clamp-cutting edge connections each having a nose-like projection. The cutting head is axially supported by the tool shank at four spaced apart axial support regions on shank support surfaces.

1459826688-191e7487-7aab-4982-a8bf-dc1d2a4e5185

The method of the present invention results in a secondary containment area for above ground storage tanks. In a case in which each of the sensors does not the bucket when the rotor is in a stop condition or in a low-speed rotation condition, a decision is made that an abnormality of a swinging movement of the bucket has occurred, and the fact of the occurrence of the abnormality is notified to a user. The cache controller designates in a cache directory the first set with a marked bit indicating that the first transaction is working on the first set, and the marked bit for the first set prevents the other transactions from accessing the first set within the congruence class. The stream is then mixed by several mixing devices to allow residual ozone and sanitizer to further react with contaminants and biota.

1459826689-2033080d-4f1d-48cf-a806-5df884441cd1

A jack for raising, lowering and holding articles such as wallboard can be used by a single installer to install a wall-board panel. The combined storage system comprises a fixed data storage device. At least a portion of the at least one double stranded DNA molecule is denatured. The cover plate includes at least one opening to receive the module and at least one pocket opening. The venthole 18A is a constantly-open type venthole that is not covered by means of the lid member 60.

1459826689-4819bf8f-1839-49de-822f-73479ccbb043

Described embodiments provide a multi-port memory system that has a plurality of memory banks and an equal number of mapping memory banks, each one of the data memory banks corresponding to one of the mapping memory banks. Such compounds are represented by Formula I as follows: wherein A, B, G, Y, R1, R2, R3, and R4 are defined herein. The memory processing unit 12 may lit the indication lamp 14 when the number write operations to the respective addresses of flash memories 11-1 through 11-3 reaches a set number or when the error frequency in the information stored in the respective addresses reaches a set frequency.

1459826690-17f0d236-5355-4fba-b384-2c0042db2d7c

A technique for analyzing digital circuits to identify pin swaps is provided for circuit layout and similar tasks in which the circuit is first decomposed into regions. A second connector component external of the housing is displaceable between an engaged position in electrical engagement with the first connector component, and a disengaged position disengaged from the first component. Active and passive components of the circuit assembly are attached to the printed circuit board by means of gold powder diffused under high temperature. By isolating and treating these layers of the artery, collagen degrading and collagen crosslinking agents can be delivered so as to affect the diameter of the blood vessels and control blood flow therein.

1459826690-d7cfa880-2e9a-484f-b118-b3d898c90c2f

Intrauterine Fetal Growth Restriction is a very important clinical problem for which no satisfactory treatment is available so far. A doctor blade device having a seal is also provided. Each cut includes a first tract parallel to a pressing direction and a second circular part; the circular second part constituting a snug seating for discs. The cams rotate in grooves defined in the vehicle frame support members and cause the fastener to move inboard or outboard in slots defined in the

frame support members in order to adjust wheel camber. Recording information and recording pattern including the record repetition count are stored to record the user's favorite programs and a message is displayed to notify the user of the recording start time of the favorite programs. If the bit error is an erroneous \u201c1,\u201d value, the memory block data is saved in a non-volatile memory block, the configuration memory block containing the error is erased and reprogrammed using the corrected bit.

1459826691-057b907c-a991-490b-a3b5-5e59eb222706

A deactivation valve lifter includes a lifter body. The method includes reading a batch of input data including a plurality of records from one or more data sources and passing the batch through a dataflow graph. An information handling system readable medium having stored thereon said data structure.

1459826691-a394aa76-f8cb-4c73-aeec-e14eeccdf9ad

A public passenger transport installation includes two end stations connected via two tracks for inbound and outbound travels. The pH buffer prevents the swelling of the alkali swellable polymer. The sliding element is erected on a diaphragm.

1459826691-adbe35ef-0e28-4e82-b4bf-850ab9dee18d

A preform main body of an iron species preform for forming a metal matrix composite inserted in an aluminum species alloy base material to be cast-in is bored with a first to fourth through holes communicating an inner peripheral face and an outer peripheral face. In various embodiments, conductive material is coupled to a dielectric containing HfSiON, where such conductive material may include one or more monolayers of titanium nitride, tantalum, or combinations of titanium nitride and tantalum. The outer apparatus, after actuated, sends out an outer data signal to the receiver apparatus according to its operational frequency and a PLL of the receiver apparatus outputs a transmitter clock according to an operational frequency of the receiver apparatus. When an operating bit-lane fails, one of the spare bit-lanes is allocated as a replacement bit-lane and the interface operating frequency is reduced to a frequency at which the new set of operating bit-lanes meets the performance margins. The invention also concerns a pipe, and, in particular a submarine oil pipe for great depths, comprising at least a layer of said material. The sorbents of the present invention have particular application for the sorption of hydrophobic contaminants, particularly constituents of AFFFs, surfactants and/or perfluorinated or polyfluorinated compounds.

1459826691-e553ec7c-2d6c-43c2-bf49-9d396de1630d

Quantified Boolean formula techniques are used in determining QBF satisfiability. The level shifting signals are to control an output switching element of a high potential side of an output device that includes a power source and a load. A reconstruction processor reconstructs an image representation from the corrected radiation events. The elastic means is manufactured from a metallic material and has a plurality of spring coils, of which at least two spring coils have a geometric dimension which is different from the other spring coils. The control element allows for control over the behavior of the thermal management system, and the visibility element allows external devices to monitor the status of the thermal management system.

1459826691-f5d5ca92-1549-4016-9951-78aee8f71093

An interconnect structure is provided that has enhanced electromigration reliability without degrading circuit short yield, and improved technology extendibility. The transmission pathway contains at least one partial section for a wireless transmission. These are characterized by XRD and IR data. The gate insulation layer is between the gate electrode and the fin. A size and an orientation of an original are decided based on an electric signal converted from light that reaches the linear image sensor from the main scanning line via the first optical system, and an electric signal converted from light that reaches the

linear image sensor from the detecting position via the second optical system. The multiple charge sharing switches connect the neighboring pairs of the driving signals.

1459826692-6076f010-4c3b-4ce2-b3bf-7a3d2056bf92

Apparatus for use in a hearing aid wherein a first microphone is connected to the hearing aid case and exposed to free air and a second microphone is connected to the hearing aid case and sealed from free air. The invention also provides a holder for a medicament capsule which holder comprises a chamber suitable for receiving a medicament capsule; and means for generating turbulence in a fluid flow through the chamber such that, in use, the turbulent fluid flow causes vibration of a capsule received by the chamber so as to assist in releasing medicament contained within the capsule. The semiconductor die is mounted to the interposer substrate with the conductive bumps disposed in the plurality of recesses so that the die face is adjacent the facing surface of the interposer substrate. The feature extractor receives an audio signal and extracts recognition features.

1459826692-c0999a70-ee38-492b-a15a-3c4e0620443f

The invention relates to a bendable or vaulting support structure in a bending section or bending and tempering section for glass sheets or panels. The shank includes a number of depressions formed in an outer peripheral portion and extended into the cavity of the handle. Next, the addressing device receives GPS signal indicating the position where it is installed and then addresses the GPS signal, further executing digital security processes to converting the area address into an address signal having the same transmission frequency as that of the baseband satellite TV signal. An ideal level shifter should provide the optimal voltage swing to output switches under all process, supply voltage and temperature variations. The polarized beam splitter enables the laser beams of the first and second laser elements to be simultaneously radiated to the recording layer of an optical disk.

1459826692-d6553562-dcfb-4a41-b03b-d77f033543b8

A wire retriever system comprises a handle with an interior portion. The system further includes a processor operably connected to the store communication network and to the memory for executing the program instructions and a mobile display device operably connected to the processor through the store communication network for rendering an overlay image using the transmitted route rendering data. Functional data which are required for the machining of a specific work piece and which have been fed into the data input and visualization unit or selected in the unit are conveyed from the data input and visualization to the NC control unit. The method includes an act of receiving a computer readable message from a peer-to-peer network.

1459826693-09bbe1b2-a4f6-44da-a8d7-7e40530f205c

Disclosed herein are a turbo-machinery blade breakage monitoring unit and a turbo-apparatus having the same. During the transmission of optical signals each carried by a predefined wavelength defining a transmission channel, said signals are grouped onto the same fiber in a band of channels. By making this idling current behave so as to exponentially change, relative to input control voltage, the invention enables output power control proportional to the input control voltage. The vapor passages within the discriminator, cylinder head and/or manifold are sized for receipt of spring actuated ball's to open and/or close the vapor passages during suction and/or discharge of refrigerant vapor or liquid by the compressor. On receiving a request for content from a user equipment, the base station can directly deliver the content to the UE from the data storage device, over an air interface, when the requested content is locally available. Changes in the operating frequency of the induction power supply and in the distance between induction coils and workpiece are not required to adjust edge frequency heating.

1459826693-0a03d590-2470-4e46-ae38-5665db8fdd10

An actuator element comprises at least two actuator arms. Segmented padding is supplemented in joint areas by tangentially-stepped articulated shielding, each comprising a hingeably interconnected series of rigid shells. The sense amplifier equalization control signal has a rising transition effectively earlier than the rising transition of the sense amplifier enable signal. The abstract is submitted with the understanding that it will not be used to interpret or limit the scope or meaning of the claims pursuant to 37 C. In one embodiment, a plurality of actuator controllers are connected in a configuration wherein one controller is a \u201cmaster\u201d and the remaining controllers are \u201cslaves\u201d to provide a higher level of machine control.

1459826693-5ab21607-60e7-4b3f-945c-07457c1dc5d9

A \u201chigh availability\u201d system comprises multiple switches under the control of one more control processors. Each support structure is adjustably attached to a mounting member that allows individual vertical adjustment of each support structure. The mounting bracket includes a central opening for receiving the electrical device. A first subset of the electrical conductors extends through a plug face of the housing and connect to a plug connector that is located in a region exterior to the housing.

1459826693-85b2c3d6-9f64-4d3f-b161-0e79f6f234a8

Bundled cables and a method for maintaining a plurality of cables together during use and installation and for allowing the cables to be easily separated for termination or connectorization. At least two logical processing units are grouped, wherein data in a first storage coupled to a first logical processing unit of the least two logical processing units is mirrored by data in a second storage coupled to the second logical processing unit of the at least two logical processing units. The aft-body is composed of a crown portion, a sole portion and optionally a ribbon section. The data channel has a variably configurable termination impedance at a host device node that is connectable to a host device. In an alternative embodiment, reflective surfaces may be brought into proximity or into direct contact with the subject and the light source directed onto the subject. The apparatus for carrying out the process includes a wet sludge storage container, a low temperature drying system, storage containers for intermediate storage of the dried biogenic residues, and a thermal treatment system with one or more thermal treatment steps.

1459826694-1886e7da-0ec0-42ca-8197-3ea0e46e5a33

Window cleaning cloths are repetitively conditioned for cleaning windows in a commercial car wash by processing the cloths in a washer-extractor having in sequence a wash cycle, a first rinse and spin cycle and a final rinse and spin cycle. Each bit assembly has a tool bit at a front end and a contact surface at a back end. The two parts are joined together with the free sides facing each other and the cavities in each covering region aligned with each other. The distortion compensation circuitry is configured to boost a portion of the RF signal that is being compressed by the RF switch when the amplitude of the RF signal is above a predetermined threshold by selectively injecting current into one of the input node or the output node.

1459826694-2c72f1a0-1b79-4988-9935-2606b1cc1389

An optical switch has an input section for inputting a light beam and movable optical members each comprised of a piezoelectric actuator for inputting the light beam from the input section and for individually switching an optical path of the light beam. The image processing apparatus acquires ink information about, in particular, a remaining ink level, arrangement direction, and the order of the arrangement of the ink tank, and displays the information about the peripheral device in a user interface of the application using the acquired ink information. The call is established between the called and calling phone. In addition, the

present invention is also directed to methods of using the peptides in a variety of contexts, including the treatment or prevention of infectious diseases. The cleaning device further includes a soiling degree measuring device for measuring soiling degrees of the sunlight reflecting surface before and after air blowing by the air nozzle.

1459826694-383aac03-dee4-4e34-b531-cd8e8675c219

According to one embodiment, a storage medium includes a burst cutting area at an inner periphery, wherein the burst cutting area has includes plural burst-cutting-area data areas. In view of the foregoing problem, the invention provides a depletion mode polycrystalline silicon TFT as a polycrystalline silicon TFT used in an analog buffer circuit such as a source follower circuit. Initially, the first and second variable phase shifters 10, 20 are preferably set to the same phase. The breaking of at least one of the filaments indicates to a repairer that the electronic equipment has been exposed to the predetermined impact force.

1459826694-6899e832-bec0-4a11-b21e-fdea7187cf2f

A hybrid protein comprising the non-toxic proteolytic C fragment of tetanus toxin fused to green fluorescent protein was used to analyze the functional synaptic organization of neural networks. According to one embodiment, a drive load measuring system includes: a pair of mounting assemblies that support opposing end portions of a rotating drive shaft of an oven drive unit; and a PLC control unit operatively connected to the mounting assemblies. The GNSS receiver may be compliant with one or more standards comprising GALILEO, GLONASS, IRNSS, and BEIDOU. The filter fuel that can be selectively routed to either a new fuel filter or a recycled fuel container.

1459826695-080e55a8-ff3d-40a3-ae6b-ba018b6e5894

Thin-film transistors and techniques for forming thin-film transistors. In the thermal curing device, a tank vessel configured to have a fiber layer formed on its outer surface by winding carbon fibers impregnated with a thermosetting resin is held to be rotatable about a virtual central axis of the tank vessel. The substantially straight portion is configured to engage the casing and enable it to travel vertically along the substantially straight portion while maintaining engagement therewith. The barrier can encapsulate at least a portion of the wire-bonds. The ARS then compares the information received from the user PC using information from a relational database. In one exemplary embodiment, the nonvolatile memory apparatus may include: a host interface; a memory controller coupled to the host interface; and a memory area including a plurality of chips controlled by the memory controller.

1459826695-41a84855-e7db-4e5e-a888-a9afa60a94bc

Photosensitive material includes a support, and a photosensitive layer overlaid thereon and containing resin. One partial current is generated by an asymmetric differential amplifier with two lateral bipolar transistors of different area. The method then proceeds to receive a condition from the player that identifies the player credits applied for each chargeable action. On the contrary, in a circuit structure of the present invention, polarity patterns are made to have not less than four kinds, and disclination patterns are made to have not less than two kinds. In some instances, the access point updates its downlink data with a value corresponding to the shift. The systems evaluate a target location within the Karnaugh map corresponding to the first and second indices in the first and second dimensions of the Karnaugh map, respectively, and search for at least one of a simplified minterm and a simplified implicant having the target location using the one-dimensional array.

1459826695-60b2b162-fe60-4902-96f4-be8a9874b56e

Improved robotic surgical systems, devices, and methods often include a first assembly with a surgical end effector supported and manipulated relative to a first

base by a first robotic linkage, while a second surgical end effector manipulated and supported relative to a second, independent base by a second robotic linkage. If flasher bulbs are used in the string, they will twinkle off and on when the operating potential is applied. The cord constituting the carcass layers are arranged substantially in a radial direction in a region of the tire from the bead to a position near a tire maximum width, and from that position to a grounding end. The housing is closed at both ends to seal the slot and prevent ingress of dirt or fluid. Each FET includes a silicon-on-insulator region, a gate electrode disposed on the SOI region, a source stressor, and a drain stressor disposed across from the source stressor relative to the gate electrode, wherein proximities of the source stressor and the drain stressor to a channel of a respective FET are substantially equal. A hollow adjusting screw, a fixing screw and a counternut achieve a vertical adjustment, and a connection to the damping element.

1459826695-651bc517-5a0d-4141-a8ce-6a59d29fbe79

The present invention relates to a process for preparing homopolymers, copolymers and/or block copolymers of 1-olefins by living polymerization, to the use of the homopolymers, copolymers and/or block copolymers obtained for producing high-value materials and to the polymers formed from these homopolymers and/or block copolymers. The invention thus relates to the plants, seeds and tissue cultures of the variety CH745929, and to methods for producing a corn plant produced by crossing a corn plant of variety CH745929 with itself or with another corn plant, such as a plant of another variety. The seal parts interface to form a fluid seal between the composite pipe segments, and also to provide an electrically conductive path between their electrical lines.

1459826696-35fb954d-0368-44c3-90c0-85d0efb2083f

A printhead of an ink jet printer includes plural ejection nozzles for ejecting ink. The ionically resistive ionically permeable element in a preferred embodiment is a disk made of a resistive material having a plurality of perforations formed therein, such that perforations do not form communicating channels within the body of the disk. Moreover, creation and handling of data can easily be performed. When an encoding sequence control unit determines that the encoded data amount in the first memory has exceeded the target data amount, the encoding sequence control unit discards data in the first memory, sets a quantization parameter for a higher compression ratio for the first encoding unit, and causes the first encoding unit to execute encoding.

1459826697-bdc96d3d-81c0-4824-ac28-51123c0a0864

A control module and method for an exhaust system of an engine can include a secondary air intake pressure module that monitors SAI pressure. Each node includes an optical switch to controllably route a plurality of in-ports of the optical switch into a plurality of out-ports of the optical switch. Notches fit around the wire crossovers of the chain link fence and locate the insert at the mid-plane of the fence. A request to change the selected order is detected. In one embodiment, a restore module receives a command to restore the vital product data copy.

1459826698-21f2f452-8b11-40bf-ae8b-2937c8b31bf3

A water-ballasted barrier system incorporates a concave reflective design, wherein outer walls of the barrier segment are configured in a concave manner. In particular, in various illustrated embodiments, a local device such as a Digital Media Adapter, mobile device, cellular telephone, etc. Selection of parameters also provides power to energy ratios for high power, high energy batteries of at least 10. They can be assembled using cold shrinking and heat expanding. The device includes a body having a zigzag-shaped structure, which forms ducts for said gas flows, and the body is designed for the transfer of heat between the first gas flow and the second gas flow.

1459826698-6cd5f511-dc1f-40ef-9219-78996379a588

A multi-stage swing horticultural watering appliance includes a base, a water-dispensing basin, a swing device, a spraying cover and a swing outlet pipe. The pressure-sensing switch extended in an X-Y-direction includes pressure sensing portions arranged in an X-direction and connection portion provided between the pressure sensing portions for connecting the pressure sensing portions. In other embodiments, the inventors have shown that there is improved Ad-p53 production with cells grown in serum-free conditions, and in particular in serum-free suspension culture. Each respective pivot portion defines a respective bore section formed for aligned receipt of the hub device therein.

1459826698-b937b602-9f4c-4809-a638-043d5ad9804e

A next processing pin is applied as a follow-on pin to a stone, wherein the stone is held by a preceding pin and fixed to the stone by way of a first adhesive bonding location. A lever system is operatively coupled between the lid and the drawer such that upon opening or closing the lid, the drawer is moved. The superlattice may include a plurality of stacked groups of layers, with each group comprising a plurality of stacked base semiconductor monolayers defining a base semiconductor portion and at least one non-semiconductor monolayer thereon. The filter cartridge defines a pair of fluid flow paths extending through a central cavity thereof.

1459826699-06891823-5143-4be6-8b60-191ecae14c53

An electronic control unit inputs from temperature sensors a temperature of the heating side of a thermoelectric conversion section assembled to each of brake units provided for left and right rear wheels. The measuring cell is connected to the printed circuit board and is mounted in the housing in a shock-absorbing manner in the radial and longitudinal directions and is in gas flow connection with the environment through openings in the housing. Further, the system may include an interactive voice response system that requests an agent's identification from the VACD, wherein the VACD and the web server are coupled to the IVR system, and wherein the VACD routes a customer's information to an agent desktop environment coupled to the VACD.

1459826699-4e1c6c38-033e-4ded-a807-fe9322f890f8

A dynamic damper includes a cylindrical mass metal element, a cylindrical elastic-body attachment portion, a cylindrical elastic-body connection portion, and an elastic-body covering portion. The elevation mechanism includes a pair of hydraulic actuators, each actuator covered by a telescoping shroud. A query server accesses an index of the scored web pages to locate pages that are both responsive to a user's search query and likely to include a product offering. The re-click event, based on human impatience, may be determined to be an indicator of a human user. A region including the subject having the largest parallax among subjects in the left and right images is clipped and displayed in a small screen with the size of the display unit of the camera.

1459826699-b9e4ca0c-f025-47e4-8012-40d75a71fda0

A flow meter device that improves a way to obtain an accurate differential pressure across an orifice body situated in line with the flow of gas and liquids. The measurement period coincides with a period when no signal is transmitted on the channel. The resulting fasteners, articles, or components manufactured from such material have improved material performance characteristics associated with this ultra-fine, submicron grain material structure.

1459826700-177faf89-0d09-4ff4-ac36-0ceaeba026ea

The physical training machine operation system of the present invention is adapted to inexpensively provide up-to-date exercise programs making use of results of medical science, exercise physiology and other sciences, specifically for individual users. Operation commences with the wireless terminal accessing its GPS receiver to determine its location coordinates. The date is printed by pressing the

print hammer and pressing the business card against the type with the printing ribbon interposed therebetween. When this occurs, the program determines which of the parameters, such as the location, transmission power, channel and/or frequency, antenna height, and the like, alone or in combination, of the point of communication interfering with the increased market coverage scenario to vary to overcome the conflict with communications and/or regulatory law. The security element may comprise EAS, RFID elements or any combination thereof. The action computers are interconnected via an action bus, and the auxiliary computers are interconnected via an auxiliary bus.

1459826700-2d80f5b4-741f-4009-a9ee-ed7823b3ca96

This invention relates to a method and an apparatus for electronic communication between at least two communication devices. A pulse generator having a pulsed signal output node and a pulse generator input node is coupled to the compensation frequency output node and converts the compensation frequency signal into a series of compensation binary pulses having a constant pulse duration regardless of variations in the duty cycle of the compensation binary pulses. The values of the cardiac parameters are compared to predetermined value ranges for NSR cardiac complexes. The fine timing generator also includes a phase shifter that receives the sinusoidal signal and the timing command input and shifts the phase of the sinusoidal signal based on the timing input to generate the phase shifted sinusoidal signal.

1459826700-fdf3a826-f97f-470b-9996-311d7e1678c0

A semiconductor device includes: a semiconductor substrate having a first semiconductor layer, an insulation layer and a second semiconductor layer, which are stacked in this order; a LDMOS transistor disposed on the first semiconductor layer; and a region having a dielectric constant, which is lower than that of the first or second semiconductor layer. The thermal blanket includes an inflatable portion for receiving the conditioned gas under pressure and for being positioned over a portion of the body of the user. The flipper panel assembly includes a main panel slidably disposed on the cargo load floor and fixedly secured to the seat assembly. In another embodiment, a patterned masking layer is formed over a substrate having a plurality of openings formed within an insulative layer, wherein some of the openings comprise capacitor container openings within a memory array and other of the openings comprise conductive line contact openings disposed over conductive lines within a peripheral area outward of the memory array. One configuration includes an objective lens coaxially aligned with the flow of particles being analyzed for collecting emissions at a detector. The reinforcement also enhances the impact resistance of the boards after installation.

1459826701-27a52e7f-15ad-4b47-bee5-0bff08c93e86

The invention provides a semiconductor device, and a manufacturing method, comprising a semiconductor substrate, a gate insulating film, a gate electrode, and a source-drain diffusion layer. When the member reaches the second position, the member actuates the coin sensor arrangement to signal the presence of the coin. By sensing skin temperature, the homogeneity thereof, the time variations thereof and the correlation between the two series of infrared images, the present invention decreases the rate of false positives and false negatives.

1459826701-6040ec76-3ea0-49c1-9954-ef5b8d4927d6

A flow regulator device and an associated method of using the device to constrict the flow of fluid through an intravenous line is disclosed. The base includes a plurality of longitudinal rails and a plurality of transverse ribs for supporting and spacing the filter element. The integrally molded eye and lid of the present invention reduces the part count of the eye when compared to conventional two-piece eyelid combinations, which lowers the cost of production by eliminating high cost, labor intensive secondary operations. The sensor assembly further provides a non-conductive spacer positioned between the cable and the plurality of sensing

elements.

1459826701-7be3824e-4ec2-4f20-aae4-520136c6b7bc

Data is copied from a source storage device to a destination storage device in a differential mode. The cross-differential amplifier includes an inductor connected to a direct current power source at a first terminal. The upper cladding layer comprises a first upper cladding layer and a second upper cladding layer having a higher band gap than that of the first upper cladding layer.

1459826701-7c0c474d-79e6-4c33-a1fd-a5e907ef0bfc

A micromachined z-axis rate gyroscope with multidirectional drive-mode has an increased drive-mode bandwidth for relaxing mode-matching requirement in which the drive and sense modes are completely decoupled. Communication channel allocation commands associated with a first network are monitored. According to the invention, the first generating unit includes first units of Peltier cells and at least one first contact plate which is made from a heat conductor material and which is placed in contact with a first side of the units of Peltier cells. After receiving user requirements in a response to the query, the tool selects a number of power management integrated circuit tiles having pre-defined physical structures. The CPC is an identifier that represents a group of members of a trusted user circle.

1459826701-9a02603b-2fd5-4162-bc86-e5c5e533fd6c

A system and a method for publishing a newspaper page or other data through a Web page, such that the information can be made available more easily through a network such as the Internet. Proxies may be employed to intercept messages and data transmitted between the stations and to enable transmission of data between the stations in compressed form. The cavity formation material disappears during heating. The at least one separating portion may have at least one oil pocket spaced from the associated supply channel. The difference in sensitivity between the measuring unit and the reference unit is detected before initiating the measurement of the change of a state of attenuation in total internal reflection, and result of measurement by the measuring system is calibrated on the basis of the difference in sensitivity between the measuring unit and the reference unit. The sandal or shoe also includes at least one material partially covering a user's foot extending across the socklining for holding the sandal onto a user's foot and a securing mechanism extending from the at least one material through the socklining to the outsole for securing the socklining directly to the outsole.

1459826702-2af6fbba-bb4b-4ee0-9b87-1cb146cda47e

An ink accommodating pouch for accommodating ink is produced in the following manner.  $ySiO_2 \cdot xH_2O$  wherein, in Formula, M represents K or Na, x represents 1 or 2, and y represents an integer of 1 to 5. The in-plane pulse current is used to flip the magnetization direction of the perpendicular-anisotropy data storage layer sandwiched between a heavy metal writing current-carrying layer and a dielectric layer. First and second pivotal side doors are provided at the head end of the blind. The one or more modulators are adapted to control the one or more switching circuits to transfer power from an input power source to a load, based at least in part on the modulator control voltage.

1459826702-a8316964-9544-43e2-8a83-56600393bd01

A method to release hydrogen from a material comprising hydrogen fixed fullerenes involves irradiating the hydrogen fixed fullerenes with electromagnetic radiation of sufficient intensity to release hydrogen rapidly upon irradiation. A multi-parameter measurement module generates output signals as a function of wavelength or angle of incidence. The first image is rendered on a white background. For example, Gln60GlyLeu148Phe binds with wild-type affinity to lactose operator DNA and exhibits enhanced responsivity to IPTG.

1459826703-53bf19c1-c38b-4fc2-a343-f481adf4125b

A gas separation membrane comprises a blend of polyethersulfone and aromatic polyimide polymers that may comprise a plurality of first repeating units of formula  $\text{--}[\text{X}_1\text{--}(\text{X}_2)_n\text{--}(\text{X}_3)_m\text{--}]_p\text{--}$ , wherein X1, X2 and X3 are herein defined. When a playback image signal Dvr is supplied from a control unit, the synchronizing signal generator is self-driven. The background portion has a transparent optical density of 3. The method comprises identifying among a plurality of data records, a data record associated with the particular trip, receiving data elements at the client derived from the record associated with the particular trip and pre-populating the information display fields with the respective data elements. Then, the superimposer superimposes the indicator mark such that a brightness of the indicator mark increases as the luminance of the position increases.

1459826703-64f4c580-72bd-4e70-835b-981a61e78df3

An apparatus for creating an anatomic space in tissue in a body comprises an introducer and a sheath. The module communicates with a communication network that comprises various nodes configured by a network controller module and a network communication module. The looped, endless belt is entrained around the plurality of rollers for conveying the recording medium in a longitudinal, conveyance direction thereof.

1459826703-80f6f972-7359-4723-b287-7199340c18cd

An animal management system includes a beacon, a radio animal tag configured to monitor the proximity of the animal tag to the beacon, and a reader configured to read information from the animal tag. A diamond film is deposited by a CVD method and porous grits are used as a victim substrate to be etched later, so that the substrate can be easily removed by a capillary phenomenon that an etching solution can be intensively absorbed in a substrate etching process. Subsequently, component-related, context-related, and/or user-specific troubleshooting workflow guidance associated with the faulty system component identified may be retrieved and/or determined by a processor and presented. The state management operation relates to the state of a server-side control object. A separate inventive feature is the deformability of the piston so that force transmission to the trigger means to initiate needle retraction only occurs upon full content expression when the piston has bottomed out within the cartridge.

1459826703-92bfbb6d-e4c2-4fe7-9d34-2742d32617fd

A self-laminating rotating cable marker label is constructed of a transparent film having a first adhesive area, an adhesive-free smooth area, and a second adhesive area. The first power connector comprises a first housing and a first contact module consisted of a plurality of first contact units assembled in the first housing. The weapon is mounted on a circumferential fifth wheel including a fixed portion integral with the turret and a movable portion on which the weapon is mounted, in order that the movable fifth wheel rotates on the fixed one, permitting the movement of the weapon along the circumference. The front attachment part has a front bearing for bearing a load acting from the interaction. A first pawl and a second pawl are provided to movably mount on the first shifting lever and the second shifting lever, respectively.

1459826703-92d7a90a-4b50-4262-a064-5b683397c8a4

A lumped resistance electrical cable has a multiple twisted pair ribbon cable having first and second conductive lines and twisted and untwisted portions. The method at the called telephony communication device includes receiving a request from a calling telephony communication device. The raft has a geometry such that it can be positioned around the driven wheels of the vehicle so that the driven wheels can be used to propel the flood rescue raft and vehicle thereon to safety.

1459826703-aed17b82-d082-44ef-bd74-73945dc23575

A semiconductor device having two different gate dielectric thicknesses is formed using a single high-k dielectric layer, preferably a metal oxide. The controller is

configured to stop the first transfer section prior to the second transfer section upon detection of a jam of the print medium. The first layer may have a first doping type such as p-type doping, whereas the second layer may have a second, opposite doping type such as n-type doping. When the balloon is inflated to deploy the stent; the balloon ends inflate and uncover the stent. Sintering produces a strong metallurgical bond between the shaft and rotor, providing a near-net rotor shaft assembly and also an inexpensive and efficient method for the manufacture of an assembly capable of withstanding the high forces and temperatures within a turbocharger. The method also includes the steps of measuring the actual metabolic rate of the individual and determining a metabolic comparison factor by comparing the measured actual metabolic rate to a predetermined standard metabolic rate.

1459826704-307bca07-c6cf-4797-bd43-c9d4d2e872ab

A power switch includes a first power transistor having a first source electrode, a first gate electrode, and a first drain electrode, and a second power transistor having a second source electrode, a second gate electrode, and a second drain electrode. A valve mechanism is disposed within the fluid passageway adapted to substantially cyclically build-up and release pressure within the fluid passageway such that a pressure build-up results in radial expansion of at least a portion of the fluid passageway and wherein a pressure release results in a contraction of the portion of the fluid passageway. If the end of the branching tree is reached, or if the next item of audio data is not stored upon the portable telephone, then the required data or program is downloaded from a server device 50, and the game is continued. Debug operations may ensue thereafter by utilizing a debugger integrated with the architectural simulator. At least one extension element is arranged on an outer side on the active part at a distance from the driver.

1459826704-5586eaa7-5e42-4d0d-ad16-bc5a711daf08

The invention relates to a hydraulic mineral composition which is characterized in that it comprises a vitreous or crystallised matrix based on magnesium and calcium silico-aluminates which represent at least 25 wt. The housing has a top surface, where an internal cavity is formed, and a sidewall having an inner shoulder. Nanogrooves and methods of making nanogrooves.

1459826704-5685a498-ba10-4a57-915b-caa71868ce4a

A dynamic element matching method for a multi-unit-element digital-to-analog converter having unit elements comprises several steps. The chamber is defined by at least one wall having an external surface for contacting a transducer device. According to the power-supply device, a voltage drop by equivalent series resistance emerging the output voltage of the power-supply device can be compensated.

1459826704-5c69b957-faff-4c96-9231-1ab5d16b0fd6

A method and system for creating a controllable, shaped, and scalable graphical user interface object for use in an application program displayed on a computer. In one aspect, a plurality of codes, such as SSCs, are correlated with a received signal at a plurality of offsets to produce a codeslot energy corresponding to each codeslot boundary pair. The one or more condensation monomers may be either a solid or a liquid at room temperature. Each node receives heartbeat signals from its neighboring nodes. In some embodiments, the breakaway coupling is releasably held together by way of magnetic attraction between two coupling segments, with one electrical contact on each segment to comprise one set of functional contacts.

1459826704-85e01525-ac7e-4127-b6a4-95121e8d87fe

A semiconductor module is of a structure such that a wiring layer, an insulating resin layer and a semiconductor device are stacked in this order by bonding them together with compression. The socket includes pinch-style support contacts which establish a reference seating plane for an IC package. A bearing plate extends vertically from the support plate. Each redundancy circuit comprises a switch and

resistor electrically in series.

1459826705-0aa90728-d83b-4ffe-8921-d23b39fd81ec

A self-help oil changing apparatus includes a nozzle having an outer tube in which an oil suction tube and an oil filling tube are received. An LED driver circuit comprises components including a phase lock loop, a pulse width modulation engine, a configuration register, a series of gain adjustable fast charge current sources, and a serial input/output interface. The siloxane oligomers can be used as coupling agents in rubber mixtures or as building preservation agents.

1459826705-0b58f37f-7229-4d78-9ebc-e2888575d13d

The invention relates to an intermediate element for the arrangement of a probe pin with respect to the probe pin carrier of a coordinate measuring machine, having a single-piece base body with a probe pin end and a machine end. In at least some example embodiments, the first bit string includes packet header information. The optical element is positioned relative to the optical fiber in response to attachment of the ferrule to the ferrule attachment part. This separator is useful for an electrochemical device, particularly a lithium secondary battery.

1459826705-ee3db12c-2577-4e26-97cf-b430acdf5340

The present invention relates to a tool for analyzing by priority a defect having a high possibility of causing an electrical failure when inspecting a particle and a pattern defect in a piece of work which constitutes an electronic device such as a semiconductor integrated circuit, and relates to a system therefor. The fluid is filtered with a filtration system, and upstream of a final filtration stage of the filtration system, a purity of the fluid is measured. The integrating detector can detect the colored light emitted by the light-emitting units as reflected off a surface by integrating the colored light detected over a period of time. The rear edge of the cover can be raised out of the closed position by moving the slide by means of the raising lever. AII fragments or analogues thereof or AII AT2 type 2 receptor agonists to a patient in need of chemotherapy. A gain parameter can be adjusted to alter sensitivity.

1459826706-829bf666-52dc-44bc-9194-9f8f0bb704ea

A display unit capable of inhibiting moisture and gas from penetrating into a liquid crystal layer and an alignment layer also after formation of a display electrode and suppressing decomposition of a material forming the display electrode is obtained. The methods described herein comprise contacting a provocative agent to live cells and measuring and analyzing adaptive readouts. Each of the head members is designed to remove or tighten a fastener without slipping. A primary leak path may exist between the seal ring and the seal carrier and a secondary leak path may exist between the seal carrier and the valve body. When either the curved surface mobile panel or the button input panel move, the curved space will become narrowed or extended. A rotational speed of the motor is adjusted by a controller, so that a rotational speed of the compressor is changed with respect to a rotational speed of the pulley.

1459826706-be88c91d-0cc5-48d6-9552-7fdf175257e7

A ceramic sheathed-element glow plug includes a ceramic glow element made of an electrically conductive layer and an electrically insulating layer, in which the conductive layer is made of supply layers and a heating layer. The harness protector has a first wall secured to a door panel of the sliding door by a first securing means, and the harness protector has a second wall opposed to the first wall. In some embodiments, each PWM module generates an output phase-shifted PWM signal based on the input data and its corresponding input phase-shifted clock signal. The vortex ring imparts a spiraling motion to the flow of superheated steam. The n electrode and the p electrode are connected to the n-type contact layer and the p-type contact layer, respectively.

1459826706-f4533cee-966f-4727-8441-be520e947bd1

Disclosed herein is a radiation image information reader for reading radiation image information from a stimuable phosphor sheet and obtaining an image signal which represents the radiation image information. The mechanical press includes a frame having a press head, a base pivotable between a load position and a working position, and a tie rod coupling the press head and the base. A novel method and system for reducing spontaneous beat noise is also disclosed.

1459826707-0ecac2ee-2a4b-4683-ab86-bd6ae9043a4a

The present invention relates to a Push to talk Over Cellular PoC Server for providing PoC communication services in mobile radio communications system, the PoC Server being arranged to perform at least one Controlling PoC Function for a PoC Session between PoC Clients in mobile terminals. Each magnetization direction of the first and second magnetization free layers is allowed to vary independently in response to a signal magnetic flux from a medium. The terminal further includes a resource manager operable to provide, to a selected service, the plurality of resources indicated in the resource set information in the associated service execution environment. The transaction interface is adapted to provide an instruction set to the user for performing a financial transaction.

1459826707-adf7a55a-f9f2-4c68-9942-07f803df2662

Computer program products are configured to allow dual operational modes of packaging systems to produce encased products using interchangeable first or second horns. The method includes determining relationships between the tasks and generating a task network comprising the tasks of the first process. A transition assembly is positioned between the proximal cannula and the distal end section. The reduced expression is nested in the single abstraction by: appending a selected prefix of the composed abstraction to the reduced expression, binding the open variables of the reduced expression to the formal parameter of the selected prefix, and computing the type of the formal parameter of the selected prefix. Such methods are believed to be useful for affecting neuroregeneration, cell proliferation, cell differentiation, extracellular matrix formation, myelination, inflammation, immune function, liver function, pancreatic function, angiogenesis, or wound healing; and/or for preventing or treating diabetes. There is provided a sound collector for collecting voices and converting the voices to a voice signal, a communication unit for communicating with a cellular phone terminal according to a predetermined communication protocol, and a reproducing unit for reproducing the voice signal received in the communication unit.

1459826707-d48635e9-2b5e-4007-b38c-bc73753f86e2

One embodiment of a golfing apparatus for assisting a golfer in playing golf includes an belt member adapted to be wrapped around a waist of the golfer. Furthermore, there is a milk collecting arrangement for receiving milk pumped from said woman's breast. The gripping side of the groove is nearly perpendicular to the direction of crop travel for positive gripping and advancing the crop.

1459826708-4e9134ae-cdb7-4795-b0ac-d4007b806314

Disclosed are oligo- or polysiloxanes, which are characterized by containing at least 3, for example 4-3000, Si atoms in the main chain, and wherein at least one thereof is contained in a moiety of the formula whose variables and attachments are described within. The connecting element includes an anchor for securing the connecting element to a bone, in particular a vertebra, a first lateral opening, and a top opening with a first inner screw thread. The second interface communicates with the peripheral device over a clock conductor and a single ended data connection which includes a data conductor. At least one, preferably three, geophones are positioned in connection with this structure. Subsequently, a salicide process is performed to form a silicide layer on the sourcedrain doping region, the resistor, and the efuse.

1459826708-564fff8c-1592-480c-8d4b-e242d6f36e30

Disclosed are methods, systems, and computer program products for performing temperature standardization of the volume of a liquid product from a distributor to a consumer. In particular the present invention relates to adhesives that provide secure attachment and are pleasing to the skin upon application, yet cause no discomfort upon removal. The cue may user-specific, or optionally provided based on a level of care required by the user. In other aspects the invention relates to the use of these compounds in a method for therapy and to pharmaceutical compositions comprising the compounds of the invention. A clip manager maintains a global clip-list, and responds to messages from the applications by updating the global clip-list and informing those other applications of relevant changes to their own respective local clip-lists.

1459826708-95767eb8-984d-470d-9a78-f67166bbfd5c

Methods and systems for blackout provisioning in a communication network. It is the object of the invention to propose a method for coding a data stream which provides for simple coding of the data stream while at the same time ensuring a digital sum value close to zero. Additional systems and methods are also presented. A received packet is forwarded to an FSD of the cluster by: extracting a configurable number of bit values from a configurable set of bit positions within the packet; determining the output of the load balancing function; identifying the port to which the FSD is coupled based on the output and the table; and transmitting the packet to the FSD via the identified port.

1459826708-9df02e47-ada2-4574-9e14-c244efe6c8df

A composition includes at least, in % expressed by mass relative to the total mass of the composition, from 0. Feeder systems need to be able to handle a variety of types of paper with different weights and finishes. This enables a receiver to recognize the synchronous data in the transmitted signal easily and reliably. The applied force may be the force of gravity, or it may be an induced force such as a centrifugal force applied with a centrifuge or similar apparatus.

1459826708-ea0f3ddc-3f88-401c-b928-3c65feb3064f

A serving tray apparatus comprising a container support portion and a handforearm engaging portion incorporating a mechanism for releasably attaching the container support portion to the handforearm engaging portion. The keyboard preferably includes an alphanumeric or QWERTY section and an editing section laterally disposed from the numeric section. The outer resilient material layer of the shield can be formed of closed cell foam or a gelatinous material. Other aspects of the present invention include an edging machine and a trenching machine, both being of a compact design.

1459826709-201b4ed6-613b-42cc-aed6-ee7e3b55c44a

A powertrain is provided having a multi-speed transmission. The clock signal may be single-ended or differential. The face of each blade 42 that is located on the leading side of the rotation direction forms a positive pressure surface 42p, and a face located on the trailing side forms a negative pressure surface 42q.

1459826709-e07b7e5d-ddf0-465b-8ef0-84ee3325746e

A method for sharing and updating a key using a watermark is disclosed. The heater typically includes a first conductive medium and a second conductive medium disposed upon a carrier. Therefore, a front appearance of the refrigerator is beautifully maintained. The end opposite the handle may include a series of impact ribs with cutting blades removably installable thereon, to produce non-lethal cuts in an assailant during an attack. The integrated circuit is configured to receive a voltage input to generate the voltage output having a maximum voltage higher than the voltage input. A custom parameter rule can be generated based on the comparison.

1459826710-3d1dbf1f-b206-4c6b-8207-d12686d794b9

A liquid crystal display that can clamp a document is provided. The method involves treating the conduit system making up the sewerage network before it reaches a typical sewerage treatment plant. The call note includes call data that are related to the phone call. A table of known locations within the building and the base station signal strength at those locations is searched to find the most similar stored signal strength to the signal strength detected. The appointment system includes a billing interface that charges the patient's insurance for the appointment.

1459826710-4ebcda53-43c0-4518-adec-b74c4bb886de

A process for electrolessly plating particulate matter is disclosed wherein the particulate and the electroless plating solution, without a reducing agent component, are combined with agitation in a plating vessel. The first opening communicating with a third opening of the housing to form a channel for a first leg of the hasp. They may be administered to patients to alleviate pain, produce analgesic effects, or assist in cases of narcotics withdrawal, and may also be used as probes for receptor activity. On the axial, there are stopper rings and elastic flexible keys. Further, several bearings are introduced to align shafts and absorb thrust created while applying pressure to a work piece. Devices and various adaptations therein are described for use in electrical therapy.

1459826710-862346af-724e-4f01-bd4f-ea0109d2afcf

A router controls transmission of packets over a plurality of networks. The processor is configured to determine a specific gravity, a hydrocarbon ratio, or both, for the liquid fuel based, at least in part, on the lower heating value of the liquid fuel. During the wet treatment of the successive batches the conductivity of the solution 5 is monitored, which monitored conductivity is brought to approximately a desired conductivity at second time intervals during the wet treatment of the successive batches by adding the active component or the solvent, or both, to the solution 5 inside the bath 4. The relative surface area of a first segment of the display area that coherently assumes the first display state and the relative surface area of a second segment of the display area that coherently assumes the second display state are defined by the currently adjusted position of the adjusting mechanism. The base can further include first and second wings that each has a width that is at least twice a width of the base. The assembly also includes an electrically conductive member disposed at the surface of the element to serve as a gas diffusion media.

1459826711-125372c7-0c18-4e93-b232-39496eb7d449

Laminates are disclosed having interlayers containing an infrared absorbing amount of lanthanum hexaboride coated on or dispersed in a thermoplastic polymeric matrix. Each cell in the array includes a pair of memory element electrodes. Higher voltages than that of the logic power domain are generated in response to an oscillator oscillating. The first end of the wire terminal is secured to the electrical contact using a mechanical device such as a crimping connector or a spring connector.

1459826711-8ab8c80b-f405-4a38-acae-7d711ec7ba8b

An adjustable regulated power device includes, for example, an electronic potential device, a regulated device and a control device. The method includes using servo tracking error to obtain a measured value of insitu non-repeatable runout for the hard disk drive, the hard disk drive having been filled with the gas and hermetically sealed. The hydraulic control system includes first and second mode valves located downstream of a hydraulic fluid pressure source. A normalized phase error for the selected measured tone is estimated.

1459826711-c65d5a1b-f483-4a26-a9b1-3fdeb6f5fa4a

A method and system of authenticating a computer resource such as an application or

data on a mobile device uses a contactless token to provide multi-factor user authentication. Packets representing the switching intervals of each component of the desired fluid mixture are provided to an intake of the mixing pump system. The work implement is configured to be supported by the frame. The surface of the sheet forms a guide deck for the paper path. With such a configuration, the disclosed SPESDFET provides robust ESD protection without consuming additional area and without altering the basic FET design. In the described and illustrated embodiment of the invention, this pressure differential is a pneumatic pressure differential.

1459826711-f7a6aabf-6a2e-4a5d-80b3-9cd4a5ce9324

An agricultural machine including a carrying vehicle and plural work units configured to cut a standing product. The image details in bright and/or dark regions can be further boosted by applying a local mean adaptive gain. A maximum outside diameter portion of the interconnecting bridge portion is located radially outward of a median point between inner and outer peripheral ends of the lip portion on the side of bush. The panel is then transported into alternate dispensing systems for resin coating. The count comparator is coupled to the conversion unit for counting a number generated by a reference clock during a period of the clock, and comparing the pulse number with a predetermined value to generate an adjustment signal. The strain relief projects beyond the second mating face and is positioned such that the cable assembly rests against the strain relief when the cable assembly is joined to the second mating face.

1459826712-14c28af2-d196-4151-81af-b3246e64aa03

A method and system of canceling radio frequency interference sourced from a narrow-band radio frequency transmitter to interfere with the operation of a multi-carrier modulation system. The support plate may be composed of a composite material, such as carbon-fiber reinforced polymer or aluminum metal matrix composite, and the edge frame may be composed of a foam material, such as closed-cell aluminum foam. The MS additionally receives at least one terrestrial base station signal with a second receiver, and estimates a time of arrival of the at least one terrestrial base station signal. The processor then generates the plurality of compressed forms that can be used to compress the body of text. The spacing member may include a first cover part which is located between the driving input part and the driving input member and covers at least a portion of the driving input part. In addition, values in relation to the spinning stability, tear resistance and evenness can be achieved which are usual in the case of a notched contact surface of standard yarn withdrawal nozzles without a balloon-breaking insert.

1459826712-5ab607e2-e004-4bcf-8f9b-b81b84ac4e88

An integrated circuit is manufactured by providing a P or P type semiconductor substrate with a resistivity of 10 to 1000 cm, disposing a CMOS on top of the semiconductor substrate, depositing an insulating film with several wirings embedded therein over the CMOS, and disposing an inductor on top of the insulating film in a region that is apart from where the CMOS is positioned. In order to obtain superior dynamic behavior and enhanced dielectric strength the oxidation behavior of the field plate electrode is modified, for instance by incorporating a desired high concentration of arsenic. The light further includes a second group of light emitting diodes displaced axially with respect to the first light emitting diodes, which emit light that bypasses the second focal point or focal line of the first reflector of the first optical unit. The thermal sensing element may be located near the components with the lowest failure temperature to ensure the multi-chip package is not damaged during the healing process.

1459826712-66f0a2aa-6b44-4c72-bce8-e90b3be622fe

An immersion probe has a probe body having a longitudinal axis and an outer surface surrounding the longitudinal axis, wherein a portion of the outer surface has sampling elements, which extend around the longitudinal axis in the peripheral

direction and which have a radial dimension. The transmitting device includes a transmission list in which frames to be transmitted are stored. Otherwise, the digital media controller connects to the media server and the media renderer using the fastest available connections, in the event that the renderer cannot stream directly from the server, whether due to network connectivity or format incompatibility.

1459826712-87d6d3a1-9065-45b0-abdc-6521a74acbdc

A method of treating a subterranean formation surrounding a wellbore, according to which a tool inserted into the wellbore for performing a function in the wellbore is fabricated of a material that breaks up upon detonation of an explosive mounted on the tool, thus allowing the pieces of the tool to fall to the bottom of the wellbore. Services may be developed that can be used to support different client devices with different capabilities. A check code is formed from the authentication value and the random sting. The bit sequence program controller counts the number of the bits that require programming in the program word by counting the number of bits of the program word that are not in an erased logical state to determine when the programming should be completed.

1459826712-b6e8af4a-1f7b-4a53-8902-cb2828d22673

A passenger detection system is provided for a vehicle having at least one opening to allow passengers to enter and exit the vehicle. The systems may be used to obtain images of the cardiac tissues particularly in a blood-filled environment. Evidence that an object is located in the field of view is used for detection, and evidence that the object satisfies appropriate inspection criteria is used for inspection.

1459826713-6b0a94f0-57eb-46de-9d67-b12cfd6039b4

Technologies are generally described for employing ultra-short pulsed X-rays in X-ray computer tomography. The outer circumference of each of the at least one bearing is surrounded by one tapered forcing ring which is arranged inside the housing. Then estimating a lower bound of excess delay introduced into the signals received from the base stations based on the time of arrival of the signals from the respective base stations and a known distance between the base stations. Calculating arc radius is a much simpler operation than the alternatives and can be easily and efficiently performed by the pixel shader. Elevation and azimuth angular binning is applied to the estimated monopulse angle bin to obtain a smaller coverage area among one or more possible target areas. In-room device requirements in guest rooms of a hospitality establishment are thereby minimized while providing enhanced user interface performance.

1459826713-83a40431-b531-4bf6-a7d8-69a822297606

A children's playboard of the type comprising a backing having a front surface of a cloth material for adhering figurines thereto and a back surface is disclosed. In one embodiment, an application receives content that may contain a script. The forend comprises an elongate body having a U-shaped cross-section configured to be secured to the action slide assembly by an action slide cap engaged to a distal end of the action slide assembly. The event handling system receives events from ClientsSources via connections through the event handling system Input Portals, and uses Shared Memory as its form of inter-process communication with the Monitors. The position sensor creates an inner loop with position feedback on the position of the actuator and spool valve, while the outer loop controls the phase angle.

1459826713-92361c49-ab78-4cda-aa9a-8af219a048a7

In a switching element using, for the active layer, a carbon nanotube dispersed film which can be manufactured at low temperatures, the interaction between the CNT and the surface of the gate insulating film is insufficient. In one aspect, the flexible display device includes a first display which has a flat shape and a second display which is disposed on either side of the first display and has a

curved surface bent at a boundary between the first and second displays. The strut includes an engagement end and a base end including a first side and a second side thereof. The resources and the metadata are both analyzed with respect to the query such that a response indicative of a match between at least two of the resources and the query is a ranked search result included in the response.

1459826714-2f1d9129-cef0-41d9-b329-98b53fc7d285

Systems, methods and apparatuses for manufacturing dosage forms, and to dosage forms made using such systems, methods and apparatuses are provided. At least one of the surfaces which has a different designation than the surfaces on which the tabs and hook are located, is equipped with a button, one end of which is equipped with a first slide surface. The migration of coating ingredients creates a gradual transition layer from the plastic film to the coating layer and leads to unique properties. A separation pattern may be provided between the first and second rows of vertical structures and include a separation semiconductor layer. The end face of the calking die has a peripheral recess, which extends from a diameter defining a radially inner remaining end face to a radially outer circumferential face of the calking die and which is intended for at least partially receiving the calked bead.

1459826714-33791c43-87ad-4c05-9926-37efd6d002e8

A computer-implemented method for using geo-location information in sensitive Internet transactions is disclosed. The image pickup unit includes an image sensor. It also sends a corresponding notification message over the reserved block. Also described is a plurality of sources 100 and light receiving apparatus 102 sitting atop a vertically moving support structure 110 that may view 360 degrees, of the whole circumferential interior surface of the tire.

1459826714-e3fc0260-0c6c-4bcd-89ef-9ef72c053d07

A method for constructing an agent in a first execution environment that utilizes a set of compiled, canonical rules, comprising requesting a canonical rule set for the agent, compiling the rule set and supplying the agent with the compiled rule set. Sample aerosol particles are compared against and identified with substantially matching known particle types by producing positive and negative test spectra of an individual aerosol particle using a bipolar single particle mass spectrometer. By this arrangement, scattered light enters each fiber from a direction substantially parallel to the fiber axis.

1459826714-fef8fc6b-ea82-430e-adf1-5d7ede4a68bb

An assembly for selectively lifting a computer monitor, and particularly a flat screen computer monitor, from a storage position below the top of a desk or table, to a use position above the top in which the monitor is visible to the user. A cam pivotably mounted opposite the opening has a serrated edge opposite a handle. The first AEE is configured to be isolated from the second AEE. This deflection may be converted into rotation of a power shaft included in a motor. This data may be a list of URLs of succeeding pages only by which the current page may be controlled.

1459826715-73d2e337-5fca-4317-bbb7-66d1199f05b2

A method relating to an improved swing characteristic capturing system that can be used for a golf club shaft fitting system is disclosed herein. A p-stage shift register which is clocked at a clock frequency corresponding to the high clock frequency of the digital circuit to be tested has connected to its parallel loading inputs p logical gates which logically combine a static control word with a dynamic n-position test word. That information is derived at least in part from automatically collected data related to user behavior with respect to at least one television advertisement delivered to a set-top box, which set-top box corresponds, at the time of that user behavior, to the first set-top box identifier. When the transparent siloxane resin produced by a non-hydrolytic reaction forms a composite in combination with the glass filler, the composite realizes high transparency and heat resistance, as well as a low thermal expansion coefficient. The retransmit

register is responsive to a retransmit address and has a data input electrically coupled to the data input port.

1459826715-a348b17c-333d-4c17-8734-d19be8c28b10

A light emitting diode backlight driving circuit includes a rectifier module, a voltage reduction module coupled to the rectifier module, and an LED lightbar coupled to the voltage reduction module. A determination is made as to whether payload data has been received from a subscriber's terminal. The memory-array die comprises at least a 3D-M array, which is built in a 3-D space. Each of the side edges of the segments associated with the slot defines a substantially vertical plane with a zone being defined between the substantially vertical planes of the side edges, and the movement apparatus is located substantially outside of the zone of the slot.

1459826715-dd02b287-4fce-4cbb-88b6-5b534e08075b

System and method for rendering a sequence of images corresponding to a sequence of camera poses of a target area to generate an animation representative of a progression of camera poses are provided. Said frequency demultiplication circuit receives, on the input side, pulse signals of a relatively high frequency and has two counter arrays and a phase comparator circuit that is connected to the outputs of said counter arrays. The upper end closure panels are hingedly connected respectively to the securing panels by respective connecting panels. A portion of the CMP layer and the protective layer is removed to expose a portion of the gate electrodes with remaining portions of the CMP layer and the protective layer remaining over the sourcedrain regions. The control system compares the feedback power to the reference power, defines a frequency offset based on the comparison, generates a speed command using the frequency offset, and outputs the speed command to the inverter to maintain a smooth DC link voltage during deceleration. By providing a slower delay path, the data being latched at the downstream latch will not change as quickly after a latching signal is received, and therefore the possibility of a hold-time violation is reduced.

1459826716-755397e3-09b4-49d9-bd0c-e8c6b891096c

A food storage monitoring system device comprising a battery powered digital timer device having an LCD digital readout describing the elapsed days and hours per day, and a reset button to reset the timer. A password gate may determine whether a select group of users are allowed to access a particular entity and/or content in order to rate and/or provide commentary with respect to that particular entity/content. The upper barrier layer and dielectric is selectively removed from those openings which will have ordinary vias and conductors, the other opening remains as capacitor. The devices on the shared bus may be configured to monitor the bus for events, and respond to each event according to the requirements inherent within a transmitted command, thereby performing the necessary tasks to enable power management functions without the need for interconnecting analog signal lines. The invention further relates to electronic devices in which there is at least one active layer comprising such charge transport compositions. The portal container includes a login application that receives player credentials and logs into various servers using the login credentials.

1459826716-7c75f0b2-a400-4c15-951a-4dbb03d66e9d

A computational scheme for an INS which utilizes micro-electro mechanical systems sensors resolves issues of unnecessarily large computational burden and numerical instability which happen in using conventional methods using high-end inertial sensors. Each gaming device participating in the group event is associated with an individual group event eligibility timer. By doing this, there will be no reduction of the extinction ratio of the polarized light that irradiates the substrate W if there is a change in the polarization direction of the polarized light that is incident on the second plane mirror. An ion-electron emitting screen is installed on the path of ions in the reverse stroke, and positions of collision of the ions

with the ion-electron emitting screen over time and space are detected with the use of micro-channel plate detectors.

1459826716-9bcf57f5-2d5f-492e-83f8-7acaa1664034

A retaining system for securing a closure at an installed position within a bore. The Suzuki couplings are each carried out with a boronic acid or a boronic acid ester. Thus, this system allows the business to process such an order before the customer arrives at the business, preventing idle time by the customer at the business while the order is being processed. A liquid crystal on silicone image device is provided.

1459826717-4d7b83e5-830f-4219-9d08-294aed43b3df

A CCFL power converter circuit is provided using a high-efficiency zero-voltage-switching technique that eliminates switching losses associated with the power MOSFETs. At this time, the steps to are repeated until a difference between the target length and the length of the chain which is measured in the step is less than a predetermined value. Input from a user indicating the target temperature can be received and the estimating and displaying can be carried out in real time. The at least one applicator may comprise at least one flexible blade defining an application face.

1459826717-7038c7ef-b5c6-46b5-95cc-2331cd676382

This document generally describes docking stations for portable computing devices with one or more of a variety of features, such as a near horizontal tray into which a portable computing device can be placed, embedded microphones and/or speakers, and/or input jacks for external microphones and/or speakers. In the image forming apparatus, when a number of rotations per a unit time of the image bearing member is assumed to be  $\frac{1}{2\pi} \frac{2\pi}{R} \frac{2\pi}{R}$  and a number of times of reciprocation per unit time of the toner charging brush is assumed to be  $\frac{1}{2\pi} \frac{2\pi}{R} \frac{2\pi}{R}$ , assuming that  $R=ba$ ,  $R$  is set to be in a range of  $125 \frac{1}{2\pi} \frac{2\pi}{R} \frac{2\pi}{R}$ . The input may include code a circuit design, a technical document, and text in a natural language. The method further includes calculating a duration for each transit route in the transit routes. The container opening is at least partially filled with an insulative material.

1459826717-c236e4dc-e3b2-48a1-9464-3d7248810211

A favorable magnetic transfer is performed to a perpendicular magnetic recording medium. The print object acceptance portion accepts an input operation of the print object including a print identifier. A first locking member is provided at the proximal end of the first bangle member and a second locking member is provided at the proximal end of the second bangle member. The piston rod is held in the crosshead using a flat to prevent rotation while an adjuster nut that is turned creates axial movement in the piston rod with a lock nut securing the final piston position. The first end is configured to receive and grip a ferrule of an internal optical fiber and the second end is configured to receive and grip a ferrule of an external optical fiber.

1459826717-e0de87d3-7f49-448b-9b27-a8daa42ba30e

A small-sized piezoelectric power generation device is provided which can generate electric power even with vibrations at low frequencies. The magnetizable particles are prepared by controlled water atomization and comprise iron having a passivating oxide surface layer. The data recording area includes a non-magnetic area scattered with magnetic regions, and the servo-pattern area includes uniformly magnetized magnetic regions larger than the magnetic regions in the recording area. To facilitate use as a retrofit component, the ECP cover may have an elliptical section that is contiguous to a circular section that conforms to the geometry of existing probe wells and probe sub-assemblies. Present invention is characterized in that the outer conductor is made of an elongated tubular compartment having an elongated opening along one side of the compartment, and that the inner conductor

is suspended within the tubular compartment by means of dielectric support means. The created topology cache is then stored at each directory server, and forwarded to a client upon submitting a query to the system.

1459826718-4cef8381-56c7-493c-9a67-16dc272fa3b9

A bed dressing and set includes several articles of bed linens or bed clothing. The MPEG encoder receives a past encoding parameters generated at a past encoding process as a history information, and performs a present encoding process by using the past encoding parameters selectively so that the present encoding process is optimized. Thereafter, the sewing machine is operated to sew a number of stitches in the tuck, and the tucking blade is then retracted.

1459826718-b79147b6-7661-4d76-a1be-e75fef54e4be

Media is transported to an imaging region using a vacuum feeder. The carrier has a bottom panel, two side panels, and a back panel. An A-axis control system reads out the corrected pivot angle about the A-axis, the corrected pivot angle about the A-axis to pivot the spindle head when executing oblique machining of the inclined hole. Further, non-correlated portions of the light emanating from the interactive spaces that are linearly proportionate to the intensity of the excitement light available in the interactive spaces are separated from portions of the light emanating from the interactive spaces which are not linearly proportionate. Use of the SPO2 plethysmograph signal to determine the initial inflation pressure reduces both the over-inflation of the blood pressure cuff and the under-inflation of the blood pressure cuff, which increases the rate at which the blood pressure measurement can be made while increasing patient comfort. The first and second housing are respectively constituted at least by first and second motherboard blocking walls, first and second front walls, first and second rear walls, a first upper cover and a second lower cover.

1459826718-e0a1dcc0-43cc-449e-b3fb-c77d0d8304ea

Multiple-pass video encoding systems and techniques are described which utilize statistics taken during a first-pass encoding to create complexity measurements for video data which is to be encoded. A specified evaluation value for the optical data code is obtained from the results of processes carried out prior to the decoding step and stored if the decoding is done successfully. In one embodiment, the microelectronic workpiece further includes a plurality of dies formed on the device side of the substrate, a dielectric layer over the dies, and a plurality of bond-pads on the dielectric layer. At least a portion of the olefin catalyst is regenerated by combusting coke deposited on a surface of the olefin catalyst in an oxygen-containing environment, and at least a portion of the olefin catalyst is heated.

1459826719-01185230-a8d5-4671-a332-a4bd968dcf2d

An electrically connecting terminal structure made of a metal sheet with unified thickness and including a first terminal section and a second terminal section. concurrently and continuously-receives audio telecommunication signals for at least two telephone calls from a digital hybrid telephone line; and2. A second structure is created with creation of an operator on receipt of each new continuous query that uses the new function. Improvement in the alignment of the field of view between sensors is realized by applying an adjustable compressive force on the filters to individually adjust the field of view. The first part detects the amount of light emission of the semiconductor laser, and generates and outputs the bias current so that the amount of light emission produced by the sum of the bias current and the first current is a predetermined value.

1459826719-3d0cadab-54c3-4dd1-9e22-52a7c7516173

An electrometer for use in measuring current is provided. The hierarchically structured menu may have a main menu, a plurality of submenus, and menu items. Consequently, loud speakers from which poor quality voices and good quality voices

are output can be separated from one another, thus improving the total intelligibility of received voices. The present invention also provides containers having a multilayered body-forming portion including: a layer comprising the aforementioned blend; and one or more layers of a formable polymer composition. The second locking mechanism may be engaged upon closing a second door assembly. In a preferred embodiment, the figurative print comprises a primary, a secondary, and a tertiary figurative element.

1459826719-7c76ed6e-127f-4ebc-a69d-82e178ea6830

Thickness uniformity of films sputtered from a target onto a series of substrates is maintained as the target surface shape changes due to the consumption of the target. The transmission medium is capable of carrying a plurality of wavelengths organized into bands. While the movement of a typical twin stage apparatus causes one of the stages to eclipse the other and requires the addition of a significant number of additional interferometers, this invention minimizes the number of interferometers necessary through dimensioning the stages so that one stage never totally eclipses the other. , having a Reid vapor pressure of 7.

1459826719-7e616c60-e5fe-4e3f-8c32-5964a2a497f9

A method and system for enabling user interaction with computer software running in a computer system. By using the voltage on the column line to control the gate of the reset transistor, there is no need to provide a dedicated reset control line. Various monitoring operations might, for example, be performed.

1459826719-9ec80ca6-9522-489f-9290-397a846040ca

A high intensity discharge light source includes an arc tube having a longitudinal axis and a main central discharge chamber formed therein. To the inner side of the door panel is mounted a reinforcement member 100 having a body formed by laminating layers of aromatic polyamide fiber sheets and thermoplastic adhesive and subjecting the same to hot pressing to form an integral member. The moisture removal holes may be a channel through the outer sidewall through which the water droplets that collect in the groove may flow. Another embodiment, among others, includes a mass defect labeled peptide including at least one tryptophan residue labeled with 4,6-dibromo-2-trifluoromethylphenylsulfenyl chloride. The imaging probe can also display the count of the detected radioactivity.

1459826720-3d9af823-abc9-4d8b-8bd3-cfc8c732eb65

Disclosed are arrangements which seek to update schemas in a controlled manner so that a device or service can accurately parse documents conforming to a new version of a schema without the need for translation services or extra information within the document to provide guides for translation. A plurality of flexible model values is determined on the basis of measurements made by varying the parameter  $qE$  and maintaining the angle of incidence at a constant value, and the correction consists in an extrapolation operation providing a value of the aerodynamic coefficient corresponding to  $qE=0$ . Reaction parameters associated with individual reactor vessels are changed in response to the value measured during the reaction. The node data are related to the execution of a node within the workflow process. The pattern in the silicon oxide layer is transferred to the SiCOH-containing layer using a dry plasma etching process formed from a process composition comprising NF<sub>3</sub>.

1459826720-4d674da5-5f3d-4be3-a306-6cdb62ee761c

Methods, computer program products, and systems are described that include accepting at least one indication of a bioactive agent use by an individual and/or assigning an artificial sensory experience to monitor at least one desired effect of the bioactive agent on the individual. One embodiment according to the present invention is a p-n junction carbon nanotube nanowire TPV cell, which is formed by p-n junction wires. In this regard, the toy members may move relative to each other as the pet gnaws on the toy, swipes at the toy with his paws, or lifts the toy in a

manner to cause gravitational movement. In some embodiments, augmentation can be performed by imbricating an implantable device comprising a biodegradable matrix and microparticles at the capsule. The cache is still further adapted to provide a response, including from the responses stored on the storage device based upon the request, to appear as through the server provided the response.

1459826720-f0aac6c7-d9c8-40bc-999f-9933ce8a3e26

Disclosed is a method of communicating emergency call information originating from wireless phones among multiple entities using a set of network signaling operations for pooling and reconciling records of emergency calls and identifications for sources of fraudulent calls. Because the block patterns can have widely varying probability distributions, the codec adaptively chooses a prediction mode for modifying the block patterns to enhance their compression using entropy coding techniques. The middle of the U-like pattern is implemented with four metal ring electrodes and one electrode is circuit-shortened to the B-side electrode plate for increasing antenna sensibility and reducing antenna size. The indium tin oxide layer further ensures proper cooling behavior of the recording layer of the further recording stack in order to obtain sufficient recording performance in the farther recording stack.

1459826721-1d31d858-6074-4d4f-b1e7-cb053d4b2444

A locate device for a locate operation to detect a presence or an absence of one or more underground facilities is configured to access and display facilities map information, and/or other image information, as a visual aid to facilitate the locate operation. The hydrocarbon fuel is injected into the fuel reformer as spray having a pulsating pressure. The arm is coupled to the gear train, and the override control is coupled to the arm.

1459826721-62ab9e4c-cd76-4952-b34e-14d04af6abac

A Dielectric Barrier Discharge Plasma Generation Cell includes a plurality of hot electrodes interspersed with a plurality of ground electrodes whereby a power supply connected between the hot and ground electrodes creates a non-thermal plasma between the electrodes. A presence of a computing device coupled to one of a plurality of power sourcing network ports off a network device is determined. The tea making mechanism comprises a tea making room and a tea outlet pipe. Furthermore, the refrigeration system and the supplemental heating system are operable to maintain each of the plurality of components within the predetermined temperature range. Further provided by the present invention are low shrinkage die attach pastes and methods of use therefor.

1459826721-fbf18907-b706-43ee-8b3d-e5407f41c4ec

A method and apparatus for a flotatable aerator system that includes a concaved surface at the top of a fluid uptake chamber for diverting aerated fluid behind a chassis of the system. A problem has been that when the error torque becomes less than a forward static friction, there remains a positive magnetic pole deviation and when the error torque becomes less than a backward static friction, there remains a negative magnetic pole deviation. First, an encoder regulates quantization using quality, minimum bit count, and maximum bit count parameters. The pre-conditioned polishing pad facilitates uniform polishing rates of production semiconductor wafers subsequently polished on the apparatus. The valuations are aggregated to form an index representing a toxic mapping for the workload within the environment.

1459826722-4cf28e8d-0b85-4d04-97a6-b28979244031

Systems, methods, articles of manufacture and apparatus are disclosed to align actions of audio source monitors. More specifically, the invention relates to a method of preparing metallic nanoparticles consisting in: selecting a precursor from the salts, hydroxides and oxides of metallic elements that can be reduced at temperatures below the clay silicate network destruction temperature; and

depositing said precursor on a support selected from pseudolaminar phyllosilicate clays. The tray has a plurality of side panels that extend at least partially around, and at least partially define, a cavity of the container.

1459826722-5b40c96d-84ca-485d-b62c-c2de731877f8

A method of forming patterns includes forming a layer composed of a ketene based random copolymer on a substrate, forming a block copolymer on the ketene based random copolymer layer and patterning the ketene based random copolymer layer by removing a part of the block copolymer and a portion of the ketene based random copolymer layer. A blade is rotatably held by the blade holder. The method also comprises the step of examining the associative memory to determine if the data should be stored. When all the relays are closed, the motor will start. The dust collecting member is connected with the mounting seat and includes a receiving space.

1459826722-5e1322d5-dc44-420c-8f48-1c7bba796852

Disclosed is a multilayer insulator, a metal-insulator-metal capacitor with the same, and a fabricating method thereof. The mounting assembly includes a first mount having first and second prongs disposed about an intermediate space, a second mount configured to extend bi-directionally into the intermediate space between the first and second prongs in opposite first and second directions, and a snap-fit fastener. The UMC allows the DTV receiver to use a unified memory. The constellation was iteratively generated using a mirroring technique.

1459826722-62c8d13e-bfd3-49ba-8e20-91dbf422a75f

A wind turbine with a sensor that measures the out-of-plane deflection of the blades and a controller that uses the signal from the sensor to determine the risk of a tower strike. According to said method, the surface of an aluminium support is anodized, especially by anodic oxidation, and/or electrochemically pickled in an acid solution with an alternating voltage, treated in hot water or water vapor at a temperature of 50 to 100 C. The fibers can be made in the microdenier range with average weights as low as one denier or less. For example, the switches carry small magnets which, by manipulation of operating switch levers or knobs, move into and out of close proximity to magnet sensitive switching devices mounted on the front PWA. A digital sum value of the NRZI data varies in accordance with the selection of conversion tables. Therefore, when the actuating rod is moved by an accidental force, the actuating rod self-moves back to its original position once the accidental force is removed.

1459826722-974d0589-0c1e-40b2-9283-50faf7e63ed7

A driving apparatus which comprises a stator and two movable elements. The invention provides compounds and methods for inhibiting histone deacetylase enzymatic activity. These methods flatten the image and remove all but the low spatial non-uniformities from the DMD mirrors.

1459826722-9a18da33-9b1f-4c86-9d1d-8cf92a46003f

An encoder is disclosed that is partitioned into discrete hardware modules. The method and system can use two physical channels to form two logical channels. The method also includes the steps of condensing the vapor in a reflux condenser, heating the condensate in a reboiler, removing the purified chlorine gas from the distillation system, and removing the distillate from the distillation system.

1459826723-679ab2dc-2476-4ef6-8801-fd6d108a8ee8

A number of configuration elements are associated with a number of devices. The second plate includes a grid that defines a plurality of apertures each having a first dimension extending in a first direction and a second dimension orthogonal to the first dimension, the first and second dimensions lying in the second plane and the second dimension being larger than the first dimension. The LED also has a current blocking layer below the p-side electrode for locally blocking electric

current flowing from the p-side electrode to the n-side electrode.

1459826724-ab481108-56fb-463f-8556-895106358cc7

The present invention provides a transfer control protocol handoff notification mechanism for a wireless network by which hosts connected through the wireless network via a transfer control protocol connection can be notified in the event a handoff occurs. 11af physical layer in television white space spectrum. A mounting assembly may be operatively connected to the inner and outer air foil elements for aligning the opening within 5 inches of the rearmost portion of rear-facing portion and mounting the air foil elements to the rear-facing portion of the vehicle. The code converter is configured to receive mode setting codes generated based on the decoded plurality of command signals and convert the mode setting codes to serial mode setting codes. Second channel quality information may be generated and transmitted to the BS, where the second channel quality information is modified by an offset configured to modify a second MCS allocation. In order to avert difficulties attendant on injection-molding ultra-miniature parts, the thickness and length of a reinforcing ring on the tip of the impeller are set to within predetermined ranges.

1459826725-26f9d294-697e-45ed-91de-2a3ec8fca0e0

A forced flow of cooling air through a computer housing is created during operation of a specially designed data storage disc drive structure operatively disposed in the housing. Medical imaging systems especially comprise a medical imaging device 1, a signal processing and image display station 2, a data entry device 4 allowing the selection of the print support format, and a printer 3 allowing the images to be printed. This is accomplished by a catching mechanism that contacts the target vehicle. In another aspect, a higher pass voltage is applied to unselected word lines during the reprogramming.

1459826725-8f96f28e-b091-4c4a-9565-aeb69327a9cd

The present invention encompasses compositions for deriving, maintaining, and growing pluripotent and germ-line competent mammalian embryonic stem cells, and for deriving, maintaining, and growing adult human stem cells and/or adult early progenitor cells. The relative angular position is set by an hydraulic piston and cylinder assembly which has a chamber in the shin component containing a piston arranged to execute a translational movement in the chamber when adjustment is required. The service is provided with an API to allow an application server to create the connection pools, connection groups and connections.

1459826725-f52aa191-778d-459f-8e83-366d06b46fef

Equipment of manufacturing a wearing article includes a plurality of units movably arranged on a unit basis for transferring a half-completed product of the wearing article. The invention further relates to electrically conductive pigments prepared by the process of the invention, to the use of these pigments for pigmenting lacquers, printing inks, plastics systems or coatings, and to lacquers, printing inks, plastics systems or coatings pigmented with an electrically conductive pigment prepared by the process of the invention. A bulkhead is coupled to a first module that includes a first conduit aperture for receiving an electrical connector assembly. A first private address is initially associated with the first processing node, and the first processing node uses this private address to communicate with the private network. It can also be used outside the context of semi-join reductions. In another form, the central reamer includes a single cutting element coupled to an angled reamer handle and a reamer guide.

1459826726-19cc2a20-209b-4b8a-ba0a-73775ad7744a

A system including a DRAM memory device on an integrated circuit using a control logic device to initiate a body refresh operation to provide a means for maintaining a low voltage at a floating body and discourage data loss, and a design structure including the DRAM memory device embodied in a machine readable medium is

provided. The cation and the anion containing liquids are spaced from, and preferably out of contact with one another on the surface of the reflective coating as an electric current is moved through the anion containing liquid, the conductive surface between the liquids and the cation containing liquid to coat the conductive surface with the electrically conductive coating. The curb opening filter has a system for vertically attaching a filter apparatus over the curbside opening. A plurality of trailer attachment plates are connected to the respective top ends of the vertically oriented support bars to attach the cage structure to the bottom of the trailer. The first wakeup request signal and the second wakeup request signal are one of concurrent and consecutive wakeup request signals. The sensing amplifier overdriving circuit may be used in a semiconductor device.

1459826727-4e2c4814-2344-4617-9b43-1e625f99ad18

A fastener apparatus includes a frusto-hemispherical head portion having a flat top surface, a curved outer surface, a base portion, and a peripheral edge, with the flat top surface bearing a tool fitting. A diaphragm is biased into sealing engagement with the valve seat to provide a fluid seal between the ink inlet and the ink outlet. To enable the fabrication of a thermally stable ultralow dielectric constant film, specific precursor materials are used, such as, silane derivatives, for instance, diethoxymethylsilane and organic molecules, for instance, bicycloheptadiene and cyclopentene oxide. This shape is also determined by the deformation of the plates and the insertion by the external forces applied to the plates, for example by the fasteners connecting the plates. In addition, the estimated baro offset at the runway is compared for consistency with the baro offset obtained by the pilot from the airport by radio. Each of the second storage systems writes to a logical volume in sequential number order write data, of the write data received from the first storage system, that includes a sequential number of a value smaller than the sequential number of the marker including the marker number reported from one of the second storage systems.

1459826727-5c3a9e88-e6d5-4752-8c36-06c62feee9c1

A device for measuring the tightness of a transmission belt comprises a hilt, an insertion tube, a frame, a retaining piece and an engaging piece. The customer station receives back from the telephone switch indications of modifications in status of the switch occurring in response to the control messages. A non-viscous resistance material is provided in contact with the resistance element within the speed reducer chamber. The molded products produced from the molding material mixture for the foundry industry are characterized by a high strength and a lower generation of fumes and smoke during pouring. Of the hold capacitors, capacitance values of first hold capacitors arranged for data lines at the ends of each of the data line groups having the N data lines and capacitance values of second hold capacitors arranged for corresponding data lines other than the data lines at the ends of each of the data line groups having N data lines are different from each other. The first and second ferromagnetic contacts have anti-parallel magnetic orientations relative to each other.

1459826727-dd511dda-8bf1-4e3a-8e5a-5094247553b5

An object of the present invention is to provide air cooling equipment for a heat treatment process for a martensitic stainless steel pipe, which is capable of shortening the time required for the heat treatment process by enhancing the cooling efficiency at the time when the inner surface of steel pipe is air cooled in the heat treatment process. These thin, highly porous structures with large catalytically active surface areas, should exhibit a significantly higher power output per mg of Pt and per cm<sup>2</sup> of the membrane than the current Polymer Electrolyte Fuel Cells catalytic layers. The connection pin parts connecting between the lever plates and drive ring of the variable throat mechanism are formed integral with either the lever plates or the drive ring by extrusion or by precision casting. The ink drops jetted by activating both the main and the peripheral actuators and the ink drops generated by activating only the main

actuator have the same drop weight and drop velocity. A second print driver, interconnected to the second network, generates second drive instructions corresponding to the written second image data.

1459826727-f397c844-6e03-46ec-be45-add4b2bfb06e

The present invention provides an open application program interface service. Rotational direction of the motor shaft is controlled by an electronic circuit responsive to a tilt sensor. The weight value calculation unit calculates a weight value based on a degree of similarity between an image adjacent to the target position and an image adjacent to the normal-phase candidate pixel. This configuration makes it possible to illuminate the respective liquid crystal light valves by illumination areas of exactly the same size, which in turn enables a high-quality image having no display shadow to be projected. And the anisotropic conductive film is extended from a formation area of the external connection terminals to an outside area along the flexible wiring board. The trench is then filled with a trench isolation layer.

1459826728-db9a6ef1-c4c2-449f-a14a-aba018007bf5

A slider head assembly is provided which includes a slider head for reading/writing data on the surface of a rotating disc. Each of the columns have opposite ends that extend beyond respective ones of the outer surfaces of the substrate. The annular second lighting apparatus is disposed around the housing and includes a plurality of light-emitting elements disposed annularly so as to be radially spaced apart from an outer periphery of the first lighting apparatus. In the non-rotating configuration the driven gear is prevented from rotating, and a corresponding portion of the animated children's toy is not moving. The method further includes automatically providing the relevant data to the user.

1459826729-2d8ce3e6-afa2-4438-a60a-fbc73433ccbb

The present invention relates to the Passive Optical Network technology, and a method for sending an upstream transfer frame in a PON is provided, so as to improve flexibility of a system and satisfy a requirement that an error probability is reduced as low as possible. The system includes a receiver front-end configured to receive an observed digital signal in the digital transmission system. Each signal is sampled and decomposed to produce frequency coefficients stacked in a set of linear systems modeling a reflectivity of the scene. A controller governs the orientation of each of the plurality of detector plates based at least on the detector signal generated by its detector elements such that each detector element of each detector module of each detector plate may be aligned to within a specified fraction of the transverse dimension of the fan beam as measured at the exit slot. The channels have a different channel cross section in at least two of the radial zones.

1459826729-300ac620-0905-4571-a4a6-228ef79cf0af

The present invention employs a dental component that includes at least one first indexing element and at least one second indexing element having an apical end located apically of the apical end of said first indexing element, wherein the second indexing element is designed to present a play with mating features of a dental fixture. In one embodiment the invention includes a pair of guides, such as ribs or slots, incorporated into the bridge of the key ring grip. Furthermore, a penetration is made on the holding rod and the moving part concentrically, and intersects through the concavity for installation of the turning rod.

1459826729-9961dfae-9077-4cf9-a224-8233c06356e7

A first image processing system, a second image processing system, a first storage system and a second storage system communicate over a high bandwidth switch. An inspection table downstream of the rolling line has a surface aligned with the downstream end and the strip emerging therefrom. And, when the optical disk has been mounted, the recording and reading means decides whether a first situation or

a second situation holds, using the ID and the number of times information of the optical disk as a key. In the event the electrodes have mushroomed, then dressing of the electrodes is provided and then the abrasive cleaning is performed to restore the surface texture. The compensator can further comprise a first medicament positioned within each first packet and a second medicament positioned within each second packet, wherein the first medicament is different than the second medicament. The apparatus includes a porous substrate, a mirror image of a first image pattern printed with a first phase-change ink having a first phase change temperature on a first side of the porous substrate, and an adhesive layer applied to the first side of the porous substrate to enable the porous substrate to be affixed to an object.

1459826730-16f0328a-386d-461b-88fb-e7db44935ca8

An improved structure for the sound coil of loudspeaker comprises a cylinder provided with multiple layers of coils surrounding one end thereon. A temperature measurement start instruction is provided to the controller of the wireless wafer at a position in a wireless wafer carrier, and thereby the wireless wafer starts temperature detection to store time-series data of the detected temperature value in the storing portion. The circuit has particular application to asynchronous multiple processor networks. In a layout view, a first area for placement of the first and second diodes is interposed between at least two separate sets of second areas for placement of the MOS transistor.

1459826730-64182288-37b0-41be-885f-a470c2094978

An attenuated phase-shifting photomask provides adjustment of attenuation from mask to mask. The semiconductor apparatus includes: a clock signal transmission unit that selectively transmits a clock signal in accordance with the frequency of the clock signal at an operation standby mode. The test pattern is then read, and the amplitude of the signal produced by the test pattern is stored.

1459826730-706688c9-d71d-40d7-b090-ec2c1808ff97

A valve for a tire with a simple structure and a low cost is easily made for monitoring the pressure of the tire through an indicator. The present invention also relates to a pn heterojunction utilizing the photosensitive organic semiconductor compositions. In one embodiment, a caller navigates to a desired web page on the internet and the caller dials a telephone number on that web page directly to initiate a two-way audio communication with the destination telephone number using an internet telephone service. This permits the image processor to prevent the quality degradation of the spatially filtered image. The method insures that the newly formed risk model is consistent with the component models from which it is formed.

1459826730-a3645c76-9b2e-4000-9c62-e4d2f776fbb1

A telecommunications system for communicating internet packets between a correspondent node and a mobile node. The system includes delivery apparatus remotely located from the care provider, wherein the apparatus stores a plurality of sealed unit dose packages that are delivered to a patient at a scheduled dosing time. Then, the resist and the BARC layer is stripped, and the hard mask pattern is effectively transferred to the CNTs by etching away the portions of the hard mask which have been already partially etched away. Additionally, a target production for the well is entered. In use, the pump preferably includes a fluid having one or more drugs disposed in at least one of the reservoirs, and a radiopaque fluid disposed in one of the reservoirs.

1459826731-16bddade-8719-420d-9286-5153414b67bf

Various embodiments of the present disclosure provide a gaming system and method providing a plurality of different player-selectable wager alternatives if a credit balance of a player is less than a designated wager amount and greater than or equal to a lowest eligible credit balance. The parts made of metal such as the

spring is isolated from the liquid to ensure that the liquid is not affected by the metal. Adjacent units are interconnected to one another at their terminal vertices by a square tubular member. An integrated circuit may include power electronics to convert DC input power to AC output power and processing circuitry to control the power electronics. A clip is provided that secures the relative position of the two boards when the two sets of posts are engaged. The solvent in the solution is removed to selectively form a patterned conductive, semiconductor or insulating layer on the patterned first SAM.

1459826731-1eff3424-addd-411a-b55c-427a42d8753f

A self-deploying catheter assembly comprises an anchoring device mounted to a tube. Fixed rails are formed on the surface of each terminal block at opposite sides of the nut accommodating hole and extend in a projecting direction of the terminal block. The degree of fairness is controllable, in order to appropriately balance the desired throughput and data transfer resource allocation for a particular application. An adhesive compound can be used to stabilize the juncture of the two walls. In another embodiment particles carrying desired agricultural inputs with modified release characteristics are delivered.

1459826731-62ff5385-53ea-497b-8e5d-766012cc762f

What is disclosed is a novel system and method for minimizing visual artifacts, such as ROS skew and laserbeam bow, in a brick-layer halftone structure. The cells of the first type are cascaded with each other. A second carrier carries a second set of magnets arranged radially and spaced apart axially from the first set of magnets. The at least two lamps are disposed in the receiving space and spaced apart from each other by a second distance. A control system is coupled to the actuator to control the actuator based on a gait activity.

1459826732-996eebde-4274-4265-80f3-8330b0418349

A system and method for remediation of contaminated soil are provided. The handheld remote keyless entry transmitter comprises an integrated electronic compass element and logic adapted to store a first compass direction when activated and directed towards a destination. The display presented on the computer monitor will mimic the model railroad layout depicting each track turnout with a red or green path. In some embodiments, a plasticizer, an amide wax and optionally a rosin are added to a cellulose-ester-based coating to increase moisture resistance. The optical receiver may include a second DSP to receive components associated with the 5QAM signal, filter the components, reduce phase noise of the 5QAM signal, and provide data associated with the 5QAM signal.

1459826732-c3ca2fed-99ea-4036-8368-41c8d5749d71

Disclosed herein are systems and methods involving the use of magnetic resonance imaging and optogenetic neural stimulation. Operational data received from deployed femto cell access points are aggregated and monitored. A perianal support device includes a perianal support member having a pressure surface configured for engagement with tissue adjacent an anal orifice and a pressure detecting system associated with the perianal support member to detect pressure indicative of pressure on the perianal tissue of a patient. Unlike the threshold gates, the present automaton is capable of outputting an n-bit digital value analogous to a cell membrane potential. The formulation comprises: hydroxylamine; corrosion inhibitor containing a mixture of alkyl dihydroxybenzene and hydroxyquinoline; an alkanolamine, a water-soluble solvent or the combination of the two; and at least 50% by weight of water.

1459826732-c6bcb930-8a2f-4a24-a04c-8bf972a4138e

A system and method for printing an image on a medium whose dimensions are determined based on the size of the image are disclosed herein. In one embodiment, the bolt and slider are articulated so that the displacement of the bolt results in a force component accompanying the slider as it moves along a slider path that

traverses a line formed by a linear firing axis of the barrel of the firearm. The primary circuit returns the energy obtained from the secondary circuit to the direct-current power supply. The meter update method enables both time of use and other configuration parameters to be updated.

1459826733-386e636f-6d9a-45cb-8207-ec8f21e56a55

A computing device having a display portion for displaying information and a user input portion for receiving an input from a user. This separating apparatus includes a position adjusting mechanism for adjusting the position of a nozzle which ejects a fluid. Each lamp assembly includes a transmissive tube housing a lamp. The electrode 10 is one in which electrode mixture layers 700 each including an active material 701, conductive additive and a binder as components are coated on both surfaces of a collector 710. A second light emitted by a light wavelength converter that is excited by a first light generated by the labeled binding member of the binding complexes of the second composition is then detected to detect the presence of the analyte in the sample. Processed force sensor signals may indicate the presence of button activity such as press and release events.

1459826733-3bfcffc3-19a1-4ef9-848a-cc77baa98af7

a method whereby a linearization training sequence is designed to be transmitted by means of a radiofrequency transmitter incorporated in a mobile terminal or a base station of a radiocommunication system comprising a fixed network. A rotatable shaft extends through the chamber inner space, and is operable for being rotated by a motor. First, a transmitting source is selected as a reference layer, wherein the associated symbol represents a reference transmit symbol. At least one encoder module is configured for insertion into a second one of the receptacles and is connectable to a multi-wire path for sending encoded signals and a second power signal along the multi-wire path for selectively energizing one of a plurality of solenoid actuated valves connected to corresponding decoder circuits connected along the multi-wire path. The toothbrush head can flexibly conform to a convex profile to suit the labial surface of the teeth or to avoid damage to the gums.

1459826734-810411ed-b27f-4418-9064-3780c5c6959a

Disclosed herein is an organic light-emitting diode lighting apparatus. The hood including a damper that is openable and closeable as a function of outside temperature. The pressure-side tip wall includes a continuously concave curved arcuate portion, at least a section of which extends circumferentially outward from a radial axis of the airfoil. If the pull-up network and the pull-down network are both conducting, the current compensation device adjusts currents flowing through the pull-up network and through the pull-down network such that the currents are substantially equal. Module initialization is then performed.

1459826734-94d31336-980f-4cdd-bd18-28eef17e2b5c

A mechanism for determining an optimal compression technique for each data file when creating a computer archive file from a set of data files. In one illustrative embodiment, the method comprises forming a layer comprised of a refractory metal, determining a thickness of the layer of refractory metal, and converting a portion of the layer of refractory metal to a metal silicide. The texture material base and the pigment material are combined and deposited on the target surface to form a durable, irregular, colored surface. The method also includes associating, by the administrator, a plurality of tools used to complete the task with the task, where the plurality of tools include at least one of templates used to manage the task, experts on the task, and frequently asked questions regarding the task.

1459826734-b771beff-2f7d-460b-9884-f5af915e5fda

A system and method of automatically replacing the geographic location of geo-fences stored in memory of a telematics system is described. First phantom sinogram data is acquired from a scan of a solid cylinder phantom within a PET scanner imaging FOV; second phantom sinogram data is acquired from a scan of a second solid

plane or scanning line phantom within the PET scanner imaging FOV; and a PET scanner detector component scanner efficiency normalization is determined from at least one of the first and second sinogram data. The converter includes two input terminals, is arranged at the input of the element and delivers the polyphase alternating current to element. The energy transfer from the outwardly deploying cantilevered pipe directs impact loads away from the pelvic region of the occupant toward the femur region. A further embodiment of the invention provides a non-volatile microchip memory component to store information about the vehicle operator usable by medical personnel at the scene of a crash.

1459826735-3e8e2530-6d25-44a4-aca9-45d50590e4a1

A panel or door suspension system used to hang sliding panels or doors. A second control unit includes a second operation data generation section for generating second operation data in accordance with a direction input operation performed by a player or a motion of a second control unit body included in the second control unit. The side-under spoiler 1 includes a side-under spoiler body 7 supported at the lower part of the bracket 3 by supporting sections 5 of the bracket 3 elongated in the front-to-rear direction of the vehicle body 2; attaching sections 6 for engaging the side-under spoiler body 7 with the supporting sections 7; and guides 7 for the attaching section 6 to the supporting sections 5. For example, the first metric may then be considered a thread-relative metric as it has been observed during a time period in which no thread switch events or interrupt events would have caused the first metric to become inaccurate during the execution of a particular thread. Ideally, the tool is further configured to support on the at least one base source operations of create object and delete object on the at least one view.

1459826735-4ff17c0d-dcfc-4fe0-9b75-aeaeee301b66e

A system and method for authenticating a subscriber of a first network to access application services through a second network, wherein the second network is a packet data network. The first substrate has a top surface and a bottom surface. A disc is rotatably mounted in the circular aperture. The first data storage facility is conditioned to assume the role of the secondary facility, which includes sending a copy of data committed at the second data storage facility to the first data storage facility. Also provided are methods of treatment with antagonists of IL-17, IL-19, and/or IL-23.

1459826735-558d622e-e8da-496d-a78f-f17c2fe8163e

An automotive seat assembly 10 is provided, including a primary seat structure 12 having a seatbase portion 14 and a seatback portion 16. A set of annular permanent magnets is included in each magnet arrangement, including a set with trapezoidal cross-sections to provide a more uniform field and to allow greater access to a patient placed within the magnetic field. In order to increase the lifespan of the seal, said seal can be surrounded by an adapter part made from undulating curved sheet metal, which can be inserted flush into the housing wall opening.

1459826735-e9ef28ba-3ab9-4f74-abab-6d90a53a32fe

A power supply, an over voltage protection apparatus, and an OVP method are provided. A rotor is assembled from a plurality of identical fin panels and rotatably mounted on a supporting pole within the selected area. The prefetch scheduler takes advantage of the latency associated with the martyr load to schedule prefetches for memory operations which follow the martyr load.

1459826736-6a19cc26-122d-496f-b6c4-ba72ca9f7960

The electrically variable transmission family provides low-content, low-cost electrically variable transmission mechanisms including first, second and third differential gear sets, a battery, three electric machines serving interchangeably as motors or generators and at least one brake operable to enable series hybrid reverse operation. This image registration device contains, in operation, a

rotating image carrying element and a rotating image receiving element in rolling contact with each other and each having a flange co-axially mounted on their respective shafts. The used die holder and a next die holder positioned collinearly with each other are moved simultaneously and longitudinally, while slidingly contacting both of these die holders with the press member, so as to eject the used die holder from the press member and to deliver the next die holder onto the press member. One or more resonant frequencies of the transmission line sensor are determined, and the determined one or more resonant frequencies are then correlated to the structural health of the structure. Lights are mounted on the support. Therefore, the present invention is very useful and effective.

1459826736-854d64a8-1704-413c-896a-8b0bcd947235

An undergarment is provided that does not show through an outer garment. The switching network includes a first gateway for receiving a communication from a caller, a second gateway for establishing an external connection through which the communication can be routed, and a command center that allows the first and second gateways to make an internal connection. For example, an electrode may be configured with the Tesla coil to form the electric field of the electrical target. When a data write operation is requested, a determination may be made as to whether physical space has been allocated for the territory in the volume that is to be written. The platform is moved to multiple positions in order to calibrate the first, second and third sensors. Each path is described by guest paging structure descriptors and by tie descriptors.

1459826736-ae1fb19c-9cae-467e-8090-e9d42c887f9d

Measurements made by a multicomponent logging tool in a borehole are inverted to obtain horizontal and vertical resistivities of a formation traversed by the borehole. Used is a formulation of non-aqueous, monocyclic saturated terpene mixed with a non-ionic surfactant package. Human reovirus, non-human mammalian reovirus, and/or avian reovirus can be used. , a programmed microprocessor, receives inputs from the absorption system, the heat sources, and loads and a lookup table and provides outputs to select and control the heat sources and maximize their efficiency.

1459826736-ee4ae6a2-26bd-42cc-b7c7-0636a74fb300

A Littrow-type external-cavity diode laser optical axis displacement correction method and device to easily, inexpensively, and accurately correct displacement of optical axis in Littrow-type ECDLs is provided. A device for deploying such a clip is also described. At a given flow, a higher viscosity fluid will create a greater relative movement and make it possible for flowing fluid to bypass more of the flow through member.

1459826737-11e2032d-029e-4026-b8ad-de658bbbd4b2

Disclosed herein is a composition and method for semiconductor processing. In a non-selection period, a transistor is turned on at regular intervals, so that a power supply potential is supplied to an output terminal of a shift register circuit. The computer is also programmed to compute a value based on the just-determined constants, the formula and a known threshold intensity for a given position along the feature's length. Also configured is a cleaning implement provided with said cleaning sheet.

1459826737-1cf5c6a9-d6c8-4043-baa6-8c08119f6409

Various implementations described herein are directed to displaying laylines. When a new sound generation request is supplied to a certain port in which all sound generation channels of the port are currently generating sounds, and when the sound generation channels to be used for the sound generation are in short, the CPU supplies the sound generation request to a channel not producing a sound currently in other port to which the application of the same priority is set. A micro-processor is coupled to the skin element and a feedback loop for controlling

activation of the skin-element corresponding to surface pressures detected on the skin element. With this arrangement, it is possible to prevent the orientation of liquid crystal molecules from being disturbed due to the influence of electric fields generated by the gate electrode, the drain electrode, or their respective associated lines.

1459826737-56961e94-a043-4381-aba1-db7cbb718e8c

A radial latching mechanism for engaging a safety switch is described. The device includes a sensor unit that comprises at least two sensors configured to sense a motion of a user, and a control unit that determines whether or not at least two sensing values sensed by the sensors satisfy a security channel interface activation condition, and activates or inactivates a security channel interface according to a result of the determination. The expansion tube is connected to the vapor collector.

1459826737-a22cb1ae-8866-4201-8b7b-4f325c21f972

The invention relates to a rope spreading device for rope networks with tensioning ropes that converge at a top point of a support mast at an acute angle. With this structure, variation in the current supplied to each EL element is reduced. The processor is configured to engage the primary braking system when the parking brake is activated and the motor vehicle is traveling at a speed at least equal to a pre-determined speed.

1459826738-01efa358-9776-4218-b362-4a5a98c8572d

Systems and methods are disclosed for detecting framing data in a telecommunications signal. The stationary part of the motor is attached to the machine frame on which a PCB is attached. The table is moved toward the tape adhering unit, whereby the tape adhering surface of the wafer on the table is pressed against the tape adhering unit through the tape with a force. Such assembly minimizes depressurization of the pressurized resin cartridge and extends the shelf-life of the pressurized resin cartridge. Among other uses, this method may be practically employed as a disciplined way of carrying out consulting engagements that call for setting up and maintaining categorization schemes for electronic communications. The compound of the present invention is useful as a therapeutic drug of diseases accompanied by abnormal calcium homeostasis, or osteoporosis, hypoparathyreosis, osteosarcoma, periodontal disease, bone fracture, steoarthrosis, chronic rheumatoid arthritis, Paget's disease, humoral hypercalcemia, autosomal dominant hypocalcemia and the like.

1459826738-0326eeb4-07ea-43af-87e3-e12b264be16b

A power amplifier includes a first transistor, a second transistor and a bias voltage generator. A gate and a gate insulation layer are formed on a substrate. The mail watcher application control section outputs URLs and electronic mail addresses included in the text data of electronic mail supplied from the MAPI mailer to a URL and mail address filter to replace them by registered predetermined names.

1459826738-2bf9cdec-3cd4-41eb-a573-5384fae3e461

Coding techniques for a video image compression system involve improving an image quality of a sequence of two or more bi-directionally predicted intermediate frames, where each of the frames includes multiple pixels. The mounting structure comprises a case, one pair of sliding slots and at least one recess. Such simultaneous inspection processing and transmission may be implemented using two ownership bits for the packet, one to indicate \u201cownership to process\u201d and one to indicate \u201cownership to send,\u201d instead of the single ownership bit that is used in conventional systems. The two slots into which the marbles fall may equate to two dice being rolled in certain traditional craps games. The catheter includes a guidewire configured to carry a balloon and deploy directly in a branch leg without traversing acute bends. A method for producing the same is also

provided.

1459826738-96ff70cf-4213-4ba7-a3ee-90b4a6b43284

A new and distinct cultivar of Lobelia plant named Weslolvav, characterized by its cascading plant habit; freely branching habit with short internodes; dense and bushy plant form; continuously and freely flowering habit; densely pubescent leaves; light lavender-colored flowers; and relatively tolerant to high temperatures. The hybrid matching system includes a pair of transmitter output nodes, a pair of receiver input nodes, and a pair of terminals for interfacing to a transmission line. A first fuel injector is in communication with the second rotary unit operable to initiate the combustion phase and a second fuel injector is in communication with the first rotary unit operable to selectively initiate augmented operation.

1459826738-9dfb5b6c-5594-4c7d-9c31-64eafc621254

A microwave ablation safety pad includes a base layer, an electromagnetic shielding layer and a physical protection layer. With both block-based objects and file-based objects represented as the same type of underlying objects, data protection of both block-based and file-based objects is accomplished using a single set of data protection technologies, which are configured to perform data protection operations on files. In a first state, the second roller is separated from the first roller.

1459826739-284cab89-c4da-49d8-a786-bbdc9d20c4bd

According to some embodiments, a multithreaded microcontroller includes a thread control unit comprising thread control hardware configured to perform a number of multithreading system calls essentially in real time, e. A pixel portion is divided into a plurality of pixel rows by a bank, and a head portion of a thin film deposition apparatus is scanned along a pixel row to thereby simultaneously apply a red light emitting layer application liquid, a green light emitting layer application liquid, and a blue light emitting layer application liquid in stripe shapes. Two independently movable operating elements at the rear of the housing move differently in response to depression of the push button when the push button is turned to different orientations about the axis.

1459826739-2ffcb6b6-e3a6-4fd5-89a8-d78536f4c90b

Apparatus and methods for detecting stray voltage anomalies in electric fields are provided herein. A method includes presenting multiple first search results received from a first search engine. Accordingly, the terminal user can correctly perceive the event occurred during the service.

1459826739-550f51bb-ec63-4cc3-adc0-3d09d5fda9c5

A novel hybrid maize variety designated 38N86 and seed, plants and plant parts thereof, produced by crossing Pioneer Hi-Bred International, Inc. A carrier allocation system assigns sub-carriers according to a utility function based on real-time measurements of arrival data rates and queue length variance. After a workpiece is processed with the initial parameter configuration, the results are measured and a sensitivity matrix based upon the numerical model of the processing chamber is used to select new parameters that correct for any deficiencies measured in the processing of the first workpiece. Indexing devices and methods are also disclosed for successively treating portions of the hollow anatomical structure.

1459826740-0bd80901-811f-4e0b-969c-5d68caf2b725

Disclosed herein is a method and a Radio Resource Management arrangement in a wireless communication system for allocating communication of one or several services to at least one of several available frequency spectrum resources. The sewing machine includes a plurality of needle bars having lower ends to which needles are attached respectively and a needle bar case supporting the needle bars so that the needle bars are movable upward and downward. The user may provide this input via a peripheral device, a touch-screen display, or in another suitable

manner. A means for handling is fixed with the concave inner surface within each shell and is adapted to be grasped by the user. At least some of the indicia may change appearance depending on whether an object to be scanned is within a prescribed distance from an imager. The service provider fetches only this data from its data structure and sends it in the reply message to the message bus.

1459826740-1de6695e-3480-4352-b2bb-4f1ebac50dd9

The present invention provides an additive agent to be added to oil and comprising weak basic hydrotalcite. The power module includes a locking member and a sliding member sandwiched between the base and the cover and abutting the locking member. The system includes an implant, an elongate cannulated insertion tool, and an elongate lockshaft positioned within the insertion tool.

1459826740-41ce006d-1f46-486c-98e5-18c9cd5e20ca

A miniature x-ray tube capable of intra vascular use, has a micro cathode preferably formed by MEMS techniques. A phosphine-phospholane compound represented by the following formula : . A binary 16, 8, 5 code is used to encode the plurality of data bits. Also, solar energy, heating and fire suppression systems are disclosed. The first computing system transfers the message content in the file format to a communication port for transmittal to the recipient contact address.

1459826740-7e328ec9-f128-4dc3-b895-3731d995621a

Methods and systems for providing accurate time-keeping on battery-powered communication devices used in AMI systems, mesh networks, and multi-channel radio networks. The invention relates to an agricultural chemical enhancer comprising at least one type selected from a specific alcohol compound, an ether compound and an ester compound. From the refractive index analysis, information is obtained about the volume of first liquid dispensed. In addition, parents can configure the system to support real time parental screening of individual communications, e. The semiconductor laser oscillates only in the fundamental lateral mode, and light emitted from an exit facet can be optically coupled with an external single mode optical fiber.

1459826740-a8e7e221-8c42-4c23-84de-c5cf60cdb923

A full mouth toothbrush for simultaneously brushing the facial, lingual, occlusal and incisal surfaces of all the maxillary and mandibular teeth is provided. Quantum well structures that satisfy this condition have Kane-like bands at and near  $k=0$  which can provide physical effects useful for various device applications, especially optical modulators. Parameters of interest such as line width, integrated absorption etc. The bin cover is disposed at a bottom side thereof with two or more first connecting members.

1459826741-459e65e7-7bb2-411d-945e-70d3f136f5b1

An apparatus and method for producing a core spun yarn by means of a fluid delivery device is provided. For memory devices, such as SDRAMs, implementing a synchronization device to synchronize one signal, such as an external clock signal with a second signal, such as a data signal, tuning elements may be provided at various points in the signal path of the synchronization device. The electrical lead is positioned within a cavity in the ferrule, and an inclined surface of the ferrule is contacted to an inclined surface of the probe within an area defined by the probe insulator and the lead insulator. By this arrangement, an occupant may propel the wheelchair forwardly by exerting palm pressure against the posterior side and rearwardly by exerting finger pressure against the anterior side.

1459826741-bdee42dc-2b7b-4e1c-afb6-c25a4212da50

A mobile communication device having a first section, a second section, and a hinge mechanism. The air gill bag comprises an elongated bag body which includes an open top, a closed bottom, a plurality of air gill cut strips, and a plurality of strength strips. The plurality of parts are formed of different honeycomb

structures, respectively, so as to provide different heat insulation characteristics. The baffle forces a carrier gas to travel an extended mean path between the inlet and outlet ports.

1459826741-d0ee0620-54aa-4975-9aa7-a3ce64800f78

Control means of a wearable electronic communication device for control purpose and use thereof are claimed. Where the tape cassette is used, a MIC mode switch is written to a predetermined area on the magnetic tape held in the cassette. The first and second means are operable such that the arrangement, below a first predetermined value of a parameter representative of the energy to be transmitted, presents a first resistance-to-displacement value and, above the first predetermined value, presents a second resistance-to-displacement value.

1459826742-39ff2c22-2fd1-4809-a217-3b458ed4af07

A method comprising defining one or more aggregate virtual fields for a first document using meta-data associated with the first document is disclosed. An active control card which receives a request passes the request to the inactive control card for processing if and only if the inactive control card is synchronized with the active control card and the inactive control card is able to process the request. A pressure sensor detects an actual pressure value at a connection of the proportional pressure valve.

1459826742-3e32ee58-e3ea-4f83-a1ef-b465790e7f32

An electrical circuit assembly includes a node and an electrical circuit. More particularly, the invention relates to a family of compounds having both a biaryl moiety and at least one heterocyclic moiety that are useful as such agents. The method includes determining when a predetermined amount of hue shift will occur in the color conversion process for the object from the source color space to the destination color space. The selectively configurable electric motor also includes a power converter, at least a portion of which is coupled to the plurality of electric conductors, including a plurality of switching elements configured to selectively couple one or more of the plurality of electric conductors in a predetermined electrical configuration.

1459826742-4cc917d5-e079-45b2-9bfe-664f15749e6d

A security network containing multiple controller functions that communicate using wireless communications. When at least one alkyl polysulfide is used to completely or partially replace conventional crosslinkers such as S or MBT, mercaptobenzimidazole may be optionally used as a co-crosslinker. A notice to the merchant may be generated. The system may also provide users with the opportunity to select certain businesses from their contact lists and allow these businesses to provide them with personalized data, either on demand or based on user-controlled permissions or areas of interest through various technologies including presence technologies. The Bayesian objective function is optimized using a consensus of global models, and an output is generated with locations of the fiducial points labeled within the object in the image. The invention may be employed advantageously in a variety of scenarios, especially where there exists a need to provide end users with a method of accessing and executing large computationally intensive application software programs at low cost, on an as needed basis, in a secure manner, without the burden of excessive transmission times or large centralized vendor computer facilities.

1459826742-4cfaadaf-feac-4691-9af6-98ca76c4a0f6

A method for fabricating a semiconductor package is performed using a mold tooling fixture having a mold cavity and a pair of flash control cavities on either side of the mold cavity. The first and second electrical conductors have adjacent surfaces configured such that when an electrical potential is applied between the conductors, an electric field is formed between the conductors. While the earth leakage occurs, the sensing circuit turns OFF the relays so as to stop the supply

of the AC voltage.

1459826742-8b988a4a-c845-4540-a84b-69e2db71a00f

A document holding fixture for a vertical optical scanner. The capacitor element has a plurality of laminated insulator layers, a first signal internal electrode and a first ground internal electrode disposed so as to face each other with the insulator layer in between, and a second signal internal electrode and a second ground internal electrode disposed so as to face each other with the insulator layer in between. Energy-transfer nanocomposite materials as well as methods of making and using such materials in various applications including, but not limited to, in vivo radiation dosimetry and imaging, are disclosed. The sink device comprises a power supply, hand-shaking circuitry able to indicate that the sink device is able to supply a current on a line of said HDMI cable, and a circuit able to couple the power supply to the line. Preferably, the convection of the inner region of the melt is made smaller than that of the outer region thereof.

1459826743-37d22c30-79fc-4ce5-8ba3-b8fdce08c738

The present invention is an electronic musical instrument that in appearance and playing characteristics closely resembles flute-like instruments such as a conventional flute or a shakuhachi. The invention also concerns inverse latex or microlatex containing such a polymer. The activation signal may indicate that the oscillator control signal is being varied to provide frequency control or adjustment of the shared oscillator. A draw tube is coupled to the inlet fitting at the lower end. Furthermore, a particle catcher for use in such a water kettle is described. The filter is trained under user supervision.

1459826743-5cfcf70b-c6cb-44f1-964a-ec646c98caf5

Data migration can be preformed between source and target storage subsystems without stopping exchanging data between a host computer and each of the storage subsystems. When attaching the connector to an attaching object, the flange is caused to face one surface of the attaching object in the first direction and the to-be-locked portion is caused to pass through the attaching object in the first direction so as to project from an opposite surface of the attaching object. The method and apparatus also provides for a significant reduction in the actual total dormancy wakeup time and latency by exchanging group call signaling even when mobiles are dormant and no traffic channel is active. As another example, expected changes in a process variable for given changes in a load variable may be determined. The refrigerator further includes electrical parts for maintaining cosmetics accommodated in the storage chamber at appropriate temperature, a control means for controlling operations of checking and displaying failures of the electrical parts, and a display unit for displaying the results of the checking of the failures.

1459826743-f7082980-69b9-4e09-89e9-8116b56c517d

The present invention concerns a catheter heating circuit for continuous cardiac output measurement. Surfaces are provided with adjustable contour, transient force damping and temperature. An adapter is provided for connecting each of the ID pins of the first row of the type 66 block to a corresponding input terminal of the DAC circuit and each of the ID pins of the second row of the type 66 block to a corresponding output terminal of the DAC circuit. The charge reservoir is connected to the voltage supply to provide a current through the resistive element. The method includes inputting image data with a first resolution, virtually increasing the first resolution to a second resolution using the reference position data, and generating a screen with the second resolution with respect to the image data using two reference vectors based on the reference position data.

1459826744-204fb2af-47b9-477b-89a7-652f8f427627

To easily secure a welding length when an opening is formed at a portion in the vicinity of a joint portion between a head pipe portion and a main frame portion.

The SIG field provides information for interpreting the data field. With the battery frame upper the battery frame lower structures a closed cross section structure.

1459826744-2134d906-8494-4144-8080-382e68b0a46a

A system on chip provides a memory array of nonvolatile bitcells. Each energy storage unit has first contact means for contacting the corresponding power tool and additional contact elements for contacting the charging unit in such a way that the charging unit is able to charge the energy storage unit via the additional contact elements, both when the unit is connected to the power tool and when it is disconnected from the power tool. An avalanche photodetector diode is formed about the trench. The control circuit works to limit a voltage applied to the transistor selectively to one of a higher controlled voltage and a lower controlled voltage. A retrieval catheter 3 is also advanceable over the guidewire 99 for retrieval of the filter 1, the retrieval catheter 3 having a distal end and a proximal end; and engagement elements for engaging the embolic protection filter 1 with the guidewire 99 for retrieval of the filter 1 into the retrieval catheter 3 in the collapsed configuration.

1459826744-bff5f137-819d-4875-9c6c-39a45133cc47

A complete and portable tool for retaining round, square or other non-flat stock, especially pipes, in a secure fashion while cutting and related operations are performed thereon. The first connector comprises a housing, a plurality of contacts supported by the housing, and a metal reinforcement member fixed to the housing. The voltage detection module produces a digital detection voltage according to the output voltage at normal time intervals, the comparison module detects whether the digital detection voltage is lower than a reference voltage corresponding to the state. The increase correction of the fuel injection amount is terminated after elapse of a preset time  $t_3$  since the increase of the throttle opening TH to the preset target opening THset. A method of providing container security includes closing a container using a latch device and removably coupling the cabling to the housing so that the communicative coupling is broken if the latch is opened.

1459826745-10061de6-14da-4d48-85bb-fa5860abbc53

A variable ratio sprocket assembly for providing improved transition between gears and eliminating derailing. The reinforcing element may include a plurality of open channels each of them being closed by a portion of the plastic coating. There is also proposed a method of producing such airbag and a method of inflating it. Certain portions of the memory subsystem are powered down in response to the memory power management signals.

1459826745-417c5fbd-e6dc-4a9f-b38c-ed384e2631af

An alkyl-tin stabilizer composition is treated with a calcium compound to reduce the carboxylate content level of the stabilizer. The leading edge preferably is generally straight while the trailing edge is contoured to define the chord. The output circuit comprises a main high-frequency switching inductor through which an inductor current flows wherein the lamp current is based upon the inductor current.

1459826745-588ff695-31ba-4ede-b399-9c614d4a7b01

A gray voltage generation circuit for driving a liquid crystal display rapidly outputs an altered gray voltage so that a source driving circuit can charge liquid crystal capacitors constructed in a liquid crystal panel in a short period of time. The switching device, in particular embodied in the form of a rail-mounted device, contains a housing and, included therein, a switching unit for interrupting an electrical circuit, and a supply connection for feeding a current to the switching unit. Certain static communications nodes are network cluster-head nodes with directional antennas, and, for example, achieve much of the gain possible when all nodes have directional antennas. A second material is inserted through the second aperture such that it fills the recess and the first aperture in the first portion

to form a second portion of the midsole. The API can be transmitted on a paging channel from which user equipment can receive information. In one exemplary embodiment, a cloud point monitoring system receives diesel fuel in the tubular conduit and propagates a sound wave through the diesel fuel.

1459826745-60cf3c33-d687-4926-ab19-73d2271282c7

In a current controlling apparatus for controlling a load current flowing through a load, a reference level generating circuit generates a reference level signal, and a reference signal generating circuit generates a reference signal in accordance with the reference level signal. Each spiral flow channels has a first end near the central axis and a second ends near the periphery. In operation, the hood, which does not move with the rotor, extends over part of the circumferential area.

1459826745-ebe68708-458d-4dbc-9eb9-d219009336dc

A method for treatment of a systemic wasting disease, by administering, to a subject in need thereof, an effective amount of a 3,8-diaminotetrahydroquinoline derivative represented by formula, or a salt thereof. An electrical connecting apparatus uses at least four types of contactors different in terms of at least the shapes of seat portions and the height positions of arm portions. Atoms of an element from group 4B of the periodic table are formed into a clathrate lattice, and a clathrate compound is then formed in which specified doping atoms are encapsulated within the clathrate lattice, and a portion of the atoms of the clathrate lattice are substituted with specified substitution atoms. The aircraft becomes anchored to the apparatus, and is pulled downward by the cable into a receptacle.

1459826746-660d19aa-ef27-4b27-a4de-09e494fc8541

The present invention provides a multicomponent fiber containing at least two polymer components arranged in distinct zones or segments across the cross-section of the fiber wherein at least one component of the fiber contains a thermoplastic polymer and at least one component of the fiber contains a thermoset polymer. More specifically, it is directed to filter laminates of multiple discreet layers of material bonded together, with at least one of the layers being an asymmetric membrane. The apparatus may include at least one spiral cathode for optimization of solution agitation and/or voltage distribution in the electrolytic solution. Assembling the inner cover and the metal cover with the frame, the inner cover comes in securely contact with the metal cover. During this discharge phase, energy in the capacitor discharges through the protection circuit of the semiconductor device.

1459826746-b22d6d68-e26f-4b69-8282-0eb17786c806

A scan diagnosis system for testing and diagnosing a device-under-test is disclosed. An audio encoder marks a frame as \u201cdropped\u201d whenever a buffer overflow might occur. The current sense signal is integrated to generate an integration signal. The licensing system provides protection from un-authorized copying of the applications.

1459826747-109078ed-b329-4dc0-b189-553798a5cf47

An apparatus includes a rotatable shaft having a shaft surface and a first seal disposed in a sealing engagement with the shaft surface. The tapered guides optionally include a plurality of projections defining a crown structure for discouraging insect egress from the trap. Each of the log entries may include an entry metadata portion, describing a respective log entry, and an entry payload data portion. The various segments may have different lengths and may include segments having a length shorter than the length of the article.

1459826747-e004985d-f069-475f-bf4a-f1d1aa7ac31d

An inbred broccoli line, designated GK0-1 is disclosed. The second node receives streaming media message packets and one or more check packets from an upstream

first node. These high-pass images are gained at each resolution and recombined with the original image to produce a sharpened version of the image.

1459826748-144780e8-42df-4b0a-a0e1-162270691a79

A floor cleaning machine having a speed control and steering member which operates under operator-applied deformation thereof. In one or more embodiments, a memory controller includes control circuitry coupled to one or more memory devices having multiple Groups of planes associated therewith, each Group including at least two planes of physical blocks organized into Super Blocks, with each Super Block including a physical block from each of the at least two planes. The cutting element further includes multiple surgical blades. The transfer pulse signal lines between the timing controller and the source drivers can therefore be removed.

1459826748-1f418330-9172-4a2d-8e76-cf5431688c89

A low flow heatedhumidified respiratory gas delivery system, especially useful for low flow rates as preferred in the treatment of neonate and other such patients, wherein the respiratory gas is heated and humidified as desired for delivery to the patient and the temperature is monitored at the point of delivery to the patient. A fuel pump system injects fuel into a combustion chamber defined by the housing, anvil member, and the ram member. The primary plunger shaft has a primary plunger attaching end opposite a primary pressure applying end.

1459826748-5531b059-da0e-4743-9bb2-e9ab0284c517

Provided herein are systems and methods for influencing shoppers while they consider making purchasing decisions in a retail establishment. This allows wireless service providers the ability to monitor and log changes in the status of mobile stations within and/or outside their networks. Feature vectors, including the mean heart rate of the photoplethysmogram and its standard deviation, the very low frequency, low frequency, and high frequency components of heart rate variability, the frequency and mean amplitude of skin conductance responses, and the mean and maximum skin temperatures, are extracted from the detected biological signals. In response to a signal, inputted to the input terminal port1, which falls within the UHF band, the high-pass circuit and the low-pass circuit output signals that are inverted in phase and equal in amplitude with respect to each other.

1459826748-cb99b51e-ceda-419a-8b48-aab75f7ace2b

The liquid ejection head ejects droplets by causing an electrostatic force to act on a solution in which charged particles are dispersed. These methods include using measurement and storage elements to measure the electrical response of one or more selected cells within an array and then comparing that stored electrical response to the electrical response of a reference element within the array to determine the resistive state of the one or more selected cells. A converter comprises a controller in accordance with the invention. The invention further relates to a device for the application of a chip module to an antenna module. In one embodiment, a plurality of the adaptive structures may be associated with micropores of a skin panel. One technique processes a recursive streaming query through a query graph.

1459826748-cce59b65-f566-4797-915c-b9af0081e664

A label adapted for direct thermal printing on both sides thereof and having a sealable pouch is described. The system provides access, to a user, to the network service. The two offset signals are then summed, which results in a signal proportional to the inverted envelope of the input signal.

1459826749-23e739cd-d765-435e-8eb7-a02b2b3076cb

The invention relates to a method of regulating the temperature of a heat regenerator used in an installation for storing energy by adiabatic compression of air. All of the wheel sets are vertically adjustable to negotiate stairways and similar changes of elevation. A coupling mechanism can be included and associated

with the connector portion so as to provide the connector portion with substantially uniform contact across a contact surface area with the conducting member. If it does not so qualify, the customer's original selection will be dispensed and the transaction ends.

1459826749-2ab8c8ee-574e-4e10-9ee3-d349def3945d

An optical medical tube and control unit assembly and methods of using the same are provided. An operative condition of the memory cell involved in a programming operation is detected, and at least a configuration signal of the regulator according to said detected operative condition is generated, this configuration signal taking a first and a second value associated with the first and second operation conditions. Each channel also includes a threshold detector and a peak amplitude determining unit connected to the output of the filter in that channel. A plurality of devices tracks the characteristics of an estimated noise in the received signal and modifies multiple noise adaptation rates.

1459826749-6b7063bc-cd28-47f0-9efc-cffd836eaf1a

A cassette detecting device and a medium processing device using the same are provided. The communications module can transmit and receive information and data via a commercial two-way wireless system, which may include two-way paging technology. In another embodiment, multiple pumps are coupled into the core of the gain-producing fiber. The tip mount has a threaded shaft extending outward along central axis for releasable threaded engagement with interior threads provided in a detachable mounting ferrule. Further, the invention relates to a computer program product defining an algorithm that comprises a method for improving the control behavior of motor vehicle control systems.

1459826749-a13abfcf-2793-4f02-80ed-3f742d3e19a3

The disclosed technology enables manufacturers to efficiently design and manufacture structural wall panels, floor panels and roof panels from cold-formed steel for use in residential and commercial construction. The device includes an integrally formed plastic extruded spline and a protrusion having a D-shaped profile. The display device acts as a monitor for the controller. Also, for each iteration, an intermediate decoded data element is multiplied by a scaling factor based upon parameters of the previously decoded data element block and is used on the next decoding iteration. The solution is then separated from the glass particles. The composition includes a first agent selected from the group consisting of an oxidative phosphorylation inhibitor, an ionophore, and an adenosine 5'-monophosphate-activated protein kinase activator; a second agent that possesses anti-inflammatory activity; and a third agent that possesses serotonin activity.

1459826750-403e743a-43e5-4007-b019-a87eeb242bd9

A flame-resistant polymer excels in moldability capable of providing a flame-resistant molded item of novel configuration; a relevant flame-resistant polymer solution; a process for easily producing them; a carbon molding from the flame-resistant polymer; and a process for easily producing the same. According to one aspect, a network element receives user-specified input that indicates a particular message classification. A support member extends from the bottom surface of the body into the cavity to help support the flexible portable fluid container. The receptacle wall has soft fins for hampering the spinning of the propeller assembly when receiving a descending propeller assembly. The piston has a leading end, a trailing end, an inlet valve that is located at the leading end of the piston for receiving a compressible fluid from the compression chamber and an outlet valve that is located at the trailing end of the piston for expelling a combustion gas into the arcuate expansion chamber. In a fourth set of embodiments, the object storage system uses a structured information synchronization system.

1459826750-96b6da9d-3880-4dc6-8de1-f3487a5a0174

A client-server system may include a primary state of session data. The film has good press formability, film removability, and blocking resistance, and possesses a high level of rust preventing properties in that it can prevent the steel material from rusting when kept in stacked or coiled conditions with no oil application. The system also includes a stemmer that reduces words to grammatical stems by removing known word-endings associated with the various languages to be supported. A first doped polysilicon layer is disposed on the collar oxide layer and on the exposed bottom of the capacitor deep trench. The column direction and the second virtual linear lines L2 define an angle of 2-40 degrees, and the dummy wiring layers 32 are disposed in a manner to be located on the second virtual linear lines L2. 1 bus architecture and includes a plurality of stages.

1459826750-eb431049-62cc-4368-9470-7efc580e6a0e

A micromachined device of micron dimensions comprising a base and a movable member spaced apart from the base. Polyolefins are introduced into an extruder. The marks are formed so that reading signal level will be raised where the marks are formed while it will be lowered where the marks are formed in a counterfeit disk produced based on an authenticated disk, namely, the reading signal level where the marks are formed is different in polarity between in the authenticated and counterfeit disks.

1459826751-48381f78-ece9-403f-a7c2-ead57087e5ec

A handheld controller which includes at least two disparate sensors, such as a motion sensor and a touchpad sensor. The circuit may further include at least one control signal line from the control logic to the configurable impedance logic, where the control signal line is operative to provide a control signal for configuring the configurable impedance logic. The cellular baseband unit includes a digital signal processor that performs modulation, demodulation and scheduling for both the cellular radio signals and the microwave backhaul radio signals. The cogless motor is coupled to the user interface, and receives motor drive signals.

1459826751-56e605ac-690e-46b0-9545-ecdae4621a3c

A Redundant Array of Independent Disks controller receives new data that is to be written, wherein the new data is indicated in blocks of a first block size. The mixed modulation memory access circuit selectively accesses burst memory locations containing a valid burst of coded bits. In an exemplary embodiment, to offset the skew that may result across the tiers in the clock tree, a cross-tier clock balancing scheme makes use of automatic delay adjustment.

1459826751-7a267b5a-9469-461a-acd6-926e3b49d45a

An automated method and system to assemble and inspect tubing assemblies includes one or more coordinate tables with each table having a plurality of robotic fixtures mounted for movement on the table. Further, an ignition coil device module is provided with ignition coil devices 102 provided corresponding to a plurality of combustion chambers of an engine, respectively, wherein connection surface base portions at which connecting terminals are exposed are provided on one-side surface of each ignition coil device 102. A FIFO write pointer counter receives a write enable signal and the write clock. Each dividing grooves extends along the centerline of any projecting region having a width larger than a prescribed value.

1459826751-87fbf51d-ab9f-43fe-8473-3fadf5266cb2

Disclosed is a magnetic bearing structure including a permanent magnet, levitating a rotation body without a bias current, and easily magnetizing the permanent magnet. The filter casing can include a top wall positioned in the bottom of the dispenser housing, a head assembly at the bottom of the filter casing connected to the water supply and to a water outlet in the dispenser, and can include a filter casing drain. The frame member is disposed within a portion of the vehicle so that the frame member is flushly mounted with an outer surface of the vehicle. According to the device, a high-quantity image can be obtained, and the pixel size can be

reduced.

1459826751-d2b87ca1-dc65-4107-b135-714d6cb979aa

The invention relates to a process for the preparation of triamides from ammonia and amido-dichlorides. Said frame elements are connected in a non-positive way by means of fastening elements with parts of the building which are adjacent to the opening. The output unit outputs a volume value corresponding to the rotation angle position of the operation dial displayed by the display control unit.

1459826751-d8ccf4ea-5667-4c1a-b600-e37e9c2336d2

The method manufactures high-purity ferromagnetic sputter targets by cryogenic working the sputter target blank at a temperature below at least 50 C. The structure-reinforcing cap is inserted within a first open end of each of the posts and frictionally engages the interior surface of the post to substantially prevent movement of the exterior surface thereof when various types of appurtenant structures are mounted thereon, which would otherwise cause deformation and possible structural failure of the post walls. Metadata associated with at least one music track in the set of common music tracks is retrieved, the metadata being specific to the second user.

1459826752-3833f03a-3d5e-4dc8-a2ab-bf7ff07d6f40

A method, device, and computer program product for managing alarms during a care process are disclosed. The dual-chamber system includes respective separating elements separating the two chambers from each other. by the vehicle's driver, of a reference speed vset which is the speed desired by the driver for the vehicle. The CO oxidation activity of a material of this type can be increased by metering in elements selected from the group consisting of Pt, Pd, Rh, Ru and Ir in any desired inorganic form.

1459826752-a988696e-e70d-448b-8da1-b773192abe25

A wolf note elimination device for a stringed instrument utilizing a base member which is attachable to the surface of the stringed instrument. The cells may occupy two-dimensional or three-dimensional grids, defining the optical gratings as planar gratings or cubical gratings, and thus providing two or three sets of surface-to-surface separations, or thicknesses, and cell-to-cell separations. When closed, the bottom may have a gusset for allowing expansion upon the depositing of the pot into the sleeve. The splicer is capable of delivering the webs at a constant rate or a rapidly changing and/or dynamic cycling rate, and applies relatively low web tension for operation with delicate, narrow and extensible webs. Bit-level operations are generally avoided and the methods and apparatus are applicable to systems based on, for example, public-key cryptographic algorithms defined over the finite field GF.

1459826752-cd7f525b-12a0-4e1a-ad9a-442cd637e68e

A new photovoltaic cell structure, prepared on transparent substrate with transparent conductive oxide layer and having nanorod zinc oxide layer. These mechanisms and methods for determining a rate at which an entity is polled can enable decreased overall server load, improved efficiency, an increased perception of responsiveness, etc. The radio assembly further includes a modulation cancellation scheme in full duplex mode. The tank top portion of the invention is attached from each side as well as the bottom of the garment, in a unique \u201cturn-under\u201d sewing technique. The receiving unit transmits one credit to the sending unit for each data packet that is read out of the skid buffer. The annular body portion consists of a plastic material and the plurality of gear teeth project from the annular body portion.

1459826752-e68e77e1-61cb-4e35-bd83-f5268bcb415d

A novel maize variety designated PH17R8 and seed, plants and plant parts thereof. The occupant protection system includes a sensor for detecting an impact at a time of collision, a determination device for determining the collision based on a

detection signal of the sensor, and a an occupant state detection device for detecting whether an occupant's posture is maintainable. The walls and floor are integrally formed into a single structure.

1459826752-ed4abd46-f0ae-44b8-8da8-67e076b3aa83

A high-speed wavelength channel selector has properties of relatively easy manufacturing and easy extension to multi-channel integration, and a high-speed space and wavelength multiplexed channel selector uses the high-speed wavelength channel selector. One embodiment employs a bore in the plug so that the thin wall of the plug flexes outward at high pressures to partially fill the gap between the chamber member and the plug where the o-ring is located, thereby preventing the o-ring from extruding through the narrowed gap. A variation is determined during a predetermined time interval of the stimulation signal preceding the current instant of injection and exempt from injection, to accelerate the charge or the discharge of the floating substrate of the transistor.

1459826753-06a84b82-9bb5-46e0-af44-d9abe3f5facc

A recording medium for storing virtual deletion information, and recording and/or reproducing method and apparatus therefor are provided. The olefin polymerization catalyst comprises a transition metal compound represented by, for example, the following formula and optionally at least one compound selected from an organometallic compound, an organoaluminum oxy-compound and a compound which reacts with the transition metal compound to form an ion pair; . The lid is turned in an opening direction or a closing direction in association with a turn of the arm.

1459826753-65e96cce-5935-4121-aa71-ee441112d5a9

There is herein described a connector system. These pump housing structural features accommodate access bore plugs that secure suction valve spring retainers that are internally located substantially centrally over the suction bore transition area of the plunger pump housing. Measured amounts of back scatter are received for each of the wavelengths. Transition metal complexes attached to polymeric backbones are also described. 48 degrees of a peak having a highest diffraction intensity at 2 on an X-ray diffractometric chart traced at a diffraction intensity at an X-ray diffraction angle of 2, and is made of a material which has an amorphous phase and contains at least one element selected from among cobalt, nickel, manganese and iron is used as the negative electrode and/or the positive electrode. The third electrode has a bias voltage being two volts higher than a pixel voltage of the sub-electrode.

1459826753-82247af9-87b8-4548-89bc-a759a6d11f70

Methods and apparatus relating to distribution of intelligence across a network are described. For detection of a touch position, a segment of surface acoustic wave is provided multiple times to be propagated on a SAW touch panel, and the multiple SAW segments are received by the SAW touch panel. The relationship between the mixing time and temperature may also be determined based on the following: . This signal is used to energize an actuator positioned between the car and the guide elements and thereby dampen the vibrations acting on the car. As a result, the attachment position of the position-detecting sensor can be arbitrarily adjusted in a stroke direction of a cylinder.

1459826753-a3f22ce1-6ad3-4550-bafa-b80a164e964c

An approach to hybrid transmit diversity which involves the transmission of information using different forms of transmit diversity for at least two adjacent time slots is disclosed. Video content may be provided for viewing by a plurality of users. Each connector module communicates with an outside complementary connector. The control circuit instructs a read operation in units of rows and a write operation in units of cells, and inhibits the read operation in units of the banks when the write operation is carried out to a specific one of the cells of a specific one of the banks. The parameterized commanded positions cause the scanning

optical system to deflect the light beam to scan the beam spot over the scan path to scan the biosensor.

1459826753-e76af897-e67c-41d7-8fd9-200d0cb0d244

A frame is provided for vehicle roofs of all usual types, such as sliding sunroofs, slide-and-tilt sunroofs and top ridge sliding sunroofs, preferably having a motor drive for the cover that can be moved in relation to a roof opening by means of a cable drive system. The computer terminal transmits status information on an apparatus as an object of the maintenance management to the server machine in response to a status information transmission request received from a server at every predetermined interval. In one aspect the water soluble cholesterol derivatives disclosed may be used to replace cholesterol in micelle-solubilized membrane protein preparations.

1459826754-5677bf87-0b40-4157-87ec-34a5d7a8843e

To check operation of a circuit to be checked connected to a bus to which at least one master circuit and at least one slave circuit are connected, a model is connected to a bus in place of a master circuit or a slave circuit and cause given signals to be outputted at given timing for checking the operation of the circuit to be checked. It relates more especially to the hardware parts of the electronic circuits for monitoring proper operation which are integral with the equipment or with equipment parts and which are furnished with a nonvolatile memory and by means of detection, selection and capture into their nonvolatile memories, of the report formulated by the central maintenance computer. In addition, the camera includes a pair of flashes oppositely disposed on the front side of the housing. The access map manages the MPEG transport stream in block units, each block containing an integer multiple number of ECC blocks.

1459826754-6b6c0f2f-d4d1-4959-bf37-91e533c76372

A method, system, apparatus, or computer program product is presented for routing event messages between data processing systems based on privacy policies associated with the data processing systems and based on event policies associated with event types for the event messages. The semiconductor device does not carry out the auto-precharge operation until a predetermined auto-precharge delay time passes. , a disilane gas in a reacting vessel, so as to form a hafnium silicate film on a silicon film. A string passage includes a central passage which extends only part way through the string post and has an end surface area disposed in the string post at a location adjacent to a bottom surface of the slot.

1459826754-b5ab6edd-93eb-45eb-b23f-e98fd72c4aa2

An electrostatic discharge protection device and a fabrication method thereof are provided. This invention thus relates to the seeds of soybean variety XB48X07, to the plants of soybean XB48X07 to plant parts of soybean variety XB48X07 and to methods for producing a soybean plant produced by crossing plants of the soybean variety XB48X07 with another soybean plant, using XB48X07 as either the male or the female parent. The invention also relates to an optoelectronic system with at least one said optoelectronic module, at least one base part and at least one adjusting means that is arranged in the base part and passes through the at least one adjusting opening of the carrier element of the optoelectronic module. A single output connector connects to a data processing device 3 which processes signals from the strain sensors 5. Session points would accumulate at the \u201cmultiplied\u201d rate and are displayed as such on the EGM display. The disclosed disk carrier device includes an attracting unit including a permanent magnet that attracts and thereby holds the plate; and a holding mechanism configured to detachably hold the attracting unit.

1459826755-3469d95a-5bff-436f-b55d-058b40a2de57

An RF chip test method is disclosed. The prescription pill vial includes a body having a sidewall and bottom forming an enclosure for prescription medications. In

one embodiment, the control logic block of the RFID tag operates based on a system clock and the sensor block provides a reference clock to the control logic block for use in calibrating the system clock of the control logic block. On a front end side of the ferrule main body, the positioning block is disposed. The phase decision module determines a direction of phase adjustment according to the specific M-bit data. In certain embodiments the device is combined with a filter that covers the mouth to provide an air filtration system.

1459826755-34d24849-b540-484d-9cf7-0a70156dd4eb

One end of a shaft is fixed to a first portion of a housing. The proximal end is configured for attachment to an electromagnetic radiation emitting device. The locking wheel includes an engaging block for selectively engaging with a first engaging notch and a second engaging notch in a fixing member securely mounted in the inner rose. After hard-facing the casting is hardened and tempered by heat treatment.

1459826755-fe4fc606-db30-41ce-bac7-a44f90699c6c

A pile is disclosed for insertion by a pile driver. The computer program is configured to control a processor to execute instructions. The invention furthermore relates to processes for the preparation of the compounds of the formula I, their use as pharmaceuticals, and pharmaceutical compositions comprising them. The potentiometer is coupled to the shaft, and provides a variable resistance between the first and the second terminal in relation to the movement of the shaft. A cooling fan may receive inlet air and may generate cooling air. Magnification set by an optical zooming function is acquired, and a gamma curve, namely gradation correcting information is set to a gamma lookup table, while the gamma curve is applied during a photographing operation based upon the acquired set magnification.

1459826756-f1c49d2b-d4dc-4f72-b1f3-6348c7d68bf0

In some embodiments, this invention pertains to isotopically enriched N-substituted piperazine acetic acids. The sensor spacer is spaced apart from the sensor pad, and includes a sensor electrode disposed on a portion of the sensor spacer which faces the sensor pad. A continuous flow of wastewater is supplied to the rotatable device, and intermittent pulses of wastewater are supplied to the stationary nozzles. The support pillars, the support plate, and the flexible pads form a hollow area, and each support pillar has a hollow hole.

1459826757-51172ef6-470e-4f49-8c53-f37cd455f8f0

A reference voltage circuit and an operational amplifier operate when an output voltage is produced from an output terminal of a power supply circuit. Upon inflation, the cuff applies radially inwardly directed compressive force to the shaft of the penis with a concomitant restriction of the urethral passageway. When the illumination device is connected to the fixture device, the controller module communicates with the identification circuit of the illumination device to retrieve the identifying data and causes the driver module to supply the appropriate power to the luminary module of the illumination device. A heat map is generated that has regions assigned to represent different components from the software product. The provided data includes a hybrid automatic repeat request profile, a transport block size, power offset, or the like. The first phase adjusting circuit phase shifts the signal from one of the first and second antennas by a predetermined amount to provide the forward directivity state, or phase shifts the signal from the other of the first and second antennas by the predetermined amount to provide the backward directivity state.

1459826758-8f79903b-97a0-4923-bc59-b6033d377a87

Grate plate for the push-type grate of a clinker cooler, which has a topside bearing surface exposed to the hot material to be cooled. A play participant can play while holding on to the rotation shaft to which the decorative object is attached. An encrypted channel is then set up between the MN and the PGN based on

authentication established with the authentication mechanism. The piezoelectric layer 33 is formed on the top surfaces of the individual electrodes 32.

1459826758-b14e9b20-e2bc-457e-9265-c510c03dd0c9

A speaker of encoded speech data recorded in a semiconductor storage device in an IC recorder is to be retrieved easily. In order to stabilize the oil supply to the bearing or the like, the oil is supplied by an oil pump provided in a shaft end portion of the drive shaft close to an oil reserving chamber. With the opposed wheels of the movable member respectively at opposite sides of the wedge shape member, the tracks of the wedge shape member engage and impart a spreading strain to the opposed wheels as the movable member moves in the direction of travel. When the client requests status information of the properties it controls, the event manager provides this information to the client thereby avoiding the need for the client to separately query each individual device. The second pressure is greater than the first pressure to influence the second semiconductor wafer into contact with the first semiconductor wafer in the recesses in the surface of the first semiconductor wafer. More specifically, the control mechanism permits mechanical adjustments of a position of the seat to be made that are independent of electrical adjustments of the seat.

1459826759-c4a7c68f-63c4-4e41-ae08-dfaafdef9860

A console is provided for attachment to a vehicle chassis. A processing core of the first device may wake-up the second device after generating a first data unit. The OS switching means makes reference to a preferential interrupt table on the basis of an interrupt factor for switching to corresponding operating system and calls interrupt processing means incorporated in the operating system.

1459826760-c904aa64-03dc-437c-b4e3-41c8b280a836

A method and UE for setting a Happy bit on an uplink enhanced dedicated control channel are provided. At least one of the closure apparatus and a contact surface of the tool assembly include a plastic surface. A second thread executing in kernel space is provided. An electrical signal from the IMD is provided to a target portion of the vagus nerve through at least a portion of the wall of the esophagus for treating the medical condition. In another embodiment, an article is formulated from, or coated with, a polymeric composition containing metallocene as a polymer constituent. The staple pockets may be arranged in rows, each row of staple pockets being longitudinally offset from another row, such that each staple pocket in a first row of staple pockets is nested with a staple pocket from an adjacent row of staple pockets to make more efficient use of space on the anvil.

1459826760-e3290d1f-b7a2-4eb9-8036-557ce00af1e4

Methods for preparing 2,6-diaryl piperidine derivatives are described. Each side rail may also include complementary male/female connectors at its opposite ends to allow for connection of one side rail to another, resulting in a modular design. The end cap comprises a body and a plurality of protrusions which extend from the body. The reaction cell may be advantageously designed in a very space-saving manner in its scale, such that a portable use of the analysis cell is possible as well. A method of installing an object into a swimming pool is also provided.

1459826761-1ae912eb-7c52-448b-8e1d-2d1a105dfb26

A flexible package has a dispensing opening with a closure label overlying the opening that is permanently attached to the package by heat sealing along an edge portion adjacent the dispensing opening. The central computer system is adapted to: identify a particular one or more of the wireless interface devices that have received a wireless signal from the transponder, and determine an estimate of the current position based on the identified particular one or more of the wireless interface devices. Exemplary Pt-based bulk solidifying amorphous alloys having such high Poisson's ratio values are also described. The invention also provides a method for actuating at least one clutch which is arranged in the motor vehicle by

means of a motor vehicle hydraulic pump, whereby an inter-connection of a volume flow outlet of the first step and the second step of the hydraulic pump takes place according to requirements for actuating the clutch. To produce the lenses a bundle of stocks in a tubular envelope is fed to the furnace or stocks, produced on the previous degree, and the bundle is drawing from the furnace at the speed, exceeding the speed of feeding. And, caching of device local memory in a host address space, as well as caching of system memory in a device local memory address space is provided for to improve bandwidth and latency for memory accesses.

1459826761-ced8af31-16c9-42eb-be16-ffdf89b4f257

The present invention relates to a method of controlling a volume of a reproducing apparatus and a reproducing apparatus using the same, wherein a reproduction volume of an audio file can be automatically controlled in accordance with information on a volume level of the audio file. Further, in some cases, the controller or control method is designed or configured to control transition of an optical device to an intermediated state between two end states. In response to the user request, an echo of the speech input based on a textual interpretation of the speech input, and a paraphrase of the user request based at least in part on a respective semantic interpretation of the speech input are presented to the user.

1459826762-425a9ef4-f5aa-41f8-bc3e-f5bc30d22c90

A refilling system for use in refilling a container with a fluid from a fluid source. A cartridge receiver and a changeover switch are integrated into the body of a desired electric instrument, while an effects cartridge is attached to the electric instrument via the cartridge receiver. A pre-selected aggregation percent, representing the percentage of actual addresses from the space which is present on the node, is utilized in the evaluation of the maskaddress. The circuitry is further operative to add the addresses of rows  $N$ ,  $N+1$ , and  $N+2$  to a table stored in the memory device. By providing a counter and incrementing it each time an IPX packet is received from the network, the most used entries are identified. The data collected can pertain, for example, to the weight and/or volume of the glass, plastic and/or paper within the input stream.

1459826762-b70592e0-969b-4869-84c6-bd51c5ad1e4d

A lockout device for securing a toggle switch. A semiconductor memory test mode configuration includes a first capacitor for storing digital data and connecting a cell plate line to a first bit line through a first select transistor. In one embodiment, when the well is pressurized the tool can be loaded with one or more items to be dropped.

1459826763-030fc166-54ac-4974-8651-7e0c3c09661b

To prevent degradation of transmission quality due to interference between scramble codes, under such a situation as soft hand over, when the number of mobile stations connected with a base station exceeds the number of the orthogonal codes. With this configuration, an amount of desulfurized waste water to be returned into the flue gas duct per unit time can be increased as compared to conventional systems, without increasing the size of the entire air pollution control system. Pillow members are provided on the inner bottom surface of the recess at positions corresponding to corners on both sides of the other end of the crystal blank, and the two pillow members are independent of each other.

1459826763-4bd196cb-c5b8-4cca-b56b-73f203c0b9ef

An integrated circuit inductor structure has a substrate disposed below an inductor. A gate insulating layer and a floating-gate conductive layer are formed on a semiconductor substrate. The retaining clip includes a pressing body having first and second ends, a first leg extending from the first end thereof and engaging with one ear, a spring attached to the pressing body, and a second leg attached to the second end thereof and biased by the spring. The conveyor device comprises at least one means for generating a spatially and/or temporally altering

magnetic field, which produces a force to rotate or stop the spindle-shaped elements.

1459826763-5f22879e-1d92-4671-809f-f378db81c62d

Disclosed is a roman shade assembly that utilizes lift bands rather than lift cords. The refresh period controller generates a control signal in response to a self-refresh signal, the control signal indicating a nominal initiation of a refresh period. The first plate is movable from a first position, wherein the first opening is aligned with the vent, to a second position, wherein the second opening is aligned with the vent.

1459826763-90e111d0-9d28-42e6-a8a9-28c0326950ba

A side keypad assembly includes a pressing surface, an opposite mating surface. The housing defines a first notch and a second notch communicating with the first notch. Advantageously, the method provides enhanced container handling and logistics, and has wide use cases in warehousing, assembly manufacturing, ports and distribution hubs. The input symbols comprise user data traffic to be transmitted to the base station.

1459826763-96716b76-3f20-48f0-b749-5dbddc9d5251

A compact self-ballasted fluorescent lamp which is equivalent to a typical light bulb is provided. The chair includes a seat pan, a seat plate and a torque limiting fastener. Requests for Internet content are received from user equipment through a wireless network base station, and served from the local content server, which is logically proximate to the wireless network base station. Thereafter, the ADPCM value Dn is compression-encoded by a compression-encoding section to generate a signal D\u2032n, and the signal D\u2032n is framed by a framing section and outputted.

1459826763-97164442-e148-456a-b018-893c6986fe72

A system and method in an IP-based network for defining a specific router for a host to utilize as a default router. On the other hand, when the image to be formed on the recording medium is a monochrome image, the liquid ejection apparatus performs the recovery action for the first nozzles of the first liquid ejection head. Sacrificial carbon sidewall spacers are formed adjacent to the sacrificial carbon gate, and sourcedrain regions for the transistor are formed using the sacrificial carbon sidewall spacers to define the sourcedrain regions.

1459826764-2705e749-061f-4192-9f95-99a3f43a256c

An improved golf club grip is provided that is comprised of a shaft, including an upper shaft portion; an upper grip portion positioned about at least a portion of the upper shaft portion; and a lower grip portion positioned below the upper grip portion. An adaptive color value interpolation circuit includes look-up-tables to store a plurality of values for each of the destination pixel's coordinates. The method also includes comparing the personal content for the first member to the information that characterizes the personal advertisement to determine whether the personal advertisement is related to the personal content for the first member, without determining whether the first member is related to the second member in the online social network. A print data conversion unit converts the color converted color-converted image data to two-color print data. The cucurbituril derivatives have the formula .

1459826764-50637af7-15cb-4ff4-8d9e-1d32e08efa4b

The sole FIGURE is a side elevational view of a tire sidewall. An expansive horizontal structure parallel to the surface of the water confines one or more horizontal layers of water, a distributed array of heat transfer structures gathers solar energy and imparts it to the confined water, and one or more heat engines produce electricity utilizing the temperature differential between the confined water and ambient water. The HUD comprises a projector and a combiner. The film can

then be turned over for use with the former bottom lamina becoming the upper lamina. The actuator can disconnect from the valve base and valve member. A porous organic polymer includes polymerization product from at least a plurality of organic monomers, where the organic monomers are selected to provide a deliverable adsorption capacity of at least 70 gl for an electronic gas.

1459826765-23ad564c-8b34-4d91-b57f-6411216683e6

A field effect transistor having a T-shaped gate electrode is formed on a GaAs substrate, and the T-shaped gate electrode of the field effect transistor is coated with a SiO<sub>2</sub> film. A fluorescence detection system includes a probe having a lens and optical fibers and arranged on one end thereof. The first diffusion region is disposed in the base. Still another aspect of the invention pertains to graphical user interfaces that can be utilized to set or monitor notification characteristics for wireless communication devices. At least one of the arms may carry service conduits that provide medical air, oxygen, vacuum, nitrogen, nitrous oxide, or electricity. This member, for example, a back-panel combined frame, is constructed of a resin, etc.

1459826765-72e46bc6-4b08-48b0-8b58-28e3f3afafdd

A speaker that is designed to substantially eliminate wobble of the voice coil during operation, and thus remove that source of distortion and early failure of the speaker. A wider variety of conductive material and insulating material can be used for forming the wiring layers and the insulating layers on the substrate by ink jetting, while the wiring board has a first wiring layer having high density. The biomarker can be detected by SELDI mass spectrometry. The means for supplying the band member and the means for supplying the belt member are operative to cooperate with one another to continuously in series form a plurality of tires having different tire sizes. The molded brace member can be sized and dimensioned to correspond to the associated measurements of the lower leg of a user afflicted with a foot drop condition.

1459826765-9ed7b04a-5c9d-4734-b2d6-4be96d757bde

A tamper detection system includes a trigger mechanism system and a detection circuit that operate in combination to protect an integrated circuit from attack. A structural element includes at least two glued units of concrete, the compressive strength of the concrete being greater than 80 MPa. The 5'-substituted bicyclic nucleosides are expected to be useful for enhancing one or more properties of the oligomeric compounds they are incorporated into such as for example increasing the binding affinity. A drive system may operatively connect the transmission output member and the motor shaft to the final drive input member.

1459826766-280256f6-7a73-4712-a261-9789b5ec4327

The formation of an interlayer insulating film above a substrate, the formation of an insulating film of an organic material on the interlayer insulating film thereafter, and the irradiation of the insulating film of an organic material and the interlayer insulating film with electron beams, thereby curing at least the insulating film of an organic material, are proposed. The system enables the notebook computer to be easily detached even when the system is installed in a vehicle. An indent on each mounting bracket is configured to engage a microphone stand or another elongated, pole-like structure, supporting the weight of the loudspeaker monitor through frictional forces.

1459826766-5eec1f0-e620-49aa-87ac-d1fdd57a36ea

A pneumatic charging system and method for re-pressurizing at selected pressures air tanks used to actuate pneumatic motors. Systems described herein allow for improved treatment of tissue. The scan test architecture generates a control signal to mask bits in an unbalanced scan chain. Computer instructions instruct the processor to identify specifications representing the tow-vehicle and trailer assembly and to calculate force values and motion values affecting the tow-vehicle

and trailer assembly.

1459826766-6d163347-4d77-4733-ac58-4c194e5f6487

The present invention provides a multi-bits non-volatile memory circuit having a cell transistor with non-conductive trap gate which has a cell array capable of reading a plural data simultaneously. The support portions are provided with ball splines and radial needle bearings. The rear roller assembly comprises a single rear wheel 121 supporting lower leg support platforms 115A, 115B on either side of the rear wheel. An air gap does not have to be formed by mounting components on a printed circuit board. The financial transaction request is processed and cleared or rejected.

1459826766-a86a78cd-a4ac-4d9f-8db9-cef2782fcd31

In one embodiment, in a power converter system having first and second switches connected in a half-bridge arrangement at a common node from which current flows through an inductor to a regulated output terminal, wherein the regulated output terminal is connectable to a load, wherein the first and second switches are turned on and off in cycles, a method is provided for synchronous rectification. The tunneling magneto-resistance element is electrically coupled to a sourcedrain region of an access transistor through a strap and a contact hole. The amount of attenuation for each branch is equivalent to the cross polar suppression required for each antenna array. In one embodiment the container is a doughnut shaped flexible bag.

1459826766-ddb376e9-c2a2-46ac-a8fd-f6c4e292be87

First, a trench penetrating first conductive layers and interlayer insulating layers is formed. The distal jaw is operated like a standard hand tool with compression of the handle causing the jaw to close, and vice-versa. A mixer reads the audio signals recorded in the multiple tracks, subjects the audio signals to mixdown according to a mixer parameter set by an operation section, and records the processed signals as audio signals in the recording medium without reproducing the processed signal in real time.

1459826767-1c37ce8e-040b-4d3a-ac97-fc66adf520ea

Rotating power transformer having stationary and rotating parts. The dual-loop AFC includes an inner loop that corrects short-term frequency variations and an outer loop that corrects long-term frequency variations. An indicating device indicates to the passenger the allocated car deck and/or the main stopping floor thereof. The pharmaceutical formulations can be used for any disease that is sensitive to the treatment with decitabine, such as hematological disorders and cancer. The overlayer is adhesion is unchanged by 4 weeks in a 100% humidity chamber at 30°C.

1459826767-71b504ff-e5fb-4562-bf4a-b64a238398b1

An apparatus for detecting a deviation of a camera as a result of a shaking. The highest order harmonic that has sufficient strength to cause significant harmonic distortion of a sweep segment is determined. An inner cover layer is disposed about the outer core layer and an outer cover layer is disposed about the inner cover layer.

1459826767-a93220d0-98c3-4f98-bd55-db4a2c252ab5

A tab system for a folder, and a method of making same is disclosed. Defect density is the number of distinct defects which required changes to be made to a particular file or module in a given period of time. To install the bed extender, a tailgate of the truck can be removed, the hitch assembly inserted into a hitch receiver on the truck the load platform connected to the hitch assembly and positioned to extend from the bed of the truck. The second thermal member forms a plurality of through holes for heat dissipation. The second signal is representative of a voltage of a reference power supply line. In addition or alternatively, the corona

gun may be adapted to alter its length and/or include a second electrode partially inset within a space surrounded by the first electrode.

1459826767-b2cb90b4-460a-4e67-8022-11778131abf5

Techniques are provided for managing a routing table in a distributed network switch. The component is provided for the generation of laser radiation by means of an external optical resonator. The outer side of the outer raceway grooves is tapered, and the inner side of angularly arranged outer raceway grooves is positioned closer to the central axis of the bearing than to the outer side of the outer raceway grooves. The first and second drives are operable for positioning the gripper and/or the gripper pad so that clamping faces of one of the gripper and/or the gripper pad are movable by the second drive perpendicularly to clamping faces of the other of the gripper and/or the gripper pad.

1459826767-f72e99f9-598a-4023-9d0b-d5f0aefd11a2

A foldable display support stand is foldable easily and readily into a folded collapsed condition. The vaporizer comprises a sublimator for receiving a solid source material such as decaborane and sublimating the decaborane. The frame also includes a removable child seat adapter that can be connected to the stroller frame such that the stroller frame presents a second set of connection locations that removably attach to a second child seat. The PSA module comprises a rotor containing the adsorbers and rotating within a stator, with ported valve faces between the rotor and stator to control the timing of the flows entering or exiting the adsorbers in the rotor.

1459826768-3506290d-8c38-47fc-9b52-f61305d7c630

An operating mechanism for an electrical apparatus, in particular, for a hand-held machining tool, includes a storage for inputting of control data and/or a control program for controlling the electrical apparatus, as well as a control unit connected with the storage for controlling the operation of the electrical apparatus according to the stored control data or the stored control program. The invention also provides pharmaceutically acceptable compositions comprising the compounds of the invention and methods of using the compositions in the treatment of various proliferative disorders. A pair of cores are mounted to the substrate. The heads are dished to have a domed center portion which has a profile and thickness so that the domed center portions will reverse before any other part of the cylinder is stressed beyond a yield limit for such part. A set of data structures are provided to keep track of active scan operators, including a session control block that includes fields for keeping track of whether the scan operator is performing an initial scan or a delta scan. The database is configured to present at least a portion of the advertising information of advertisers when at least a portion of the detected traffic information is requested.

1459826768-59876aa8-7be8-4cb1-8c7d-76f4d04ff3d2

A firearm laser training system according to the present invention includes a laser transmitter assembly and a cartridge adapter assembly, while employing modified blank cartridges to simulate firearm operation. The method includes providing a probe having a cantilever defining a longitudinal axis and supporting a tip. This blade apparatus is coupled with a prime mover.

1459826768-777771c5-2e42-4f7b-a319-554c48d677f4

A height adjustable auger shroud for a snow blower comprises a pair of wheels secured to a lower portion of the opposing sides of the shroud. The support disc has a center aperture lying parallel to the longitudinal axis of the heating element, and one or more apertures located between the center aperture and the periphery of the disc. In the second switching state, it is operatively connected thereto in a non-force-transmitting manner.

1459826768-b4447a8d-2b6d-4cba-8c72-846620ba8521

A liquid testing device for determining the value of at least one property of a liquid. In addition, the invention relates to pour-on formulations for combating parasites in animals, such as cattle and sheep. The plug end of the electrical cord of the appliance is locked into the apparatus to prevent the electrical appliance from being unplugged from the apparatus and plugged into an electrical wall outlet. For other systems not required to maintain a separate password infrastructure, the CPR performs password services by responding to requests from those systems seeking to validate user IDs and passwords.

1459826769-3c65119f-ac0d-4dc7-a26b-fd4a7b54673b

A toner image forming device for forming, on the basis of input image signals, a toner image on a recording material with a first toner and a second toner having the same hue as the first toner and a density different from that of the first toner. An aluminum model freight train car body is extruded through a die. The write signal satisfies the formula  $T_{fmax} \setminus u2212 T_{fmin} \setminus u2267 0$ . In some embodiments, the communication system comprises a recording system. One or more components, preferably push-out devices for pushing out a movable furniture part mounted in the furniture carcass, are securable to the support element without a tool, preferably in a manner such that they may be snap-fitted on.

1459826769-3e773e80-3bf7-446b-824b-831fa3f4a816

A system for power-saving task processing includes a remaining power detector detecting a remaining power of a battery, and a motion information table defining a relationship between the remaining power of the battery on execution of a task and a plurality of processes for each task. The optical device includes a demultiplexing portion 4 separating TE waves and TM waves of incident light of a wavelength and an optical fiber 1 inputting incident light into the demultiplexing portion 4. The cables may then push both panels forward toward a third position to open a rear opening in the roof. They are deliverable from aqueous solution. The media separator includes a separation roller, a retard roller that is pressed against the separation roller and applies a torque load, and a media offsetting member for feeding the sheet media to a nipping part of the separation roller and the retard roller with the sheet media offset to the separation roller side.

1459826769-a90991d4-50c4-44e4-b0b1-3c90bfeb98c1

An active matrix circuit comprises a semiconductor layer, and a p-type impurity region provided in said semiconductor layer, and an interlayer insulating film comprising silicon nitride provided over said semiconductor layer. In one step, an instruction is decoded. The appliance is automatically designed according to the final design, which also can be interactively modified and approved by the orthodontist, with the computer recalculating the effects on the treatment as a result of the doctor's changes. A second conversation mirror face biased toward the front seat passenger is fitted to the mirror support surface adjacent the first conversation mirror.

1459826769-af49c11b-36b9-4ae2-abec-9d3303e499e9

A fuel cell system includes an intake pipe that admits an introduction of oxidizing gas upstream of an oxidizing gas supply source that supplies the oxidizing gas to a fuel cell, and an exhaust pipe that discharges exhaust gas which contains a vapor generated at an oxygen electrode side through an operation of the fuel cell. The device includes a plurality of electrodes, which are adapted to be placed in contact with the skin and then moved across the skin while maintaining electrical contact with the skin. Information is encrypted using in part the initialization vector for return to a second electronic device if the initialization vector falls within the first group.

1459826769-d24a10ef-9ed9-4c72-aa21-087f3dc76200

A flame retardant resin composition is disclosed. Peripheral blood having mononuclear cells from a mammal is provided. Each die package includes a flash

memory device, and each of the flash memory devices includes bit lines and memory cells coupled to the bit lines. The screen-space pipeline includes a pixel shader and a raster operations unit, and receives cache tile batches from the tiling unit. A sealing member can be arranged on the valve stem in communication with the bolt to prevent compressed gas in the compressed gas storage chamber from entering a forward bolt chamber when the bolt is in the rearward position and to permit compressed gas to enter the forward bolt chamber through the bolt ports when the bolt is in the forward position. Treatment of a polymeric material according to the invention improves the stability and lifetime of a wavelength converting material comprised in a such a treated polymeric material.

1459826770-245eb62d-f6c7-4e4e-b7a2-c3eff5fc35a7

A butterfly damper for supporting a voice coil bobbin of a speaker on a frame in a state that the damper is vibrative. The actuator also includes a substantially moisture impervious and electrically insulating packaging having a cavity around the bimorph providing for a clearance around the bimorph. The output can be configured for either single or dual-axis operation where the geometric shape of the beam is rectangular or square with steep edge intensity. The method comprises determining a thermal denaturation and/or renaturation curve of a domain of the protein whose unfolding leads to aggregation of the protein in a solution. The frequency response of the probe card assembly is optimized by appropriately distributing, adjusting and impedance matching resistive, capacitive and inductive impedance values along the signal paths so that the interconnect system behaves as an appropriately tuned Butterworth or Chebyshev filter. Accordingly, the small-sized memory card 1 can maintain the dimensional compatibility with respect to existing memory cards whereby the small-sized memory card 1 can be used also in equipment which is designed to cope with the existing memory cards.

1459826770-878ed735-c0f9-49fa-976d-6b7715f76808

An LED is an element in which when a voltage pulse applied to the intrinsic diode of an electrical equivalent model reaches a peak value, a current suddenly flows to obtain an optical output proportional to the forward current. The method for fabricating an image sensor device comprises forming a photosensitive layer on a substrate. The first image and the second image may be formed using the same recording material or different recording materials. Processors comprising a range checking hardware feature supported by machine instructions for runtime integer range checking can eliminate the conditional branches generated during runtime integer range checks. The sealing device collects in the plenum some of the cooling air flowing between the outer casing and the inner liner structure. A method of controlling the purge system is also disclosed.

1459826770-b8d339a2-513c-4ee5-b57c-2689ac91175f

An improved system and method is provided for parsing in a distributed directory-enabled environment using an extensible Markup Language application program interface. An Foreign Agent, when a terminal carries out a handover between mobile Internet Protocol Version-4 sub-networks of the Foreign Agent, identifies whether or not a registration request message from the terminal is transmitted from an entry of a visitor list of the Foreign Agent. Compositions and methods for using the compounds as adjuvants and immunoeffectors are also disclosed. The first layer is disposed adjacent the second layer. In another aspect, the present invention provides a printed circuit board, comprising: at least one substrate; a layer of organic molecules attached to the at least one substrate; and a metal layer atop said layer of organic molecules. The compound of the following formula III, which is a key compound for the production of citalopram, can be easily produced by subjecting the compound of the following formula II to reduction and cyclization.

1459826771-0e6bd649-c05a-4dac-9cdf-6b249cf4497a

An RF nanoswitch which can reduce a loss in RF signal. Each measurement head comprises at least one camera which is the direct to a measurement target arranged

in the field of view of the camera and positioned in a well defined relationship to the wheel of the motor vehicle. This invention also relates to a process for removing oxygen from an aqueous system, which comprises adding an oxime and a primary hydroxylamine to a fluid system.

1459826771-78ee1773-6b44-464d-8c0b-3dceb4ea3424

The present invention relates to the field of somatic embryo production, particularly to methods for the regeneration of *Jatropha* through somatic embryogenesis. The dielectrics are annealed to mix them above the NFET resulting in a lowered work function, and corresponding threshold voltage reduction. The first aperture is sized based on an angle between the array and the source, and includes a first subset of sensor elements. The scene features in the first frame are determined by Doppler circle intersections.

1459826771-f28fd807-e220-42ef-8bc0-77de4056f148

A tensioned tablecloth includes a flexible and unitary body with a plurality of monolithically formed sides configured in such a manner to form a continuous perimeter extending about the body. The composition is characterized by the fact that it includes: a bonding agent comprised of at least one photopolymerizable resin, with a viscosity of less than 4000 mPa. The communication interface also includes a device-specific logic in communication with said base media interface for decoding a message-specific semantic of an incoming vibration wave message and encoding a message-specific semantic of an outgoing vibration wave message, such that each of said plurality of devices may correspond in accordance with device-specific and message specific limitations. The second predetermined attack time is longer than the first predetermined attack time. In an embodiment of the invention, the device is intended to facilitate communication of information through intuitive operations and commands. A method of metering fluid through a pipette by connecting the pipette to the pipette dispenser, holding the dispenser with one hand, and controlling fluid flow through the pipette by operating the controller with at least one foot.

1459826772-1af402c7-3213-4e0a-9659-69e3e88b4d24

A fiber orientation verification system includes a sensor and an indicator to identify the fiber orientation within each sequentially laid composite material layer. In one embodiment of apparatus the microprocessor is controlled by a monitor circuit operable with the microprocessor and operated by the variable frequency oscillator. The architecture comprises a bus structure, a Central Processing Unit core, cache, RAM, and ROM memories, and a GPS engine that comprises a receiving, tracking, and demodulating engine for GPS and Wide Area Augmentation Service signals. The tube defines a central volume and the metal conductor extends in a direction through the central volume for a distance of at least one inch.

1459826772-38ef1596-e0f2-48d9-b406-6decbe2e7770

An integrated circuit chip including solder structures for connection to a package substrate, an IC chip package, and a method of forming the same are disclosed. Two resilient hooks and two resisting portions are formed on an inner surface of the main body. Podium lights, buzzers, or other obtrusive signals are becoming less and less effective means of signaling during presentations.

1459826772-3d2fa41a-8deb-4429-9b7e-151df3997037

An organic compound is provided having excellent electron-injection transport performance, hole-blocking ability, and high stability in a thin-film state. Exemplary embodiments can generate a security bypass environment in a computing environment governed by the security application to provide a bypass to the security application. Processes are described that add data associated with a database to increase the accuracy of interacting with the database through a voice interface and create the unstructured grammar for improved voice recognition capabilities.

1459826772-98628d3c-71df-476b-8f4e-20f60d574dfb

A conduit threading device is provided for passing a pull-cord through a conduit by imposing suction at one end of a conduit to draw a shuttle having a zone of maximum diameter that is commensurate with the internal diameter of the conduit and that is introduced at the other end of the conduit, through the conduit. The method includes assigning a priority to a demand record that contains at least one demand attribute and a priority field. A demodulator output digital signal is fed to a base-band signal processor 8 for signal processing, and then fed out through a man-machine interface 9 to the outside. Exterior cooling air and engine exhaust ejected through said engine exhaust opening entrain cooling air through said second duct to said oil cooler, and thus provide engine oil cooling. The outer section includes an outer wall that has a generally rotated parabolic shape, an inner wall that abuts the central section, and a slanted front surface extending between the inner wall and the outer wall.

1459826772-b852772a-6522-43bc-8976-8bdfe4d346c8

Apparatus and methods are provided for controlling synchronous and asynchronous communications in an avionic network. After motion estimation and motion masking for all input frames, the method enters a frame loop within which high frequency information is extracted from the input SR image for each low-resolution input image. The covering structure moves relative to the outflow opening when the stretchable element is stretched. The locking groove has a depth rod not equal to that of the unlatching groove. When the strap is tensioned a force is exerted by the strap on the floating element to force the biasing element against the bias direction. The liner also protects the user in environments where the liner is not fully effective.

1459826773-79bbfaec-b29b-4c1e-945b-861c5548f00a

Systems and methodologies are described that facilitate paging a peer in a peer-to-peer communication network. The synchrotilt chair mechanism is for use on a chair that has a base assembly with an extending pedestal, a seat, and a back. The method and the system solve the problem that a large message mode CPM message cannot be transmitted to a group in the prior art and the user experience is improved. The first electrode is formed on the other portion of the first type doping semiconductor layer without being covered by the light emitting layer. To enter the space through the entry point, an intruder must compromise a door or a window, the tarp, the reinforced webbing and/or the cable which may reduce an amount of time that the intruder may have to perpetrate a crime in the space and/or to flee before being noticed and/or apprehended. According to the invention, the elevation device has a cross-shaped mechanical fastener including at least two opposite arms, which cooperate with clamping means respectively secured to the terminal curve and the outer coil of said hairspring.

1459826773-b126c63e-c482-4b64-906a-a2b9ebcd3a2d

A method for manufacturing bamboo mats which also relates to the use of such bamboo mats including bamboo mats and products manufactured from such bamboo mats. The server-side mechanism preferably comprises a pair of processes: a daemon process and a servlet process. For a five-parallax type, the apertures 12 are rectangles with the same shape and the same area, and under the condition that an opening height is 87 times as large as a sub-pixel height, that is, the opening height  $H_t=87H_{sp}$ , an opening width is set to 2-2. A handheld file is subsequently requested from the installation server. The content sharing application may also provide various spam filtering techniques that prevent users from abusing the system, including restricting the number or type of requests to share content that may be effectuated over time. As a result, since the pulse width  $t$  is within a range of equal to or larger than 3  $\mu\text{sec}$  and smaller than 30  $\mu\text{sec}$ , a high-quality marking pattern with excellent visibility can be formed while improving the productivity of the X-ray film.

1459826774-2833f3da-70e1-44f9-aa66-6f8a22f26b53

A communication interface device, system, method, and design structure for error correcting code protected quasi-static bit communication on a high-speed bus are provided. It is endeavored to improve the efficiency of the piston compressor. A force propagation body intervenes between both force detection parts and the handle. N,N-Diethylhydroxylamine and N,N-dibenzylhydroxylamine and their acid salts are surprisingly effective for this purpose. This device generates backpressures of short duration and slower frequencies approaching the resonant frequency of the drill string, which maximizes axial motion in the drill string and weight on the bit. A user is enabled to specify one or more search criteria that includes image data, and a search result may be determined based on one or more images in the collection that show a corresponding object that has a portion that satisfies a threshold.

1459826774-71fb7857-556e-4cf6-a941-9218d97b2505

The present invention relates, in general, to an water cooled horticultural growing light and a method of using the same. An converging element comprises a central portion and outer portion, wherein the central portion has optimum design plate thickness of 0. The resistance regulating layer contains, as a principal component, an oxide, a nitride, a fluoride, a carbide or a boride. 1, of that of the gemstone; illuminating the gemstone and imaging the illuminated gemstone; and determining the position of inclusions based on images of the inclusions in the images.

1459826774-cff1c5c8-38d7-4e7c-be13-47f4539c9be6

The invention relates to a continuous dry spinning process for preparing a fiber from a polymer solution having concentrations of polymer, salt, solvent and water. A semiconductor sensor die is attached to a first side of a lead frame. There is no color change due to the use of the stroboscopic light and the image having natural color reproduction can be obtained. Thus, the heating-beam generating device can control the laser beam in a sufficient control range, thereby making it possible to record an image on the thermo-sensitive recording medium with high accuracy.

1459826774-f7a08896-edf6-4b94-b1e7-71413abec336

A method of cleaning a semiconductor fabrication processing chamber involves recirculation of cleaning gas components. A plenum may be defined between the band and the enclosure and a discourager may extend from the enclosure. A source electrode is connected to the data line. The rotating member moves relative to the fixed member when said fold down seat back is folded up. A telephonic switch, through which the call placed by the calling party is routed, accesses the index formed by the indexer, located, for example, at a service control point.

1459826775-04de8571-256c-4d48-8ac3-bce75d64fec0

An apparatus for measuring the amount of ink remaining in an ink tank using a sensing module and a detecting circuit is disclosed. Copies of the design application publication with colour drawings will be provided by the Office upon request and upon payment of the necessary fee. A measuring beam is introduced into the total reflection prism from an incident optical system at an angle of incidence causing total reflection and an outgoing beam from the total reflection prism is received by a measuring optical system, thereby measuring absorption by the gold colloid labelled immune complex and carrying out qualification and determination of the antigen. Accordingly, the charge process is completed by repeating the voltage detection and the duty cycle modulation of the control unit. Methods and articles of manufacture are also disclosed.

1459826775-dfeb0123-75ab-4a71-94f8-17a189a49fb8

Methods are provided for producing a plurality of polyhedral nets, creating polyhedrons from the polyhedral nets, and teaching lessons related to math, science, or art using the polyhedral nets and polyhedrons. Ordered media, such as

tabs, are pre-selected into a part for use in a print run and an unwanted part to be discarded. The logical qubits may include two or more physical qubits. However, it could also be a capacitor or an inductor.

1459826775-fc1171a7-9016-464c-ba9d-7455b2c9a596

An automatic door latch is disclosed. The adjustment mechanism includes an adjustment screw, a slider, the cutting insert and the securing screw. Users can send data and/or commands to the directional drilling equipment. The inventive superabsorber is suitable for the preparation of nappies, incontinence articles, water-storage materials and electric cable coverings.

1459826776-01c16230-018d-4c94-b421-923776c0198b

A mechanism for providing thermal compensation when measuring surface topography at an elevated temperature using a non-contact vibration transducer, such as a laser Doppler vibrometer. A sample mixture containing a sample of the use composition, a diluent and at least one reagent is prepared and analyzed using, for example, an optical detector. The received signal samples are then spectrally processed, typically by a Fourier process, to generate a frequency domain data set. of a substantially elongate platelike shape were combined and arranged around the central support section, while being sequentially swirlingly and spirally wound, and each support section was fixed in a laminated condition between inside and outside. The device includes a beam; at least one beam support mounted on the beam; a sensor assembly slidably connected to said beam and adapted for measuring the distance to the surface; and a transducer assembly adapted for measuring the position of said sensor assembly along said beam. A fixing member is arranged on a second end of the releasing member and is mounted in a fixing hole of the electronic member.

1459826776-0e4bc126-b635-4c8f-b7da-e82013c75f3c

Provided is a hair dye composition to be used as a mixture of a first part containing an alkali agent and a second part containing an oxidizing agent, wherein the composition comprises a triazacyclononane compound or salt thereof, 0. A backup server recognizes the secondary volume. Input can be received via the GUI. The chip disposed on the die pad has at least one first contact and second contacts.

1459826776-484b1ed4-48fe-446e-8d7d-300381d48106

A method and a device for continuous, noninvasive monitoring of an extracorporeal blood treatment, a patient's blood pressure or a quantity that correlates with the blood pressure is measured and compared with a predetermined limit value. The signal generator is designed for the emission of at least two signal beams covering in given relationship to each other an area and the signal receiver is designed for the time-resolved reception of the signal beams in such a manner that the generator-receiver distance can be determined from the time signature of the signal beam reception. In the event of a failure of a process, or of an entire monitored node, the monitoring nodes may collaborate to initiate a restart of the processes on the same or a substitute monitored node. All components have circular cross sectional geometry.

1459826776-a068222e-b513-4e57-91b5-2d927df996dc

Aspects of the invention include methods and systems for an electronic financial transaction system with a translation system architecture. The disk is controlled according to the result of determination such that it is rotated at a constant angular velocity or at a constant linear velocity and recording is executed. A slant-convey screw is disposed obliquely relative to an axial direction of the receive-convey screw, and conveys the developer received from the receive-convey screw upward. The transformer includes N2 primary windings respectively connected to the output terminals of the power amplification means and a secondary winding configured such that coil elements are connected in series between an output terminal and a ground, and sums power transmitted from the primary windings. Rank

the at least one media program by the number of microposts corresponding to the at least one media program. A sputtering target includes indium, tin, zinc, and oxygen with only a peak ascribed to a bixbyite structure compound being substantially observed by X-ray diffraction.

1459826777-4a29e897-6ed5-499e-881a-4c208a64af33

An apparatus may include a multi-throw switch having a common terminal connected to an antenna of a wireless communication system. Broadband radiation generated as a result of the plasma discharge to a substrate may be optically coupled to a substrate located outside the enclosure. A default address is provided when there is no address stored in the database for the intended purpose of a mailing. A vacuum can be applied through the first aperture to pull the first membrane towards the first chamber wall and can be applied through the third aperture to pull the second membrane towards the piston.

1459826777-533d2e65-715b-451a-9b9a-76ba7b181bc2

To solve the problem of TCP timeout between NAS head and NAS client caused by the time required for disk drive power on, agent is installed on NAS client and a window size control program is installed on NAS head. The frame body has multiple fixing seats each of which is formed with a passage and an opening through which a fastening strap can pass. Using such structure, larger multiplexer, including priority multiplexers, tristate buses or larger look-up tables can be created.

1459826777-fdabe51a-68d8-450b-947b-157d5abca05e

A memory cell comprises a lower electrode, a phase change feature, a spacer feature, and a dielectric layer. One specific implementation is directed to a process of accessing data in a plurality of addressable banks of memory cells. The data is stored in storage locations that enable efficient data access while optimizing the use of available storage resources with minimum human intervention. The mounting of the compressor is formed on the compressor body and has a mounting hole. Conductive ink compositions can be deposited on a substrate coated with a cure temperature reducing agent to reduce the curing temperatures.

1459826778-0f5f6f07-78d9-4e51-b398-4e62a8925e71

An apparatus and method of enclosing material in a net and supplying a handle for ease of carrying the netted material, comprising clippers, irises, and a handle maker. Contemplated modules include: a state agent that provides at least one of the MILARRS function, and a product agent that communicates with the device using at least one serial interface. A plurality of dies are attached to the first side of the wafer, at least one of the dies are bonded to at least one of the plurality of semiconductor chips. TORC2 is repressed under basal conditions through a phosphorylation dependent interaction with 14-3-3 proteins. Manufacture is further simplified by molding, casting, or thermoforming the lens. The iterative process may involve modifying one of the light intensity images based on a smoothed version of a depth image that is generated from the two light intensity images.

1459826778-3d9f2367-0eea-4d75-8536-2d004ba62679

To control movement of ions in a mass spectrometer, an ion guide has means for generating an electric field along the ion guide, and also provision for generating a gas flow along the ion guide. A part of the membrane against which the fingers press, which part is called the track, is kept in permanent contact with the end of the fingers throughout the duration of the pumping cycle, even in the absence of any tube. The stack of paper is clipped together between said two limbs or by means of projections incorporated therein. The conductive wall can be formed of a tubular member. The toner includes a wax that remains solid at room temperature and melts at a fixing temperature. When the module is delivered to be installed on the vehicle, the striker and the bolt are linked together by an intermediate plate for temporarily indexing the position of the bolt relative to the position of the striker and to facilitate mounting and fixing of the module on the vehicle.

1459826778-8b6d19c0-87ff-4c55-b282-3c6c875e5db8

A vapor trap for detecting VOCs includes a housing, having a first end portion, a second end portion and at least one opening for receiving gas vapor. The porous medium is disposed within the outer layer. A correlation calculating section calculates the correlation value of the estimation error of when the state amount of a system at time n+1 including the original image information is estimated by information up to time n or the time n+1 with respect to the degraded image information of only the time n.

1459826778-b720fc16-7eda-4a93-aff1-5bbcd62da92d

Systems, methods, and devices are provided for embodiments of the present invention to describe a technique that provides an operation region and associated operation region handler to define a virtual device for extending the functionality of an existing operating system. A timing reference, such as a beacon is identified. The sealed, empty containers are subjected to radiation capable of penetrating through the stopper and chamber for sterilizing the container.

1459826779-13f9a075-dd87-4527-b82d-e2dcb32c3198

Disclosed is an environmentally-friendly training hand grenade and a method of manufacturing the same. A computer for this purpose may be a user or host computer, or be built in to the printer. Each detector is arranged to receive unscattered light from one or part of one of said collimated beams and scattered light from one or more other beams. The outlet ports leads out ink into the passage unit. The type of previously-used developing agent that remains in the holding chamber from the preceding developing operation usage is determined.

1459826779-431609db-1e75-4f33-b2be-811fde8cd926

A method and apparatus for a Peer-to-Peer connection between terminals are provided. The optical transmission apparatus allows the continuity test on optical propagation paths of channels including a channel not used at the time of a start of the operation to be made easier than the known techniques. A select circuit is coupled to the receive circuit to select, according to a receive data rate select signal, one of the plurality of samples to be a first selected sample of the input signal and another of the plurality of samples to be a second selected sample of the input signal. The slider includes an air bearing surface that is configured to form a shallow recessed surface and a deep recessed surface.

1459826779-c71acfa0-7d3c-4889-ae27-f517c4570af4

Disclosed herein are a rail system and an X-ray imaging apparatus using the same. Also provided are the hybrid substrate produced by the method as well as using the direct bonding method to provide an integrated semiconductor structure in which various CMOS devices are built upon a surface orientation that enhances device performance. Specifically disclosed is a multilayer film wherein an adhesive resin layer that can be adhered to inorganic materials is arranged on a base film made of a resin. A vent fluidly connects at least one cavity to atmosphere and is shaped to direct debris that can accumulate in the cavity or the belt in a radially inward and lateral direction so as to maintain a desired driving interaction between the belt and the cog.

1459826779-e1ac325f-e40a-45b6-ae3d-48da66857a5d

A solid state illumination system is provided as a replacement for conventional arc light, metal halide and Xenon white-light sources for applications in life sciences including, microscopy, fluorescence microscopy, and endoscopy. In a first embodiment, a first electrode is provided with a second electrode disposed adjacent to the first electrode, and defining a gap therebetween. This system manages the maintenance manuals and other data for each model in a model information database separate from the maintenance database and correlates the two databases based on the model data. Each instance of each data object can have zero or more foreign key

fields, each of which can be used to make reference to the primary key of at least one other data object.

1459826780-31efadd7-0d36-4644-8ec2-1e3b2cdf369d

A procedure to assemble a vehicular transmission from modular components. Upon detection of a first of the fiducial marks, the advance of the side edge of the sheet associated with the detected fiducial mark is repeatedly dithered rearward and then forward while the opposite side edge of the sheet continues to advance. lighting device for operating the metal halide lamp. Further disclosed herein is a method based on the foregoing. In a mounted state, the deflector is nested within the seat and is releasably mounted to the trailing frame member via the clip. A preferred motif has the sequence His-Glu-Cys-Gly-His.

1459826780-537f8792-4e50-4ac2-859b-3b13f5657f16

Methods of making metal-terephthalate polymers from a polyester ethylene terephthalate or terephthalic acid produces high yield and high purity reaction products for a range of metals. The power supply includes a housing with an electrical connector, a circuit board, and a removable electrochemical cell disposed therein. During down operation mode, the operation is similar to the up operation except that the voltage polarities connected to the each end of the load is reversed. The golf tool retention clip has opposing panels with are coupled together and which side onto the brim of the hat with the golf tool positioned on the upper surface of the brim while the ball marker positioned on the lower surface of the brim.

1459826780-563f72d8-6fbd-47e3-abf5-a0cb6997edb9

A method of scheduling upstream bandwidth. The rubber composition is essentially composed of a rubber and a layered mineral filler treated with short chain alkyl ammonium salt. An oral composition or aerosolized formulation comprising the nanoparticles of the soy isoflavone prepared by the method of the present invention is also disclosed herein. The two rod portions are inseparable in event of the fusible zone breaking by a cylinder coaxial about the axis and secured to the first rod portion, and having an end wall through which the second rod portion passes.

1459826780-b8bba7f9-a0cb-4910-8f9e-da6a8e40e59a

A modular BIOS update mechanism provides a standardized method to update options ROMs and to provide video and processor microcode upgrades in a computer system without requiring a complete replacement of the system BIOS. The limited region may be defined by a nanometer-sized aperture in the membrane. The servo controller 17 drives the rod 11 under the position control mode and determines whether the load for pressurizing Pm that is detected by a load detector 13 is bigger than or equal to the load for stopping Ps. Applications include telephone terminals using the Internet protocol. Inbred maize lines derived from inbred maize line PHDPP, methods for producing other inbred maize lines derived from inbred maize line PHDPP and the inbred maize lines and their parts derived by the use of those methods.

1459826781-39d2b9ce-f388-4e1b-bca8-768a752477ce

An injection molding machine estimates a check valve wear amount, making it possible to predict a check valve use limit. In response to user login requests, login access is controlled by providing multiple users login access to plural electronic devices capable of communicating via the communication system. Release of the DIR to the second device requires permission from a device or entity that may be different from the device or entity attempting to access the relying party. 15 mm in range with respect to a raceway member when cut along a direction perpendicular to the axial direction of the raceway member in a state attached to a moving member.

1459826781-6a4e7442-e651-4646-b6a1-19fcd77e2399

A stress buffer and dopant barrier in the form of a TetraEthylOrthoSilicate film is

deposited after the capacitor cell plate has been etched and cleaned to thereby eliminate electrical shorts from the bit line to the cell plate. The system is configured to decode compressed video data using an MPEGH. The search window specifies a region to be searched to identify edges for use in defining a border for the image. Therefore, a problem of wasting resource elements or not being able to implement mapping can be solved by applying a simple mapping rule while mapping symbols of the PCFICH. The connecting member is connected to the cylinder, and the shaft extends through the cylinder and is received in the receiving part of the base.

1459826781-e3720a31-44fe-4c27-8b64-c2e41ecb9817

Disclosed is a support apparatus for a washing machine. The system generates an identifier for the instance and associates a new near object with the instance, wherein the new near object points to a class specifying behavior for the object. A core is mounted in the interior of the handle housing, the core having a longitudinal slot therethrough. Each penstock has one or more hydroelectric turbine generators installed therealong. The mobile station may use the country determination to help select a preferred network or to enable a location based device feature. A locking device releasably connects to and operationally interacts with a flange of the taper lock screw.

1459826782-a18906f9-4562-44d3-80d0-595989fe12f9

Embodiments provide a vertical external cavity surface emitting laser that may provide a uniform current density in an active layer using a double current injecting channel. The membrane is sealed in such a manner that all fluid must flow through the membrane between entering the inlet and leaving the outlet of the housing. Such detection device and method may be comprised of a sample collection area on which a sample of food, after being mixed in a solution, is placed for example on the substrate of a biochip that includes an enzyme that along with a co-enzyme or form of energy or catalyst, facilitates the conversion of either acrylamide to acrylonitrile or the conversion of acrylamide to ammonia.

1459826782-d513bd75-53c8-4427-a8a6-2d7054477f62

A system and method employs standard DECT hardware adapted for use in the Industrial-Scientific-Medical Spectrum wherein a Frequency Hopping Spread Spectrum, multiple carrier, time-division-multiple-access, time-division-duplex technique provides wireless communications over the ISM Spectrum while employing standard DECT hardware. At the time of engine starting, after the hydraulic pump is driven by the hydraulic pump driving motor while the crank is stopped in the first engine-starting mode, and then the crank and the hydraulic pump are driven by the starter motor in the second engine-starting mode. The suspension is then granulated by spray freeze drying, and the freon subsequently removed by heat treatment. A second housing arm contains an intermediate gear, a transmission device, and a pick roller. Then, the possible spots found are assigned to a specific trail.

1459826783-063b6929-9480-4aad-93ec-a3e4e02e0c29

A power supply system is provided. The device includes a mini-hopper sized to hold the correct amount of mortar, a sluiceway, dimensioned to fill the normal joint space between blocks, an optional divider to accommodate both 4 inch and 8 inch nominal blocks, and a vibrator. In one embodiment, initiating a lock operation may include sending a lock command to the target volume. The product includes instructions to access a linear text of a business object, the linear text including attribute data from the business object. Those resources may be disposed locally or remotely with respect to the CPU.

1459826783-11bf660f-dbe2-49f0-89a2-5b9ad4e8d310

A method of manufacturing a semiconductor laser chip has following steps. Standard PCM data packets are mapped into and disguised as standard European HDSL formatted data. The sample device may be positioned to a receiving component such as an

injection valve of an instrument by movement of the transfer needle.

1459826783-a0a9e57a-5db1-43bb-b0f8-896e90a37ae5

A white LED lighting device driven by a pulse current is provided, which consists of blue, violet or ultraviolet LED chips, blue afterglow luminescence materials A and yellow luminescence materials B. A resume key is returned to the client that allows the client to request a duplicate handle to an open file. An installation instrument is also disclosed for removable attachment to implant and engagement with the rotatable insert to selectively permit rotation between the insert and the support body.

1459826785-1e3fba3d-e3c9-46c8-b9d4-4b8c31f040be

The present invention relates to an organic-inorganic composite comprising bacteria and transition metal oxides and a method of manufacturing the same. The receipt and processing of the data is independent of whether the main computer system is in a powered-up state or powered-down state. In one implementation, the clock can be positioned at a region close to a hinge of the corresponding temple, with the clock facing inward towards the user.

1459826785-45e91998-1828-4425-bcea-c42a9ee2b5b8

An exercise device for strengthening the muscles of the pelvis, particularly the collective group of muscles involved in human sexual response, which are also important for controlling the evacuation of the intestines and the bladder. The suppression architecture uses the field established by coupling the metal structure to the lowest potential voltage to steer the charge away from the critical field and keeps non-local charge from migrating to the \u201cbirds-beak\u201d region of the transistor, preventing further charge buildup. The processor is programmed to receive a job to be executed, as well as a selection of one of the plurality of devices for executing the job and a transfer cost for transferring the job from the selected device to each of the plurality of devices.

1459826785-81a0a001-62a8-4658-bbbe-7a292ab39db9

A method for roughing surfaces and edges of concrete casted blocks, comprising a block support surface having a plurality of surface sections. The closure device includes a first and a second interlocking fastening strips which are arranged to be interlocked over a predetermined length, at least one of the fastening strips having a surface alteration providing visual confirmation of occlusion of the closure device. The embodiment of the disclosed method also includes transforming the parking lot data into parking lot information, the parking lot information including information about a moving parking lot object. The recliner link is arranged to engage or disengage the pin based on rotation of the seat assembly. The system further comprises a power supply and a controller. The method then sends a request for eye-scan authentication from the mobile endpoint device over a network, wherein the request comprises the first retinal image.

1459826785-d55527e9-68fe-4e0a-9b86-fbad26d4551b

A caddy for storing diamond polishing pads used by grinding machines holds multiple containers in a rack in a case. Wind speed information is presented as a planar representation of three-dimensional wind speed data using contour lines, delineating areas with a planar location in the three dimensional data, overlaid on a geographic map display either alone, or in combination with radar reflectivity information. The methodology includes creating a CAZAC sequence, truncating the CAZAC sequence into a plurality of segments; and transmitting each of the segments within a predetermined window of time.

1459826785-db8e21d2-37a2-4673-b1e7-8ea456fd5175

A silicon-on-insulator memory device using negative differential resistance elements is disclosed. The network is monitored by a network computing device. A rapid and sensitive test is provided with significant advantages over the Ames

test. An elastomeric sealing element is disposed between the cap and the socket so that when the cap is in the fully seated or sealed position, an substantially or completely airtight seal is created to prevent the contents of the container from leaking out.

1459826786-91e82c2c-f7a6-4ada-a93a-1cedb9f78836

A fishing lure system comprising a hard-body lure that exhibits lateral motion when pulled through water, a trailing lure, and a flexible linkage for translating the lateral motion of the hard-body lure to lateral motion of the trailing lure, the flexible linkage having a first end connected to the hard-body lure, and second end connected to the trailing lure. The coater or applicator includes a smoothing doctor on the web and downstream of the one or more rolls, and may also utilize humidity from one of steam showers or a humidity enclosure to assist smoothing. Pre-cached queries are also distributed into multiple partitions to apportion work among multiple computing machines to further enhance performance and provide redundancy in case of the failure of any particular partition. The composition with the filler can then be melted at the reduced melting temperature to manufacture an article. The present invention further provides a flame stabilizer structure that is adapted as a standing pilot for relighting the burner port area in the event of extinguished flame. The preferred FPA in visible is a CCD.

1459826786-b1b3bdbb-5b86-40d1-ad53-4012935af678

A motorcycle construction permits a rider to assume either a first, elevated crouched racing position, or a second lowered, reclined, feet-forward \u201ccustom chopper\u201d position. A plurality of concavo-convex parts is provided on a surface of the fixed contact that faces the movable contact. Associated therewith is a server including a plurality of server data sets stored thereon.

1459826786-e8f2417c-8892-498d-be4c-e42812274022

A disk drive includes a base, a spindle motor attached to the base, the spindle motor including a hub having hub apertures, a plurality of disks on the spindle motor and including a first and a second disk, a disk spacer between the first and second disks, and a disk clamp. An example mechanism includes an arced, resilient keycap, the arc of the keycap having a first central arc angle when un-pressed. The substrate area useful for integrated circuit fabrication is also increased. Each of the exhaust mufflers is opened at an end thereof. The adjustable drive socket provides advantages over the prior art including simplified construction, convenience of use, durability, effectiveness, and cost and weight reduction through the elimination of a plurality of sockets having fixed sizes.

1459826787-129b9821-1ce0-48af-88bd-d7cccd77a43a

The present invention provides a system and method for filing and closing of flight plans. The received packets are acted upon according to outcomes of the classification; and the flow state information is updated according to actions taken on the received packets. The signals are separated by an inbound detector at a receiving end of the network.

1459826787-12d75a53-af1c-4337-a6e4-6d339bb21a89

A device and method for dc isolation and level shifting includes a driver circuit powered by a first voltage range, a capacitor connected to the driver circuit, and a latching circuit connected to the capacitor. The pegs can be locked onto the board to support either a weight placed thereon or a side-ways pressure applied thereto. The invention summarizes and performs text clustering on the summaries to produce classifications. Furthermore, the reference entity pricing model decouples the borrower from the entity issuing the debt and eliminates rating inflation due to digital discontinuity.

1459826787-7ae99ea7-0234-4515-a6cf-ce131494b6f9

Systems and methods of distributing, dispensing and validating game tickets provide

for the use of radio frequency identifiers. The load cup includes an improved substrate edge sensing mechanism to ensure a substrate is present and correctly positioned in the load cup for transfer to a polishing head. In one embodiment, the digital image and the audio description are received from a mobile phone. If the first threshold is exceeded, timing control logic may generate a low band correction pulse to adjust the power converter output voltage, and thereby adjust the error signal to a level within the first threshold. The disclosed method and apparatus are particularly applicable to light assemblies incorporating an array of LEDs.

1459826788-2a361285-0ca5-4915-96b2-17f8b8a61b88

Low-pressure screw compressor provided with a rotor housing with an inlet side and an outlet side, and enclosing two rotor bodies including shafts and screws mounted on the shafts. The highpass filter unit 116 supplies the reference voltage to a node to which the light reception signal  $\text{\u201cSs\u201d}$  is output, and the processor 110 counts the number of pulses included in the light reception signal  $\text{\u201cSs\u201d}$ , and calculates the speed of the operation article 3. Methods of use of the polymeric and pharmaceutical compositions for therapeutic and/or prophylactic benefits are disclosed herein. The anvil member includes a swage cavity with an entrance section, a swage land located adjacent to the entrance section, and an inner bore located adjacent to the swage land.

1459826788-930c23b9-250b-44a4-8dd4-0212cedf13ea

A random number generating algorithm is seeded with an unpredictable number. The invention provides a consumable gelatinous nipple where the gelatinous nipple may also contain a nutrient. In order to accomplish the above mentioned object, the present invention provides a semiconductor light emitting device comprising a light emission layer, consisting of a GaN system semiconductor, which is interposed between an n type GaN system semiconductor layer and a p type GaN system semiconductor layer, wherein there is provided a Ga-doped MgZn<sub>1-x</sub>ZnO electrode film. The mixed liquor of the membrane bioreactor is comprised of an enriched culture of nitrifying bacteria.

1459826788-dcf3dc32-c4bf-4252-b15f-5759e0d0325f

The present invention relates to a device in a load carrier for vehicles, which load carrier is intended for roof-mounting. Primary amines are directly acylated by equimolar amounts of alcohols to produce amides and molecular hydrogen in high yields and high turnover numbers. Wherein, a carrier identifier which indicates the carrier on which the HARQ failure happens is carried in the HARQ failure indication data frame.

1459826788-f1e181b7-cfc6-4fe3-b8b8-c4b7c4308012

The stop ring having a surface nearly vertical to the rotational center axis, which is projected at the inner periphery of the hollow cylinder of the rotor section, and the stepped surface of the fixed shaft secured on the chassis are opposed to each other with a predetermined slight clearance provided therebetween. The server configuration information contains stored information about the configuration of each EGM. Small arms ergonomics can be improved by providing a better cheek weld via an ergonomic attachment.

1459826788-fb56a222-c3d6-4190-98e6-0952e61e1f5c

A liquid crystal display array substrate and its manufacturing method are provided. A hybrid of dielectric defined and non-dielectric defined electrical interconnects reduces the potential for electrical interconnection failure without having to control the dielectric defined interconnect ratio of substrates. The conical ring structure has an axial distal end with a larger diameter than its opposite end for engaging a flat annular surface on an adjacent structural member to form the seal. The locations and predictions determined on the basis of the model geometry are used as a basis for defining projected or most likely locations for the position

markers and an automatic position markers identification method is applied for finding the locations of position markers from within a search area in the X-radiographic information. The cardiac output analysis module is configured to determine a change in cardiac output using the ECG axis change information.

1459826789-703c93d0-8ca4-4300-aa7d-ceb7b45178a6

Disclosed are replaceable cleaning pads capable of delivering a bleaching agent and a detergent composition to surfaces being cleaned. The worktable is movable on the machine frame along a first horizontal direction, a second horizontal direction perpendicular to the first horizontal direction, and a vertical direction. The extension portion of the advertising page is contiguous with a part of an unbound side of the page portion that is adjacent to the binding side and has an inner side that is spaced from the binding side of the page portion.

1459826789-b9538906-4f34-4ca2-859d-8ac3528fa608

A manufacturing plant is provided for vehicle body parts. The application buffers are used for storing data transferred on a socket established between the network application and a remote network application executing in a remote host system. There is provided a display device including such a power module. The cover includes a three-sided opening. The lock mechanism may have a cushioning mechanism to prevent a hard stop.

1459826789-c2329662-95a8-4aed-b941-b4f48253d8a5

A generally C-shaped frame portion having upper and lower generally horizontal arms and a generally vertically positioned connecting member partially surrounds a camera receiving space. The crankcase lubricating system includes filterless lubricant circulation system, and a crankcase lubricant containing a fully formulated lubricating base oil meeting or exceeding ILSAC GF-4 or API CI-4 minimum performance standards for engine oils. This thermoelectromotive force is detected from a change of a voltage or current appearing between the anode and cathode of the chip 1 and displayed at a CRT to thereby detect defects inside the crystal. The slurry includes a fluid and a plurality of elements. A passthrough includes one of the plurality of nodes, a directed edge of the plurality of edges coupled to the one of the plurality of nodes, and another edge of the plurality of edges coupled to the one of the plurality of nodes.

1459826790-1e7698d8-b36f-450c-addd-e01690b53317

A panoramic display system includes a curved projection screen, a panoramic projector, and a substantially conically shaped barrier. The invention also features polynucleotides comprising the full-length polynucleotide sequences of the novel genes and fragments thereof, the novel polypeptides encoded by the polynucleotides and fragments thereof, as well as their functional equivalents. The structure of the present invention is less lossy than prior waveguide structures having photonic band structure regions. The microphone and the speaker have directivities opposing to each other.

1459826790-48d386a0-4f9c-4e2c-b47f-3751245f007f

A winding and time-setting control device for a timepiece movement including, connected in rotation, a movement stem secured in rotation to a sliding pinion driven in translation by a lever between winding and time-setting positions, and a control stem sliding between winding and time-setting control positions, actuating a pull-out mechanism. A database residing on the programmer contains patient information obtained by at least one implantable medical device. At the same time, by performing a number of functions, such as media transcoding and a portion of call processing, it reduces the processing requirements of network border elements. A casting bracket includes downwardly extending reinforcement members and a handle portion interconnecting opposite ends. Each backing magnetic coupler can be coupled with the measurement magnetic coupler for coupling the measurement carriage with the backing carriage.

1459826790-4aeb7078-5742-471b-ac74-31c76030f985

A laminated product is provided including a carrier sheet, a polymeric film ply, a polymeric card ply, and a radiation-curable laminating adhesive. When the pump device and the removable controller device are removably attached to one another, the components may provide a portable infusion pump unit to dispense medicine to a user. The MM core is configured with a refractive step-index profile which includes a continuous dip configured to shape an intensity field of the fundamental mode from a Gaussian or dome-shaped field profile to a two-peak-shaped profile and back to the Gaussian field profile.

1459826790-866dfefd-d0fb-4eb0-ac5b-22a67c2fe81f

A method and apparatus for managing spare partition units in a partitionable computing device is disclosed. The liquid crystal display device of the invention has a structure in which the whole inside of the second seal frame including the insides of the first seal frames of the array substrate is filled with liquid crystal by a liquid crystal dripping method and thereafter the color filter substrate is stuck on the array substrate. performing a first delineation step on the actual radiation region. The one or more alignment features are configured to contact the image sensor package to mechanically align the lens holder with the image sensor package. The one ends of the one or more electric wire are electrically connected to at least one of a power line pattern, a GND line pattern and a signal line pattern of the circuit body. By providing an objective standard to evaluate sensitivity properties of an interior material used in vehicles, the present method eliminates the difficulty in communication between customers and manufactures and quality control regarding the sensitivity grade of interior materials used in vehicles.

1459826791-002b18fb-6abf-44b6-bc01-bcbda9762d7e

A method and system for booting a user station in a computer network in which a first set of operating system information retrieved from the user station is used to attempt to boot the user station from a remote server. The seal assembly provides minimal leakage of core airflow when the airflow is turned and diffused by the diffuser section to increase the engine operating efficiency. The first area is formed above a reticle having formed thereon a pattern that is projected onto a material to be processed in order to form an image of the pattern on the material to be processed. The operating system code protecting the domain code, executing at the second protection level, from the user code, executing at the second protection level, by context switching between the user process context and the domain process context. Said compounds particularly act as immunomodulating agents. The modified HTTP message is then sent to one of a customer browser or the browser of a collaborating agent collaborating with the customer or both, and the embedded program is executed and predetermined information is displayed.

1459826791-6a38cf44-ff79-41af-b050-899fbed00ef6

A system and method of pre-buffering media files may be employed to improve the initial playback performance of a media file.  $\theta$ , an HLMI of from 1 to 100 g10 min, and a density of from  $\theta$ . In one embodiment, a transformation is used to evaluate a ratio of the two measured signals in order to find appropriate coefficients. The second luminescent layer has a second luminescent conversion element which has an excited efficiency lower than that of the first luminescent conversion element.

1459826791-8d2cef3e-e17a-4c40-bf07-0a53e9316e7e

A hybrid wellhead system for a hydrocarbon well, having a wellhead supported by a conductor; an intermediate head spool secured to the wellhead by a hammer union; and a tubing head spool secured to the intermediate head spool by a hammer union. An attaching/detaching mechanism which brings the transfer belt into and out of contact with the photosensitive drums, based on a number of black and white pages to be or which are printed. Each bit comparison circuit includes first and second

transistors connected in series between the wiring and a power supply line and third and fourth transistors connected in series between the wiring and the power supply line. It is also contemplated that the sun visor has a combination slider and detent slidably supported in channels molded into the first and second visor shells. Alternatively, the case is combined with the bare cell by being fixed to the protection circuit board so as not to be separated from the bare cell, thereby improving the reliability of the products. The technique includes selectively disabling ports of the physical machine associated with the link aggregation group in connection with the network booting until a driver of an operating system to group the ports together is installed on the physical machine.

1459826791-a6e22192-dce1-44fd-a913-d467321747c3

A beam line ion implanter includes an ion source configured to generate an ion beam, a scanner configured to scan the ion beam to produce a scanned ion beam having trajectories which diverge from a scan origin, and a focusing element having a focusing field positioned upstream of the scanner configured to focus the ion beam to a focal point at the scan origin. The system may include an RF tag coupled to the asset; a wireless wide area network including a plurality of transceivers and having a first coverage area; and a plurality of wireless local area networks. A block protrudes at one side of the opening.

1459826792-07528d4f-db39-49cb-9427-8382baadd126

A method of manufacturing a complimentary metal oxide semiconductor image sensor. A flag is utilized to differentiate when the pixel is in an idle period and when the pixel is in an integration period. With the embodiments of the present invention, upon detection of an input operation, a window control operation can be performed on at least two opened windows to change the sizes and locations of at least two opened windows simultaneously.

1459826792-2c7b1bb0-0212-4894-af04-6ce414b7f7c0

Packet routing via payload inspection at routers in a core of a distributed network for use in distributing content according to quality of service guarantees. A plurality of nozzle assemblies is arranged in an array on the substrate and is the product of dielectric and metal layers deposited on the wafer substrate and etched, such that the wafer substrate and layers define ink inlet apertures. The software package may include one or more components and each component having zero or more sub-components. The circuit substrate has an end-sealing property and through holes are bored opposite the signal and scanning electrodes. The electronic controller can release the normally open valve in response to the unsafe condition.

1459826792-668ba845-0388-4394-9b51-8627d532d016

An apparatus for one of substantially minimizing damage to and loss of earbuds when not in use. Here, the optical head part has a spatial modulating unit which spatially modulates light from a light source, based on pattern data, and an optical path corrector which shifts the route of light spatially modulated in the spatial modulating unit at precision subdivided more than units of spatial modulation in the spatial modulating unit. 5 ins at 1000 psi and show no pressure slope break up to 8000 psi. The resealable tape and the releasable film coupling arrangement permit repeated removal of the pouch from the body-side mounting wafer and repeated resecurement of the pouch to the mounting wafer.

1459826792-80d02fa1-3aeb-4ed9-a7ec-ffb37725d847

Devices, systems and methods for shielding a person's neck and head are disclosed. The preferred embodiment of the composition of the present invention includes a small percentage of palladium and a reduction from typical percentages of copper found in a sterling silver alloy. The plurality of elevators which are managed as a bank are divided into a plurality of groups according to the distance from the hall call registration device. The method also includes displaying a search result based on the weights chosen by the user. Similarly, the CTI adjunct enqueues agents in

agent queues of the CTI adjunct, but also causes agents that have call-handling skills to log into and to be enqueued as ACD agents in ACD agent queues of the ACD system, whereby the ACD system and its MIS provide ACD features to the agents.

1459826792-e802328e-25ab-4759-b956-2d986690a3b9

Pliers for crimping work pieces include a pliers head, a first pivot jaw and a second pivot jaw. The tool has an elongate housing containing a pneumatic motor. The conductors have second ends opposite to the first ends and serving as connector terminals of the connector.

1459826793-1c6980d6-5cdb-4caa-a560-10d90ee3a276

An image reader includes: a conveyance path forming member; a conveying unit; a reading unit; and a pressing unit. The synthesis techniques allow identification, quantification, transcription, translation, and manipulation of portions of the gene sequence represented as 0's and 1's in a computing system. The decompression engine extracts the compressed instructions from memory or the instructionsdata cache using a bus compression technique to save power as the compressed instructionsdata traverses the bus. The hydrogenated disaccharides make it possible to obtain an excellent compromise between retardation, plasticity and the mechanical properties of the mineral binder.

1459826793-4d7135a4-1b48-4cbe-a2a7-7041617e24c5

An optical compensation film comprising a light absorbing layer capable of absorbing at least light of wavelength  $\lambda$  nm in the visible light region is disclosed. A number of pixels corresponding to a desired resolution for encoding the image is determined and the image is converted to a modified image having the desired resolution. The display controller then derives a composite color subfield including a plurality of common composite color intensity values assigned to respective pixel blocks. A central authority is used to synchronize and authenticate both source and destination users with constantly regenerated dynamic authentication keys.

1459826794-359e6e6f-4533-48b1-89db-abc63bf87401

A xerographic marking device includes an intermediate transfer unit, a media transport path and at least one two-color image-on-image drum module. A second voltage divider includes a third resistor having the first resistance coupled to the positive voltage potential in series with a fourth resistor having the second resistance, and a fifth resistor having a third resistance and coupled to a negative voltage. During performance of a database operation that involves the transfer of data from the second machine to the first machine, data in the first segment of memory is buffered in response to the second machine writing the data to a second segment of memory on the second machine. The first one of the at least two hinges being secured to the predetermined side adjacent one end thereof and a second one of the at least two hinges being secured to the predetermined side adjacent a radially opposed end thereof. The vessels are closed by means of a surrounding, clam-shell type locking seal mechanisms. The methods and devices use integrating AD conversion and are characterized in that a reference voltage used for the AD conversion undergoes polarity changes synchronized with the polarity changes of the supply voltage.

1459826794-460c56d5-566c-4142-8aa0-0848aff9acf9

A floor position detection device of an elevator system includes a first sensor unit having a first Hall sensor and which is provided to detect at least one floor position characteristic, and an evaluation unit which is provided to evaluate the floor position characteristic for generating a floor signal. The turf reinforcement mat is preferably produced by needle punching a fibrous mat containing low melt temperature thermoplastic fibers and a lofty polymer grid followed by heating to an elevated temperature to fuse fibers of the fibrous mat to strands of the lofty polymer grid. The attraction may be between annularly adjacent ones of the

structures in the annulus, and it may be provided, for example, by magnets or springs. A high resistivity N type second epitaxial layer is then formed on the first epitaxial layer.

1459826794-84de6b70-0512-4fff-b368-337c7a7afc5d

A medical skin applicator apparatus includes a fluid housing having a fluid chamber for storing a medical agent and an applicator coupled to the housing. The device should efficiently, and without harm or discomfort to the user, be able to pinch the tightly drawn scalp of the user, thereby squeezing the sebaceous glands and improving oil production. The system and method also includes a counter embedded in the memory configured to monitor the number of times each block of the memory has been written. 5% by weight of a monographed polyol, borate calculated as the borate equivalent of 20% by weight of boric acid relative to said polyol, from about 0. In some embodiments, the compound high k dielectric material comprises an admixture of TiO<sub>2</sub> and HfO<sub>2</sub> and further comprises a dopant of Al<sub>2</sub>O<sub>3</sub>. A first aggregation element is coupled to the storage device and the controller, where the first aggregation element is coupled to route access to the storage device between one of a first network and a first transceiver socket, and where the controller controls the first aggregation element.

1459826794-87069529-414c-46c4-bd3e-97e2ded7c257

A toner for developing electrostatic images in a single component development system free of carrier and including emulsion aggregation toner particles of a styrene acrylate polymer binder, at least one release agent and at least one colorant, wherein the toner particles have a volume average particle size of from about 5  $\mu$ m to about 10  $\mu$ m, an average circularity of about 0. The transmitter further includes a temperature sensor for detecting the temperature of said transmitter, and a temperature correction circuit, including a look-up table, responsive to said temperature sensor, for adjusting said projection arrangement in dependence upon offset grade values that are stored in said look-up table for a plurality of transmitter temperatures. A method may detect, by a sensor, characteristics of a driver; determine, based on the detected characteristics of the driver, whether the driver exercises sufficient supervisory control of the vehicle; and provide a series of one or more prompts, wherein each prompt's intrusiveness is related to the determination of whether the driver exercises sufficient supervisory control of the vehicle. The corrector circuit further includes biasing means for providing a biasing current to the transconductance circuit.

1459826794-c9f571d9-5c0f-4345-a2d8-b5c098908312

An organic electrolytic solution containing a lithium salt, an organic solvent, and an oxalate compound, and a lithium battery using the organic electrolytic solution are provided. The apparatus includes a cathode target, a plurality of anodes, a transiting device, a pulsed arc discharge device, and a pulsed laser device. A second portion of the contact strip is optionally wrapped around the lead body. When two modules are fitted into each other, the bore holes of one module are aligned with the bore holes of the other module on both sides of the unit thus created.

1459826794-cd98d53f-a63f-487b-a7f3-5aab7be8bda3

An electronic control for an air conditioning system is provided. In certain embodiments, the frozen particles include materials at low temperatures. A second radiator is disposed on a second predetermined area of the body.

1459826795-67975ddc-6335-47d0-9cc3-ee55b6151f9a

A method of cleaning a low dielectric constant film in a lithographic process includes providing a dielectric film having thereover a resist composition, the dielectric film having a dielectric constant no greater than about 4. The information may comprise a telephone number of the called party and the call may be

forwarded along with the information, so that the third party can provide a telephone service. At least a portion of the body is formed from a radio wave penetrable material so that radio waves may pass through the body. Within a short time after reaching the download time, the host pushes download data to the remote devices by broadcasting the download data.

1459826795-6a911448-2ccd-4395-a4bb-249ff26eaa9c

In an example embodiment, a method of presenting marketplace listings is provided. A plastisol composition containing the viscosity modifier and a polymer. The use of a metal or a polymer material to form sacrificial layers has several advantages over the use of zinc-oxide to form such layers. The closed surface is hermetically sealed by fusion-welding to a depth of penetration equal to or less than the predetermined depth of the sealed ligament to minimize or eliminate expulsion of contaminants in the sealed ligament.

1459826795-dc822174-c2a3-45a5-b023-5fe2581b5894

An improved contacting-type conductivity measurement system and method are provided. In a second embodiment, the invention relates to an arrangement for operating a plurality of terminal devices on a common transmitting antenna and on a common receiving antenna which is separate from the common transmitting antenna with a coupling network comprising a separator which is associated with the respective terminal. The mux output is connected to a blanking interval circuit, which is triggered to begin timing a blanking interval by a multiplexer output transition. The reflected light is measured by the photodetector. The driver is operable to activate and de-activate the wordline. The first end of the single flexible flap is associated with the fixed portion of the flap so as to remain at rest during an exhalation, and the second end being associated with the free portion of the flexible flap so as to be lifted away from the seal surface during an exhalation.

1459826795-e4f7708c-2bc2-4bb4-a92a-65f843e6c396

A structure for a bicycle frame system is described by using multiple composite tubes bonded to one another, wherein apertures, or \u201cports,\u201d are molded between the tubes to improve the stiffness, strength, aerodynamics and comfort of bicycle frame component. The composition is obtained by mixing constituents essentially comprising a polyol prepolymer, a plasticizer, a polyisocyanate monomer and a pulverulent solid charge comprising at least one nitro-organic explosive. for ranking search results, often use a sequence of decision trees involving decision nodes based on threshold values of features.

1459826796-236bdd13-8dbb-400e-998e-ea2e20d03c2b

An electronic device for distorting sensitive information in one or more electromagnetic emanations from the electronic device is disclosed. A vacuum pump discharges air in the first work area. A display device that utilizes such method is also presented.

1459826796-4744fc2b-f4ef-404a-9d8d-25151bf71dfa

An MRI imaging system provides an audible feedback signal in the gantry room triggered by a physiological sensor on the patient. The capacitor forms a wound metallized polymer film in the shape of a closed path ring. The correct alignment correctly represents a phrase that the speaker uttered. One of the rhythm patterns is selected, that corresponds to the retrieved characteristic data. A plurality of protruding pieces for restricting tilting by making contact with the pressure-receiving member is provided to the internal surface of a cylindrical part of a rotor that engages and integrally rotates with engaging pieces of the external periphery of the engaging body.

1459826796-c22c8823-3695-447a-ac00-abeb6b6b9031

A magnetic sensor using efficient injection of spin polarized electrons at room

temperature can be fabricated by forming a semiconductor layer sandwiched between ferromagnets and forming  $\text{p-doped}$  layers between the semiconductor layer and the ferromagnets. The handle has a hollow interior region having a motor and an electrical power source. The systems and methods provide advantages because the need for muxnode units is eliminated, the cost of the node units is reduced, the amount of optical fiber is reduced and the reverse bandwidth is increased. Because the program stored in the transfer program storing region is installed by users, no on except user can read or rewrite the program.

1459826796-e2d96637-f618-42e1-9d0a-2a069ec54d0f

A new and distinct Clematis cultivar named  $\text{UNAI 001}$  is disclosed, characterized by good resistance to normal diseases and pests of Clematis, continuous flowering from May through September, with flower buds continuously produced from the leaf axils. A partition divides the interior of the at least one separating container. The round trip signaling time and timing ambiguity between a wireless terminal and a satellite base station is substantially greater than with a terrestrial base station. The sensor further includes actuator for driving the first proof mass and the second proof mass into oscillation along a drive axis in the sensing plane.

1459826796-ff68d1ed-83a4-46fa-a25f-de40fe9032ac

Assume that the position of a sun visor main body is adjusted by an occupant when incident light having the incident angle  $\theta$  has entered a vehicle passenger compartment. The projector is arranged to direct a virtual image into the end of the rod, directly or via mirrors, the light travelling along the rod via total internal reflection. Each optical fiber in the fiber faceplate is of limited aperture to control the tendency of light to diverge and to increase the resolution capabilities of the sensor assembly. Then, if not acknowledged by a local monitoring station, the PLB increases its transmission power, enabling access to a remote monitoring station. In this case, plural notches are formed in the pivot portions, and outside dimensions of the pivot portions may be elastically expanded and reduced. In other embodiments, processing of different frames is interleaved.

1459826797-5d83722b-ff88-4220-b167-31d69ce9c91a

Methods and apparatus are provided for transmitting a Hopping Pilot Beacon in a communication system. The underside of the mounting bezel includes at least one blind hole or projecting mounting stud for receiving a fastener for securely mounting the fishing rod holder to a panel member of a marine vessel without penetrating the exposed upper surface of the mounting bezel in order to provide an aesthetically pleasing appearance. Further, a developing solution is supplied onto the wafer during the estimated stopping time of the development so as to stop the development. The S1-S3 pair yield a point on a Frank Starling type of curve, and reveal information regarding the patient's ventricular operating point and inotropic state.

1459826797-76c8bd3b-09f1-4a4f-bc3b-09ed9e266045

An asymmetry thin-film transistor includes a substrate, a semiconductor layer and a gate positioned on the substrate. Each portal is positioned above a respective aperture and adapted to position an infant feeding over the respective aperture. An outlet receptacle is mounted to the cord for supplying power to remote locations in the room or work area as the cord is unwound from the reel. The height of the via to be filled is thus reduced by the height of the intermediate plug. Thus, a raw image signal with an emphasized edge is obtained.

1459826797-7ddb1b68-2f1e-4196-99e4-d470b994e710

A method and apparatus are provided to control the atmosphere inside of a xerographic control module of an image forming device so that a dew point condition is not reached. To that end, at network ingress, the original packets provided by said source users and entering the network, are encapsulated with a so-called

Single Sided Virtual Channel header including a Data Link Connection Identification field. The call control function transmits a ping message to the dual mode wireless device over the wireless data network to determine if the device is available over the wireless data network for the call.

1459826798-037899b8-ba0f-4c4a-b651-4c994da89c52

A portable oxygen concentrator designed for medical use where the usable life of the sieve beds, adsorbers, is monitored and communicated to the user or service provider through a user interface or a transmitted signal. The spinning head has a housing in which the plastic melt flows through a filter element under pressure before exiting the spinnerets. Phase-shift control components provide the output signal and the LO signal to the demodulator during a first time duration and provide a phase-shifted version of one of the output signal and the LO signal to the demodulator during a second time duration. In addition, the method includes synchronizing the first IO channel with the second IO channel based on the second data. A plasma process within the plasma chamber can be controlled by independently controlling the temperature of segments of the wall or other surfaces. In one embodiment, the present invention extracts information that is dissimilar between the first response web page and the second response web page.

1459826798-0ca273e3-90f9-4740-ae41-b0ee02662339

A method and system for playing a media sample representing a full media selection on a wireless handset and, in turn, requesting the full media selection to be sent to a client station other than the wireless handset. Multifunctional, nanocomposite, hollow nanoparticles, and coated nanoparticle dispersions are also discussed. When an external tire pressure equivalent to the cavity pressure is detected, the membrane makes contact with ridges on the backside of the surface acoustic wave device. During each interval of the intermittent pressing action, a supporting and rotating device 40 rotates socket 16 in small increments about a central axis C2 of socket 16. A second support member is attached to the body and the first support member by a second braze material.

1459826799-cae20f7e-3f90-449d-a0f4-ea98a3dee122

A system and method for configuring a target controlling appliance to communicate with a target controlled appliance. The system includes a retaining cover for obstructing removal of the closure from a bore of the access port. The first member is configured to be fixed to the stock of a rifle.

1459826799-d82ebe1e-c292-4e04-96d5-203c9c8ec31b

A method and system for providing priority to a station in a congested half duplex Ethernet network. The system includes a sensor adapted to generate a signal and a flexible member having an indicator portion. Polymer functionalized nanoparticles are also provided that include a nanoparticle defining a surface; a butadiene-derived polymeric chain covalently bonded to the surface of the nanoparticle. The axial thickness of the lash ring may be varied between assemblies to compensate for manufacturing variation in the components and is secured to the body in any of various configurations. Where the skip shift is requested and the clutch remains engaged, the skip shift request is monitored to determine whether it is withdrawn before clutch disengagement. The clock generating circuit transforms the logic state of the charge pump clock when the reset signal is enabled, and sets the charge pump clock to a first preset logic state when the display clock is transformed from a first state to a second state.

1459826800-a6a72dcd-9007-4ce0-b06e-50b8e47631b6

This invention discloses a heterogeneous mesh network comprised of multiple radio access technology nodes, wherein nodes can function dynamically, switching roles between client and server. The clock generator generates first through fourth clocks having a quarter frequency of a data-rate of input data, the second, third and fourth clocks have phase differences of 90, 180, and 270 degrees with respect

to a phase of the first clock, respectively. One signal component is configured to elicit an ECAP neural response, referred to herein as a neural response signal component. During execution of the processes, the method includes receiving a request from the first process for a time donation to the second process and executing the second process during the time slice of the first process. The second blade set includes a plurality of second blades.

1459826800-e1da907a-4232-41cc-8f0a-a045be72a1a4

A polishing pad having a body comprising fibers embedded in a matrix polymer formed by a reaction of polymer precursors. According to a modification of the process, a finely-divided carbon-containing material with a surface-pH value of around 6 to 9 is used instead of the silicate carrier substance. A plurality of elastic members is provided along the direction that the card moves for pressing a specific portion of the pin against the groove of the cycle cam. An arithmetic unit or a digital processor receives the first intermediate value and the second preliminary value and provides a second intermediate value indicative of the amplitude of the current. Each of the set of media content is sent through an associated output in the outputs at substantially a same time.

1459826801-78a66283-e5e8-490c-825f-ca51f314473a

A method for forming a network is disclosed with the network including a plurality of communication devices, a wire network for allowing a plurality of communication transmissions between the communications devices, and at least one connectivity device connected to the wire network,. Low level, runtime support for a nullable type is provided to ensure consistency and coherency. Different pieces of a large payload file may be available from different nodes, however, when a user requests access to the large payload file, for example, through an application server, a virtual file control system creates an illusion that the entire file is present at the connected node. Excess oxidizing agent and acidic solvent are removed from the nanofibers, which are then dried. A method and apparatus for using the game ticket is also disclosed.

1459826801-cb1965f9-4ada-4e24-8505-e7a24cbdecee

A device may determine a first distance between a viewer and a display of a device. The irradiation device and the detection device are fixedly or rigidly associated with one another. The surveying arrangement also includes a first horizontal receiver array located in the weathered layer, and means for processing seismic data acquired by the first receiver array. The electrode is supported by the outer surface of the housing. The decision tree method includes the steps of reading the data; creating a histogram; evaluating a potential split according to some criterion using the histogram, selecting a split point randomly in an interval around the best split, splitting the data, and combining multiple decision trees in ensembles.

1459826802-20a572cd-7025-43cd-97ec-ed2c610ccdc2

Provided are a wire structure and a semiconductor device having the wire structure. Thereby, a manufacturing method for run-flat tire support which maintains a high bondability between the supporting part and the leg part, and is excellent in durability, and a run-flat tire support are provided. In addition, first and second receiving ports are connected to the receiving-side port of the high-frequency switch via a diplexer. The integrator generates a first signal responsive to integrating an input current of the power supply. The at least one of the plurality of remote input devices may have a greater form factor than the local input device.

1459826802-bc3636ce-52d0-47b1-a714-ed7d6740bb24

A fibrous structure made from a fiber and about 1 to about 15 wt % of a high viscosity polymer that has a glass transition temperature of about minus 40 to about 0°C. The silver coatingnanoparticle scaffold can be used for numerous applications in metal-enhanced fluorescence. A front channel mouth is bridged-over

by a bridge on which a plurality of cutting edges are formed, which edges are made integrally with the rest of the bridge. The winding of the primary section has at least one phase conductor which at least partially extends in or on the region of the primary section facing away from the secondary section, thereby producing a magnetic field that extends outside the secondary section.

1459826802-d4c34d15-157c-428b-aa27-6b21b924ad18

Fiber is drawn from a preform comprising a silica body, e. When the coupling of the agricultural tractor and the agricultural implement is released, first, a control lever of a coupling hook is slid upward against the urging force of a spring until a second guide pin reaches the lower end of a slit. The driving transistor has a source and drain respectively receiving a second supply voltage and coupled to a second end of the light emitting diode. Thereafter, after etching the polycrystalline silicon film with using the sidewall film as a mask, a thermal treatment is performed in an oxidation atmosphere, by which a light oxide film is formed on the sidewall of the polycrystalline silicon film. Embodiments disclose a modular transceiver utilizing a wireless broadcasting transmission technique and a wireless control system where an interface between a controller and controlled devices is facilitated using the transceivers.

1459826802-e64b502e-a37b-420d-adc6-c19d94a763e0

A method, apparatus, and computer program product for performing an instant copy of data are disclosed. The systems and methods maintain sterile extracorporeal processing conditions during and between therapy sessions. The voltage driver generates a voltage signal to drive the transmission line.

1459826802-f64f29dd-a9b3-4167-9b80-754962e0e176

A display driver generates a respective charge pumping signal and respective driving signals synchronized to a respective same clock signal for each of the CPU and video interface modes. The present method also comprises plotting the respective capacitance values as a quasi-linear function of the respective predetermined widths, extrapolating a calibration term from the quasi-linear function, and subtracting the calibration term from the respective predetermined widths to define and constrain the active region width for facilitating device fabrication. The contact representations are displayed at respective relevance distances from the focal user representation. The two lines are terminated by an open circuit and are coupled electromagnetically to the common slot of the two antennas so as to enable a phase difference to be introduced between the electromagnetic signals of the two antennas when the connection is switched from one line to the other by means of a switching device present on the connection lines.

1459826803-461b7e0d-4c95-4536-8b2b-86295b7d2909

New and improved compounds for use in diagnostic imaging or therapy having the formula  $M\text{-}N\text{-}P\text{-}G$ , wherein M is an optical label or a metal chelator, N is the linker, and G is the GRP receptor targeting peptide. The master control station provides command signals to enable dispensing of a fluid from the metering device and provides a preset amount of fluid to be dispensed. Electrical connection portions 26 of the connection terminals 25 grasp the conductors, disposed on the obverse and reverse surfaces of the flat plate portion, respectively, so that the FPC is electrically connected to the connection terminals 25. The cover can function as an antenna for wireless communication between the device and a network or access point, and it can contain circuitry for devices such as transmitter/receivers.

1459826803-accbae30-587a-4baf-b41b-29e596c27f25

In a test system, a test method, and a program for use in verifying states in a target, a predetermined state is previously defined as an intermediate state among states which can be taken by the target. The variety successfully propagates from

softwood cuttings and is suitable for year round production in commercial glass houses as a flowering pot plant. The line-switching facsimile modem of the present invention is connected to a facsimile machine and has a function to transmit data via the public switched telephone network. Other monitors might include a heart rate monitor, a temperature monitor, an altimeter, et cetera. The fiber Bragg gratings preferably have different grating periods. The information providing device which effectively provides the information concerning the currently viewable programs with simple operation is thereby provided.

1459826804-0f310b90-c0e2-4daa-a748-58ba1d53ace2

A frame for use in a construction machine such as a hydraulic excavator, in which a circle member for mounting a swing circle to a center frame is secured. When the communication information received from the one communication network is relayed to another communication network, information is output to the other communication network by storing information about the failure detected from the communication information received from the one communication network in a header of communication information to be output to the other communication network. The optical power converters may store electrical energy derived from that optical signal and use that energy to power the remote sensors. The device is configured to limit the maximum gate voltage of the output pull-down transistor device to less than the maximum external power supply voltage.

1459826804-a8bad50f-048d-4cc3-a7ff-1f5b3ca47283

An assembled honeycomb structure includes at least two prismatic honeycomb segments. The transistor also includes at least one gate dielectric layer having a charge confined within to cause an interrupted region of the conduction channel and a gate electrode operable to restore the interrupted region of the conduction channel. A preview image is acquired for a second image to be captured, and a second edge is detected in the preview image. Particle characteristics such as roughness and elongation are used to selected groups of both powders that are combined to produce the blended zinc powder. The schema objects are preferably defined using a field-based language such as extensible markup language.

1459826804-e18b78e8-0524-49d8-97a4-84bebc987ddc

A method and system for a character-based document comparison are described. The pad groove analyzer may be configured to monitor the grooves via a contact or no-contact process. Additionally, the tag has an implant receiving cavity formed by the distal portion of the first component and the distal portion of the second component. The casing includes a magnetic metal material. Based on the reference value a particular data buffer that is associated with said data management structure is selected for buffering the log data. An object to be sterilized is held in the container in a manner so that an objective face to be sterilized of the object faces an ultraviolet ray emitting face of the electrodeless discharge bulb.

1459826805-38c2e450-6165-4a12-a991-8077aaad7717

An electromagnetic clutch includes an electromagnetic coil positioned within a coil housing. The picornaviruses of the invention comprise in the non-coding region of their viral genome a nucleotide sequence which corresponds to cDNA sequence or homologous sequences having at least 75% homology to the SEQ ID NO:1, and they cause mammalian disease. The operating cable is linked to the input arm of the transmission mechanism by a slider, i. Further, the orientation of the applying step is provided by a cladding layer adjacent a conductor along which a current is passed and the current induces a magnetic field in the cladding layer of the selected magnetic orientation.

1459826805-6b32a01b-2543-4e44-a41f-f6456b3f470e

A support pin is disposed at a position in front of a front edge of a movable nozzle blade in a state in which the movable nozzle blade is located at a rating opening position B, set between a maximum opening position A and a minimum opening

position C. The scanner gantry includes a rotary part and a stationary part, wherein the detector, the detector control panel, and the power ring are mounted in the rotary part. The electrical terminal includes at least two actuating elements arranged so as to turn relative to the insulation piercing elements in the electrical terminal. The mathematical optimization algorithm takes as input at least one constraint and chaotic event information. Also a method of heating comprising providing an energetic nanolaminate film that produces heat when initiated, and initiating the energetic nanolaminate film by directing an electric current to the energetic nanolaminate film and joule heating the energetic nanolaminate film to an initiation temperature.

1459826805-e24e0604-f280-4900-8e4b-7f3a85647fa4

A system and a process for a session layer protocol allows a large number of client machines to receive a reliable data stream over inherently unreliable multicast connections in a highly efficient and scalable manner. The electronic device includes a motherboard mounted in the housing. The display also allows for individual security alarms to be triggered when a theft occurs. The separation apparatus is then placed in a buffer. a microprocessor or a chip-card processor performing information encryption in an apparatus may reveal the security sensitive information. The thread switch logic has a time-out register which forces a thread switch when execution of the active thread in the multithreaded processor exceeds a programmable period of time.

1459826806-01309227-5840-4e2d-84eb-b380996baa26

When a plurality of commands are received in succession to readwrite data fromto memory cells in accordance with the combination of these commands, a word line for controlling the transfer switches of the memory cells are activated after the reception of one of the commands excluding the first command. The detected devices are identified and such information may then be provided to an application for its use. The covering also includes a second sheet having a top portion, a bottom portion, and an inner edge portion. Dummy registry keys are created that are typically used by a debugger to make it appear as if a debugger is present within the operating system of the user computer. The device includes a source terminal, a drain terminal, a guiding gate terminal, a control gate terminal, and a substrate terminal coupled to the semiconductor substrate in which the device is formed. The base station can utilize the effective SNR to facilitate scheduling transmissions from the mobile terminal, transmitting power control commands to the mobile terminal, and determining a supporting data rate for the mobile terminal, for example.

1459826806-1f81301d-dbf3-4dac-baf3-646a5e912499

A liquid-drop ejecting apparatus comprises: a liquid-drop ejection head; a first tank; a second tank; and a negative pressure generation unit. Part or all of the source and drain regions is formed using a metal silicide layer. Based on the type of message, the interface module identifies a corresponding routine of an operating system executing on the computer which will generate the signaling service message; and invoking the corresponding routine which causes the operating system to generate the signaling service message. Resistance tuning is controlled by the number of active configurable drivers and amplitude tuning is controlled by setting the high or low drive state of each active configurable driver.

1459826806-4aaeefed-9264-4d59-b1d4-0298c8d204a4

A mask and harness system for use in providing breathing oxygen and protection from pollutants for the eyes and respiratory system as might be encountered in high altitude aviation environments. The apparatus includes a cervical guide ring, an insertion handle, a means for movably attaching the guide ring, and a means for directing a tissue sampling tool to a woman's cervix. As a result of receiving appropriate approval, such an associated content item may be promoted and made available to users of the content-controlled database, with the content management

record updated to reflect such a status of the associated content item. Software virtual product data is stored within the user-specified install location.

1459826806-87578a91-c765-453e-a3ea-1ea282532c85

A vane assembly of a gas turbine engine has a plurality of vanes extending radially and inwardly from an annular casing. When a power switch is turned off, a taking lens retracts within a camera body, and a barrier drive gear is rotated by a motor to extend a second coil spring so as to force the lens barrier to move to a closed position from the open position at the moment that tensile force of the second coil spring rises beyond that of the first extension spring. Each identical pushup exercise device includes a rod.

1459826807-4f600cae-4a63-4912-94ec-70bb5749bab

There is provided a pneumatic radial tire for a motorcycle, which reduces a difference between rigidities of the center section and the shoulder sections of a tread section to simultaneously provide a long wear life, high grip force, and high-speed durability without impairing linear characteristics of handling. A connector connects a differential transmission pattern for multiple transmission of a group of three differential signals and a differential transmission cable. The extension pipe is formed of an outer tube fastened at a bottom end to the handle, and an inner tube fastened at a top end to the nozzle. A printhead assembly includes an ink feed arrangement, in turn, defining ink feed galleries which can be connected in fluid communication with respective ink reservoirs.

1459826807-9c531dfe-f068-40f2-a2bf-add45774f6e7

A nonvolatile semiconductor memory includes a trench isolation provided in a semiconductor substrate and an interlayer insulator provided on the semiconductor substrate. More specifically, the present invention relates to devices and methods for repairing, reinforcing and/or treating fractured and/or diseased bone using various devices, including cavity-forming devices. The control circuit also includes a primary-side auxiliary winding operable to induce a voltage pulse after the primary-side switch is turned off, and a sample and hold device for sampling and storing a level of the voltage pulse for generating a control variable. Axial spinal implants and bone growth materials can be placed into single or multiple parallel or diverging axial bores to fuse two or more vertebrae, or distract or shock absorb two or more vertebrae. An electric current generated during a lightning strike is diverted with low resistance from the electrical unit via the rear plate and the mounting plate onto the fuselage of the aircraft.

1459826807-e0490000-1938-46cd-85cd-a73ac4fc438d

The pipe hanger assembly is a pipe hanger and a holding assembly for retaining the pipe hanger against a pipe support. The methods comprise exposing wafers to high temperatures in a generally neutral atmosphere that also comprises one or more species that can, or whose ions can, migrate into the wafer down to the interface where reduction of the trap density is desired. If a suspicious domain shows activity, one or more actions may be taken with respect to the domain. The invention also provides kits useful for making the litter box assemblies and using such litter box assemblies for managing animal waste. They are excellent in moldability and gives a molded articles which are excellent in appearance in terms of gloss, flow marks, weld appearance, color unevenness at welded portions, colorability and the like, and excellent in impact resistance, for example, impact resistance at low temperatures as well as in weatherability. These polymers can be blended with other polymers, and are useful in the manufacture of films, sheets, foams, fibers and molded articles.

1459826808-13e9a226-5810-455f-a988-6098c046f689

Disclosed is a film assemblage of the self-developing type comprising a first and a second sheet in juxtaposed relationship to one another. Another resin composition comprises a film-forming polyester and from about 50 to about 2500 parts by weight

of iron per million by weight of the resin, wherein the amount of iron particles having a size of less than about 20 microns does not exceed about 800 parts per million by weight of the resin. The side frames have middle portions carrying an arc tube and a surrounding shield, and the side frames further have an upper portion that frictionally engages the inside surface of the cup-shaped top, the upper portion comprising two ends extending in a direction normal to the longitudinal axis and having a space therebetween. When the surfaces of the general portion and the door portion are flush the gap between the general portion and the door portion can be narrowed, and gap on the surface is narrowed. The versatile portable telephone holder or holster of the present invention securely retains the portable telephones telephone and/or other personal items, regardless of the physical orientation of the holder.

1459826808-dc7e70fb-a2d0-4fcf-b795-27297cfa8dfe

A method and system for implementing antenna verification in a closed loop transmit diversity system. The inserter element has a slim, elongate main body, a handle attached to the body, and an anatomically curved insertion section. The base and the holder can also form a container for enclosing sharps devices. The print pixels that are blocked by the mask define a regular pattern to avoid graininess in the printed image.

1459826808-e6c5ee0e-9cb2-4c7d-8844-1b2471d264a7

A high-power point and one or more low-power points transmit signals associated with the same cell-identifier in a heterogeneous cell deployment. As such, the amplifier circuitry receives a frequency signal representing the frequency and phase components of the signal to be transmitted, as well as an amplitude signal presenting the amplitude component of the signal to be transmitted. These compounds and compositions find particular use in providing an abuse-resistant alternative treatment for certain disorders, such as attention deficit hyperactivity disorder, ADD, narcolepsy, and obesity.

1459826809-13c5101f-e221-44c3-b030-baebe90953e0

A storage device includes a memory and a wireless transmitter, both contained in a disaster-proof enclosure. Methods of using said reagents and diagnostic kits are also provided. The housing is mounted on the door. Origin servers deliver the files generally according the event.

1459826809-79542c83-a632-4d74-bc39-aa8b2b02dc87

A column analog-to-digital converter having a voltage comparator and a counter is arranged for each a vertical signal line. A protective element with a protected electrode overlays of the semiconductor substrate with an intervention of a dielectric film. The microcantilever presents a reflective target area for the laser beam.

1459826810-085bc7aa-dbb3-47db-8ec6-f1618af97b59

A method for improving throughput performance of a data storage device by executing an execution critical write-back data priority routine programmed into a controller of the data storage device. Each cooling passage is divided into at least two branches that receive cooling fluid from an entrance portion of the cooling passage that is in communication with the chamber. A fuzzy logic method is provided for effectively combining the results of different types of search criteria. When an entity of the plurality of entities seeks to acquire a shared lock for a particular resource, that entity checks the local exclusive lock flag for that particular resource. , a toxin, allergen, autoantigen, bacterial protein or polysaccharide, viral protein, fungal protein or polysaccharide, parasitic protein or polysaccharide, bacterial lipopolysaccharide or any other compound relevant to diseases. Accordingly, there can be provided a solder jointing system for jointing solder layers of a semiconductor device, an electronic device, or the like to the wirings or the pads, which is capable of having a high processing ability and

preventing re-oxidation.

1459826810-254cf5f8-69b5-416b-87d9-7f626766400b

The present invention relates to eating utensils including a support configuration adapted for elevating the utensil above a horizontal surface to prevent the contamination of germs or bacteria that may linger on the surface. An underfill layer may be provided between the bottom surface of the substrate and the top surface of the printed circuit board, to reduce water infiltration under the light emitting diode substrate. The interrupting contact assembly includes four sets of interrupting contacts being at least partially disposed on four cantilevered members.

1459826810-4c7fd5bf-87a0-4e71-8020-c1cf26e2304a

A light-gathering device for concentrating light. The first and second control modules are on-board first and second powered vehicles coupled by at least a third vehicle in a vehicle consist. The anaphora analysis section analyzes whether a correct anaphora relation is included in the text data acquired by the text input section. Preferably, two rings are formed, and the gaps of the rings are in staggered relationship about the circumferential direction. Because the pneumatic cylinder is not attached to the piano frame, the piano lid can be completely removed without the use of tools.

1459826810-59bcdd1b-a384-43a6-ace2-b78ab152af58

The subframe contains a framework which is cast as a single part and has profiled hollow members for the longitudinal and cross members. When the authentication has been successful, the authentication control unit acquires user attribute information associated with the login user name from the authentication server. In addition, the authorization request may be transmitted from the POS server to a payment gateway. The 111 orientation colony is an assembly of adjacent crystals in which the angle of 111 orientation vector for each of the crystals relative to the direction vector vertical to the rolling surface is within 15.

1459826811-2ec3939d-9b4e-4900-aaed-fea21a47b5f6

An error checking circuit that performs RS encoding and decoding operations and also generates CRC codes includes a configurable two-stage combinatorial circuit that carries out selected finite-field arithmetic operations associated with RS and CRC coding. Through the present invention, the UE is capable of configuring the timing advance information of the carrier group promptly and activating the secondary carrier quickly, resulting in reduction of uplink transmission delay. The accessory mounting device also includes an accessory mounting bracket that slides over the second portion of the slide connector. 1 to 20 parts by weight of a leveling agent. A flow control system may be supported by the housing assembly and be couplable to a source of pressurized control fluid.

1459826811-772978b6-1a70-4159-98c4-da11b9c266a6

An end system concluding that a bi-directional virtual circuit is operational if the other end system has determined that the virtual circuit is operable based on the loopback cells. A switch is preferably attached in series with an external resistor. The nanowire of the access transistor and the nanowire of the memory transistor can be formed by a single nanowire having two ends respectively forming a drain of the access transistor and a source of the memory transistor. The processing component is capable of generating an acuity level based at least in part on the acuity value.

1459826811-82244e2e-3716-4727-aa51-f2f21255f3ea

Methods and apparatus for performing content inspection across packet boundaries using stateful packet content matching mechanisms. In one exemplary implementation, there is provided a method for processing gunshot information via identification of characteristics of detected gunfire. The catalysts demonstrate high activity and

selectivity for linear \u03b1-olefins. This permits unification of the cross-sectional structure of the sealing material formation region. Then, the front cables are reconnected to the lifting legs for lifting of the pallet and load thereon.

1459826812-09c180bc-dc9f-466c-9f1f-e58ed8b41da4

An airtime sensor for board sports includes a detector for generating signals representative of vibration associated with motion of a board sports vehicle along a surface. In a typical application, a user of the mobile telephone calls a server. The line is held off-hook for a predetermined amount of time to allow the user to switch telephones. The foam is then directed onto the surfaces of the plant to be covered. With this, a robust, cheap and safe in operation glare protection device for various applications is created.

1459826812-a6cae533-a7cb-4833-aa83-c7f8a9562579

A method for operating a commissioned e-commerce service provider provides services to businesses on a computerized network such as the Internet in exchange for a small commission on the commercial transactions generated using those services. Then, control is performed such that the first display image is displayed on a first display apparatus. In accordance with one embodiment of the present invention, the current system timer comprises the current clock time of the communication system. A plurality of longitudinally extending edges parallel to the axis of the screw are defined at junctures between the cutouts and central portion of the pilot hole.

1459826812-c51b905d-5eaa-4ce6-aadf-ee6038cdf345

This invention provides systems and methods that allow a user to change the size of a background used with a graphics-based user interface. The anaxisymmetric deformable leading edge 20 can be formed by an angled leading edge 19 which presents only a portion of the leading edge 18 to a well bore obstruction and allows the edge 19 to move past the obstruction with little or no longitudinal force. The Entertainment System including a database subsystem, a registration subsystem, a server subsystem, and a virtual world providing subsystem.

1459826812-c6c4b91f-ebab-4509-8d54-ff309b1903ff

method for making a mount for at least two electronic devices forming a first mounting surface from a material, and forming a second mounting surface from the material. In this mouse, human HB-EGF precursors are expressed specifically in islet beta cells, and by injection of diphtheria toxin, islet beta cells are selectively destroyed, resulting in that the mouse shows diabetes two or three days after the injection. The semiconductor membrane layer is initially formed from a substrate of standard thickness, and all but a thin surface layer of the substrate is then etched or polished away. The apparatus may also include a skirt and a skirt cover structured to substantially enclose a lower portion of the base, while the apparatus is not in use. An apparatus and method for spin-forming the end closure with the improved geometry is also provided herein. Nozzle lips of a nozzle body of the feed device are configured so that the desired dimension of the open surface of the liquid sump and the depth of immersion of the nozzle lips into the liquid sump, and thereby the level of the liquid sump are adjustable.

1459826813-5b5fd7d3-26db-4ff2-b5b0-754c91fcff09

Electrical devices which incorporate electrodes coated with carbon nanotubes. Such methods involve administering to the mammal a diet containing viscous polysaccharides. Using the information processor, a user then specifies an image output sequence by rearranging the thumbnail images with a pointing device. The probes are useful for detecting the organisms in test samples such as sputum, laryngeal swabs, gastric lavage, bronchial washings, biopsies, aspirates, expectorates, body fluids, urine, tissue sections as well as food samples, soil, air and water samples, and cultures thereof.

1459826813-6b7323e3-8dd5-4667-964f-d0e20dd153b0

In displaying a price label, the price can be displayed at low resolution without any problem, but a bar code requires a high resolution display. During playing, players move their own balls to the target area by skipping, raising, hitting balls or throwing balls. The bit string represents a file specification of a file containing application code written by an application developer. The process may further allocate the lowest performing agents and or the least \u201cdemographic matchable\u201d agents to those callers that are predicted have the longest duration, or may not allocate the lowest performing agents to any callers at all. At least one rotating member is rotatably joined to at least one of the limbs, and the rotating member defines a first portion of a sheave having an eccentric profile.

1459826814-45c45bb9-25ba-4b11-8177-f4f43ff374af

A logical relationship is established among peripherals in a wireless local area network managed by a system manager. In addition, the present invention provides novel compounds having enhancing activity for nerve growth factor production. The resistors enable squib identification. In another embodiment of the invention, the basic approach is used to obtain an initial estimate of the signals transmitted by one terminal unit, and the contribution of those signals is removed from the received signals prior to detecting the signals of other terminal units. In many instances, the content server stores many hours of live media stream data and allows a user to select a particular starting point.

1459826814-81847e13-99a1-494e-982e-eceb4898eddc

A light emitting apparatus includes a light emitting device emitting primary light and a wavelength conversion unit absorbing a part of the primary light to emit secondary light. The motherboard system includes a central processing unit, a control unit and an interface connector. If no non-common address is available, then a common virtual importexport element address is assigned to the data storage device. The coding can be spatial, for example, by using an aperture mask and/or temporal, for example, by coded injection of ions for analysis. Using these transcription factors in novel formulations, as shown by examples, will confer value-added traits to transgenic plants, including, but not limited to, higher levels of heterologous gene expression, drought and salt tolerance, viability and productivity under stress, and enhanced nutrient reserves and seed properties.

1459826814-8de1911c-7643-40ef-ad5e-f9a0f2a79102

Arylsulfonamide compounds of formula I are described and have therapeutic utility, particularly in the treatment of diabetes, obesity and related conditions and disorders. In addition, a method is provided for preventing, inhibiting or treating the progression or onset of pathological conditions associated with the estrogen receptor and to pharmaceutical compositions containing such compounds. The thickness of the SiNx layer is expressed by  $d=\lambda kb^{1/3}$  where k is an integer not smaller than zero and not larger than 5. Each of the panels has a pair of the hinge assemblies coupled thereto to permit the panels to pivot with respect to the cargo bed.

1459826814-9cb34a11-753b-4c5b-954a-417b130e50f3

In etching using an etching solution, irradiating ultraviolet light is irradiated into a resist patterned on an etching substrate or a film formed on the etching substrate and then an etching solution is applied to the etching substrate while rotating the etching substrate. The combinations have greater efficacy than would be expected from combinations of the individual components. A plurality of equalizers is communicatively coupled with the plurality of noise prediction filters. The framing includes, among other things, adding a flag to identify command and event packets from data packets, and a sequence number to help ensure synchronization. In yet another embodiment, the torquing device has a tapered shape

and includes a ring that is slideable over the device to compress a wire in a channel. The presence of the R10 groups on the support surface prevents or reduces non-specific binding of the catalytic species with the support surface by minimizing hydrophobic interactions and providing no or substantially no surface charge in the region of the support having catalytic species attached thereto.

1459826814-d6fdb3aa-2810-4ce2-8e0d-6c3442475d43

A process for production of nickel oxyhydroxide by electrolytic oxidation of nickel hydroxide in the presence of an alkali metal halide. The graphics files are sorted into lossless and lossy file groups. When the speed of the vehicle is higher than or equal to a predetermined threshold and predetermined conditions determined by physical quantities relating to power generation conditions of the fuel cell are satisfied, the control section determines that freeze prevention processing is necessary even if the fuel cell is generating electric power and performs the processing. The gear portion of the movable plate is in operating engagement with the gear portion of the fixed plate and defines an annular race between an outer surface of the first raised collar and an inner surface of the second raised collar. When the invention is employed in direct methanol fuel cells, water transport and methanol crossover through the membrane are decreased compared to conventional direct methanol fuel cells employing sulfonic acid membranes.

1459826815-2b5c2707-1c61-41f1-82c4-28102922b2cf

A method for selection of a DRAM refresh timing in a DRAM memory system is disclosed. The stabilizing weight assembly, in one embodiment, includes a weight holder rotatably connected to a weight holder wheel. A pair of pivot pins is formed on opposite lateral sides of the body respectively, and a pair of pivot holes is defined in opposite lateral sides of the top lid respectively. In order to reduce the level of these contaminants, a purging system extracts gas from the enclosure and passes the gas through a desiccant, an organic vapor trapping material, and a particulate matter filter then returns the extracted gas to the enclosure. The sockets each have cylindrically shaped outer surfaces, and when engaged with one another define the loading interface.

1459826815-389bef7b-4a8e-43df-802d-1674dc4d18f2

The present disclosure relates to antibodies specific for urokinase-type plasminogen activator. A method of assembly of a downhole magnet tool comprises mounting a magnet on the mandrel and inserting the centralizer stem into the centralizer receptacle. The physical interface system comprises a first physical layer interface for the base station for processing the communication signals upstream and downstream between the subscriber station and the base station and a second physical layer interface for the subscriber station for processing the communication signals upstream and downstream between the subscriber station and the base station. At the user's request, the server selects corresponding voice data and sells it to the user. As one of the tasks, the system has a training function which can be used to prompt for additional information for incomplete commands. The user applies force to the driver, thereby urging the frozen solid past the directional controller and out via the exit aperture.

1459826815-b4c0077d-00b2-489a-b80c-1559f53fa591

A turbine vane ID support system usable to support the ID of a turbine vane and including a transition seal system and a turbine vane ID forward rail seal system. The system includes forming heat slug pillars on the substrate, positioning a heat slug on the heat slug pillars, and encapsulating the substrate, the die, the heat slug pillars, and the heat slug in a mold compound. The tip, with the particle, is moved into the second position where the particle can be accelerated towards the entrance opening. A subcutaneous tunnel is created, and the first end of the tunnel is near the incision. The position and size of the pattern could be controlled accurately and efficiently, instead of inefficient complex procedures of alignment.

1459826816-129dfd41-325b-468d-9e7b-adff81f2bc6a

Disclosed is a method, apparatus and system for processing a broadcast application in digital broadcasting. The semiconductor memory device includes memory cell blocks, row decoders, sense amps, block control circuits, and sense amp drive circuits. An embodiment of the present invention utilizes a DPD feedback signal in conjunction with a low power band-pass filter in the DPD feedback path. The system of this invention preferably utilizes DSP circuitry for determining the occurrence of a Twave event and the timing of the Twave, from which the QT interval is calculated. The function temporarily reduces error input to the brake controller during a perceived brake fill condition or running clearance condition thereby facilitating smooth application of the brakes during initial braking and/or under anti-skid conditions.

1459826816-28513807-cbc7-4562-88e1-6838dc0439bc

An apparatus for latching a tailgate to supporting structure of a vehicle generally includes a latch, a keeper, and a member for rotating the keeper relative to the latch. The air bladder actuator is made with lightweight aluminum end plates and utilizes a unique stud assembly for attaching the actuator to the retarder pivot arms. A portion of the pockets are coated with a first type of wavelength converting material while other portions of the pockets are coated with a different type of wavelength converting material. The magazine is configured to deliver successive ring airfoils to the breech or rear end of the chuck for launching. In the flying optical recording/playback head, a device for controlling the relative position between a slider and the optical lens based on a thermal expansion or a piezoelectric effect of an optical lens supporting member for holding the optical lens on the slider, or a thermal expansion of a portion of the optical lens. The first and second cache lines are scanned for unset done bits.

1459826816-7cee0cd7-5263-46ff-b752-0ed364a7dbf0

In an electronic system having logic agents that communicate with each other through one or more signal lines, a method for testing high speed digital signaling on the signal lines is disclosed. The system can search data communications, such as HTTP requests and responses, for proxy strings that are indicative of a string pattern associated with corresponding proxy software. In the packing box of liquid crystal panel, the content closely contacts with the packaging material, which avoids the displacement of the content generating secondary impacts during transportation and decreases the damages of the external impacts to the package. A syndiotactic polypropylene comprising a melting temperature of greater than 170°C. A method and a system for effecting currency transactions between two users over the Internet or other communication network are also described.

1459826817-1c9ad6b9-1026-42d6-99fe-fed5cdd4064e

A light-emitting module and a driving method thereof are disclosed. A conductor is formed on the sloped sidewalls. The first outer sidewall surface has a first minimum refractive index. A crown, defined by a raised band of the shell, extends between the front and rear regions of the shell.

1459826817-2f4ccf53-14ed-4ed4-8d6b-a6ce22a87ebe

The invention is based on a wiper system with at least one wiper support, which, in a pre-mounted state, has a part that is guided through a mounting opening of a vehicle and is fastened to it. The medicating device includes a control computer that sends instructions to a dispensing device. A surface coating material is disposed along the exterior and interior faces of the wall structure and in contact with the interstitial blocks. The clock generating section generates a higher operating frequency when the control section executes printing processing than when the image-capturing section obtains an image, for the control section. The electrical cable includes an outer shield connected to the chassis ground of the trolling motor; an inner shield connected to the signal ground of the transducer; and a pair of signal carrying conductors comprising a twisted pair.

1459826817-5494439b-833d-48e1-b894-61c6b71757d9

Some embodiments of the present invention generally relate to pillow devices comprising a pair of opposing lobe cushions connected by a cross member comprising a neck supporting cushion. To accelerate the weighted spool assembly, a user applies a pulling force to a strap assembly. The housing is configured so that it may easily be removed from the wire feeding module, thereby allowing the housing to be easily replaced or exchanged as needed by the user.

1459826817-d7e09cdb-f055-473b-89c5-b3856e78eb27

An alignment apparatus for optical components includes chemically co-etched parts which may be assembled with high tolerances and in a repeatable manner. There is a cylindrical external housing 1 with a through hole 1c in a central position in the closed end. Further provided are methods for making and using thermotolerant phytases, e. Subscribing dual-mode phones can use this list to only scan for Wi-Fi availability when they are associated with a cell tower which is on the list.

1459826817-d90fefbb-4fae-4f57-91b8-e4c77778a643

An ink cartridge has a first partitioning wall 5 and a third partitioning wall 7 for dividing the inside of a case 2 into a first ink chamber 9 and a second ink chamber 10, and a second partitioning wall 6 for demarcating an atmosphere connection chamber 11. The composition contains an epoxy resin, a fluxing agent, a linear polyanhydride and a catalyst. The ordering may be based on any number of factors. A semicircular wall extends between end caps that hold a roller shade. Operators thus can evaluate candidate colorant patterns in context of many different tones of the sky and other customer colors. The system can include a computer readable medium having code for receiving fluid introduction data indicative of a fluid introduction parameter, and for receiving response data indicative of a response of the patient at a time related to a time of the fluid introduction data.

1459826818-6dc99a0e-5f4d-4e26-8201-6b30b611a5d0

A configurable logic device configured to add or subtract inputs using a carry signal with a fixed value of 0 is described. The orthotic device includes a tray for receiving the user's upper teeth, a guide ramp for position the user's lower jaw, and a plurality of spacers for providing a gap between the tray and the user's lower posterior teeth during fitting of the orthotic device. A pressure relief valve is to open in response to pressure in the print head reaching or exceeding a predetermined value by the provision of gas to the print head by the source of pressurized gas.

1459826818-a1fd9fb6-c4ff-4600-a4c9-48e715edea3c

A network system includes a plurality of communication nodes. A second plate member is extended from the first plate member such that a first part thereof opposes to a traveling path of a carriage which carries a plurality of liquid containers each provided with an IC chip and a receiving antenna. The synchronizing converters operate in parallel as a multi-phase converter. The elastomer material is removed by peeling prior to adhesion bonding of the heat sink to the die. A second region is exposed to radiation through a second photomask.

1459826818-d8df421d-0866-43b4-8940-2fbc474787b9

A fluid dynamic bearing including a bearing bush having a central bearing bore in which a shaft is rotatably supported. The electron source is for coupling to an image display member to form an image display apparatus, and the image display member is for displaying an image in response to being irradiated by electrons. The method and apparatus then activates the web interface and allows the subscriber to specify a sequence of both digits and letters as the subscriber's initial web password and username.

1459826819-180f60e3-8d12-4d9a-9c44-6bf5f5ffe268

A method comprises analyzing the psychology of a typical consumer and defining first key stages wherein customers drop out and second key stages wherein sales could be maximized. Since the setting was revised, the revision history including the setup content and the data of the setting is stored in a revision history storage. Output circuitry provides an output based upon the compensated process variable. The piezoelectric element is in contact with the second member.

1459826819-19bad3f4-b520-4512-bc5d-499b2dc73746

Aspects of the invention may provide a method and system for adjusting a gain and/or a frequency response of an input signal for a multimode PHY device. The punching dies and corresponding shaving dies are located symmetrically on opposite sides of an intermediate location along the path. In this embodiment, before the downlink signals are transmitted, the mapping rule used by each cooperative cell for CoMP transmission is negotiated between the cooperative cells, and therefore, the UE can accurately receive the signal sent by multiple cooperative cells and the performance of CoMP transmission in the system is improved. Numerical clauses represent constraints that govern the configuration of the product. Surface roughness of the rough structures is greater than surface roughness of the black matrix distributed corresponding to the display area. The capabilities of introduction of three functional groups into a molecule in one step using Baylis-Hillman reaction encouraged us to synthesize some highly functionalized derivatives of artemisinin.

1459826819-d0af83d6-8a6a-49ca-a838-e77eaa61f3a1

For invention enables torque-compensation of alternating interference-torques in a printing machine. The method includes the steps of detecting a first movement, capturing a first profile corresponding to the first movement, comparing the first profile with a second profile, the second profile corresponding to a second movement, and activating a user interface behavior if the first profile and the second profile are substantially similar. The segment is selectively coupled to another scan register element to form a portion of scan chain.

1459826819-d6668768-8423-43a1-a661-01b3ea003729

A method and system for resilient routing reconfiguration, which provides provably congestion-free rerouting under a large number of failure scenarios and achieves efficiency and flexibility in accommodating different performance requirements, is disclosed. Embodiments of methods may include monitoring a patient to produce a signal comprising a sequence of numerical values for a physiological parameter over a time period, calculating an index from the signal, comparing the index to a reported index, and if the index is greater than the reported index, setting the reported index to the value of the index. The at least one alkane can be pentane isomers, hexane isomers, heptane isomers, octane isomers and combinations thereof.

1459826819-e9030568-b153-45b2-94d2-8ed505500401

In one aspect of the invention there is a system for establishing a parimutuel fund comprising a first mobile phone and a second mobile phone and a parimutuel administrator. The brace includes a first strap having a first end directly attached to the first side of the proximal frame element and a second end attached to the first side of the distal frame element so as to spiral from the first side of the proximal frame element to the first side of the distal frame element about posterior and anterior sides of the knee brace. The inner fabric and the outer fabric form a gap for receiving the suspension jet and jointly wrap around the forming element at least partially in a wraparound region. The areas are arranged concentrically around each other such that the first area is inward of the second area which is inward of a third area and the like. A roller assembly may then receive the letterpress assembly in the closed configuration and may exert a compressive force on the letterpress assembly. The optical waveguide layer includes an incident-side channel waveguide to which a light signal is incident and plural

outgoing-side channel waveguides branched from the incident-side channel waveguide.

1459826819-eea6d66d-6124-4298-8229-dadbef15d795

A method is presented for employing radio frequency identifier transponder tags to create a unique identifier, termed an RFID signature, for use within a data processing system with respect to a person or an object. The device provides a retrofit solution for overcoming problems associated with liquid entering a pressure sensing lines and pressure noises that collectively harm the ability to accurately measure fuel and oxidizer levels. Each micro-channel has a width less than or equal to 20 microns.

1459826820-28c301ca-ec57-4612-b6c9-726a586c3cd4

A fixture includes an elongated rod, a first jaw and a second jaw. The converter converts an offset voltage to a bit stream. More particularly, a process is provided for the preparation of the above concentrate employing ketonic solvents. The entered sequence and timing element are compared with stored values and access is granted only if the entered and stored values match. Annular grooves with varying depth are provided between the gear and the front flange with balls therein for adjusting the spacing between the gear and front flange depending on their rotation position. The inventive agents permit hair coloring with outstanding fastness.

1459826820-7b88e32f-eed9-4688-b3b7-a913764bd6ce

A processing chamber may be effectively cleaned by a remote plasma flowed through the chamber in a direction opposite to the direction of gas flowed during wafer processing. A cardiac stimulus device lead is provided according to one aspect. Also disclosed are methods for fabricating optical integrated circuits employing the gap and actuator. The operational range is discovered by testing points, as defined by the plurality of varying operating parameters, to discover an operational boundary of the device.

1459826821-6ebfa4fe-276f-4921-8968-352347b6b48f

A resource allocation with dynamic bit control to achieve the greatest fairness for all users and minimize transmission power over orthogonal frequency division multiplexing systems is presented. The relaxed SiGe allows for a plethora of strained Si layers that possess enhanced electronic properties. Arrays of slots extend about the disk for simultaneously directing the fluid core to the inner profile of a conduit and the outer perimeter flow toward the fluid core. During a heating operation, the high-pressure side of the circuit during the cooling operation becomes the low-pressure side and the low-pressure side of the circuit during the cooling operation becomes the high-pressure side. The reclining mechanism may include three or four release mechanisms that are all coaxially attached to the vehicle seat to permit the seat back to pivot about a single axis. Upon connecting with a wireless client, a neighboring wireless access point determines if the wireless client matches the stored predictive roaming information.

1459826821-a242b718-9865-44f5-a0b1-f159584d1ae2

A steel rule die for cutting cloth and synthetic materials. Also, a method for performing a surgical procedure is provided including the steps of providing a surgical instrument including a first cartridge assembly and a first anvil assembly having an anvil shaft, approximating the first anvil assembly and first cartridge assembly and ejecting staples from the first cartridge assembly. keeps the frequency of the cantilever oscillation constant by applying a suitable DC voltage to the probe while, at the same time, a conservative AC excitation is applied thereto.

1459826822-57856873-7c72-453b-8b52-cff23f62ee04

A method is provided to create a proof mass supported by a dual-suspension system

for Micro-Electro-Mechanical Systems using crystalline silicon. The semiconductor apparatus comprises a gate electrode formed on a surface of a semiconductor substrate with a gate insulating film provided therebetween. The target device has sensor means for detecting this radiation and for converting it into electrical signals, which are supplied to an evaluation unit, as well as transmitting means which, in accordance with decisions made by the evaluation unit, return messages to receiving means located inside or outside of the transmitter. The data set is transformed to produce a partition table of data points with one column including the fluorescence at cycle and a second column including the fluorescence at cycle, where  $i$  is typically 1 or greater. These ethanol-based, biomass-derived fuels are fully renewable, may be formulated to have a wide range of octane values and energy, and may effectively be used to replace 100 LL aviation fuel, as well as high-octane, rocket, diesel, turbine engine fuels, as well as two-cycle, spark-ignited engine fuels.

1459826822-978dc247-22da-4693-a51b-d1077ca6d188

Biology and medicine for cleaning biological fluids. The supplemental window, in one embodiment, comprises a frame with plastic sheet material stretched across it. Dog teeth of the dog clutch include steps different in axial height from each other between a portion abutted against a lateral wall surface of a dog hole when the rotational drive force is transmitted by the dog clutch, and a portion abutted against a lateral wall surface of the dog hole when the rotational drive force is not transmitted by the dog clutch. The at least one reinforcing metal strap has a width of no less than about 1 mm. A control unit 31 has a traction controller 32, whereby when the ground contact load value output from one of the ground contact load sensors 36 while the vehicle is traveling straight is outside a predetermined range, the drive wheel 34 is controlled so as to return the ground contact load value to the original value. A first electrode layer that extends over the plurality of nano elements and is in electrical contact with at least a portion of the second conductivity type semiconductor, and a mirror provided on a second conductivity type semiconductor side of the structure.

1459826823-1e3254a3-9ce1-4848-a26c-d362f6f8bbac

An inner ring of a bearing is affixed to an end of the rotor spindle and is immovable relative to the rotor spindle in the axial direction. Non-invasively measured blood sugar level values obtained by a temperature measurement scheme are corrected by blood oxygen saturation and blood flow volume, thereby stabilizing the measurement data. Edge portions of the flexible sheet form element are secured to the lower portions of the wall form panels thereby forming a general U-shape and extending longitudinally under the wall form assembly. The accessory carrier can also be pivoted by removal of a single pin. The present invention is used for anti-fake of motor-vehicle-identity-status and provides to the enforcement organ for recognizing the legal status of motor-vehicle-identity.

1459826823-2ce4b35f-a6d8-4ec6-bec7-06b5176ea0a1

A space-saving, high-density modular data center and an energy-efficient cooling system for a modular data center are disclosed. In one embodiment, the context switching system includes a context switch requesting subsystem configured to: detect a device request from a thread executing within the multi-thread execution pipeline loop for access to a device having a fulfillment latency exceeding the pipeline latency, and generate a context switch request for the thread. The gases are directed to a first dust collector to remove the entrained particulates, after which a sorbent or chemical reagent is injected in the gases to interact with the contaminants and form a contaminant containing product that is entrained in the gases. For example, streaming audio data downloaded from the Internet may be configured via frequency modulation for radio frequency transmission to an RF receiver in proximity to the mobile communication device.

1459826823-7a3f17dc-1f80-4900-8460-4246e3f20df3

A computer implemented method searches for keywords within a document and displays a surrounding context. By reducing the frequency of the output signal, circuit blocks in the integrated circuit that operate at a lower frequency than the HIP block are able to capture the output signal. The seer lever pivots relative to the trigger housing.

1459826823-cade5f01-bd61-432d-9cc1-0133894bc05b

An airborne time domain electromagnetic survey system is provided. The SIM card includes a plurality of sets of subscription parameters from which to select and activate a single set of parameters. The home network issued IDP includes said RN. This invention has a wide variety of applications and is particularly useful for the solid phase combinatorial synthesis of polymers. An engaging edge projects from one side of a base of the resilient contact piece and is fit into a locking hole formed in a sidewall to position the base of the resilient contact piece and prevent it from being raised. The first resonator and the second resonator may be coupled to transfer electromagnetic energy from said first resonator to said second resonator as the second resonator moves freely within the near field region, and where the region may include distances greater than the characteristic size of the smaller of the first resonator and the second resonator.

1459826824-415e37be-7519-4a36-b042-7d08bb49e56e

A turbomachine includes a compressor portion having an intake and a filtration system having an interior and an exterior. The component also includes contact bumps on the die embedded in a circuit side polymer layer, and terminal contacts on the contact bumps in a dense area array. The simultaneous actuation of the first and second brake clutches takes place at least intermittently with the third brake clutch in a slipping state, controlling the speed of the torque converter relative to the engine. When one of the CPU module and the plurality of IO modules is removed from the processing device, the power supply senses that the insert line is no longer grounded, and removes power from the CPU module and the plurality of IO modules. Network e access decisions can be made based on ambient data already accessible to a host environment such that network access decisions can be made in a more automated manner.

1459826824-4c006610-7019-4984-9541-68ba0b9c3bad

Provided herein is a computer-based system for viewing a two-dimensional electronic drawing, including processes for pointing to similar components in different views, animation of views, hyperlinking components between views and virtual folding of an electronic drawing. The open regions expose areas of underlying substrate. The at least one service device function module transmits the messages to a user handheld device from the back-site device function module, and the at least one service device function module includes a WiFi device and a processing device function module. The sleeve and the shank together define a size conversion structure for the shackle. The fertilizer containing polymer is formed to continue to biodegrade over a period of several years during which time fertilizer substance will continue to be released. Payment systems, phone exchange systems, and other features may also be integrated to provide detailed conversion tracking to producers of targeted content and business owners.

1459826825-adb3b115-39d3-4530-8697-551a1a07b94b

A method that allows for uniform, simultaneous epitaxial growth of a semiconductor material on dissimilarly doped semiconductor surfaces that does not impart substrate thinning via a novel surface preparation scheme, as well as a structure that results from the implementation of this scheme into the process integration flow for integrated circuitry are provided. Each mobile terminal measures pilot signal strengths of transmissions from adjacent base stations. Still further alternative embodiments may comprise more than an initial effective dose administered to a patient's maxillary sinus, so that the therapeutic substance may be delivered over time, thereby requiring a larger dose be deposited within at

least one of the maxillary sinuses so that the maxillary sinus serve as a therapeutic substance depot for long-term release to the target structure. The central station transmitter wirelessly transmits control data information via each of the guard bands. If the verification process is completed successfully, the user may be logged into the website.

1459826825-bef6dbcc-2bb8-4762-97fd-c4570120ac1b

An exemplary implementation of an aircraft interior table includes a base unit which includes a storage compartment having laterally projecting ends. A related system, fitting, and adapter are also disclosed. , blending lithium hydride and/or lithium aluminum hydride with the carbon-coated powder; and heating the carbon-coated powder at a temperature between 200\xb0 C. The filter may be used for filtering the generated baseband frequency signal.

1459826826-43d2f101-ece0-4bc4-8a4a-7d006fb4e2cf

Data is recorded on a data recording medium as a code that can be optically read by using a manual scanning process. Both the processor and co-processors can connect asynchronously to the dual ported memory. Furthermore, a method of determining the presence and location of leaks in, or thefts from, the conduit by determining whether or not the magnitude of the intensity function satisfies pre-determined criteria is disclosed. The stress calculation unit includes as individual calculation units that calculate separately different types of mean stress, a contact surface pressure stress calculation unit, a thermal stress calculation unit, and a residual stress calculation unit, as well as a mean stress calculation unit that sums these mean stresses. The uprights of the small door and the uprights of the large door are shaped in such a manner as to engage in pairs one in another when said small door is in the closed position so as to present a maximum thickness taken perpendicularly to the door, that is less than the sum of the first and second thicknesses.

1459826826-4deafaf0-0b21-4c58-92a0-2cb81e77aad5

A submersible motor is provided for the drive of a submersible pump, with a rotor which is mounted in the motor housing via a thrust bearing. The acquisition unit is configured to acquire video streams. The information processing apparatus includes an information transmission control unit that divides processed image information so as to generate a plurality of division information to be then transmitted through the plurality of information transmission devices.

1459826826-a69278f2-c27b-433d-a2ea-c28d2772e9f1

A display switch unit is provided for a vehicle and a method for producing the display switch unit. The first pinhole layout is formed by four rows of pinholes, including first and second pinhole rows. The handle is manually shiftable between a locked state and an unlocked state to connect and disconnect the fuse from the circuit.

1459826826-c732ae01-46e8-4cc3-9250-438dc7aa31ca

A lost circulation material and method for well treatment employing the material that is effective at sealing or plugging small fissures and large fractures and has utility over a wide range of temperatures, including high temperatures. Also disclosed are compositions and methods involving novel p53 adenovirus constructs, including methods for restoring p53 function and tumor suppression in cells and animals having abnormal p53. The simulation including the formation of a droplet. Thereafter, appearance of at least one facial event in the selected portion of the image is captured. A routing device including a formatting module formatting an advertisement message having a dedicated preferred route to one of a first physical entity and a first logical entity of a first autonomous system, the dedicated preferred route being based on at least two routing attributes, and a transmitting module transmitting the advertisement message from the first AS to a second AS. Additionally, the method includes processing the silicon ingot material to free the

thickness of detachable material at a vicinity of the cleave region and causing formation of a free-standing thickness of material characterized by a carrier lifetime about 10 microseconds and a thickness ranging from about 20 microns to about 150 microns with a thickness variation of less than about five percent.

1459826827-53ada9fe-3223-49f0-b8f1-5fc4463bc74c

A method for communicating with a network is presented. The sole portion and the crown portion are configured such that a ratio of a rigidity of the sole portion to a rigidity of the crown portion is 1: 0. When an access right for a subordinate document component is changed, the change is automatically propagated to one or more superordinate document components, if permitted by the associated rules. In a mold consisting of three mold parts, the middle part may be rotatable in relation to the two outermost mold parts.

1459826827-ff858649-8769-4074-a530-20bd5726d4ad

A system, apparatus and methods are described that wirelessly communicate with its environment in response to stimuli generated locally within a communication device or within a remote activation device. In the transmitter, a control signal for controlling a function of the amplifier comprises an output signal from the compensation signal generator, and an input signal to the amplifier comprises an output from the mixer having been modulated to a desired frequency. In one embodiment, the wordline voltage signal is determined as a function of the metastability voltage of the SRAM cells and an adjusted most positive down level voltage that is a function of a predetermined voltage margin and a most positive down level voltage that corresponds to the read-disturb voltage of the SRAM cells. Charge exchange is driven by the electric field applied at the charged droplet sprayer sample solution outlet. At least one measuring apparatus is arranged on the frame between the running rollers.

1459826828-6904ada8-d7c7-452b-abe3-89d35891b4da

Provided herein is a pharmaceutical composition comprising an antagonist, an agonist, a seal coat, and a sequestering polymer, wherein the antagonist, agonist, seal coat and at least one sequestering polymer are all components of a single unit, and wherein the seal coat forms a layer physically separating the antagonist from the agonist from one another. The sensor may include an integrated circuit substrate for receiving a user's finger adjacent thereto, and a first set of biometric sensing pixels on the substrate for sensing a first finger biometric characteristic to generate first finger biometric characteristic data having a first matching selectivity. The first magnetic film and the second magnetic film are magnetically joined with each other at a joint as viewed backward from the first pole chip and the second pole chip. For example, the process could be a low voltage CMOS process.

1459826828-e55fb730-2b51-4c7a-b574-a1e7bea31429

Variable stretch composites having one or more first elastomeric members disposed on a first region of an extensible substrate, and one or more second elastomeric members disposed on a second region of the extensible substrate which different from the first elastomeric members to provide variable properties to said regions of the composite. The measuring center sends the obtained measured data to a design center using communication apparatus. Example embodiments reduce power-up time and minimize current surges in the supply by selectively charging and discharging capacitance to the circuit during power-up and power-down of the bias circuit. 7% to about 5% by weight based on the total weight of the uranium component of the triuranium disilicide.

1459826828-f41ef0d1-0a03-4c18-ab9e-f3b489f5a2e8

An optical element includes a dichroic surface formed by a multilayer dielectric film or the like and a polarized beam splitter surface formed by a multilayer dielectric film or the like. A memory cell of interest can be read using a

reference value based on a level of charge read from a neighboring memory cell. For example, each router comprises control logic that implements a security protocol dictated, at least in part, by contents of at least two separate external storage devices, each storage device separate from, but coupled to, one of the ports of said router. The handle portion has a length equal to or larger than half a length of the object along the passage opening when the handle portion is extended in a direction along the passage opening. In another embodiment, trenches are formed between every floating gate along a row, a sourcedrain diffusion extending along the bottom of the trench and upwards along one side with the opposite side of the trench being the select transistor channel for a cell. Information that causes insurance costs to vary may be highlighted.

1459826829-39bbe04d-0e49-49c9-b466-d24f6e482d3b

A method of screen printing positionally synchronizes a plurality of pallet assemblies on a first screen printing machine with a plurality of pallet assemblies on a second screen printing machine. In one embodiment, an optical switching system is provided. The recess is formed in the semiconductor layer adjacent to the first sidewall of the select gate. Based on the backup path, the server generates a list of files and/or directories to backup. Such wire meets SAE J1678 specifications at 125 C. Also described is an apparatus and method for activating and authenticating the communications device interchangeable device combinations, thereby providing device compatibility and security.

1459826829-60a0f878-66d3-4c59-beed-8a883c809be7

A structure for implementation of back-illuminated CMOS or CCD imagers. First, a set of administrative function steps to be performed are identified. The image processing of the image by the second image pickup unit is an image matching with a template image. The trench structure may include a textured surface for increased solar radiation collection. The coin is preferably provided with a decorative design and the LEDs are preferably arranged within or around the design so as to draw attention thereto during flashing action. The operation time for the synchronized ripping operation is reduced accordingly.

1459826829-8c0f8dc4-86c0-491b-8108-579c519a0184

Methods and apparatus are provided to measure isotopic characteristics of a number of sample types. The connector includes an elongated housing, a plurality of terminals retained in the elongated housing, and at least one lock mechanism for locking the daughter card. This makes mounting the electrical leads on the instrument panel particularly easy.

1459826829-f8e9119e-7080-49e8-8618-f9c47573f195

A method and apparatus provide for rapid power control based on a quality related value, e. An opening extends in a continuous manner upward into the back portion, and downward into the seat portion. At least part of instructions for monitoring and detecting the one or more trigger events is provided to an asset used to implement the application.

1459826830-3087938c-27cd-4048-a0fc-8a7f65a9bb7d

A switched-mode power amplifier is configured for performing power amplification of a plurality of signals input thereto and integrally summing those signals. If the permission grant is delayed, however, the delivery of the mobile subscriber's information can be provided at a later time to the requesting party if the mobile subscriber subsequently grants permission. The axle transmitter assembly is mounted on the vehicle frame such that the actuator lever arm rests on the axle. The method also includes identifying a slave processing element associated with the portion of the three-dimensional image. The preferred polymeric compositions are produced through the copolymerization of one or more aromatic-substituted polysiloxane prepolymers with one or more aromatic monomers, alkylated monomers or hydrophilic monomers.

1459826830-973c3e62-dde4-44eb-946f-ff632c5c3333

A method and system for decoding symbols of variable length in a digital video bit stream in real time, using Very Long Instruction Word architecture. A first table comprising one or more rows is processed through a hardware accelerator. Then longitudinally copying and laterally copying block data is longitudinally and laterally copied after entering the size and basic shape type of the work.

1459826830-a0dc968f-78e8-416e-ba89-a9b9a6b58867

Described herein is a data collection and warehousing system that collects log files from a plurality of servers, and that transforms the entries of the log files prior to using them to populate a database. More particularly, a program is described having a capability of displaying a single character at a time, more than one character at a time or all of otherwise disguised characters of a password in an undisguised form in response to a successful pre-password check. The digital identity is provided to a first party, where the digital identity includes a self-asserted claim. A first barrier layer is conformably formed on the titanium layer in the opening. The strength of such amorphous polymers is enhanced by annealing to increase crystallinity without substantially increasing the biodegradation time. Hyperpolarized xenon-129 is introduced into two compartments between which xenon-129 can be exchanged, for example, into the blood vessels of mammal organs and the tissue of said organ or into compartments within inorganic objects.

1459826830-dbb5ae4a-9b5b-4bba-93bd-433c24b2061c

The invention concerns a method and system for generating a dummy bidirectional predictive picture which can be repeated during display with substantially no vibration in which the dummy bidirectional predictive picture contains at least two fields. The sensor assembly includes a sensor tube located in the tank and a gauging rod assembly positioned in the sensor tube. In one embodiment of the present invention, various criteria are used such as mechanical energy, metabolic energy and/or a stability equilibrium factor. The MOSFET fabrication methodology and device structure further results in a device having a lower gate conductor width less than the minimum lithographic minimum image, and a wider upper gate conductor portion width which may be greater than the minimum lithographic image.

1459826831-29100e2f-0881-42cb-96ee-9c361c9b6c6a

A ball screw which is little subject to deterioration of operating characteristics and occurrence of wear, torque change, noise, vibration, etc. The method includes providing a default preloading scheme. Left and right upper rails extend longitudinally above the front wheels and outboard of the left and right frame rails and are connected respectively to the left and right frame rails by left and right braces. A collar is provided on the tube adjacent the distal end of the syringe barrel. Accidental removal of the shield is thus prevented.

1459826831-5d801789-ba56-466b-a62b-837aa5ac7fba

Cement compositions comprising carboxylated inulin and methods of using the same to cement a workspace. The device is provided on a front end of a metal cylinder thereof having therein an LED assembly and a battery assembly with a socket to receive the LED. An interface displays a generated alarm to an operator and receives a dynamic rating value from the operator related to the generated alarm. The displacement device has an actuator which directly or indirectly moves the first drum about the center axis. The portable meter user can thus set the tester to match the commercial tester which will be testing his grain and can also perform calibration offset adjustments to further conform measurements between his meter and the particular commercial tester actually used, relative to the default moisture curves for each commercial tester, and each type of grain.

1459826831-db997b2e-c763-4fad-be42-11163084818f

Embodiments of the invention relate to an invention for accessing a remotely

located mobile device of a user based on certain events. A drive transistor has a gate for receiving the charge in the photo diode to output as an electrical signal, and a drain to which a power voltage is applied. A coupling element is coupled to the light source at one of its end to receive the light beam therefrom. The third layer comprises a non-polar thermoplastic such as high density polyethylene, low density polyethylene, linear low density polyethylene, or a blend thereof. As such, tissue products can pickup bacteria from a surface and substantially hold the bacteria in the sheet to help prevent spreading bacteria to other surfaces.

1459826832-4573643c-3872-42f7-8a78-0a066c293557

A friction clutch includes a clutch boss and a pressure member that change in a relative position in a rotation direction. The method involves the steps of first obtaining a material having a via. Thereby, it is achieved that the lower space can be brought to contain different amounts of granules.

1459826832-55fbe899-d7ff-4c4d-b40b-84123657b70e

A vehicle seat, particularly a commercial-vehicle seat is provided with a scissor-type stand which is able to vibrate and which is provided with a top frame, two first rocker arms and two second rocker arms, which intersect in pairs at a scissor axis extending in a transverse seat direction. The length of the channel can be minimized by exposing light through the apertures in an exposure mask when forming the channel. The present invention also provides a novel intermediate useful in producing the compound of the present invention. The multiplication operation is determined by a condition under which the element in the finite field is placed in an algebraic torus. A first power supply connection circuit selectively electrically connects a power supply line having a first potential to the second bit line. At least one capacity unit can be allocated to a given base station group which comprises at least two base transceiver stations.

1459826832-b1536cf9-c1a7-41d9-824e-aab7305f8d37

A method of caching contextually variant objects in a common cache. A domain configuration manager is described which interactively receives domain configuration information corresponding to a data structure element, reads a reflection of the program and produces a data domain according to domain configuration information. If desired, DC power output can be accommodated as zero power-frequency operation. The dispensing head and the tilt-type valve may be configured such that actuation of the tilt-type valve may be achieved only by applying a force on the tilt-type valve in a direction lateral to the tilt-type valve.

1459826832-c5814c71-b63e-435d-a4de-9168e3faabe1

Methods and apparatus for correcting defects, such as rounded corners and line end shortening, in patterns formed via lithography are provided. The method requires the use of gate electrode materials having lower electron affinities than the channel, source and drain regions. In accordance with the invention either the displacement member or the cam element or the control member may be driven, whereas depending on which component is driven the cam element or the displacement member is mounted so as to be freely adjustable, and the remaining third component is accommodated integral with the housing. A second receiver chip includes a second tuner, and a second demodulator directly connected to the second tuner. The method includes receiving a message from a calling party to a receiving party and performing a lookup of information relating to the calling party in a database, wherein the lookup is based on an identifier associated with the message. Thereafter, an alert is sent to the alert party if the calling party information is unavailable in a contact list of the receiving party.

1459826832-d6c03edc-64a3-476c-85b2-29a5bb250564

Optical infinite impulse response filters are efficient polarization mode dispersion compensators, requiring fewer stages than finite impulse response

filters. The method further includes performing a cleavage ion implantation step on one of the pair of wafers by ion implanting a second species to define a cleavage plane across a diameter of the wafer at the predetermined depth below the top surface of the one wafer. The snoop queue circuitry has a snoop request queue for storing a plurality of entries.

1459826833-2568e7f8-213a-4b44-a75d-37be8921aa53

A nonvolatile ferroelectric memory device is provided so as to control readwrite operations of a nonvolatile memory cell using a channel resistance of the memory cell which is differentiated by polarity states of a ferroelectric material. A sail assembly is affixed to the main mast with a rotational joint wherein the sail assembly is rotatable about a vertical axis of the main mast in a first direction and is also rotatable about a horizontal axis substantially at right angles with respect to the main mast in a second direction. The time of signal integration is different for each detector, allowing one detector to have a higher sensitivity by integrating over a longer time period while the second detector using shorter integration periods is able to measure kinetic events. The gate insulation layer is disposed on the source electrode, the first channel layers and the drain electrode. If the device is not recognized, the command is forwarded to another zone within a set of zones until either the device is found or no such device is located. The chipping of the wafer can be prevented, and in coating the wafer with a photoresist, forming an epiaxially grown layer on the wafer, etc.

1459826833-a4a9945e-9336-4e0a-8227-18c36c058cc7

A method and apparatus for anodizing a component. An infrared wave-collecting device is disposed at the front end in the main body. An assembly includes a first component configured to be attached to a first member of the anatomical joint; a second component configured to be attached to a second member of the anatomical joint; and a joint joining the first and second components. Alternatively, the surfactant can also be applied to the photo-resist layer after it has been developed into a photo-resist pattern. A registration control unit performs control to assign the car stop call, including a second and later responses to the registration floor of the car stop call, based on a determination result of the boarding possibility. Upon the occurrence of an abrupt torque change on at least one monitored element, the monitoring device generates an output signal associated with a web break.

1459826833-e37b20ef-2c32-4d19-a66c-9dc97bb571ad

If the temperature  $T_1$  of the middle part of a heat roller 2 is higher than the temperature  $T_2$  of the end parts of the heat roller 2  $T_1 \setminus u2267$ , the operating time B of side coils 5 and 6 is set longer than the operating time A of a center coil. Various subsequent manipulations can be performed to obtain either antibodies per se or analogs thereof. The phase change cell is formed of material having at least two solid phases, and the lateral extent of the upper and lower phase change members is substantially greater than that of the kernel member. This configuration eliminates margins provided by software at ends of the movement range of the focusing ring 5. The inner facial features can include a pair of eyes, a nose and a mouth.

1459826834-2b4e779a-1952-411e-bce6-96f702c939d0

Propellant modules for Micro Pulsed Plasma Thrusters, and techniques for bundling propellant modules and for using a two-stage discharge process to increase MicroPPT propellant throughput, and decrease the output voltage required from the power-processing unit are provided. The vehicular and marine fire suppression system including a first canister, a second canister and an actuation mechanism. Control logic monitors activity by the processor to alert the co-processors of communications by the processor written to the memory and otherwise allows the processor and co-processors to think they are interfacing directly with one another. A central cut out is provided in the platform into which a stainpaint

applicator is mounted in a floating arrangement within the cut out and biased downwardly as to dispense paintstain onto the opposing board edges in the joints.

1459826834-462c3372-cc73-405c-8056-67d2fcc21925

A method for positioning a wireless terminal, and a related device and system are provided. Pharmaceutical compositions comprising the compounds are also provided, as are methods of using the compounds in a variety of therapeutic applications, including the treatment of a cognitive disorder, psychotic disorder, neurotransmitter-mediated disorder and/or a neuronal disorder. The cementitious systems are infrared reflective and may be toppings mixed with water for application to existing concrete surfaces, or dry-shake hardeners for application to freshly-placed plastic concrete. Using this method it is not necessary to infer the actual \u201cfilter load\u201d per-se or, the actual particle mass trapped in the filter.

1459826834-b9a6bde8-8475-42a1-a687-308bc88c12f2

A Zener diode and at least one transistor are connected in series in a reverse direction between a drain of a field effect transistor and a gate thereof. A plurality of multi-purpose input/output blocks is configured to provide analog-to-digital conversion and other IO functionality. The retardation of the retardation film has smaller temperature dependency than the retardation of the liquid crystal layer. The method includes storing contents of a current entry in a frame list in a next pointer in the queue head. The head band has a free end that is adjustably insertable into the channel of the brim to select a size of the head band for the head of the wearer.

1459826835-60ee7742-d9c2-4bde-b561-cdcb3b42995e

The present invention relates to an apparatus packaging components of an optical reading device which may include illumination optical elements, receive optical elements, and signal processing elements. The identification system identifies one or more characteristic relating to the organic photo conducting drum. 5-fold relative to that of a layer which does not comprise said air interface control agent. The labeler/printer can be easily loaded with label and webs of different widths. of from about 2 mm<sup>2</sup>s to about 50 mm<sup>2</sup>s, containing 90 wt % or more saturates, having less than about 5 ppm sulfur, and wherein the base oil is derived from a waxy feed; said composition being free of a tallow diamine/propane dioleate; and containing a minor amount of a polyester of an aliphatic carboxylic acid having 12 to 24 carbon atoms and an oil soluble or oil dispersible molybdenum compound. The medical apparatus includes a contractible snare and a plurality of axially moveable snare pushing arms.

1459826835-723b3ae1-fd0c-4c35-b041-67975d0ca563

An on-vehicle antenna system which offers a superior receiving performance, by suppressing reception of reflected/scattered waves coming from inside of the vehicle's cabin; these reflected/scattered waves being an adverse factor which deteriorates signal receiving performance of an antenna. % of an oligomeric esteramine or oligomeric esterquat, obtainable by reaction of an alkanol amine with a polycarboxylic acid and with a fatty alcohol and optionally a fatty acid, optionally followed by quaternization. The ink receiving layer includes a non-film forming polymer, a binder chosen from any of water dispersible binders or water soluble binders, and a pigment. A novel ULK dual damascene structure is disclosed with densified interfaces and no hard-masks. The cam profile is shaped to adjust the position of the beam relative to the pedal arm as the pedal arm swings relative to the vehicle.

1459826835-9d78b5cb-b2fc-4137-a936-2bdc34cba797

A vertical semiconductor device having a vertical channel region is disclosed. The device has a moveable member which may be a shaft, a sensor for measuring force applied to the shaft; and a resistance means to vary the resistance to movement of

the moveable member such as an electric brake. Consequently, after completion of metering process and before injection process, the screw is moved forward after the screw has been rotated in reverse a predetermined amount to prevent resin backflow. Moreover, computation of the keep-alive value is performed only once for a given NAT device rather than being an on-going process for that NAT device. The invention also provides a process in which a reactant is converted to a product by passing through a reaction chamber containing the catalyst. This invention further relates to the use of the compounds of this invention for mediating the bone modeling and remodeling processes of the osteoblasts and osteoclasts.

1459826835-d01721eb-187b-4c6c-b220-d432456fe59a

A semiconductor package and its production method in which the semiconductor package is produced by having via holes for electrically connecting top and bottom surface of a double-sided copper clad substrate and cutting the substrate at a line separating the via holes into half. A plurality of permanent magnet elements are associated with the drive module and each are switchable between a non-shunted state when adjacent the hull and a shunted state when not adjacent the hull. An integrated circuit buffer device enables configurable effective memory organization of the plurality of integrated circuit memory devices.

1459826836-3ec991c0-9a4c-4bd7-ba5c-84bc19ebc3d9

Systems and methods of fabricating a U-shaped memory device with a recessed channel and a segmentedseparated ONO layer are provided. The heads can be tailored to different performance criteria depending on the needs of the measurement operation that is to take place. Furthermore, these materials exhibit selectivity relative to other gases such as nitrogen, methane, and oxygen.

1459826836-74e8e91b-adc5-4532-ad5d-5c4adb42504d

An architecture for customizing the amount of web page banner advertising content presented to a user. The index nodes contain index data which is sorted in the indexing tree according to one or several given criteria. The invention further relates to a computer system, a user terminal and a program storage device readable by a processing apparatus. , will indicate a non-zero flow during a period of zero flow.

1459826836-8e8b7c90-2b66-460e-9cfa-e735b46012c0

A electrosurgical electrode specifically adapted for use in a surgical procedure for removing lymphoid tissue, specifically a tonsillectomy or adenoidectomy procedure. The optical sight has a shrouded array of fiber optics sight pins which are removable from the sight housing with their support as a single unit. The location of fiducial marks using the method of the invention is about 1 micron or less. Hole-doped Li<sub>1-x</sub>BC can then be produced, such as through vacuum de-intercalation from the LiBC. A tab portion may be integral with the plate and the tab portion engaged the nut.

1459826836-bc51ce50-8968-46be-94a9-cedae7afe7d2

A new distinct cultivar of *Sanvitalia speciosa* plant named \u2018DANVITAL4\u2019, characterized by its mounding and trailing plant habit; compact growth habit with good branching; about 200 inflorescences per plant, consisting of ray florets that are primarily yellow in color and disc florets that are primarily green in color; and medium tolerance to heat. The indexing tool turret assembly includes a tool turret assembly rotatably supported on the machine tool, an indexing assembly for selectively rotating the tool turret assembly to a desired location. When the structure is scanned, the targets are identified and can then be used in other operations, such as registration. The first cradle is mountable to the turret structure.

1459826837-348cf4c7-e173-48ad-a2ee-a9c1f3b42c4b

Performance sound is produced with a muffler that includes a casing with front,

rear and side walls, first and second compartment walls each with a central passage and side circular passages. The composition contains a functionalized dimethicone, nonionic surfactants, emulsifiers, a silicone fluid, an oxidized wax, an alkamidoalkyl dialkylamine, and water. Following bonding and handle folding, a cutter, such as a die cutter, is employed to cut through the layers to form individual pads. Preferred cytochrome P450 variants include those having an improved capability to hydroxylate alkanes and epoxidate alkenes comprising less than 8 carbons, and have amino acid substitutions corresponding to V78A, H236Q, and E252G of cytochrome P450 BM-3. A number of electrically conducting paths are formed on the surface of the material. Apertures located on the front side of the impeller may be formed in any suitable place, such as a hub of the impeller or an airfoil surface, to set forth just two non-limiting examples.

1459826837-50443a91-93c2-4a7e-b54e-4f4fb4766cb8

The invention relates to a method for bonding two substrates, in particular, two semiconductor substrates that, in order to be able to improve the reliability of the process, provides the step of providing a gaseous flow over the bonding surfaces of the substrates. The invention also provides methods of using the copper thick film paste composition to make a copper conductor on a substrate. In response to the reading of the stored file, at least part of the at least a portion of the stored file that has been read may be deleted. A switchgear transmits a driving force to the developer or blocks the driving force from being transmitted to the developer according to whether the cover opens or closes the body. The prism plate is laid on the light guide plate with the second protrusion and the edge of the prism plate abutting the first protrusion.

1459826837-70f8ebf4-7a2a-42ed-9e99-e80a322d1473

A control apparatus and method for a vehicle that has at least one detector that detects a running state of the vehicle, and a controller that receives a result of detection by the detector and controls a predetermined vehicle-installed apparatus. In particular, the substance may have excellent solubility and can be easily formed into a thin film. The communication system synchronizes the receiver by employing the signal stream. Thereafter, a comparison between values for the points in time may be used to correlate the two conditions during query processing.

1459826837-fbb36ae7-74b8-47b6-a7d8-4a4f089f5aeb

A server proxy, which is arranged between a distribution server and a router, adds quality information to a packet from the distribution server to output a packet. In some examples, multiplicative coefficients are represented digitally, and are transformed to configure the reconfigurable circuitry to achieve a linear relationship between a desired coefficient and a degree of charge transfer. The isolation resistance is a function of the coolant conductivity. The systems and methods may be incorporated into collaborative online video editing environments. In consequence, a user viewing the display with the active glasses can view the private data while unauthorized viewers without the active glasses can view only the private data obscured by the obscuring lights.

1459826838-53a0482b-1f0b-4b6f-864f-e281ce2c47b6

The invention relates to a method for preparing a product having a low content of microorganisms by using steam. Some embodiments of the invention allow an agent of a server to detect human interaction events on a client system. The metal seat is configured to be installed on a first electronic device.

1459826838-7029b318-8453-4bfd-a25a-eb6b90ad3a8f

A portable device has a rear facing camera assembly and a front facing display assembly that includes at least a protective cover layer, a display stack that includes a plurality of display components arranged in a plurality of interconnected layers, the display stack providing an imaging service, and a flat support chassis arranged to provide support for the display stack. The method

further includes generating with said client abstraction layer a request for information from said management layer database, wherein said database comprises information describing each managed object of said object-oriented model. Also provided is the distillation apparatus including a flow rate control means in the line for directing the bottom liquid of the high-pressure part to the low-pressure part. A drive assembly is disposed within the housing which moves the jaw members.

1459826838-be6ef99c-f07a-4499-aa57-5f089b4ae68b

A magnetic tape apparatus prevents dirt from being deposited on a magnetic tape even when the tape is repeatedly moved in a short interval. An integrated circuit is attached to a target, such as an optical disc or electronic device. A heat-dissipation sheet is set at the bottom of the substrate.

1459826839-2e271dfb-468e-493b-967e-cff644e6c178

An organic light-emitting display and methods of manufacturing the same are disclosed. Conductive traces are formed on the printed circuit board to define a contact area. The battery pack 31 has an output section 34 that is provided in orthogonal to a virtual plane including a mount reference plane for the electronic equipment of the case 32, with a space between the virtual plane and the output section 34. A port is formed through the bulkhead fitting by cutting a hole through the valve assembly. A node is able to detect a switching event and the output power levels of signals leaving the node are maintained at a predetermined level. The frequency modulation and/or amplitude modulation may include continuously variable modulations and/or substantially instantaneous transitions between a first frequency and a second frequency and/or a first amplitude and a second amplitude.

1459826839-34cddcf6-de5a-467c-b86a-d70e30f44d95

A method for coating a metallic substrate includes applying a powder coating composition to a majority of a surface of the metallic substrate, and applying an autodepositable coating composition to less than the majority of the surface of the metallic substrate. Such information can be used for various purposes, including identifying an image as originating from a particular source. and the exhaust pipe is heated at 100°C. A user may obtain an objective measurement of oral cavity soft tissue health by determining an objective measurement of the component color values of a gingival tissue image region and performing statistical analysis on the color values.

1459826839-ab31cd10-c517-4cc7-aa09-f5509f035e66

A computer system for managing security information for an organization includes a scanner execution module configured to automatically execute at least two scanners in a predetermined interval to analyze potential vulnerabilities of a computer environment. A cavity is provided at one end of the body and an arc discharge tube that provides a substantially spherical light source is positioned in the cavity and disposed on the longitudinal axis. A method for packaging, in sequence, a first beverage comprising particulates in a liquid and a second beverage comprising a carbonated beverage.

1459826839-de44f549-1902-4cfe-b8a3-9cd44b298625

A laser processing method is provided, which, even when a substrate formed with a laminate part including a plurality of functional devices is thick, can cut the substrate and laminate part with a high precision. The sensor has, for example, a substrate, a recessed channel formed in the substrate, and conductive material disposed in the recessed channel to form a working electrode. A first AC power converter provides DC power to a common DC bus of the power supply. The fastening screw is thereby temporarily attached to the installation and removal tool during installation and removal of the fastening screw. Therefore, it is possible to improve the uniformity of the temperature of the wafer 28 which is to be heated by the heater plate 16.

1459826839-e7cbd6d8-ad1f-4fac-89cb-0ac8f7e0a0c7

Example embodiments relate to providing pixel-based visualizations of time series data using nested helices. The second antenna group includes individually-controllable, longitudinal second antenna elements. In the formula,  $n$  is 1 or 2;  $R_1$  and  $R_2$  are H, a halogen atom, cyano group, optionally substituted alkyl group, optionally substituted aryl group or the like;  $R_3$  is H, a halogen atom, optionally substituted alkyl group or the like;  $R_4$  and  $R_5$  are H, a halogen atom, OH or the like; and  $R_6$  and  $R_X$  are H or OH;  $R_Y$  is F or OH. The invention also relates to soybean cultivars or breeding cultivars, and plant parts derived from soybean cultivar UA 5213C.

1459826840-b57c79cb-f3b5-4e0a-83bb-b835d4d14714

A form assembly for forming a concrete structure during drying of the concrete. The received composite signal is demultiplexed into the sub-signals by automatically detecting the boundary indicators between the sub-signals in the composite signal. The mapping is generated in two phases. These systems may be useful in any suitable imaging context, including navigation, targeting, search and rescue, law enforcement, and/or surveillance, among others.

1459826840-e41fd1a4-22e7-4aac-8bca-4eed90e6f15d

Methods for fabricating sublithographic, nanoscale microchannels utilizing an aqueous emulsion of an amphiphilic agent and a water-soluble, hydrogel-forming polymer, and films and devices formed from these methods are provided. The system includes an IV pump having pump operation circuitry for monitoring preselected characteristics of pump operation indicative of IV administration of medication to a patient. When the camera module is in a photographing state, the magnetism generating part is arranged at a position distant from the magnetism detecting element by at least the distance of  $D$  mm or more, where  $D = \frac{\text{magnetic force}}{\text{the magnetism generating part gauss}}$ .

1459826841-3f8b746a-1965-45a9-9b8e-2e9c2e0b3bc6

A gas sensor and nitrogen oxide sensor, which, when fitted to the exhaust system of an internal combustion engine, can suppress the influence of harmful substances contained in a measurement gas and can prevent the reduction in sensitivity over time. Each sample includes one or more lubricating oil additives, or a combination of one or more lubricant base oils and one or more lubricating oil additives. Specialized clamps provide adjustable and releasable securing of the flag to the sleeve. The ends of the wire are also coupled to the anode and cathode of the fuel cell. Similarly, by repeating movement of and exposure with the exposure unit, the entire surface of the powdered body is exposed. The hair coloring applicator may simultaneously apply one or more colors of hair coloring material to strands of hair.

1459826841-9850f983-8872-4203-b8ad-943a516a1405

A dye sensitized solar cell having a structured electrode. The portable electronic device may include a first and a second image capturing unit. On the ground glass, a parting frame appropriate to a design illumination region is formed. Thus, a driven member having the vane rotor can be made smaller. The radar apparatus further uses a complex amplitude monopulse ratio and a weighted target angle histogram to distinguish between closely separated targets that would otherwise be viewed as a single target by conventional monopulse radar apparatuses. In this manner, the corresponding tapers of the first and second orthopedic components may be seated.

1459826842-0ea55a04-e519-4c0e-835d-9d968005b692

A surgical instrument particular suited to endoscopic use is disclosed. Also provided herein are vectors and host cells comprising those nucleic acid sequences, chimeric polypeptide molecules comprising the polypeptides of the present invention

fused to heterologous polypeptide sequences, antibodies which bind to the polypeptides of the present invention and to methods for producing the polypeptides of the present invention. Additionally, it is possible to firmly clamp the flange end to upstanding frame parts of the fixture with fastening elements, thereby providing a stable connection between a console of the fixture and the upstanding frame parts. Accordingly, the sound emitted by the sound and heartbeat playback system may aid in calming infants when they are agitated and/or tired. Methods of treating a disorder or symptom of a disorder related to aberrant ABC transporter activity are also provided. The laser is activated when the golf ball mechanism is in the fallen position, and deactivated when the golf ball mechanism is upright and ready for a golfer to strike.

1459826842-4990c462-c8dd-4c5a-9281-edaf2ec9d45e

A system and method for determining an adequate sample size for statistics collection is disclosed. The ultra-low loss waveguide element may be adapted to fabricate a number of devices, including a wedge resonator and a ultra-low loss optical delay line having an extended waveguide length. The group of spherical bodies C comprises a first group of spherical bodies C1.

1459826843-22947e33-778e-458e-8af5-6a2429ae09a9

An input image signal is coded by an encoder to be outputted as a basic code string, and the basic code string is delayed by a code-string delay circuit for a predetermined period of time to be outputted as an additional code string. Information packets are encapsulated and decapsulated along the route as the information packet is forwarded among the various networks on its path to the destination address; either the mobile node on a foreign network or a correspondence node on a virtual private network. The services manager may maintain a list of authorized users. A method of mixing process gas in a chemical processing region of a chemical processing system is provided in which a first process gas and a second process gas are injected into the chemical processing region and mixed. The time delay generator exhibits reduced phase noise and a linear time delay response.

1459826843-86b1de20-2046-489c-a402-5d8490d4e17c

The present invention relates to the analysis of cytological material. The transfer of data from an old database to a new database is structured as a set of small transactions. A second spring for urging the cap body forward is received in the inner tube. A charging circuit is operative to generate an electrostatic charge so that the brake dust is attracted to the charged collector plate. 6 to about 500 milligrams, more preferably from about 35 to about 100 milligrams, of one or more methylxanthine alkaloids per 1 gram of the chocolate product.

1459826843-a14e444a-4116-4836-8b9a-98a0d2449128

According to an aspect, a mobile electronic device includes a touch panel and a control unit. The method and the apparatus make it feasible to produce commercially titanium metal suitable for a variety of applications from titanium oxide. An alley is provided outside the boxes for the female hogs to defecate, urinate, and move to feed and water stations outside the boxes.

1459826843-a4cdb22b-2e57-41da-8e67-5324043c54fc

A method and apparatus for color plane interpolation are provided which interpolates the color values of pixels differently depending on an edge direction and whether a pixel is at an edge within an image. The non-redundant elements are ignored or removed from the critical area analysis performed for undesired opens. The bitmap can include an array or grid of characters wherein each row has a unique orientation, for example, ranging from zero to ninety degrees. By delivering commands to the central processing unit, the application specific integrated circuit can be caused to transition between playback states to provide desired playback of said digital video and audio.

1459826843-cbbbfd05-3fa3-4cc6-a26f-c784c40834ea

A method and apparatus for receiving control information in a digital broadcasting communication system. The video of the external world and the image-processed image of the display area A can be viewed simultaneously by an observer on the display section 10. Part of the display can be statically mounted on the display window, in particular, printed thereon. Due to the Doppler Effect, a unique lower frequency is generated.

1459826843-f68f731c-8a32-472f-a138-0594209e0bcd

A search facility is used to predict the impact of change on events detected in application logic, where the change may involve a computing resource used by or referenced by the application logic and/or by event detection logic. Several user profiles are provided from which a user may be associated. The task network represents the relationships between the tasks of the first process. The second upright portion is biased towards and yieldingly interlocks with the channel. The invention thereby provides a timing generation circuit which can contribute to miniaturization and reduction of the cost of the set and a display apparatus of the active matrix type in which the timing generation circuit is incorporated.

1459826844-c686e649-df52-4cb5-863f-940c89584c65

The present invention provides a plastic container containing albumin solution and a packaged plastic container containing an albumin solution. The host may be a portable device that includes a memory, a memory controller, and a communication interface for communication with the external host. The other program or station specific text is separated from the associated text string, decoded, processed and stored in function specific memories. The activity and inactivity of each of the EEPROM circuits may also be controlled by a logical combination of a master chip enable signal and a chip enable signal of each of the individual EEPROM circuits.

1459826844-f15d6d85-b8e8-4edf-85e0-a289aae8d85f

A joint synchronizer and decoder that implements two decision aided processes, which are referred to as \u201cdecision aided candidate selection\u201d and \u201cdecision aided synchronization and decoding. The number of parts used are reduced and the removal and installation of the swing arm is facilitated. The botanical article may include flower petals, leaves, skeleton leaves, plant skins, and combinations thereof. A single-ended, context-independent code is realized by assigning limited-weight codes using a frequency-based mapping technique.

1459826845-2d863fd0-5515-47ce-8372-67b44b09d10f

An embodiment of the invention provides a method for processing a secure electronic transaction over a network from a sender to a receiver, which includes the process of generating a first unique representation of information included in the transaction, encrypting the information with a first encryption layer, and forming an encryption packet which includes the first encryption layer. 1 to about 10% by weight of an alkyl polyglycoside of formula I:. An image sensor may implement an in-pixel charge summing readout mode in which charges from pairs of pixels are summed onto a common node and then read out from the common node. For example, the phosphorescent dopant compound may be comprised of platinum octaethylporphine, which is a compound having the chemical structure with the formula:. As a result, a highly decorative sequin sewn member in which a plurality of sequins are overlapped can be produced with ease.

1459826845-62631368-f1c2-4ada-a2ba-c1c70db756e8

A condenser for a power module combines a plurality of aluminum materials to form a casing equipped with a channel for coolant therein, thus making it possible to keep material costs low. In a passage of methane gas prior to combustion, there is positioned absorbent material produced by mixing at least carbon with tourmaline as an absorption material of absorptivity higher than that of the material of the

methane gas passage. The ODN is an active or passive network.

1459826845-7130024d-a397-4852-bce5-bac1b761cbf8

One or more preambles are inserted into frames of Orthogonal Frequency Multiplexing-Multiple Input, Multiple Output signals. A via cavity is formed in the first dielectric layer, which exposes the first conductive layer. The switching device has a first terminal coupled with the output node of the control circuit.

1459826845-e9fb7f34-8937-404f-98b2-5cfb81d76586

In a first embodiment of the present invention, in order to increase the number of holes injected into the emissive layer, an intermixed layer is formed from the intermixing of the hole transport layer and the emissive layer. This new variety has rose-pink colored flowers and dark green foliage. Sealing is achieved through a dielectric sealing element, such as a spring-loaded polytetrafluoroethylene ring. The remote control includes a receiver for receiving the locate signal. The exhaust gas purifying catalyst includes: noble metal particles ; and supports, each support supporting the noble metal particles, wherein at least a certain amount of the noble metal particles is provided on an outermost surface of the support, or provided within a range of 10% inside of a diameter of the support from the outermost surface in a direction toward a center of the support.

1459826846-09491696-3f0f-4a5f-b748-275d84bcffff

A deliverable four dimensional intensity modulated radiation therapy planning method is disclosed, for delivery using a linear accelerator with a dynamic multi-leaf collimator. One device includes a plurality of spaced-apart buried fin contact structures positioned within a recess in a raised isolation structure on opposite sides of a gate structure. for a period between 10 minutes to 36 hours. At least one of the clubs of the set includes a sandwich-type construction for the hitting face having a dampening element disposed between a hitting face insert and a lightweight reinforcing core. Further, the notification includes an identification information of the application and an identification information of the user action provided by the application.

1459826846-3a531220-418c-4c79-8a58-dee36d57cd22

Drilling systems and methods for enlarging a borehole that include an expandable reamer and an expandable stabilizer axially coupled above the expandable reamer are disclosed. A light-emitting device emits an optical signal. The device control comprises a programmed controller for operating the load control device responsive to control commands and a communication circuit for receiving control commands. The response allows the user to be validated against a stored record of the pass code allocated to the user. These compounds may be used to scavenge mercaptans, sulfides, cyanides, and primary or secondary amines; either alone or in combination. One example of a suitable ester compound is acetyl triethyl citrate.

1459826846-6675a660-2411-42af-9331-6c1cffffbb585

A petunia cultivar particularly distinguished by purple colored flowers, compact habit and good basal branching. The method includes measuring a smoothed periodicity of an audio signal segment, such as an audio frame, wherein the smoothed periodicity is measured by low-pass filtering an instantaneous periodicity of the audio signal segment. Methods for producing a maize plant that comprises crossing hybrid maize variety X08D395 with another maize plant.

1459826846-a526715e-c13e-4378-82e6-bd852f6fc871

A chemical mechanical polishing apparatus includes a polishing pad. The composition cures at room temperature or lower temperature while it is fully adhesive to metal and plastic substrates. The process then selects a set of conductive paths in the radio frequency identification tag corresponding to the desired operative range.

1459826847-1dfe910e-46ae-460d-9941-e9587c8dcb1c

A rotational speed-reduction device is disclosed. A subnet manager can determine whether there is a path record change when a fault occurs in the middleware machine environment. Each opening is dimensioned to receive one or more cables entering and/or exiting the housing. A swivel ball is disposed within the concave ball-retaining member, and a rigid Catch retainer arm is affixed to the swivel ball at one end. Ink-aware applications may call on methods of the electronic ink object to adjust formatting, search recognized ink along with text, and perform other functions.

1459826847-a348e6fb-dd8a-4074-a88c-ef6e2002c003

The present invention relates to a universal line usage information reporting system. In one aspect, the apparatus uses a liquid crystal dispensing unit to dispense liquid crystal. The second electrode is disposed between the first electrode and the one of the substrates, the second electrode is overlapped with the first electrode in the pixel region, is overlapped with the gate signal line, and is connected with the second electrode of an adjacent pixel region.

1459826848-b2d3555e-bd26-49f4-a3c4-26dfb6d04535

A data structure, database management system, and methods of validating data are disclosed. In one embodiment, a containment ring and a heat resistance ring are shrink interference fit on the inside diameter of the fan case, the containment ring where the large fan blades turn, and the heat resistance ring where heated air from backfiring heats up the fan case. The containers enable the user to organize and easily access the personal items being carried. The method includes receiving at least a packet header of a packet at a first node and based on the packet header, determining whether to transmit the packet to a second node in either layer L, layer L+1, or layer L+2. The N-oxide compound has an oxidation potential above the positive electrode recharged potential and serves as a cyclable redox chemical shuttle providing cell overcharge protection.

1459826849-1076cf6d-83c2-40c8-9c2b-8f99cd68d865

The invention in various embodiments is directed to quantum information processing elements and quantum information processing platforms employing such elements. The first amplifier includes a first output corresponding to a logarithm of the first input. The optical reader is controlled based on this determination. Use is made of a dispersoid having metal-oxygen bonds which is obtained by mixing a metal compound having at least three hydrolyzable groups with at least  $\text{H}_2\text{O}$ . An ultrasonic wave beam B is projected from one of the elements into a fluid passing through the conduit, the beam is reflected by an opposite surface of the conduit urged against the groove 2a, and the reflected beam is received by the other element. A bore is drilled through a frame encasing an insulating glass unit to expose the peripheral spacer of the unit, and a hole is drilled through a wall of the spacer to enable air to enter the space between the panes.

1459826849-fc7a7497-c897-4bc6-8eca-f4186f55a099

An apparatus, method and system are disclosed for providing a default mode for authentication failures in a mobile telecommunication network. A structure built with these columns can be constructed using a cost-effective and relatively safe method of lifting. The digital system further includes a static memory element having an input at the dynamic node and is configured to reside in an operational state in accordance with the data signal and the ramped clock signal. Other audio sub-band signals are processed to obtain enhanced audio sub-band signals.

1459826850-7d7b3290-a818-40c3-9afe-d89f2d4b8d8c

An ammonium hydroxyfluoroalkanesulfinic acid is obtained by using an organic base while sulfinating a bromofluoroalcohol with a sulfinating agent. The inorganic alignment film makes direct contact with the liquid crystal layer and is made of a crystalline conductive film where crystal grains are oriented in a predetermined direction preferentially. The illumination optics flood illuminates a grating

modulator with reduced light beams. A set point indicative of an allowable mass flow rate of oxygen within the exhaust gas exiting the diesel oxidation catalyst is received. The acceleration/deceleration system may further comprise a plurality of insulated conductors disposed proximate the plurality of voltage grading components to modify an electrical field about the plurality of voltage grading components. The panning input may be a dragging of a pan grip control.

1459826850-95088f8d-9e63-4b70-b467-e72dc97ef7e5

A sheet metal component includes a three dimensionally shaped first surface, a three dimensionally shaped second surface opposite and extending substantially parallel to the first surface and an edge interconnecting and extending about the perimeter of the first and second shaped surfaces. Flux directors conduct flux from a magnet in the lid to the magnet sensor. If so, an attempt is made to acquire the new lock and, on the failure to acquire, the administrator is informed that the lock has already been acquired by a prior administrator. The store uses the metadata to determine the storage layout for instances of the type.

1459826850-af5612cd-291c-477d-8070-2605741a428a

New compounds useful as synthetic intermediates to synthesize perindopril, a new process for synthesizing perindopril, and new salts of perindopril. Neurodegeneration mutants are obtained in the method and causal mutations are characterized. The heat absorption layer has deformability in shape in conformity with a prescribed part of the human body and is heated using human body temperature so as to cause a temperature difference between the upper and lower substrates, thus generating electricity in the thermoelectric transducer module. The serial communication requests include a request to transmit the control signal and requests generated by the microprocessor. The resistor and the release member are commonly connected to the third lead of the motor driver circuit.

1459826850-c340ff48-4f2c-408c-9242-ab2e221a4a34

A support body is described which has an adsorber material for adsorbing nitrogen oxides in an exhaust gas which is generated in at least one combustion chamber of an internal-combustion engine. Slippage is determined by monitoring the shaft speed into the clutch as well as the shaft speed downstream of the clutch. The arrays of test tubes is attached to the flanges via living hinges that enable the flexing to occur.

1459826850-c8570cf0-a6f5-4229-b129-c9e7c89bbfa3

A process for the steam reforming of hydrocarbons comprises partially oxidising a feedgas comprising a hydrocarbon feedstock with an oxygen-containing gas in the presence of steam to form a partially oxidised hydrocarbon gas mixture at a temperature  $>1200^{\circ}\text{C}$ . Drains of the amplifying transistors of the photosensitive cells are connected to a power supply line, and a pulsed power supply voltage is applied to the power supply line. The electrical conductors can be electrically connected with each other when the sample is secured, and a negative electric potential is applied to the electrical conductors. The stress buffering structure includes a first gasket and a second gasket. The measurements are repeated at least one additional depth of the BHA. The present invention provides an antireflective film material comprising a polymer comprising copolymerized repeating units expressed by the Formula and/or the Formula, an organic solvent, an acid generator and an optional crosslinking agent.

1459826851-4b379d39-9dab-4bf9-87d0-0dce63008d9a

A steering apparatus for a marine craft has a first bracket connectable to the stern of the marine craft. The apparatus comprises a container that includes a housing, an inlet located at a first end of the housing and an outlet located at a second end opposite the first end. Further, the substrate in at least a superficial layer on the liquid-layer side, and the III nitride source-material baseplate can be formed of a III nitride single crystal, while the face on the liquid-layer side

of the substrate can be made a III-atom surface, and the face on the liquid-layer side of the III nitride source-material baseplate can be made a nitrogen-atom surface. The mapping system may then match map tile data to the geographic location data extracted from the user activity data and send the matched map tile data to the mobile computing device for cache storage at the mobile computing device. An onboard intelligent electronic processing unit uses sensory feedback for autopilot, or assistive navigation, during certain scenarios such as performing user-requested optimum stopping maneuvers.

1459826851-63ed8274-e65b-43a4-9626-10407644e1bd

A high throughput, short batch cycle commercial ice making machine produces commercial ice which resists melting in convenient sizes for mobile food carts, market produce, or fish displays. The delay lock loop may include two phase shifters in series, and one or both of these may include a phase interpolator. The manipulation members thus have increased length-to-diameter ratio and column strength, and the cam provides positive lateral jaw support and stability during opening and closing. The first to fourth transistors share a well, and an output signal of the first transistor and an output signal of the second transistor have phases opposite to each other. In operation, when the multiplexing device is coupled via one of the device ports to a single ported device such as a single ported disk drive, the active multiplexer is activated and the bypass circuitry is deactivated and the multiplexed port is coupled to the device port. Biasing means applies pressure on the lateral plate sealing member to the end portion of the heat transfer unit and seals the end portions of the first and second flow passages.

1459826851-dc89c760-5878-40d4-a13d-eb633094ed7f

A nozzle or retaining cap for a plasma arc torch that includes a surface defining a conductive contact portion for exchanging heat with an adjacent torch component. In an exemplary embodiment, a physical layer test system, such as an integrated testing and analysis system, communicates with a broadband network management system, which in turn communicates with an element management system for a frame relay and/or ATM network. The UE device then uses the first and second radio resources to communicate cooperation data between the first and second access points to mitigate interference thereinbetween.

1459826852-888f5715-4b5f-4d9c-952b-267715ced143

Digital camera contrast enhancement with piecewise-linear transform with lower and upper cutoffs for the transform determined from histogram analysis with a green color conversion approximation for images and IIR parameter filtering for videos. The data is initially transmitted in an initial mode and the selection of the subsequent mode is based on a selection of first-order and second-order statistical parameters of short-term and long-term quality parameters. Due to the pronounced degree of tapering, enhanced deposition conditions may be accomplished during the subsequent electrochemical deposition process for commonly filling the via opening and a wide trench connected thereto.

1459826852-8c736ea8-39d4-479e-8e0e-77bb1b2247b6

A pick-up head for a mobile sweeping vehicle comprises a housing defining a substantially hollow interior and a suctioning bottom opening for suctioning dust and small debris. Compounds of particular interest are defined by Formula V: . And, rotation prevention pins are elastically supported by springs in a moving direction of the transfer nut, and are selectively locked, thereby allowing the transfer nut to perform an idle operation. The list includes, in order of preference, the last known good channel, golden channels that are likely to support cable modem services, \u201cleared\u201d golden channels consisting of previous last known good channels, and other channels within the frequency plan range. Reduction in overhead is achieved by providing a more efficient mechanism for user terminal and bearer identification as compared to using GTP-u and associated UDPIP headers. The implant provides a spinal extension stop while allowing freedom of spinal flexion.

1459826853-02844606-4594-4038-a8c5-04e1e3c07725

A trip actuator reset assembly for a circuit breaker includes a cradle assembly, a reset lever, a trip actuator, and a rigid element. Also, the object of the present invention is to provide a laminated glass produced by using the above-mentioned interlayer film. The matching and selecting steps are performed by at least one signal processing electronic device. Each of the separate command sequencers packs the received commands into a plurality of instruction packets and sending the instruction packets to a plurality of instruction dispatch units, in which each of the instruction packets includes one or more instructions. One image is generated from the respective data and the respective sensitivity maps. The label distribution sessions facilitate association of labels with either Radio Frequency channels or groups of the RF channels that extend from the remote PHYs to one or more cable modems.

1459826853-337ac892-c029-4f00-812c-5904fab2a8d6

An autosensor or other communication system processing device determines which of a number of available link variants is required for a particular communication link that couples customer premises equipment or another type of device to a network. A hardened layer is formed on the inner surface of the outer race and each portion where the outer race tracks are formed. The growth surface has a root-mean-square roughness of 3 nm or less, or is free of steps or protrusions larger than 3 nm.

1459826853-49332b2d-af69-472b-8a2d-10b6c9d20043

To detect an MSK modulation mark from an MSK-modulated wobble signal without fail. The system retrieves information related to a specific reticle set from various data sources and determines a price for the reticle set. These controls may contain definitions of data stores tag which produces a W3C compliant DOM with built-in parsing for XML documents) which may either locally define their data or cause the browser to request the data from a server on the network. A FEC decoder is arranged to accept the FEC metrics as input, and to process the metrics in an iterative FEC decoding process so as to decode the FEC code and reconstruct the data.

1459826853-b7120391-97df-43e9-874a-71f7a1bedc45

This disclosure describes techniques for improving mode selection decisions during the encoding of macroblocks of multimedia frames of a multimedia sequence. With this configuration, the voltage and power of the mixer circuit can be reduced. The eccentric cam may have a smooth outer edge defining an indiscrete range of positions or a profile outer surface that defines discrete depth setting positions. The control device determines a geometric shape defined by a time axis and a lift-height change of the needle. The circuit breaker actuating mechanism is driven to move through the transmission of the intermediate transmission mechanism, such that the closing action of the circuit breaker is ultimately realized.

1459826853-bdf4b782-7c40-4cbf-8a85-2c3b19b93f43

An apparatus for adjusting a thrust load on a rotor assembly of a gas turbine engine includes an impeller rear cavity defined between a rear face of an impeller of the rotor assembly and a stationary wall spaced axially apart from the rear surface of the impeller. The bicycle rack has a frame pivotally connected to a bracket which is connectable to a front of a bus. The golf club may be included in a set having a progressive sole configuration that provides desired bounce for each club within the set. Separating devices are in contact with the plates radially inward of the friction interface.

1459826854-ea26a1b9-882d-4de9-9b40-dcc5e95e9810

A resonator system wherein a plurality of resonators each including piezoelectric material are suspended relative to a substrate. Respective images constituting a panoramic picture are photographed, and image photography information is checked that includes focus distance and optical magnification to calculate actual

photography range distance of the images. The transmission of packet rate control messages can be triggered upon a determination that a packet arrival rate over a set of ingress ports exceeds a packet processing rate of a packet processing unit bound to the set of ingress ports. A withdrawing jig comes into sliding contact with the jig contact portion to deform the lock away from the terminal fitting to cancel the locked state. Thus, a conductive path can be formed by the conductive material between the electrically conductive pads of the circuit boards, thereby establishing electrical connection between the two circuit boards. The electronic display is used as the photonic source.

1459826855-3170f8f8-236c-4466-87ea-b9276191764d

A mobile terminal prompts a user to make a voice message upon detection of an abnormally interrupted call, and records the message. A stator is mounted in the housing and receives the first cooling flow. The sensing element mounts with the body, fixedly at two ends. A position pressed by the first pressing member on the sheet bundle and another position pressed by the second pressing member on the sheet bundle are shifted with respect to each other in the direction of the fold of the sheet bundle. Abrasive elements include bristle and porous structures.

1459826855-65320a6c-26d5-41e1-89e5-f6f0bb3c0d01

A method, system and apparatus for performing selective data processing based upon a static analysis of the code of a compiled object. The apparatus has a first computer system, a second computer system, and a rules engine. Each control and display unit includes a display element and a sensor associated with each container. In at least one embodiment, this is facilitated by providing user-selectable options for responding to incoming calls in an options menu, which can be accessed by a user but is not initially displayed to the user when an incoming call is first received. Excitation of a given phase causes induction of magnetic fluxes traversing a region substantially confined to the region of the stators and rotor segments corresponding to the given phase, and causes a substantial amount of flux to enter rotor segments not in the radial direction but perpendicular to the radial direction. With this, a function of a nonvolatile semiconductor device can be ensured and a variation in a threshold voltage of a floating gate can be suppressed.

1459826855-f10d14d2-97db-492c-8405-03853adbd36a

A securing apparatus includes a receiving portion, and two resilient arms. The first circuit may be configured to generate one or more command signals, a read data path control signal and one or more write data path control signals in response to an integrity protection control signal and one or more arbitration signals. Each of the nozzle opening arrays has plural nozzle openings. The image processing device is adapted to generate at least one three-dimensional image data set of the object volume based on obtained image data and is further adapted to compute a transfer function range for use in volume rendering. The second substrate includes a third electrode that faces the first and second electrodes.

1459826855-fa2bad44-dde8-46e5-b1af-9dca3bf429a2

Methods and apparatuses to obtain an ordered set of satellite positioning system satellites, in view of a mobile SPS receiver, via one or two-way communication with the mobile SPS receiver. A display apparatus for displaying an image by impressing a voltage on pixels by row electrodes and column electrodes disposed in a matrix, for example, a metal deposition type electrochemical display apparatus. For each software application contained in an application kit, one or more offerings are created, each offering including at least some of the additional application related data in the application kit and pricing terms for hosting of the application, and a server upon which the software application may be hosted is identified. The present application includes a database arrangement that stores data types in a table as components and searches the components for desired data entries. The cells can be used alone or in an array to make useful devices by

adding an insulating substrate and contact electrodes.

1459826856-0cad54b5-aae4-4415-9bc7-3670ecd95476

A controller for a vehicle may include communication channels and control logic. At least one optical amplifier is controlled based on an in situ performance characterization of the at least one optical amplifier and the transmission fiber. This enables an IC card connected to a client to be accessed using secure communication.

1459826856-909365f1-ef87-4f3c-9aba-c3799ac7b111

A junction for connecting two waveguides having substantially a 90-degree angular offset between longitudinal symmetry axes of their cross-sections. This technique avoids the use of chemical mechanical planarization with a combination of implantation and, in some instances, low cost batch etching. The first housing section includes a vertical side wall, and a horizontal contact section extending from a top edge of the vertical side wall in a horizontal direction and having a folded section formed by folding a portion of the horizontal contact section to form the non-coated surface as a part of an upper surface of the horizontal contact section. The auxiliary mirror assembly is detachably connected to the cover and has an auxiliary mirror mounted in one of the mounting recesses of the body to increase the viewing range of the vehicle rearview mirror. The detector provides a received call to the first output if it is a voice call and provides it to the second output if it is a data call. The NMOS gate work function exceeds the PMOS gate work function so as to compensate for a difference in the respective NMOS and PMOS threshold voltages.

1459826856-aff0b252-4787-4c56-97ab-ee85ca879507

A chopper arrangement for a harvesting machine comprises a body that is rotated in a predominantly vertical axis of rotation. Externally-stored descriptors are used to specify information on which a graphical editor engine operates to create a graphical editor. The pixel region includes a light shielding region and a transmitting region partitioned by the light shielding region. The process makes it possible to produce dense hard microcrystalline ceramic coatings of thickness up to 150 microns.

1459826857-4473f376-fc4e-41e0-9c03-8211618413d6

An improved method and apparatus for a liquid filling system is herein disclosed incorporating means for generating greater overall production rate efficiencies for automatic systems utilizing diverter valve and/or walking beam filling technologies with, for example, non-traditional ratios between the number of filling stations and the number of filling nozzles. The method is conducted by using a mechanism applicable to cephalometric X-ray imaging, which comprises an X-ray source in front of an object, an X-ray receiving element behind the object, and patient positioning implements. Also described is a method of determining the end of the period of use of the accessory. 02 wherein X is a refractive index of the first matrix plastic.

1459826857-9c54bc7e-453e-4889-964a-2320582d3065

Expected data signals are generated for a series of applied data signals having a known sequence to determine if groups of the data signals were properly captured. The controller controls the production of hydrogen by the hydrogen production facility based on inputs including energy resource availability. The panel loudspeakers can be supported by an existing stable wall. The first electrical connector assembly is releasably coupled to the exterior portion of the first module and includes a first connector having a first end adapted for electrical coupling to an electrical line. The wireless streaming link is inactive during the data receive window.

1459826857-f94cc245-d14e-4a86-a8ed-3850e3f77a19

This device is a compressible chamber designed to inject a liquid medication

through a plurality of needles. Each time-based code is valid for a predetermined time period. Furthermore, the fuel element includes parallel plates delimiting spaces between them.

1459826858-9fe2e4e4-c792-466b-b8b3-e428d2c9955b

With the recent yearly increase in cell density, use of the same slurry as a conventional one for forcibly depositing a solid, e. The fan is connected to an air distribution apparatus in the seat, and includes a flow region that is open to the environment. The first circuit is configured to monitor an electrical operating parameter associated with operation of the CAN bus.

1459826858-aa8d2d0e-bd8a-4601-b3be-e54693560f5b

A method for performing a voltage drop analysis in a logic circuit that takes into consideration voltage drop\current drain dependency. An oil sump may be formed within the housing or bearing which contains a supply of lubricant for the bearing. The resilient arm has a locked position fixing the receiving member relative to the elongated member and the length of the implant, and an unlocked position.

1459826858-c6221bbc-1cb4-4d0e-8137-4a2efba98117

A gas turbine blade includes an inlet edge region of a platform. The earth terminal includes a fixing member fixed to a vehicle body by a bolt, a barrel member to which an earth wire is inserted and fixed, and a cut member for connecting the fixing member and the barrel member, in which the cut member is broken or disengaged by bending. Unlike SLR, the pulse is designed using the full inverse scattering data rather than the flip angle profile. A method for producing an intermediate floor and to the use of an intermediate floor. The inter-polysilicon insulating film is arranged so as to be interposed between the floating gate and the lower and inner side surfaces of the control gate and between the floating gate and the lower surface of the control gate line. Thereby, halation caused by back scattering electrons reentering a phosphor is reduced.

1459826858-d562ba63-b1f8-4009-8a5d-871083c0a89e

A spring energized stapler includes a \high start\ design wherein a striker has a rest position above the staple track. This is accomplished by beamforming the downconverted RF signals instead of using their baseband representation. When multiple users wish to consume the content, a component or module determines which presentation position to use, or creates a new presentation position for use.

1459826858-fda8a1a7-b719-43dd-b1c4-26904a755ecb

A system and method is disclosed for providing DRM in a broadcast environment. The housing has two scanning tables connected to each other. We showed that apigenin inhibited cancer cell proliferation, tumor growth and angiogenesis. In the plasmatron according to the invention, said opening is configured as a continuous circular axial gap between said parts of said anode orifice, while the size of said gap can be smaller or larger than the diameter of the inlet part of said anode orifice and the diameter of the outlet part of said anode orifice can also be smaller or larger than the inlet part of said anode orifice. A method of producing such a facade panel is also described.

1459826859-29ae9313-187e-4e2f-a589-936c77b1daa5

Efficient methods and compositions are provided for the targeted delivery of effective concentrations of compounds, including nucleic acid molecules and oligonucleotides such as EGSSs, ribozymes and antisense, proteins, peptides, carbohydrate, and synthetic organic and inorganic molecules, or combinations thereof, to cells, especially hepatocytes. A piston is disposed in the piston channel and has a contact portion that contacts the channel wall, which is integrally formed with the cylinder block, as it slides within the channel. The collected data may be associated with a region, with portions of the collected data

associated with subregions. The hood member may be attachable to the building and may have a hood member aperture sized and configured to accommodate at least two of the plurality of air-conditioning lines so as to extend the air-conditioning lines from within the building to the air-conditioning unit located about the building exterior. The interconnection element typically includes a plurality of terminals in conductive communication with the metal posts. The connector may also include a seal at the open end of the housing passage, the seal either cooperating with the slider to seal the open end of the connector, or sealing the open end of the connector without interaction with the slider, for example taking the form of a slit septum.

1459826860-2366e6dd-f04c-477e-8f11-4f11bb6ab32a

The invention is basically an animal attractant that is made from human urine and animal urine. The structure includes a frame having first and second sides and configured to support the cooling system module, first and second mounting points coaxially mounted along the first side and a third mounting point mounted along the second side. It is emphasized that this abstract is provided to comply with the rules requiring an abstract which will allow a searcher or other reader to quickly ascertain the subject matter of the technical disclosure.

1459826860-36027949-dc81-4c05-80f8-685578d3798e

The present invention refers to new active nanocomposite materials, comprising a matrix and additives. If the server crashes before a write can complete, the data remains safely stored in non-volatile memory. The resin layer covering the exposed portion of the electrolyte layer, the other end of the anode lead, and a connecting part between the other end of the anode lead and the anode terminal.

1459826860-6a557c17-645c-4d51-873f-1e9dcc3042ca

\u2018Kakegawa AU16\u2019 is a new *Osteospermum* cultivar particularly distinguished by its non-fading purple inflorescence color, basal branching and compact growth habit. Between the electrode layer having concave structures and a substrate is a passivation layer that is dented by the concave structures. Accordingly, the locking protrusion comes into linear contact with the corner of the locking recess in loading/unloading operations of the tape cassette so that the stopping of the ascending and descending movements of the tape cassette housing is prevented during the loading/unloading operations of the tape cassette. A variety of means for securing the membranes in place are disclosed. Determining or specifying, tracking or watching, and providing the information is accomplished using at least one customizable dynamic encapsulated object, a \u201cticket,\u201d that when paired with a \u201cviewer,\u201d provides peripheral awareness of information to the user. The soft magnetic underlayer includes first and second ferromagnetically coupled multilayer structures and a coupling layer positioned between the first and second multilayer structures for antiferromagnetically coupling the first and second multilayer structures.

1459826860-78be1551-2edd-4e8c-8a7a-66015f5a98a0

Methods of securely authenticating a host to a storage system are provided. A crude feed is contacted with a hydrogen source and a catalyst comprising a transition metal sulfide under conditions controlled such that the crude product has a residue content of at most the 30% of the residue content of the crude feed. The method also includes measuring responses of the detection medium in the predefined regions to generate a calibration that relates subsequent responses to ionizing radiation dose. The peeling film and the insulating film are etched by using the resist pattern as a mask, so as to form an interconnect groove continuous with the hole in the insulating film. The relative position and posture of the workpiece to the camera 20 is also stored in association with the teaching model.

1459826860-c4bdd8bc-3ee1-4c25-9143-90790805d5b5

A deployable template structure is described. An ink charge port is provided in an

end wall of the ink container body and an inner plug is mounted on the ink charge port. The detection device comprises a resistor having a first terminal connected to said ground contacts of the first wells and a second terminal connected to said substrate contacts; and a comparator connected in with the resistor configured to detect a potential difference across the resistor.

1459826861-4e425ccb-fc6d-4b0e-a9a5-6b9605e3f449

The invention relates to a method for fluorimetrically or photometrically identifying gaseous substances or substances, which can be converted into a gaseous state, in samples. The separating mechanism moves the refillable cartridge linearly in a direction that is different from a sliding direction of the sliding member when the sliding member makes the sliding movement. The third differential pair of transistors include respective gates connected together and in parallel to gates of the first and second differential pairs of transistors. According to another aspect, the powder mass is thermally pretreated to induce an irreversible increase in its dielectric loss factor prior to melting by microwave irradiation.

1459826861-50f13585-5f2b-4f8b-b7c7-6863730e763e

An electronic circuit for a satellite receiver. The invention is characterized in that the measuring sensor is supplied with current by a separate energy accumulator. The heating drum has a temperature and a rotation speed such that the egg liquid sprayed onto the inner surface of the heating drum is solidified and then the solidified egg liquid is detached from the inner surface before the heating drum rotates by 360°. A value of  $\mu\text{S}$  is within a range of 0. According to the present invention, it can store and manage a variety of information generated from the production location or the pre-production process and share the information by all staffs participating in the production, thereby making it possible to accurately record the information and smoothly communicate between the staffs.

1459826862-12066b69-82a6-44d2-913d-f51ac214ab8d

A gate electrode structure may be formed on the basis of a silicon nitride cap material in combination with a very thin yet uniform silicon oxide based etch stop material, which may be formed on the basis of a chemically driven oxidation process. 1 mole percent of one or more cationic monomers, from about 0. A second data track adjacent the first data track is read to generate a second read signal that is sampled to generate second signal samples. The dynamic update of power supply pump circuit results in an efficient use of the power supply pump circuit and thus results in a reduction of the number of dry cell batteries to only a single cell.

1459826862-86cb740b-42bb-43b2-9bc0-7a41b48e9322

A portable lower back support having a center section, a right articulated section and a left articulated section. The receptacle is preferably cylindrically shaped with a closed base, an open top and a sidewall that extends from the base to the top. A resonant load tuning capacitance is utilized across the input of the inverter subsequent to the DC link input to the inverter. The demodulated digital signal is further downconverted to the appropriate baseband signal.

1459826862-a5481d44-8435-4437-9b9c-c153edb6ab9b

A magnetic resonance imaging method includes generating first and second spin populations within each of a plurality of pixels of a slice of an object. In one aspect, for each input-to-output sampling rate ratio obtained, anti-aliasing filter coefficients are interpolated based upon the pitch from two filters selected based upon the pitch. 1 micron with acceptable manufacturing yields, reliable measurement of electrical charge distribution and the placement of dopants is essential, yet no conventional technique exists to obtain distortion-free cross-sectional images. A flexible hose is at least partially disposed within the pipe, with a discharge end secured to the collar and an inlet end in fluid communication with the frame-

mounted exhaust system components. A gate produces a switch signal according to the state signals. A rare earth-rare earth alloy incorporated metal nitride layer is formed above a gate dielectric.

1459826862-a7f212ca-2e2a-4849-bdc9-ff208d71c087

An approach is provided for signaling gateway management. The devices can assess the statuses of the cells. When appropriate formulations are provided within biodegradable polymers, this relief can be continued for at least three days. The diagnostic feature provides on-line status of the overall status of the field transmitter. In the event such a collision occurs, the interfering signal may have been demodulated by a receiver system, or SCS, at another site, and the demodulated data be known by the TLP.

1459826862-d64c60dc-5dc1-44c2-9874-2cb73a2cf54b

An action structure is composed of a handle part, an action part, a tenon part, and a trajectory adjusting device. The assembly comprises a base, a split ring, and a clamp. The second set of components is scaled.

1459826863-2a999247-5e19-4c96-80ea-bbae3a116552

An apparatus and method for establishing an IP session between a host 105 using a session initiation protocol and a device or mobile station 103 without an IP address is described. The double SOI wafer includes at least a base layer of silicon, a first layer of silicon, and a second layer of silicon, the layers of silicon are separated by an oxide layer. A differential amplifier coupled to the image pickup plate and the reference plate provides noise cancellation. Using the context and point data, the system loads points in a region near the seed point, and determines the dimensions and orientation of an initial surface component in the context that corresponds to those points.

1459826863-57338985-8add-4795-b518-9fbc1805b48d

This invention provides compounds of Formula I having the structure . The GCIB is injected into a processing chamber containing the substrate. The NSI may be modified to effectively extend the length of the NSI field, thus providing more registers or more range than otherwise available to the NSI instruction according to the instruction set architecture. In dyed pile fabrics, the illuminated areas can be selected to change the dye distribution within the pile material to provide an altered coloration.

1459826863-79a1f41b-63e0-4185-8d53-a68ab70eb076

The present invention relates to the field of organic synthesis and describes the synthesis of specific intermediates suitable for the preparation of triazolopyrimidine compounds such as ticagrelor. That is, at the time when power is turned on, this microcomputer determines whether or not image processing data compatible with the new processor is present in the old electronic endoscope. In addition, heat treated bent flanges are typically used to provide additional strength.

1459826863-b1cb74cc-bb0e-4d91-89d2-9e6b5c07637f

A valve actuator assembly for an engine includes a movable engine valve. A radio signal transmitter device communicatively coupled to the portable audio device transmits an audio signal of an audio file on a first radio frequency channel, a forward control signal on a second radio frequency channel, and a backward control signal on a third radio frequency channel to a radio signal receiver device. Upon such an isolation signal shifting low and isolating the adjacent memory section, a timing circuit triggers a wordline decoder to activate a select wordline. A pulsed dye laser light from the pulsed dye laser delivery device is directed onto the tissue, to reach hemoglobin in a collagen layer up to about 1. As the human operator uses the visible scanning-zone pattern to guide the transport of a package bearing a bar code symbol through the workspace environment, the package is

automatically identified by the laser scanning system supported above the workspace environment. The light shielding section makes light shielding quantity of the light from the light source in a vertical scanning direction different in positions in a horizontal scanning direction and in a light advancing direction.

1459826864-a635821b-8165-40bf-b449-56c7e858241a

Four electromagnetic shock absorbers are provided with motors. The new catalysts are characterized by the presence of two homo-morphic phospholanic rings set in adjacent positions of an aromatic pentatomic heterocycle. A power plant installation can execute the above method.

1459826864-da825954-16d3-4d76-8658-712d028b848d

Techniques are provided for preventing program disturb of unselected memory cells during programming of a selected memory cell in a NAND string which includes a continuous charge-trapping layer, either in a two-dimensional or three-dimensional configuration. Using the target metallic solutions results in damage free use to surrounding optical components since no debris are formed. If one or more of the frames depict the object and also satisfy the one or more predetermined quality control criteria, the method further includes automatically capturing an image of the object.

1459826864-ef05635b-1d61-45bc-942c-a8f839bd2710

The present invention discloses an interactive infant or child blanket with a tactile apparatus for removably attaching small toys such as pacifiers, teethingers, rattles, and developmental toys. The ocular devices may maintain the patency of Schlemm's canal without substantially interfering with transmurial fluid flow across the canal. Then, in an exponent part subtractor 20, differences are obtained between the values of exponent parts of the plurality of inputted floating point data and the value of an exponent part of the maximum floating point data. In one embodiment, the invention can further include detecting registered content from the registered document being contained in the intercepted object, if the comparison results in a match of at least one of the signatures in the set of signatures with one or more of the plurality of stored signatures. A regulatory-compliant software package is also described. The boxes can be sized and proportioned so as to be conveniently assembled in such structures and to be easily transported via intermodal transportation media.

1459826865-2ed154c3-2b95-411b-87f7-423689e20129

A magnetoresistive head including a first magnetic shield, a first electrode terminal provided on the first magnetic shield and having a first width, and a magnetoresistive film provided on the first electrode terminal and having a second width less than or equal to the first width. In one aspect of the invention, a method is performed that includes performing a process for developing a business initiative to apply to the business network and performing a process for designing a test for the initiative. When trying to copy the printed image in which the specific image information is embedded, the copy machine which has detected the specific image information will not output the copied image or output a copy sheet having thereon characters such as "Copy Prohibited". In the base member 110, first terminals 120 are provided on a first surface 112 whereas second terminals 124 are provided on a second surface 114. The coolant guide guides a coolant therealong in a circumferential direction of the end portion of the stator coil while guiding, through the holes, a part of the coolant to the end portion of the stator coil.

1459826865-780bcdbd-e32b-4953-b171-ae4fbbbeafa13

An extrusion molding apparatus for a ceramic molded product which is capable of passing a ceramic material smoothly through a filter unit is disclosed. The polymerisation process involves distilling water from the emulsion in the presence of sufficient non-aqueous liquid to prevent breakage of the emulsion and then

washing the polymer particles with isopropanol or other suitable solvent and evaporating the solvent. The strip is affixed across the bowl by moistening at each end and pressing against the sides of the bowl.

1459826866-3b44b636-5e1b-47f9-a9e6-fe1c296aa475

A lamp module for use in a backlight module of a flat panel display comprises a first transformer, a second transformer, a plurality of first lamps and a plurality of second lamps. The queue may store the resources of more than one thread in the processing device such that the entries of one thread may be interspersed among the entries of another thread. In one embodiment, a pedicle screw assembly includes a pedicle screw, a rod holding element, an insert, a rod, and a set screw. One embodiment performs a modulo operation on a function of the multi-cast address and the number of communicable PDSNs, wherein the result of the modulo operation corresponds to a unique identifier.

1459826866-c47a2c5d-84b0-4735-b464-f79bce63617a

Methods and systems for processing, e. The human and mouse amino acid sequences have been identified. Such tubular films involve a significant improvement in the seal seam strength, in particular at low sealing temperatures, a high impermeability to oxygen and a comparable to markedly higher resistance to puncturing compared to prior art films. The database can be used by a system in a vehicle that provides convenience features to the vehicle's driver. The second circuit produces a second rich electrolyte solution, which is also forwarded to primary metal value recovery. Hextrees are used to represent the pixels of the image, such as one hextree for each subset of the image's pixels, where alpha channel data distribution may be used to determine each segment.

1459826866-daf79558-a94e-4a80-990b-efe96d9b8668

A production line for carrying out machining and cleaning operations on rectangular frameworks, is provided. A handheld device is capable of communicating with the data processing apparatus. One end of the flexible printed circuit board has plurality of feeder wires that connect to one of the terminal lands of each of the recording elements. An extension of the actuation sleeve over the atraumatic forceps jaws proximal ends may be configured to gradually close the atraumatic forceps jaws wherein the atraumatic forceps jaws initially contact at the atraumatic forceps jaws distal ends. The cMUT allows variable operation voltage by requiring only one AC component. The conductive line includes a conductive layer and a barrier layer separating the conductive layer from a portion of the semiconductor device.

1459826866-f84067e5-fb90-443d-98cd-200372449f75

Methods and related systems for modulating neural activity by repetitively blocking conduction in peripheral neural structures with electrical stimuli are disclosed. One such system includes an electromagnetically shielded enclosure and a detector configured to detect an electromagnetic field event occurring in the proximity of the enclosure. Dynamic extension is prevented during a test mode. Next, the system stores the action component in a first store and the data component in a second store so they can be reused without repeated decoding. The control section calculates the battery capacity of the secondary battery by different methods in accordance with respective cases where the secondary battery is being charged, being discharged, and in a fully charged state. The first elastic piece of the elastic contact can be soldered to the circuit board by a SMT machine, thus the assembly efficiency is improved.

1459826867-63afbd02-ee57-428f-a91f-27b48c8e64c1

Element fixing mounting portions are formed in the shape of bridge beams on both the side surfaces or the like of the first optical surface, which is disposed in confrontation with an image display element, of a Free-Form-Surface prism 61 acting as an optical element, the side surfaces being located externally of the effective

light beam range of the first optical surface. The simulated nervous system is based on an intricate anatomy and physiology of the hippocampus and its surrounding neuronal regions including the cortex. Thus, the wrench body can drive the driving member to rotate through 360 degrees reciprocally so as to rotate and unscrew the nut successively, so that the driving member can be used to unscrew the workpiece easily and rapidly. A third logical gate generates an up signal based upon the multiple internal up signals. , along an upper surface that overlies the plurality of tape reels. The fasteners are then used to secure a fill zone to the container.

1459826867-c272d316-6006-4613-a1ce-adb0426f19ab

The invention provides a method of preparing a sirtuin complex, a method for detecting a sirtuin in a sample, and a method of screening for compounds which inhibit the deacetylase activity of a sirtuin. The sealing element is corrosion-resistant, essentially impermeable to corrosive and critical fluids, essentially free of leachable impurities and is made with a material having a Shore A hardness between about 70 and about 95. The photovoltaic cell is oriented at the perimeter so that it can both receive the concentrated light and receive direct light as well. The system may use the cost and retail sales information to generate financial data. The key is configured to fit within a key hole of the lock tumbler. The CSCF sends a VoIP call to the second P-CSCF if the user terminal performs the second registration procedure and the user terminal then receives an incoming VoIP call.

1459826867-e44961ac-c81e-4340-882b-74fd36f477c1

A hair transplantation method and apparatus utilizes a stereotactic robot, which includes a robotic arm, having a hair follicle introducer associated with the robotic arm. Query activity vectors are extracted from database logs. In the case where a semiconductor film transferred first and a semiconductor film transferred later are provided adjacently, the latter transfer is carried out using a bond substrate with its end portion partially removed. The first connecting element is connected between the first segment and the second segment. The encoder and decoder may use sub-block pattern codes to indicate the presence or absence of information for the sub-blocks of particular blocks. The assembly includes an upper showerhead electrode which is mechanically attached to a backing plate by a series of spaced apart cam locks.

1459826868-06ea9ffd-b938-4fa9-bfed-048ac6d21b47

A data manipulation method to make local chromatography data more usable and comparable to a reference. The golfer alignment system generally includes a first alignment member comprised of an elongated configuration, a second alignment member comprised of an elongated configuration, wherein the second alignment member is substantially parallel to the first alignment member and at least one diagonal member attached between the first alignment member and the second alignment member. The frame is encoded in manner that provides a substantially uniform apparent quality of the plurality of locations to the viewer when the viewer is observing the facial region of the video. The support rod members protrude outward in a stacking direction to support the cover member at the front ends of the support rod members. In another aspect, the present invention uses the signal to control a force applied to a top conductive surface of a workpiece during electrotreatment. The method comprises providing a remote server connected to a network communications channel, pinning a reserve memory segment program to the memory in the remote server to control a reserve memory segment allocated within the memory in the remote server when a memory constraint arises.

1459826868-09ef7789-8a32-4000-9946-c2904329b72d

A deterioration detection apparatus for an oxygen sensor is able to detect an abnormality of the oxygen sensor constantly with high precision, without being affected by the temperature characteristic of the element impedance. The double wheel structure has braking pads that are connected to bridging plates which are in

turn connected to a connecting seat, and positioning of the braking pads is controlled by the upward or downward movement of the connecting seat as the bridging plates act as a lever structure with the axial rod as the axis. Each layer of metamaterial includes a matrix material and a plurality of nano-particles.

1459826868-135ed52f-0f6e-4843-a5bb-862dd9520e30

Catheter connectors, systems, and methods of use in which a catheter is attached to a connector such that the catheter is retained on the connector by inward radial compression between an outer surface of a hollow pin located within the catheter and a collet fitted over the portion of the catheter containing the pin. The foldable input apparatus includes a connection part, a first input part, a second input part, a first housing and a second housing. A first element list can be extracted from the one or more documents based at least in part on the plurality of entity names and based at least in part on one or more heuristic rules.

1459826868-3a9ceda7-7fca-44a3-86f4-840da10cfea3

A DMT signal conforming to a first DMT standard is sampled at a sampling rate for the first DMT standard, filtered to attenuate a subset of the tones of the first DMT standard, and subsampled to provide a subsampled, filtered signal that can be further processed using components designed to operate under a second, different DMT standard. The pallet includes air ventilation apertures which allow an upper product-containing bag to breathe. The sink device detects a change of session key by decrypting only the key check block field with a plurality of candidate keys. Quartz glass sealing surfaces of the component also can be finished by the methods. Elongated fasteners are insertable through the slotted member and the sets of spacers and are engagable with the retainers for securing the electronic device to the support. or lower and a mineral oil component comprising sulfur components, wherein the ratio of amounts by weight of component to component is in the range of 25:75 to 99:1 and the amount of the sulfur components derived from component in the composition is in the range of 5 to 1,000 ppm.

1459826868-7965448a-d45a-45c4-b3ef-959de1d12f4a

A fully inverted type SOI-MOSFET has a channel region 18 constructed of a portion that belongs to a top silicon layer 13 and is located just under a gate electrode 15 and a source region 16 and a drain region 17, which belong to the top silicon layer 13 and are located adjacent to this channel region 18. The methods basically comprise the steps of contacting the oil external-water internal emulsion with an aqueous acid solution containing an anionic sulfonate surfactant for preventing aqueous acid solution-crude oil emulsions and crude oil sludging and a chemical for preventing the anionic sulfonate surfactant from reacting with the emulsifier in the oil external-water internal emulsion. The fork mount includes a head portion adapted to selectively clamp the fork mount to one of the cross bars, and a skewer assembly adapted to selectively secure forks of a bicycle to the head portion.

1459826869-c4eb84df-d752-4ba3-ae4f-5080b3a2d46f

The present invention discloses apparatus and methods for a lightweight subsea intervention package that may be installed using vessels with a smaller lifting capacity than semi-submersible platforms so that the subsea intervention package can be transported, installed, and removed from a subsea well in less time and with less cost. In general, the sacrificial layer should facilitate the recrystallization of the ultra thin layer into single crystal material. The lock-out-bar, when in the horizontal position, is locked in place to a panel-left-side-L-bracket. According to the invention the handle section includes an electronic interlock device which is deactivated by an encoded interlock canceling element on the cleaning tool only when the cleaning tool is coupled to the handle section. By the above-described structure, it is achieved to facilitate handling, in assembly of mass production, of a bobbincoil and an outer yoke of an outer yoke body constituting the linear motor and reduce the size of the outer shape of a casing. The process, starting from olefin mixtures which comprise less than 30% by weight

of linear hexene isomers and utilizing a catalyst which contains nickel, prepares olefin mixtures having a predominant fraction of branched dodecenes, which are subsequently derivatized to give surfactant alcohols and then optionally alkoxyated.

1459826869-d90475a1-95a8-411e-8ca3-f4f546913c4a

A barley cultivar, designated Champion, is disclosed. The stent includes a coil which defines a lumen and has an initial length when in an expanded rest state. The method provides an efficient, effective and semi-automated post-blocking method, such that each post-blocked group of containers has a similar desired remote destination, so that the containers can be easily located, loaded, handed-off and transported to a desired location.

1459826870-18455d3b-d865-4636-9554-3c577d1ba5ff

A method for real-time RL and/or ROSL dose rate measuring in an environment exposed to a radiation source. A second electronic device module that comprises a stackable rack component that is attached to and supports an electronic device is stackable on and detachably coupled to the first electronic device module. Lower surface-side lands with solder balls coupled thereto respectively and testing lands with solder balls not coupled thereto are formed on a lower surface of a wiring substrate. First and second dielectric segments are coupled to the inner conductor and disposed between the proximal cylindrical dielectric sleeve and the distal cylindrical dielectric sleeve. The monitoring device restricts usage of the system if the processor activates the security levels in a sequence contrary to the security rules.

1459826870-a0671d4c-cfc3-40d9-bf1a-2b14398f3121

A method for managing, storing, and disseminating compliance assurance information using a web-based system is provided. When the primary actuator initiates a seek there are two torque components acting on the center of mass of the secondary actuator's moving portion. The interface is capable of internal light reflection and impurities isolation. A third embodiment combines the first and second-embodiments. The at least one ventilation opening is provided within a housing that at least partially accommodates the support structure and the covering in the stowage position. The gate is released once for approximately {fraction} of a cycle interval during each trigger operating interval.

1459826870-d1f935e4-afb4-4c04-b268-410d44a30dc1

Disclosed are compounds of Formula 1, N-oxides, and salts thereof, wherein Q is and Z1, Z2, J1, J2, M, R1a, R1b, R2a, R2b, R2c, R2d and R14 are as defined in the disclosure. Permselective hollow fiber membranes having rigidity are cheese-wound in a plurality of layers, thereby forming a hollow fiber membrane bundle. The detector assembly includes first and second signal generators and first and second signal detectors vectoring the location of the conveyance.

1459826871-3d7b2ae1-e14e-46d7-b616-80bbbfd4facd

A tuck mounted attenuator is constructed to minimize length during use in a horizontal position and height in a vertical transport position, as well as to minimize wind resistance and buffeting at highway speeds. A fuel cell mounting chamber for containing the fuel cell is provided inside the hold portion. The grinding members may be provided in a variety of different combination of elevated ridges and/or valleys used to dry and classify materials. Thus the voltage level of the first signal can be determined according to the first output voltage and the second output voltage.

1459826871-cadae17a-0b07-4ae8-ac64-1befa97d06c7

A particle material for anisotropic conductive connection, is comprised of a conductive particle and an insulating resin layer covering the surface thereof, wherein the insulating resin layer includes an insulating gelled resin with a gel

proportion of at least 90%. When there are two stator modules, the rotational angle is 90 electrically, and when there are m stator modules, the rotational angle is 360/m electrically, where m is an integer and is greater than 2. The light absorption layer includes light refracting structures and light absorption elements, wherein each of the light absorption elements is positioned in the light refracting structures. There is an increase in the maximum length parallel to the longitudinal axis of cells from the at least one nodal cell to a first distal cell in the row that is closer to the first or second end of the tubular stent.

1459826871-dabb299a-9c0a-42b6-b3c6-d404cb7fe6fa

A moisture sensing apparatus, system and method. The data memory is an error correction code memory or a non-error correction code memory. 0.1 mole-hour without loss of selectivity is disclosed, as well as use of the process for insertion of a perfluorinated olefin with an initial rate of 0. Subsequently, the semiconductor substrate can be patterned to form a body plate for the print head jet stack. The server then processes the user communication in the profile decoder to identify user content preferences by matching user content preferences with available server content, employing the profile server.

1459826871-e5dbe2b4-5b7b-4244-89e2-a2004a6ff162

A system for enhancing absorption of a substance to be provided on a region of a patient's skin, includes a probe configured to provide the substance to the region of the patient's skin, the probe including a flexible tape with a plurality of cavities, and with an electrically conductive element, such as a conductive wire, provided at one end of each of the cavities. The access member, which is adapted to extend from the outside of the body through a canal extending from the user's abdominal wall to the bladder and into the bladder, has at least one cavity extending substantially throughout the length of the access member. Air from the atmosphere can be transferred via an intake valve into the pressurized air supply vessel via the compressor and the air dryer. The compensation circuit may be configured to compensate a non-linearity effect generated by the at least one FET. The systems may further comprise a subsea shut off and disconnect device.

1459826872-42ba0036-ba14-4b43-ae1e-d0510ac2d71f

An access control system enables a computer network to prevent execution of computer code that may contain computer viruses. The silver coating nanoparticle scaffold can be used for numerous applications in metal-enhanced fluorescence. Also disclosed are techniques and apparatus directed to presenting member-specific out-of-pocket expenses for a selected procedure offered by at least one health-care provider. The filter circuitry filters signals outside a signal band of interest. Advantages of this process include higher working pressure ranges, as well as reduced manufacturing costs and assembly time. Of note, the method also can include receiving configuration parameter values for the artifacts of the result set through the identified panels in the single window and applying the received configuration parameter values for the artifacts of the result set.

1459826872-c35bb442-37f2-4532-a35b-c551deb089cf

A fixing device for fixing a toner image formed on a recording medium conveyed to a nip for fixation of the present invention includes a rotary body, a stationary heating member not forming the nip, a fixing belt passed over the rotary body and heating member, and a pressing member held in contact with the fixing belt. The annuity rate reflects potential medical and social advancement, prudence, interest, expenses, and commissions as well as other related factors in determining premiums to be paid by individuals. The carriage is provided with at least one wheel at the rear. In addition, a hook portion is formed on the elastic locking arm. In the present invention, when a bobbin rotates, a rubber roller rotatably provided on a movable mounting plate alternately comes into contact with an inner surface of a support ring and a rubber acceleration prevention member provided on the inner surface of the support ring, so that the speed of the bobbin can be smoothly and

reliably reduced. The method comprises the step of: providing an apparatus that provides resistance and assistance during core muscle training using dynamic therapeutic movement for chest, back, abdominal and leg musculature to strengthen and condition muscles of the axial skeleton and lower extremities of a performing user.

1459826873-2bc48868-9fa7-4439-9bae-a6b44451f642

Systems and methods are provided for fabricating a static random access memory cell in a multi-layer semiconductor device structure. The non-volatile memory device includes a first conductivity type semiconductor substrate, a first conductivity type inversion layer-forming region, second conductivity type accumulation layer-forming regions, second conductivity type regions, an insulating film and a first conductive layer formed on the inversion layer-forming region. The process according to the invention for the surface treatment of a component proposes that at least repeatedly a measurement voltage be applied to the component, resulting in the flow of a current, the time profile of which represents the state of the surface treatment and is used to decide upon when to terminate or interrupt the acid treatment. The plurality of fibers can be a plurality of nanofibers which may or may not be oxide nanofibers.

1459826873-903ed87d-4df8-47be-9e31-4933404ece2a

This invention provides isolated polynucleotides that encode the MurF protein of *Pseudomonas aeruginosa*. One or more formations for emitting heat are also provided, the formations for emitting heat being in thermal communication with the contact portions. In addition, in the package structure described above, the difference in height between the thin floor and the thick floor is the same as, or larger than, the thickness of the electronic component mounted on the thin floor. A closed portion is provided on the front grille which closes the entirety of a portion of the front grille which faces the air-intake port.

1459826873-92e3a394-4430-4d23-9801-eed88a17081a

A method and system for enabling user interaction with computer software running in a computer system via an interface surface and a sensing device. The fluid discharge device is arranged to be actuated by one or more levers so as to apply a force transversely to the fluid discharge device which is used to move a container forming part of the fluid discharge device along a longitudinal axis of the fluid discharge device to cause actuation of a pump forming part of the fluid discharge device. One alternative of the invention utilizes card edge connectors on the first side. The ground plate is proximate the firing electrode to define a spark gap between the firing electrode and a first end of the ground plate. Example processes to construct such a heterogeneous channel NoC interconnect are disclosed herein, wherein the channel width may be determined based upon the provided specification of bandwidth and latency between various components of the system.

1459826874-0409df6c-1914-4776-81be-c835ead2083c

An improved cosmetic composition comprises at least one cosmetically effective ingredient and water, where at least a portion of the water has been replaced by a distillate of a green plant juice. The wide-angle lens includes, from an object side to an image plane side: a first lens group including a first lens having a negative refractivity and a second lens having a positive refractivity; and a second lens group including a third lens having a negative refractivity, a fourth lens having a positive refractivity, and a fifth lens having a positive refractivity. A tracking controller is adapted to receive the control signal and based on the control signal, the controller is adapted to control a tracking motor for adjusting the system so that electrical power generated by the photovoltaic cells is increased. Grooves are formed in both sides of the thermistor, and connection portions for electrically connecting the electrodes formed on both surfaces of the thermistor are formed through the inside of the grooves or through the sides except the grooves. Two or more images with reflection artifacts can be

created and subsequently recombined through image processing into a composite artifact-free image.

1459826874-38bc4070-4ed3-4b77-b38a-b880f1729fb3

Aspects of the invention relate to a system for monitoring the wear of a component. A method of detecting the presence of a wheel is also provided. Test components, instrument components, support objects and a test system interface component are communicatively coupled to the test kernel component.

1459826874-6d193dc7-5b1d-4073-ab19-c4090c697384

A lapping device comprises a mounting surface for coupling at least one non-parted slider row. This makes installation of said device in a laying site easier. Distal ends of the protuberant members are radially disposable within a concentric ring to a clamp axis of rotation, the ring being sized for an interference fit with an outer diameter of the motor hub.

1459826874-c2af20a6-1acb-4740-a853-764bc3b26b55

The invention concerns a method for separating fractions of a mixture using a chromatography device. Each activation phrase is associated with a respective application. The tissue securing member is preferably configured to pass through only one of the tissue structures, and is movable from a first configuration to a second configuration which results in a compressive force being applied to the tissue structures. In this way, the portable wireless system increases the utilization of existing wireless network infrastructures by making one or more unused wireless channels available to other devices. To this end, a plurality of pistons supporting, at one of their respective ends, lower mold cavities have the other ends thereof slidably inserted in hydraulic cylinder blocks installed on lower mold sets. In addition, the catheter assembly may include a planar tip which, when extended outside the distal end of the assembly, assumes a substantially flat unbiased configuration for use.

1459826875-bdca8e6f-4a94-45ac-be06-746873040a1e

An optical collimator includes an optical fiber, a metal ferrule, a Graded Index lens and an outer metal tube. Fluorine may be introduced into the bonding layer by exposure to a fluorine-containing solution, vapor or gas or by implantation. Methods for producing a maize plant containing in its genetic material one or more traits introgressed into PH1D7S through backcross conversion and/or transformation, and to the maize seed, plant and plant part produced thereby. The system also includes at least one valve that receives the substantially dry and clean air flow that has passed through the adsorption unit.

1459826875-d0ee44da-37ff-4d48-8bce-6cd7f319004d

A bussed electrical center for providing customizable current flow to electrical output components. In one embodiment, the rotating disk storage device includes a disk enclosure, an FPC supporting portion, and a flexible printed circuit board assembly provided with an FPC terminal area that extends along a front surface of the FPC supporting portion and further beyond an end portion of the FPC supporting portion. At least one item of connection is located within the cavity. The network also includes a second network Ethernet switch having a second network interface and a second service interface. The speakerphone indication active and inactive signals can be, e. The water exiting the rear chamber as viewed relative to the jet disk can for example pass through the front chamber in a sealed channel or as a jet, which passes through a larger opening of the jet disk.

1459826875-d783cde7-7b6c-4e33-972f-deb3b3eea4e6

The present invention discloses methods and apparatuses to design an integrated circuit. The connector is provided with a conductor for electrically connecting the chassis and the ground wire. An elongate longitudinally-extending slot divides the heel end of the upper member into a lateral pylon support and a medial pylon

support and further divides the upper member into a lateral upper section and a medial upper section. Movable partitions include one or more such protective clips. The preset invention is capable of working in different time zones by converting the calendar information into the current time zone of the telephone. The frame can further include a seat that attaches to the upper cross member of the frame.

1459826876-0916de2a-dc9c-4bef-b845-df3a7889c8a6

The invention combines systems and methods for heat containment and cold air isolation for managing airflow and temperature in data centers. The frame body includes a main member formed with an accommodating space, a seat-connecting rod, and a front member connected to a front end of the main member. A fraud score is calculated for each case, and a result of score calculation is specified using at least one of the calculated scores. The cell includes a charge storage layer disposed above the bottom oxide layer, a dielectric tunneling layer disposed above the charge storage layer and a control gate formed above the dielectric tunneling layer. The remote devices can further interact with at least the interactive media content. The processor generates at least one control signal when the designated pulsator pulsating vacuum level is at a vacuum level outside of the predetermined vacuum range.

1459826876-3462f2d9-d181-47da-b3d9-16f070c048c3

A page-width array printing device includes a page-width array printing mechanism including at least one page-width array printing module. In order to avoid a permanent correction in the length of the driving shaft, the spare stator is connected to the instantaneously operated stator or is configured in a single piece. An etched-back first conductive filling is produced by etching back the first conductive filling down to a depth below the first source and drain regions and second source and drain regions are formed.

1459826876-71c49eef-7954-4794-ab03-c4e32449402e

Self-removal of enterprise application data is disclosed. The method of fabricating includes the steps of forming a sacrificial layer on a substrate; patterning said sacrificial layer; establishing a layer consisting essentially of polycrystalline SiGe on said sacrificial layer; depositing an infrared absorber on said polycrystalline SiGe layer; and thereafter removing the sacrificial layer. The panel may be composed of multiple laminated sheets. Methods include simultaneously supporting a plurality of types of imaging media on an imaging device having a single pick roller, and selectively picking either the first imaging media or the second imaging media from the respective media tray. The supporting member has a protrusion adapted to pass through the apertures in the display stand and the anchor member to engage selectively with the anchor member.

1459826876-cb5caf30-5706-4f19-8a9c-d308a2b4cbd9

A user interfaces can deliver enhanced information regarding media assets stored on a portable media device. A security policy may be determined for a multimedia terminal based on high-level requirements by various system users. The tow rope attachment mechanism includes a bridle having two bridle limbs terminating at respective bridle limb retention points. In another embodiment, the single nozzle includes an exit point and a flat or curved plate to direct the spray. The memory stores the N data blocks encoded by the encoder. The means for scrolling through the plurality of selections is located on an upper surface of a spoke of a steering wheel and the selector switch is located on a lower surface of the spoke.

1459826876-ec50a2cc-5ad7-4ebf-a211-1f48030c18a9

Described are techniques for processing requests for a device. e, is coupled to the two-way data communication network. If the content provider platform responds within a given time limit, the query processing server forwards the response to the inquiring entity and updates cache data based upon the response.

1459826877-08e9ec00-b4f6-41d9-a32d-905bd7f45a41

A metal powder produced by a process which comprises directing at least three successive gas beams at a molten metal stream inside an atomization chamber, the at least three gas beams being oriented in different directions. The light source and light detector are located remote from the housing. The crown has a rear crown portion.

1459826878-19b68077-6df3-4ed2-b91f-d914a68afc5e

A spray-gun line-connecting device is provided for the connection of a plurality of lines between a robotic arm and a spray device. The porous matrix yields upon contact with an aqueous medium nanoparticles and microparticles of celecoxib having a mean diameter between about 0. An acceptance width of the alignment pattern detector is determined so that the acceptance width satisfies a relation with a writing density of the image forming apparatus and a line width of the alignment pattern, as follows:  $\text{acceptance width} \geq \text{line width} \times 22120$ . The memory unit not only has the advantage of high speed operation of a static random access memory, but also functions as a non-volatile memory for saving data. The divided ends along one side of the groove are separately provided with expanded portions whose cross-sections are expanded. The securing members secure the portion of the cord proximate the securing member to at least one other portion of the electric cord or an external structure.

1459826878-4140f2a0-7d6b-4e6b-b81d-9050ca4a2387

A data recording device for recording data on an optical disc by irradiating a laser pulse on the optical disc while controlling rotation of the optical disc at a constant angular velocity. The proposed method is characterized in the forming of a dual-layer NiVCu metallization structure, rather than a triple-layer AlNiVCu metallization structure, over each aluminum-based PBP, which includes a bottom layer of nickel-vanadium deposited over the aluminum-based PBP and an upper layer of copper deposited over the nickel-vanadium layer. The resultant natural frequency response is detected and recorded. The sneak path prevention logic may also include one or more diodes coupled to the one or more GSHE MTJ elements to prevent a preset current from flowing into input circuitry or a charge current generation circuit. The price associated with each limit order is indicated by a first axis of the graphical display and the time associated with each limit order is indicated by a second axis of the graphical display.

1459826878-57f30c67-2558-4129-88ac-eaf0cf051be9

A portable mapping tool for use in a horizontal drilling system and associated methods use a boring tool configured for transmitting a locating signal. In one pass of a multi-pass programming operation, a programming speed-indicating program voltage is obtained. When the repair line is employed, a part of the peripheral lines could be separated by a laser optionally, and it subsequently could be welded to the repair line by the laser to improve the ability of the repair line.

1459826878-92c3274d-92e6-49d5-93e9-9c58d3086dca

An improved dispenser for thin, flexible hand coverings includes a unique mechanism to retain the opposing edges of the flexible film as it is advanced and applied to the hand, thereby promoting a controlled stretching, adherence and release. Each of the lower core assy and the upper core assy is unitarily formed so as to have a predetermined shape by resin-molding a core and a coil that form an electromagnet as well as an armature bearing, etc. Analysis can include, for example, generating a thickness map, a cartilage curve, or a point cloud. A photosensor element may be located inside the housing and adapted to be optically coupled to the scintillator. Frame processing further refines the current background model by determining whether a substantial change has occurred in the actual background and, if so, providing a more accurate background model.

1459826879-4f1633cc-5a8b-4548-ace8-e1461a184ed9

A multilayer printed circuit board has an IC chip included in a core substrate in advance, and an intermediate layer provided on a pad of the IC chip. To this end, the codebooks are divided into a plurality of node-tables, each table corresponding to a node. The gripping ball chain is attached to the pivoting gripping member and extends through the inner tube to the gripping trigger. The primary data store may communicate an acknowledgment of success in committing the data at the primary data store as well as of success in writing the data to the secondary data store. The content sharing device may provide, to the dongle device and based on determining the dongle device identifier, information that identifies the content.

1459826879-53388cc3-a6f6-48c5-9356-938986460a68

A technique is provided for forming a gravel pack at a well zone. From an incoming data packet that includes data and a training sequence, a modified data packet is generated that includes the data, the training sequence, and at least one additional copy of the training sequence. There are means of separation of grounds for the chosen user station and the other user stations. The present invention reduces the cost of a group delay equalizer by simplifying the use of multiple three-port WDM devices into a single channel four-port WDM device. With this plastic identifying apparatus, it is possible to realize a plastic identifying method of the present invention, and to identify the types of plastics contained in items to be identified with good accuracy, and continuously, regardless of the size of the items.

1459826879-ca12c254-96e9-421a-b980-258e790ea9d9

The invention pertains to a sealing arrangement 10, 10a, which acts between a housing 12 and a component 14 installed in the housing 12, with a stop 16, permanently connected to the housing 12; with a spring 20, which is supported on the stop 16; and, with at least one first sealing element 22 in working connection with the spring 20. The shaft may be capable of an angled configuration where at least a portion of the shaft is manually movable to a direction in which it extends at an angle to another portion of the shaft. The package substrate has a metal core with via openings, power conductors connecting a top and bottom surface of the substrate and passing through the via openings, and ground conductors interconnecting the metal core with the top and bottom surface of the package substrate. If the word type is found in the electronically stored list of known word types, it is determined whether the word type is a known solid compound word or not in accordance with the indication in the electronically stored list of known word types. By pulling up the output, the input buffer circuit enjoys improved margin, and is able to reliably signal a low power condition even when both inputs are low. The concave portion is recessed relative to a bottom surface of the insulating pattern.

1459826880-331f9c0f-7d95-4b3c-a582-137a8de4526f

The specification discloses a support system for parts standardization, a method therefore, a computer program for executing the method and a recording medium storing the computer program capable of being read out by a computer. The method includes evaluating, by the first storage processor and as part of a first batch process, the set of enclosures relative to a set of identification rules. The extensions are sized to be substantially coextensive with the maximum projection of the binder's rings along an axis that is perpendicular to the inside surface of the spine, and the rings and associated structures are either mounted on the inside of the spine or inside of the back extension depending on the ring type. This enables the balance between positive and negative air ions and its stability to be improved while reducing the hardware configuration in size and weight.

1459826880-8df40fdd-2bc0-4c31-acc7-99db99c3ache

A vacuum cleaner includes an electric air blower; a dust separator placed at an upstream side of the electric air blower and having a filtration filter for taking in dust-containing air sucked by the electric air blower and separating the dust

from the air; and a dust accommodating section for accommodating the dust separated by the dust separator. Alternatively, a layer of SiGe having a Ge content greater than 0. From within the 3D image object, cross layer planar views spanning various depths of the 3D digital slide are constructed as well as 3D prisms and other shaped image areas.

1459826880-8e32e0e5-4937-4b1f-b923-523692eaa1b0

An integrated circuit may have a clock input pin coupled to a buffer. This compound is useful as a proteasome inhibitor and/or an antitumor agent. The method also includes producing an upper wafer including an etched substrate and interconnect metal, bonding the device wafer and the upper wafer, and dicing the bonded upper wafer and device wafer into individual MEMS devices.

1459826880-9d82bb71-96f4-4087-b707-1e4020fadd7f

An output driver for enhancing initial output data using timing includes a selection signal generation unit for generating a selection signal, a reference data generation unit for generating reference data, and a selection unit. Scalars are represented using a generic multibase form combined with the non-adjacency property, which greatly reduces the nonzero density in the representation. Embodiments adapt a software application for loading of a trigger and an extension library for interfacing a feature module with the software application. The heat sink has a mounting surface on which the substrate is arranged. In one embodiment, the number of active instruction schedulers and one or more associated functional blocks may be increased or decreased to improve power efficiency of the cluster micro-architecture. The client can then iterate through the result set, either by viewing different subsets or selecting different EJBs from the list.

1459826881-2da3cf02-8d4a-49ed-a250-12dd3b8f8015

A novel maize variety designated PHR1C and seed, plants and plant parts thereof. The apparatus comprises a dielectric reflector, a plurality of ridges disposed on the dielectric reflector and a plurality of grooves disposed intermediate adjacent ridges to form a diffraction grating. Each instruction includes an operation code, and each data manipulation instruction is specific to a particular data type.

1459826881-4f14846d-3071-49f2-9d45-e92098274f1f

A method for tilling needleless injector capsules with liquid drug, whereby dissolved gas within the drug is replaced by a less soluble gas in order to reduce the inclusion of gas bubbles, or to prevent the growth of bubbles during storage and thereby prevent breakage of the capsules. The self centering system is comprised of a series of arms that provide tension to hold the right and left sides in place. A heat-shrinkable tube has an inner surface and is disposed on the adhesive material so that the portion of the strength member is disposed between the inner surface of the heat-shrinkable tube and the outer periphery of the stop ring. An impingement annulus surrounding the impingement sleeve is divided into more than one region, with each region forced to have a pressure equal, pressure, with the pressure induced being sufficient to provide adequate backflow margin.

1459826881-ee17b24c-cd1a-4900-8ba7-941f81ba54b2

From an MPEG image data, an MPEG2 encoder circuit extracts a quantum scale of each macro block which has been used for quantization of the MPEG2 in the encoding process. In particular, certain microRNAs are useful to the response to chemotherapy of ovarian cancer patients. The product catalog system includes a product alternatives module that identifies product alternatives based on information regarding a multitude of received queries and information regarding products that were selected from other products presented in response to the queries. 05 wt %; converting said first slurry by means of heating at a temperature greater than 90°C. The transform coefficients are filtered to provide modified transform coefficients associated with an output bit sequence.

1459826882-5b049a96-02fa-43aa-a4de-bd7a5175caec

Light that has entered a lens held by a barrel portion of a three-dimensional circuit board transmitting virtually no visible light enters a semiconductor imaging device held inside the three-dimensional circuit board. In the printer, a machine plate is mounted on the outer circumference of a machine-plate cylinder section 12 fixedly provided on a machine-plate drive shaft 1. The method further includes dispatching the at least one write request to the memory in response to the first ordering queue entry. The mixer 7 mixes intermediate quadrature signal ISQR and the input shift signal SSFT to generate a quadrature signal SQR.

1459826882-5da222ac-b3bd-4720-a1b8-c1a66006e0b4

An applicator for applying a friction modifying material to the top of rails. Preferably, the batt is made from about 60% to about 90% by weight natural fiber and about 10% to about 40% synthetic fiber. The system may be utilized in-situ and may comprise a movable probe mount configured to hold the eddy current probe and to traverse the calibration standard and the nuclear fuel rod to be measured. In the open position, the washer has external upsets which are received within two entrances located in the fixed bushing. The conductive layer is passed through the dielectric layer and connected between the outer pad and the inner pad, wherein the outer pad and the conductive block are formed as an integrative unit, and an outer diameter of the outer pad is substantially equal to an outer diameter of the conductive block. The invention concerns in particular such a support having two separate frame elements which respectively have a bearing sub-surface and a base sub-surface, as well as a bridge member which can be coupled to the frame elements in the region of the bearing sub-surfaces for the transfer of force between the frame elements in a substantially horizontal direction.

1459826882-9c1368e9-4d17-435b-b512-bf9ae10d4e11

A system, method and computer program product are provided for computer graphics processing. This memory device including a first bit line and a second bit line having a current path independently of the first bit line, and renders write current paths of the first and second bit lines in common. The preamble signal is provided as a periodic plurality of preamble sequences, each preamble sequence being generated in accordance with:  $13215k=0bkbmod^*=\{1,n=00,n0$ . The switch element comprises a multitude of contact pairs of the contact matrix, whereby these contact pairs can be closed according to the position of the input element based on an arbitrarily made selection. The nth shift register includes an input unit, an output unit, an output pull-down unit and a threshold voltage memory unit. A getter layer is deposited over the non-insulative, silicon-including region, the getter layer reacting with at least one of the one or more contaminants in the non-insulative, silicon-including region at approximately room temperature.

1459826882-d72ead14-0a3f-455a-83c0-d748153292e8

A tibial prosthesis assembly can comprise a tibial tray and a tibial insert. At a pre-processing stage before the voltage signal detection, an offset current included in the detected current signal and having no relation to the terahertz wave is drawn. The resulting simulation results are subsequently assembled according to the functional layout. When the magnetic semiconductor is changed to the ferromagnetic state, the ferromagnetic material is magnetized in a predetermined direction due to the magnetic coupling with the magnetic semiconductor.

1459826882-e729f3e7-a40b-4219-89af-e6b7713a6e82

An adaptable hand operated tool for tensioning safety cable to a predetermined tension limit, crimping a ferrule onto the cable, and cutting the cable. The contact mass is prepared by premixing metallic silicon and a tin compound and heat treating the premix at 300-600°C. The cover lifting structure includes a first rotating member, a second rotating member, an elastic member and a pushing member. One implementation of the invention pertains to functional testing, and another

implementation of the invention pertains to site analysis. Inputs supply data to the microcomputer that processes the data.

1459826883-1ec894b4-b31c-4d3e-80c1-8d609bac2b22

Steels having a pearlitic structure and containing 0. A method for producing a cartilage replacement implant is also proposed. The method includes publishing the at least one OSGi object to the SOA registry. Between the top of the cable cap, and at the top of the cable cap, the cap is shaped so that there are no substantial horizontal surfaces that are of sufficient dimension to permit rodents or other vermin to sit on the cable cap and chew on the cables. The communication device can be a set-top box.

1459826883-6544c53e-c7f7-4325-b33d-554cd27fe3cf

The present invention relates to a method and apparatus for issuing and redeeming a gift certificate drawn on a credit card or other financial account. An SR flip-flop generates an output signal which is switched to the second upper voltage upon receiving a positive edge via its set terminal, and is switched to the second lower voltage upon receiving a positive edge via its reset terminal. When the functional block is about to require an increased level of power, the associated clock is provided to drive the at least one regulator switches overriding their normal drive signal, which has a lower frequency. A plurality of manually-adjustable tuning screws with engagement tips are threadedly disposed in the rocker arm. With the magnetic head, demagnetization produced in the recording track of the magnetic tape is prevented from being produced.

1459826883-8762f389-d2f4-4825-9baa-88fbd785e1ae

In a cooling structure for the secondary battery, a first exhaust duct is connected to a first battery pack. The call log is displayed for the user and includes a status indicator for each of the events. The first portions of the light beams are directed in the same direction above or below a plane defined by the second portions of the light beams. Combining the appropriate running calculations for a particular window position yields the final result for that position. The connecting element has at least one spring which can be embodied as a compression spring or as a coil spring. In an alternative embodiment, all references to a given type's supertype hierarchy may be stored in a type data structure.

1459826883-c681ebf3-1a76-4b5b-948c-4b117288d92b

A method for making an alkyl 3-hydroxybutyrate is provided. In some examples, the system determines a media component to be exported, determines the media component is in the media library for a specific process, and exports the media component after the process is completed. A further embodiment uses drain extension implants to provide good channel connection. Lesion candidates are segmented corresponding to the liver lesion center candidates, and lesions are detected from the segmented lesion candidates using learning based verification.

1459826884-3fc23604-d8a1-40ca-9d2e-485fc9701127

A small hand-operated sprayer for spraying small volumes of content includes a main body coupled to a top of a container and a hand-operated pump mounted inside the main body to pump content out of the container through movement of a button mounted on top of the hand-operated pump. The method discontinues the extraction of materials from the oil well, disposing the mixture of petroleum distillates and terpenoid compounds into the oil well, and disposes the salt extraction formulation into the oil well. In another aspect, an RFID tag includes an antenna having a first section and a second section short relative to the first section; and the antenna is adjustable to disconnect the first and second sections from each other at a predetermined location. The abrasive cleaning sheet is located proximate to the leading end of the base material.

1459826884-86b3a616-e908-418b-8d19-23d784eb3931

A display array element including a substrate, a prism rotatable relative to the substrate, and a fluid conduit defined in part by the substrate. A control unit in this device selects one value among values obtained by adding 1 to four PUCCH resource indexes, which have been preset for PUCCH resource 1 by the base station, on the basis of values for transmission power control information in a PDCCH, for which notification has been received at the start of SPS. Further, selection of a downstream flow and a downstream neighbor node may be based on the estimation. The instruction unit selects one of a plurality of colors associated with the game in response to the actuation of the mechanical number selection device, and causes the first output device to provide a sensory perceptible output corresponding to the color selected by the instruction unit. For example, the system may be configured to determine multiple properties of a specimen including, but not limited to, critical dimension and a presence of defects. The bridging section is integrally formed with some portion of the first section or second section.

1459826884-bd6089b9-9f62-423d-9053-deeec0024820

A process for the fabrication of semiconductor devices on a substrate, the semiconductor devices including at least one metal layer. The pre-stored digital word generator includes a edge memory used to store a primary preset information; an edge address counter used to point to an address of the edge memory; a reloadable down counter used to count according to the primary preset information and trigger the edge address counter; and multiple word generating circuits having a secondary preset information. A sensing period when the backlight is turned on and a sensing period when the backlight is turned off are set once, respectively, in the one-frame period.

1459826885-0c7a896e-63ea-4cae-8564-078e0ca4930c

A method, an apparatus and an article of manufacture for forecasting a meteorological parameter. First, a plurality of users are set to a logged-in status. , instead of a halogen-based flame retardant, as a flame retardant.

1459826886-239819be-d8b3-40be-bcfe-de5bd7cd35a7

Systems, methods, computer program product embodiments are provided for enhanced license management. The image identification apparatus includes a transformation module, a first comparing module, a second comparing module and a determination module. Each of the plurality of fringe sets intern have a structured-light pattern that is projected when one emitter group of at least one of the plurality of light emitters is emitting. When the first casing and the second casing are connected to each other, the first baffle plate is slidably inserted in the slit.

1459826886-9d2225e9-60de-4713-9bf9-5ca21fa51081

Process for the production of electrolytic capacitors with low equivalent series resistance and low residual current, having a solid electrolyte formed from conducting polymers and an outer layer containing conducting polymers and a binder, electrolytic capacitors produced by the process and their use. The microwave antenna has a radiating portion connected by a feedline to a power generating source, e. , a first storage device and a second storage device, in which the storage devices may both be active.

1459826888-197aa6cf-6727-4897-8ff6-305953aee695

The present invention uses invisible junctions which are a set of local features unique to every page of the electronic document to match the captured image to a part of an electronic document. As the valve is engaged with the bracket, a vapor vent fitting provided on the cover is received in the valve outlet and sealed by a seal ring. Normal memory access instructions may execute and will retrieve data from main memory in the event of a cache miss; however, these instructions are not allowed to allocate entries in the cache. The crystal holder holds the first and second crystal blocks at such angles to each other such that both crystal blocks diffract X-ray. Further, the synchronization control unit is configured to

synchronize refreshing of the display unit and the light transmission control unit, wherein a refreshing rate of the display unit equals to a refreshing rate of the light transmission control unit, and to dynamically adjust the view sequence based on the position information of the one or more viewers. The piston is associated with a compensating piston whose end face subjected to the pressure at one of the ports of the directional control valve is arranged before the valve seat when viewed in the closing direction.

1459826888-5709b1a0-27f0-4689-813f-599e89a725cc

An erectable, collapsible frame for a shelter, the frame being erectable to support a canopy in order to form the shelter. On the basis of the comparison, frequency bands of the input audio signal are selectively attenuated. The calibration signal is down-converted, with the receiver, to provide a down-converted calibration signal. The invention further provides a method for accessing and monitoring the operation off-site. The first timing unit transmits data to the second timing unit, and the second timing unit transmits data to the first timing unit. Protective means are placed in the environment of the chip to obtain an electrical and biological insulating effect for the active part with respect to the input and output contacts of the connector.

1459826888-d34dcfbd-6642-49a4-98c3-fa96e293f5e2

An insensitive crystalline high explosive molding powder, usable as a booster HE. The invention also relates methods in vitro and in vivo for testing hormones or another related molecules by cell proliferation or tumor proliferation. Blocking operations are eliminated from queries using a cost-based approach.

1459826889-00aa9267-db7a-4496-9a26-01cfad9889fd

A method of hydrogen recovery in refineries and petrochemical operations in which some or all of the feed streams for separate PSA units are combined and utilized as feed for a single PSA unit, and in which some or all of steam reformer product and refinery offgas streams being used as feed streams for separate PSA units are combined and utilized as feed for a single PSA unit. According to an aspect, correlated noise is reduced by coupling the reference inputs of imager amplifiers to common voltage sources. The first locking element is configured with a connector body for engaging and capturing an elongated rod and a transverse rod simultaneously. The weather information extraction may be performed according to a criterion such as extracting the weather information with a certain importance level or higher, extracting the weather information of top n th importance, or the like. An impedance matching network is additionally provided to make the operating frequency of the slot substantially the same as the operating frequency of the wireless communication device.

1459826889-36403bae-dc22-4949-9ba7-b77e8d61d486

An alignment mechanism to assist in antenna alignment is described. Structurally, the apparatus is provided with a cabinet body with an interior for placing test specimen. A job indicates that a certain application program is to be executed with a certain set of input. One disclosed embodiment comprises implementation of an EUV debris mitigation filter in an EUV source collector module utilizing a discharge-produced plasma light source.

1459826889-61cbb6b-271a-4984-9091-54b7577d4476

A method of humidifying a gas that includes supplying a gas to a surface of a humidification material that readily absorbs moisture and readily releases moisture when exposed to a dry environment and generating turbulence in the gas as it passes over the surface of the humidification material. More particularly, a gate stack of the transistor is formed to include an optional layer of poly-SiGe and a layer of poly-Si, where at least one or the layers comprises carbon. An insulating material is formed over the substrate, including the MRAM stacks with the upper layer of conductive material.

1459826889-cf54459c-2264-4d96-93e0-e2d61db1d008

A ventricular rate based on first candidate waveforms and second candidate waveforms within sensed ventricular waveforms is compared to an atrial rate. Lumber placing apparatus includes an actuating assembly that can be actuated to move a sticker support bracket that is operatively supported thereby in a substantially vertical direction and in a substantially horizontal direction during transferal, by the sticker support bracket, of a sticker from a sticker in-feed conveyor to a sticker tray. The compounds of the invention are suitable for use, for example, as hypolipidemics.

1459826890-2eca6507-6419-4b4f-bf89-af4c7ca487ba

Vertical cavity surface emitting laser arrays that emit light at different wavelengths and that are suitable for wavelength multiplexed applications. The system includes an injector for injecting a gaseous reductant into an exhaust gas stream, and a mixer attached to a surface of the injector. A measuring device is provided with the depth gauge for measuring the relative distance between the tip and the reference member, and the measuring device has a large, digital display for providing the relative distance. It suggested of a favourable prospect of application.

1459826890-4953ef15-0009-46a7-b192-b1aacbea6242

An electronic part and a complex electronic device each include a substrate that contains at least one material selected from a dielectric material and a magnetic material and two or more coils that are formed in the inside of the substrate. The print system reads out the job information spooled at the time of reception of a grouping start instruction from a spooler and stores the information. In so doing the mono-amine and di-amine derivatives of CL-20 are rendered and which in turn may be subsequently utilized as intermediates to generate further novel derivatives with differing physical and chemical properties to the parent compound. Other embodiments store more than the first page, or a part of the full file or document, thereby creating a safety margin in storing more than one page. A fixed logic processor, a first auxiliary processing interface, a second fixed logic processor, a second auxiliary processing interface enable communication with the configured processor, wherein the configured processor remains configured to enable both the fixed logic processor and the second fixed logic processor to access the configured processor to perform the fixed logic function. A thermal process is performed that reacts the metal with the p-type polysilicon in the presence of the catalytic surface to form a metal silicide.

1459826890-b47a0ba7-666c-4cfb-b33c-bcee83633135

A method is described for configuring a system having a plurality of processors to provide the system with at least one cluster of processors, where each cluster has one service point. A second level detector offset-controls a second output node in response to a pair of second reference signals. The method can include determining at least two performance values for the watermarks, determining some collective metric of the at least two performance values, and removing or preventing watermarks from being in the subset based on the same collective metric. This improved control is used to improve various engine control functions.

1459826891-42fe1dd7-90bb-44ac-bbd0-e1803a868b80

A DC-to-AC power inverter includes an input port, an output port, a switching circuit, and a system controller. In one embodiment, the contact probe device includes first and second contact probes connected to each other, the first contact probe including a first film, and a plurality of first wiring patterns formed on the first film, each first wiring pattern having a front end portion projecting from the first film so as to form contact pins. According to embodiments of the present invention, the two equalized signals are respectively demodulated according to a transmitting diversity mode, and then a maximum ratio combination is performed

on the two signals to get a demodulated signal, which improves the performance of the demodulated signal and the equalization system. The compliant biasing member is accessible for adjustments from the external environment. The stepped nozzles can be provided such that the exit diameter can independently dictate the drop mass and the entrance diameter can independently dictate the drop speed.

1459826891-7d9fb0fa-f914-48d4-9b72-1df621632828

A substantially pure capsular exopolysaccharide adhesin of coagulase-negative staphylococcal strains, and a gonoral method to prepare such adhesins, are described. When one of the left or right drive wheel moves backward and the controller detects that the user is behind the one of the left or right drive wheel, the controller suppresses or stops the wheel driver from driving the one of the left or right drive wheel. The graphics system has a graphics processor includes an embedded frame buffer for storing frame data prior to sending the frame data to an external location, such as main memory. Mating the insert housing, with the bore tube inside, to the muzzle portion engages the first angled surface with the second angled surface causing the first bore at the output end of the first bore tube to substantially align with the second bore at the input end of the muzzle portion. Transmission of the data user block is delayed until the next transmission slot. A controller trims a pulse-width of the first fuel injector until first and second AF ratios of respective exhaust of the first and second cylinder banks are equivalent.

1459826892-229642b6-8eb0-4211-9c85-5038c9f2ef8b

An object of the present invention is to quantitate with good accuracy, furthermore, quantitate absolutely, one or a plurality of biological molecules in a sample such as a tissue, a biological fluid, a cell, a cell organ or protein complex. An embodiment of the present invention includes a housing, an optical fiber, a collimating lens system comprising at least one lens, and an inner tube. For each Internet Protocol address block from which requests for content resources are expected to be received, the method generates a candidate list of data centers to be used to service the requests. The first device then piggybacks its discovery information in the SACK option of the ACK packet which completes the three-way handshake. The lithium secondary battery of the present invention can ensure its safety even when overcharged.

1459826892-6b866d79-3f75-4339-8354-cebd69052694

A method includes detecting an identity change instruction. Accordingly, when an axial impact force indicative of a sudden deceleration is applied to the shift lever, the support is broken. The inhaler comprises a release device which, upon actuation, releases the resisting force and allows the preload to actuate the aerosol valve.

1459826892-8ca426e8-5ceb-4001-8183-19a9971cc599

A system and methodology for implementing an all-Internet Protocol for voice and data communications on a code division multiple access network. In one embodiment, a buckle assembly is configured to detachably engage latch plates. This process makes it possible to improve the dielectric breakdown resistance of a copper interconnection formed by the damascene method. A wavelength-converted light generating apparatus and generating method capable of favorably generating light of a shorter wavelength than incident light of a predetermined wavelength by wavelength conversion is thus realized. The invention also relates to a computer program product comprising an algorithm defined by the above method. Therefore, the components such as high intensity discharge lamps and optical processing devices are unnecessary any more, reducing the bulk volume of the testing device and its related cost.

1459826893-6f19ff4c-6e2a-4825-a8ff-17b4ce036496

A hybrid IC card has an IC card and a housing. The third panel is retained by and

between the first and second panels in a manner in which at least part of the third panel is exposed. The tissue webs may be constructed so as to be relatively non-compressive and may have a resilient three-dimensional structure. The network is subdivided into logically defined rings, such that each working and protection circuit lies on one or more of the rings.

1459826893-8769f5b8-5c8a-461b-abe9-e6d0f81e8d4b

Embodiments of a user station and methods for synchronizing with devices in a wireless communication network are generally described herein. In one embodiment, an apparatus that includes a barrier component configured to be disposed within a plasma chamber. At least one of the light-emitting modules has a control unit and a bypass unit electrically connected to the light-emitting unit. Metadata associated with the key-points provides the user with additional information relating to the corresponding entities. Sesquiterpene-lactones form part of the prodrugs, and are designed to be linked to carrier moieties such as the peptides of the invention.

1459826893-89e9a28c-461b-43fd-b613-4a6c86c84531

It is a magnetic recording medium for which favorable values for all of reproduced output, noise level and error rate can be obtained, and which is also superior in terms of storage stability. The sharing model includes systems and methods that allow users to conveniently create and customize tabs and tab sets that define relationships between custom objects and fields, standard objects and fields, and applications. The second arm is pivotally biased to a wafer-hold position by a graphite bias member.

1459826893-fa05ae09-9cbd-4d97-bcaf-264088e8e204

A fastener installation tool is provided that is used to install a threaded nut onto a threaded fastener of the type having a non-circular recess in an end of the fastener that matingly engages with a male member that has a complementary shaped non-circular tip end to the non-circular recess. The container assembly includes a flexible pouch and a base. In addition, the second resin layer is provided over the first resin layer. The arm brace is configured to control an angle between the swimmer's elbow and wrist in order to promote early vertical forearm positioning as the swimmer's arm moves through a catch phase of a swimming stroke. The second side of the ear portion defines an exterior portion of the opening.

1459826894-0fc596df-67dc-4905-acdd-511aa64a9d45

This invention comprises a layout method to effectively protect electronic circuits against soft errors and circuit cells, which are protected against soft errors. The developer carrier bears a developer, and is disposed facing the image carrier at a first position. The second-order polarization mode dispersion is compensated by recognizing the separate sources of second-order PMD, and coupling of a portion of the optical signal into the orthogonal polarization relative to the main pulse with a different transmit time. Accordingly, the functionality of the SMM mode of various processors and the native mode of Itanium processors can be extended through add-on drivers written by parties other than the OEM from the computer system or the BIOS vendor for the system. The frame is effectively divided into two mutually exclusive groups of symbols; one group is copied M times and the other group is copied M+1 times.

1459826894-20e29582-1561-4c8f-b765-2617d1be804f

Swim goggles comprising first and second substantially rigid frames each having a base portion, an eye lens portion, an inner end portion and an outer end portion. The DC driver circuit includes a first capacitor coupled to a first switch where the first switch is coupled to an amplification circuit. The at least one anchoring unit includes at least one elongated member and at least one fastener. A shape memory alloy of elements refers to any molecular or crystalline combination which is a solid possessing the shape memory property of at least two solid phases in the

operating and storage conditions of a hard disk drive.

1459826895-03478ea6-0ccb-4d2a-ad27-e253f353e385

Apparatus includes a communication predelivery receiver, configured to communicate with and relay both IP addressed overhead and IP addressed payload data from an originating communication device. The object can include one or more optical elements such as a lens, or may include a plurality of fused fiber optics or collimated light tubes to convey the image appearing under the object to a different surface. A leadframe includes a member having a proximal end and a distal end. The trench is sealed with a sealing material such that the trench is air-tight.

1459826895-81f8335f-ea7d-4211-9abc-c3d2c7321165

The present invention concerns novel stent apparatuses for use in treating lesions at or near the bifurcation point in bifurcated cardiac, coronary, renal, peripheral vascular, gastrointestinal, pulmonary, urinary and neurovascular vessels and brain vessels. Consumables are categorized and displayed in lists associated with an appropriate color to draw attention to relative nutrition content and to facilitate quicker and easier evaluation of a consumable of interest. They also receive video signals from the server and frequency demultiplex them for transmission to the client. A light supply portion is mounted on the flexure and is provided between the flexure and the slider. In the first operating position, the run-off surface faces upward, while in the second position a surface of the work platform opposite the run-off surface faces upward, the surface forming a secure standing surface for a person.

1459826895-8a4d3a1e-8624-4d76-bc97-4dc43ca9c637

A pixel charge-discharge circuit charges and discharges a series circuit of a capacitor by alternately connecting two types of auxiliary capacitance wires to a high voltage source and a low voltage source by using four types of switches. Solids removal can be accomplished by electrophoresis in the same unit employed for electrolysis of brine to release chlorine, or in a separate unit. The system also includes a receiver having a photosensitive detector capable of detecting the modulated light signal and a decoder capable of decoding the predetermined signature.

1459826895-9dc3f12e-40dd-4b5e-8409-c7b2ebb886b6

A load disconnection lock having a locking device which is secured against unlocking by means of a safety device as long as the tensile load is not less than a predefined minimum value, and which unlocks automatically when the tensile load is less than the predefined minimum value. A stiffener is attached to the socket body. The serializer can be configurable to support other gearing ratios as well.

1459826895-bd17cb58-20b2-4852-9717-0c3565f7c7b7

A virtual device includes multiple devices connected to operate as a single device. The method includes connecting a pixel electrode overlapping a portion of the opened gate line to the gate line, and forming a metal pattern to electrically connect two adjacent pixel electrodes. The via sidewall surfaces have a first portion and a second portion. By changing the location of at least one zero in response to the measurement signal it is possible to dynamically change the compensation based on variations in the inductance of the inductor. The compounds are useful for the treatment and/or prophylaxis of diseases which are associated with 2,3-oxidosqualene-lanosterol cyclase such as hypercholesterolemia, hyperlipemia, arteriosclerosis, vascular diseases, mycoses, gallstones, tumors and/or hyperproliferative disorders, and treatment and/or prophylaxis of impaired glucose tolerance and diabetes.

1459826895-f3085cdc-61f9-44f6-a7f0-28392c218439

A servo system for writing servo information on a recording medium of a hard disk

drive and for determining head position based on the servo information with a tracking accuracy, the servo system including a first magnetic head and a servo writer. Each electrode includes a connector, all the connectors being located on the external periphery of the ring of detection elements. The radiating element is fed electro-magnetically by a parallel planar feed element connected to the antenna port and located near the radiating element, between it and the ground plane. The light guide reflection plate is configured to transmit light emitted by the light source. A noise countermeasure information determining unit determines noise countermeasure information based on an item selected by the user from the noise countermeasure list information, and transmits the determined noise countermeasure information to the user terminal. Carbon nanotube arrays are combined with a thermally conductive metal filler disposed between the nanotubes.

1459826896-63008ee7-b24e-46c2-be1b-4a0c9125bcdd

During an electronic call between two individuals, a sound localization point simulates a location in empty space from where an origin of a voice of one individual occurs for the other individual. In one embodiment, a method for obfuscation techniques for enhancing software security includes selecting a subset of code to obfuscate, and obfuscating the selected subset of the code. A step is formed between the first mounting section and the second mounting section.

1459826897-4efa9ac0-9026-493c-8f5d-637ec6831277

A lighting apparatus is disclosed. In some embodiments, the antenna parameter measurements comprise radiated power. The codec may include circuits for partitioning the image data into fixed-size blocks of image data and compressing the image data in each fixed-size block based on the image content in that block using a logarithm-based quantization of selected transform coefficients. During the grant pending absent state, the customer premises equipment sends no upstream data to the base station controller but can use the unicast request slot to request a data slot for sending upstream data to the base station controller. The system includes vehicle lamps according to the present invention, and can include sensor processors located within each of a plurality of lamps, or sensor processors that are centrally located within the vehicle. The passive infrared camera system includes: a lens; a refrigerated portion including the infrared sensor device and the optical bandpass filter.

1459826897-baf49ce8-3810-4c47-ba8b-e3206cc81fdb

The present invention belongs to the field of biomedical material, and is particularly related to a method of preparing bioactive glass coatings by liquid precursor thermal spray. The addition of an amino-containing compound to the self-dispersing pigment can improve the reliability and performance of the ink in an inkjet printhead. Each coil has forward extending arms including an angled portion and forward vertically coincident portions. The idea is to retrieve timely and spatially continuous upper level wind information from wind profiler measurements. This type of form panel allows the formwork fittings used with conventional plywood form panels to be used at the time of erection, is lightweight and has good workability, is durable, does not easily leak concrete, and can be recycled. The control method includes: controlling the current which is flowing through the superconductive magnet for limiting the fault current in the power net in the case of a short circuit fault event.

1459826897-bb2ff43f-6f4c-4081-b0a7-2df57ca28bd4

A fuel tank vent system includes a fuel vapor vent apparatus and a vent controller. The substrate has a {100} crystallographic orientation. The comparison may include segmenting the documents into blocks, where an arrangement of blocks of a document represents a layout of the document. In these embodiments, an overall EDA process is divided into a plurality of pipelined stages to accelerate the computational speed of the overall EDA process. The system controller is also configured to deactivate the power converter, while the contactor is maintained in the closed

position, when an alternating current power output has remained lower than a power level for a length of time. Such arrangement of the cooling system achieves satisfactory cooling of the vehicle even in a situation in which an air-intake port, for introducing air into the radiator, must be made small.

1459826898-975bfd06-4321-499a-b42d-9a1aeaf0c3b1

A mirror file systems is a virtual file system that links two or more file systems together and mirrors between them in real time. The air conditioning system includes a compressor, a condenser, an expansion device, and an evaporator connected to one another by refrigerant lines. The interactive entertainment phase may include multiple interrelated layers such that progress in one or more layers may affect the participant's experience in other layers. The self steering capability may be obtained by use of a longitudinally oriented rocker that may tend to permit resistance to deflection that is proportional to the weight carried across the interface. A control system is operable with each electric servo motor of each actuator for providing a simulated motion to the passenger platform including a heaving motion such that the vertical downward acceleration experienced by persons riding the elevator exceeds 1 g, by way of example.

1459826898-9b541605-779b-4a3a-a48b-fe2788654c52

Light sensors having a wide dynamic range are used in a variety of applications. The light-emitting device includes a first flexible substrate, a second flexible substrate, an element layer, a first bonding layer, and a second bonding layer. The array substrate also includes common electrode lines.

1459826898-c16829f8-a92e-42c6-bce5-4a149e53a75d

A tremolo assembly for a stringed instrument such as a guitar can be used in an instrument comprising a body, a neck and a head. These fasteners can be of any number and mounted on the top or sides of the body. These instructions are then sent to be installed on a network device that provides access to the network resource. Laterally spaced locking pins each include a pin connection link that is coupled to the cam. An application may request, from the storage system, an image of the file system. In particular, the luminaire generally comprises one or more light modules, each one of which comprising one or more light-emitting elements, and optionally comprising a heat sink in thermal contact therewith and output optics for managing light output from the one or more light emitting elements.

1459826899-3d62e99c-ea9c-48f2-a603-e22fa6377631

A continuously variable transmission for a motor vehicle, possessing a variator with a primary V-pulley set and a secondary V-pulley set. A radiance camera is described in which the microlenses in a microlens array are focused on the image plane of the main lens instead of on the main lens, as in conventional plenoptic cameras. The central adapter portion is a disk with an F-type or S-type adapter. In addition, a trigger signal can be generated by establishing an electrical connection between a signal contact element and the conductive element in the magnetic power connector so as to achieve the purpose of identification or control, thereby avoiding the functional failure caused by the damage of the contact element of the matching magnetic connector. The method is repeated until the set of orthogonal codes is complete.

1459826899-659ee15e-cd9a-4528-8e85-91099c96d026

A rotary finishing device including a generally circular hub having an inner periphery and an outer periphery. The method comprises the steps of producing a semiconductor substrate, depositing a binary chalcogenide layer onto the semiconductor substrate, depositing a sulphur-containing layer onto the binary chalcogenide layer, and creating a ternary chalcogenide layer comprising at least two different chalcogenide compounds ASexSy. Based on this indication, a technique may be selected for correlating a measured signal intensity to an analyte concentration or range of concentrations. To stow the cover, the side flaps are

released to return to their folded positions whereafter the cover is wound on to a roller at one end of the container. Comprising colostrum, lactoferrin, and with modified citrus pectin as an optional component, the dietary supplement is administered in mucosal delivery format: a dosage form that promotes effective absorption through the lining of the oral cavity. The lower end of the feeding reservoir includes a base portion having an opening therethrough for receiving fluid from a storage reservoir.

1459826899-7162ef02-4122-45de-a6b4-956911f1c9c5

A device and method to detect a gesture made by an object in touch-less communication with the device are described. In one example embodiment, a method of virtual defragmentation in a deduplication vault includes a virtual defragmentation phase. The transfer case further includes a powershift clutch assembly comprised of a first range clutch located between the carrier and the ring gear, a second range clutch located between the first sun gear and a stationary member, and a third range clutch located between the second sun gear and the stationary member. In response to receiving the funds, the kiosk may dispense a redeemable voucher to the user, including a redeemable voucher for any amount paid in excess of the amount due. Further, the method for separating the sound source from the mixed signal includes separating the frequency clusters by applying a blind source separation to signals in frequency domain for each frequency cluster; and integrating the spectrums of the separated signal to restore the sound source in a time domain wherein each of the separated signals expresses one sound source. Electrochemical parameters of the calibration batteries are measured.

1459826899-800bd258-235d-4d11-a7f1-f18ef4aff125

A method and system for physiological gating for radiation therapy is disclosed. The landmark pair forming unit forms general landmark pairs using of a distance between each of the reference landmarks and the general landmarks, and also forms general landmark pairs from the remaining general landmarks using the distances from the general landmarks included in the general landmark pairs. Each includes a zigzag portion with leads at different spatial locations. The microprocessor may execute the setup kernel to determine the operational characteristics on the device.

1459826900-29fbbcfcd-4f95-42ff-b735-9a377a4994a9

A vehicular mirror 12 having a first curved portion 18 and a second substantially planar portion 16. The various bearing types and the startergenerators are arranged in such a way as to share peak loads experienced by the engine shaft during maximum aircraft maneuvers. The retail performance metric type is determined as a function of the input received by the system. The second set of wireless link parameters corresponds to higher error tolerance than the first set of wireless link parameters.

1459826900-625aa803-4158-4023-a5a3-70196496b431

The present invention allows transmission of multiple signals between masthead electronics and base housing electronics in a base station environment. Additionally or alternatively, the method can include the utilizing a spatial mask and a variable splitting technique in the PSF estimation cost function. A semiconductor chip is attached to the substrate. Systems, methods and computer program products are provided in accordance with this and other aspects.

1459826900-6b016607-ad42-48af-8999-69cfb0c537c3

A system for bulk network transmissions using multiple connections primed to optimize transfer parameters includes one or more processors and memory coupled to the processors. The attachment includes a leg having an upper end and a lower end. In other embodiments relating to data receipt, a plurality of portions of data is received utilizing a plurality of different types of data connections, after which the portions may be reassembled. This processing is repeated to generate a panorama

image.

1459826901-1ad6dc4c-765c-4056-83ac-d4dd6b1174ff

A test handler is disclosed in the present invention. The light injector injects light into the light guide panel at a suitable angle for total internal reflection of the injected light at the surfaces of the light guide panel. The radially changing surface produces radially non-uniform and unsteady heat release that does not couple with acoustic modes within the exhaust duct. A structural representation of the compounds of this invention is shown below: . In one embodiment, the visual sensor also includes a process check portion adjacent to the banding portion for indicating whether a predetermined imaging parameter is within designated limits. The radionuclide is administered to the body in an amount sufficient to allow uptake and retention by the tumor cells.

1459826901-3d351b4b-dc66-4e73-9e44-f37b74ce9428

Apparatus and methods are provided for measuring the potential for mutual coupling in an integrated circuit package of any type or configuration using a network analyzer in conjunction with a coaxial test probe. ; and carbonizing the resulting product by heating it to a temperature of 500-3000\xb0 C. The balun includes a 1st winding that is coupled to the single-ended radio frequency signals and a 2nd winding that is coupled for differential RF signals.

1459826901-b82484d6-5900-4c19-9b82-e2a1d1767573

Scroll compressors include a tap for communicating a compressed refrigerant to a back pressure chamber to resist a separating force. A stack of memory arrays is formed by tow or more ribbon-like structures, which are folded and/or braided into each other. In one arrangement, a bowling game may determine a reference time at which a bowling ball crosses a predefined location in a bowling lane. The second circuit may be configured to invert the parallel signal in response to a control signal in an inverting state.

1459826901-f35804cd-6073-42d4-8981-0f33757eb08e

The QuickSite method provides a framework for conducting accurate, timely and economical site investigations and characterizations of potentially contaminated regions. The article includes a substrate, an overlay bond coat deposited over the substrate and a topcoat deposited over the bond coat. In some instances, control of an HVAC system may be modified based upon predictions of Critical Peak Pricing events. It further relates to metallic fluids or inks prepared from the dispersion and to the preparation of the dispersion and the metallic fluid or inks. When correctly installed, a tire chain tightener with N+1 hooks will form a symmetrical N pointed star inscribed in the circumference of the tire chains. At each cross point is located a memory block for storing any data packet received from the input port corresponding to the cross point and which is to be forwarded to the output port corresponding to the cross point.

1459826901-faef6145-cef3-48f6-9140-2a6601dd2917

The present invention provides methods of using metal nanoparticles 0. % high molecular weight film forming carbohydrate; 5 to 30 wt. The coating station and the coat-adjusting station comprise first and second bars for respectively coating and measuring the liquid agent.

1459826902-3d71aef6-e10b-4dcf-b9fe-73ab719bbb8e

A system and method for digital management and control of power conversion from battery cells. 1 to 20 volts peak to peak through said first and second electrodes. When the health care provider needs to use the stethoscope, the device can be slid up a length of the stethoscope to a desired location so that the diaphragm is exposed for use. The resultant beam provides extra reinforcing material where needed to provide a balance between weight and strength. The body includes a pliable first layer and a second soft fabric layer configured to engage digital

data readable portions of the optical disc.

1459826902-a75a8cf8-b7fd-4a34-ab89-2bc86e81545a

A diaphragm for a diaphragm valve in particular for liquid fluids includes a backing membrane and a primary membrane which are supported by a central connection pin. This application presents a three-dimensional mathematical model o study the interaction of light with a fully faceted, colorless, symmetrical round-brilliant-cut diamond. Parameterization values obtained are supplied to a predictor that extrapolates the behavior of the energy storage means. , the ability of the membrane to filter water by reverse osmosis; and to detect failures in the membrane such as leaking saline water into the output stream.

1459826902-b244a089-9764-4a5e-a701-e4d3034866bf

A circular filtering system that prevents the problem of inter-symbol interference. A method, for each of a number of future differently sized memory allocations, determines which memory allocations are to be satisfied from a lookaside list, and which memory allocations are to be satisfied from a memory pool. Speed divided by fuel efficiency results in gallons per hour. A control component may receive data units from the switch fabric after operation of the switch fabric and analyze the received data units to determine whether the received data units correspond to the inserted test data units. A preferred oxygenated water stream or source has a dissolved oxygen concentration of greater than 50 ppm. A motor control unit gives, to windings of each phase, currents obtained by adding, to a fundamental sine wave current, a current having a frequency which is three times as high as that of the fundamental sine wave current.

1459826902-b70fed9f-dde2-4e49-aa9e-26ba54b7182e

A surface of a workpiece to be laser machined is protected by a surfactant film form debris produced during machining with a laser beam by reducing adherence to the surface of debris produced by the laser machining. Digitized and compression encoded audio signals, stored in a semiconductor memory, are read out so as to undergo a decoding operation, which is an inverse operation to compression encoding, to reproduce the audio signals, and the reproduced signals are heard by the headphone. A second write head concurrently writes an incremental number of stripes to a specified first stripe pattern to form a first incremental stripe pattern with a fifth write element and writes the incremental number of stripes to a specified second stripe pattern to form a second incremental stripe pattern with a sixth write element. If the button head is pushed in its intermediate position, the center button axle makes only the center individual switch ON.

1459826903-bab3a847-efae-4331-a343-ef7c1da97b4e

In a fixing tool, a fitting portion includes a post, clamp plate, elastic press piece, and lockingunlocking piece. Frame flows routed through the switch are counted by hardware frame counting logic, which includes a content-addressable memory and counters corresponding to various frame flows. The layers of the supercapacitor are optionally rolled into an approximately cylindrical structure. The first control device is generally exposed when the moveable panel is in the first position.

1459826904-057a196a-bf19-48f4-b0ea-dbe9eb555e95

A new and distinct cultivar of Impatiens plant named \u2018KLENI05079\u2019, characterized by its upright and outwardly spreading to trailing growth habit; rounded plant habit; freely branching habit; dark green-colored leaves; freely flowering habit; relatively large intense purple-colored flowers; and good garden performance. The relay may be a single or individual relay or a polyphasic relay. In this annealed state, the instrument blank is twisted at low temperature, for example less than about 100 C. Each of the conduits include one way valves disposed therein to limit fluid flow to a single direction into and through the bladder.

1459826904-0cdd23b0-4df0-4658-b8c4-cbd8c7b4931f

High pressure capillary liquid chromatography solvent delivery is effected at substantially low volume and atmospheric pressure. Various ways of monitoring the energy level of the rechargeable battery and controlling the battery recharging process for user convenience and safety are provided. The rules may be selected based on whether the EPG data was collected in-band or out-of-band. The clamping mechanism further provides a pair of thumb-screw fasteners on the handle which enable the clamp to be secured to inserted branches or similar objects. The front and back surfaces of the laminate is almost entirely covered with resin-layers.

1459826904-a3153790-6dd1-40b9-86af-767e6fc9358e

A method and system for co-molding a thermoplastic material with a thermoplastic sandwich material to form a thermoplastic sandwich article having a thermoplastic inner portion are provided. The gear head forms a gear housing, in which a free wheel or ratchet gear having an output rotational axis is arranged. At least one of the pinching elements of each pair comprises a delaying element for delaying or postponing a pivotal motion of the pinching elements towards the pinching position. The electrodes are formed on the base material and detect the terahertz electromagnetic wave incident on the incident surface of the base material.

1459826904-bb5c413b-a4a4-4129-b760-bb652d6a19b9

To provide a method for producing a Hippocastanaceae plant seed extract which is less colored and is suitably incorporated into a composition such as a pharmaceutical product or a cosmetic composition. An elongated track member is attached on the first structural member. The external interface module retrieves a comparison software file from the source external to the vehicle corresponding to the part number and compares the software file and the comparison software file. The nozzle body is threadedly received within the carrier behind the swirl unit to axially press the swirl unit, and in turn press the orifice plate against the adjacent surface of the carrier. cerevisiae reactions, a constraint set for the plurality of S.

1459826904-cbf6cde0-4375-46b9-a842-7e364e4b202c

The invention relates to a process for the crystallization of the compounds of the formula or acid-addition salts thereof, in which R1, R2 and R3 have the meaning indicated in Claim 1. The drive system is operatively coupled with a reservoir to infuse a fluid into a body. Then the cut apart glass plate is rotated by 90° and the partial plates are moved apart from each other. Likewise, a data collection device communicates with the interrogation component as well. Each of the first and second guides defines a channel configured to receive the first and second guiderails of the module.

1459826905-0071207c-ab5d-4fdd-b5bd-d308cf740214

The present invention concerns a projection system for providing a distributed manifestation within an environment. The drive system comprises a piston drive assembly, a hydraulic system, and a vibration drive assembly. The stereoscopic output includes images of a virtual reality tool whose motions mimic motions of the real-space grip.

1459826905-3c5f1b88-a7a0-4c1f-869a-30c61b63f04a

Primary and secondary Li-ion and lithium-metal based electrochemical cell systems. The large ink reservoirs may be pancake shaped, and may be stacked in side by side horizontal manner within the housing. The electron field emission material includes a carbon nanotube having a number of concentric graphene shells per tube of from two to ten, an outer diameter from 2 to 8 nm, and a nanotube length greater than 0. Accordingly, the pre-counters merely have to be wide enough such that even at a maximal event rate, the pre-counter will not be able to wrap before the \u201csweeper\u201d state machine accesses the pre-counter. Also provided herein are vectors and host cells comprising those nucleic acid sequences, chimeric

polypeptide molecules comprising the polypeptides of the present invention fused to heterologous polypeptide sequences, antibodies which bind to the polypeptides of the present invention and to methods for producing the polypeptides of the present invention. The positive-electrode mixture layer contains a compound including sulfur and/or phosphorous, a first polymer serving as a main binder, and a second polymer different from the first polymer.

1459826905-684deeb0-a6d3-427d-8223-c73e3461be26

System for arranging holders for information-carrying labels in optional positions along the front edge of a shelf or equivalent. In turn, a test system tests the electronic assembly in response to the electronic assembly being subjected to the thermal cycles. This strain can be used as vaccine. The first lens group includes cemented lens elements, and the cemented lens elements are positioned at the most object-side of the first lens group. Lock-pins are extendable from each side of the lower sash. In a preferred embodiment, the device applies parallel rows of surgical fasteners to body tissue and concomitantly forms an incision between the rows of staples during an endoscopic or laparoscopic surgical procedure.

1459826906-b116d6b3-a3fe-41bb-ae69-39ae72772803

A method and system for displaying and reporting project completion information of a large-scale project having a number of individual subprojects. The phase change memory cell includes a first thin film spacer and a second thin film spacer. The basis vectors account for colorant interactions between a primary colorant with which the color separation is to be rendered and at least one secondary colorant with which at least a second of the plurality of color separations is to be rendered. Output from the optical sensor is processed by the guidance and control electronics to produce command signals for the electromagnetic actuators.

1459826906-cb774ea2-bd4d-4202-9d85-2df9fd5a2838

Compositions and methods for the treatment of pain in a mammal are described. A number of nodes are initially generated, each connected to an initial generator, to create respective initial root nodes of an initial tree structure. An adjustable mirror assembly is carried at one end of the support member including laterally spaced first and second mirrors, the first mirror receiving light from the light emitting source and the second mirror directing light to the light receiving point.

1459826907-43c92d1c-7851-44f3-9429-c62c491cec37

A sludge treatment plant includes an extended floor with a work surface for receiving a mass of spread-out sludge and a movable carriage positioned transversely above the work surface. A fluid filling method for a vacuum container is also provided. The particulate absorbents are generally placed in the forming box by distribution units which may have metering devices and outlet chutes extending into the forming head. The insert is rotatable between two positions, an upright position in which the perch is below the base central opening enabling birds to feed while standing on the perch, and an upside down position in which the perch is above the base central opening, requiring birds to hang upside down from the perch to feed. One or more optimizations may be included in the optical structure including optically absorbing materials, varying the geometry of the structure to change reflective angles, using optical apertures, changing the reflectivity of one or more mirrors, changing the photodiode to be more impervious to spontaneous emissions, and using ion implants to reduce photoluminescence efficiency.

1459826907-8b76d802-65d6-4adf-876e-3828c53f4ad0

The device for measuring translation, rotation or velocity includes at least a light source, a light detector, a first grating and a second grating, the first grating being mobile relative to the second grating. The wiping device includes a front flap and a rear flap adapted to elastically and slidably engage the floor so as to define a suction chamber therebetween, with the suction chamber being fluidly

connected with a suction device. Thus the blade is pressed against and cuts a substrate and produces chips, and the blade is intermittently disengaged from the substrate whereby the chips move in the direction in which the blade rotates to be removed from between the cutting edge of the blade and the substrate. The latching portion guides and resists the IC package in the insulative housing. The attestation server stores said results in a database for comparison to subsequent results sent by devices. The structure so produced can be used for molecular separation.

1459826908-278997c2-1e44-487c-985d-dabf868845fe

A three part foundation system for supporting a building is described. The amplifier provides amplification of a source signal to the antenna and recovery of power stored in the antenna during periods when the impedance of the antenna is negative to enable reverse current through the amplifier to a direct current power source. The commands may be received from a device abstraction layer in response to a request from the simulator for any commands associated with the plurality of devices. In addition, the method may include binding the tag to the message by applying a message authentication scheme and providing a mechanism for down-stream applications to identify information about data included in the message by reference to the tag. A series of historical scenarios of the demand at the departure of previous instances of the flight are obtained from the potential profiles, and a stochastic model is applied to the historical scenarios according to the corresponding probabilities for calculating the optimised weight and volume authorizations for each category.

1459826908-2a2c95e6-cfffb-4a30-aa76-e715c0be2bcf

A head 4 includes a socket 10 and a weight body 12. The gusset includes a sleeve attached to the gusset along a fold location. The supplier information is stored by the server in a database. Each group is formed of a plurality fiberoptic strands. The system further includes a communication system coupled to the pre-screening stage and the screening stage.

1459826908-96e0aa8e-bb24-429f-850c-d9b1f13d4fe8

An image sensor has an array of image sensor pixels. The semiconductive foamed elastic layer is a layer formed by making the mandrel and a semiconductive rubber composition standing uncured and unfoamed pass through a crosshead die of an extruder to set the composition on the periphery of the mandrel, followed by curing and foaming. The interleaving includes computing positions of the information bits in the transmission bursts such that the values of the indexes of at least a portion of the information bits are modified. Further, the objective lens having a numerical aperture larger than or equal to 0. The formation to be treated may be chosen based on an initial vitrinite reflectance of the formation.

1459826909-612dbd9a-fbe9-41b7-9ace-c90d4df8f550

A clamp for attaching a vibration damper to an energized suspended conductor includes a base having a first clamp member with first and second extension sections. Signature data is acquired by registering a signature handwritten on a surface by a three-dimensional inertial sensing system having rate-of-rotation sensors and linear acceleration sensors. Within a memory controller, a request queue receives requests from a requestor, a bank decoder determines a destination bank, and the request is placed in an appropriate bank queue. Some embodiments may include a photofabricated seal formed by a photosensitive polydimethylsiloxane material, by a filled photofabricated mold, and by photopatterned glass frit. \u201cFor once you have tasted flight, you will walk the Earth with your eyes turned skyward, for there you have been, and there you long to return.

1459826909-7add339f-792d-4b47-9ea8-2c751330f6bf

Methods provide for post processing at least one flexible glass sheet with the step of providing the glass sheet with an initial shape. The MRAM reference cell sub-

array has MRAM cells arranged in rows and columns. By tilting the lock lever away from the pivotal ball mount, the pivotal ball mount is free to rotate so that its hitch ball can move in an arc laterally for alignment with the ball receptacle of the trailer tongue.

1459826909-e4b55d28-35cc-4d0f-9d82-1fa04ead9a61

A method and apparatus for secure authentication of Near Field Communication transactions based on proximity to a mobile key device. Each DRR includes a parameter indicating whether it is a null or non-null DRR. An aperture may be formed through the rest of the thickness of the counterweigh block at each indentation, wherein a securing strap can be run through each aperture of a stacked plurality of counterweight blocks to secure them to each other. The process of the present invention may also include concentrating steps. A symbol stack may be replaced with another symbol stack. A processing system includes a scalar robot for conveying a bonded substrate stack held by a robot hand, and a centering apparatus, separating apparatus, inverting apparatus, and cleaningdrying apparatus disposed at substantially equidistant positions from a driving shaft of the scalar robot.

1459826910-3ed26acb-101b-4bff-a4bf-1827bdeed7be

A system and method for optimizing network delivery of streaming data is provided. The flexible flat cable includes: a first shield member and a second shield member disposed in such a manner as to cover a surface of a cable body including a plurality of conductors arranged in parallel with a prescribed pitch therebetween. Moreover, the controller may also be for selectively connecting and disconnecting the at least one other one of the antennas to an unused one of the wireless transceivers. In addition, the hinge is hidden from incoming light thus improving contrast and fill-factor.

1459826910-6076ba7c-f986-4f26-a2bf-0461bec824ee

A display device includes a pixel driver circuit. Said mop cover comprises at least two layers that are interlinked in a manner so as to configure a pouch-type mop cover having an insertion end. without the weight of the patient or the patient's foot on the scanner, has multiple arms and multiple adjusting members for first allowing the scanner to be easily positioned to desired positions and then temporarily held in any chosen position while a patient's foot is being scanned. A non-flowable granulate material is packed in the container. At least one abutment face for tangential abutment in a circumferential direction is provided on the guide end and a support face is provided thereon for radial support in a radial direction. Furthermore, a wall mount assembly kit may include assorted clips or brackets for attaching to different slat wall configurations.

1459826910-c940b69f-a713-46d0-a841-f17ed549121e

A privacy enclosure system including a positionable seat which transforms into a privacy enclosure. The NAND string channel may be a single crystal of silicon or have a few large grains of polysilicon. Using the information processor, a user then specifies an image output sequence by rearranging the thumbnail images with a pointing device. Consequently, the workpieces can be stored in a vertical direction, making it possible to secure the number of stored workpieces while saving space.

1459826911-25901451-7c0c-466a-ba48-d0db4c76e12e

This invention provides for a process of rapidly forming silk fibroin gelation through ultrasonication. A node name is provided for a target node on the SAN and a port name is provided for each port in the target node. The effects of the binaural beats may include various health or other benefits to the hearing aid wearer. , and a molar ratio of mayenite to calcium hydroxide is 19. Related methods and apparatus are also disclosed. The hybrid inductors may be configured by varying transconductance, resistance, and/or capacitance and may be utilized as an amplifier load.

1459826911-e9b3b0fc-76a0-4015-9693-d121743923ca

A metal casting system and related method are described that eliminate or at least significantly reduce deposition and buildup of resinous materials in gases vented during a casting operation. Such interference between collocated wireless radio devices can lead to degradation in performance of one or both of the wireless radio devices. A daughter isotope is generated and collected from the first isotope. The method further includes electrochemically depositing a second copper layer on the copper seed layer. A statistical data generation unit generates a scatter plot, which has granularity on the vertical axis and a radiation dose on the horizontal axis, as statistical data.

1459826912-01c6d9ce-d738-4eba-83bb-886d1b2de1d3

A magnetic member includes a substrate and a magnetic element. The receiver part defines a receiving groove facing the microphone part. The square bar is passed through the probe in probe's passive direction during the calibration.

1459826912-39144b35-a9cd-4b29-b75f-e582c80030d6

The invention provides compositions and methods for the breeding, production, processing and use of specialty cannabis. The programming station generates a security code and communicates the security code to a memory of the programmable key. The local file data corresponds to file data in the remote cluster file system. The tapered, outer or inner surface of the shaft is typically longitudinally displaced from the cotapered transition section. Devices to practice the method include sewing machines having a sewing head moveable relative to a workpiece and a control handle operably connected to the sewing head to move the sewing head relative to the workpiece, wherein the display showing a pattern to be sewn is mounted relative to the control handle for movement with the control handle.

1459826912-5ae56fad-f017-428b-bbfa-57206824c295

A method and an apparatus to drive an analog signal into a sensory tissue. A distance between adjacent lens units change during zooming so that a distance between the fourth lens unit and the fifth lens unit at a telephoto end is shorter than the distance at a wide angle end and a distance between the fifth lens unit and the sixth lens unit at the telephoto end is longer than the distance at the wide angle end. Each orientation of the acoustic energy may be simultaneously or alternately generated. The stabilized zeolite is bound by a phosphorous compound, alumina and optional binders wherein the alumina added to make the catalyst is about 10% by weight or less and the molar ratio of phosphorous to total alumina is sufficient to obtain an attrition index of about 20 or less.

1459826912-6ec431e2-a081-40b2-b721-fbd37e79ad53

A semiconductor transistor with an expanded top portion of a gate and a method for forming the same. The output voltage of the permanent magnet generator is controlled by configuring the electrical connection of the stator coils. The processor including a scan test controller coupled to the first and second distributed shift generators, the scan test controller to provide clocking signals for the first time domain and the second time domain for performing an at-speed test of circuits coupled to the first group of scan chains.

1459826912-7a2344cd-c44a-44b6-936f-dde0a54af605

The invention relates to a pressure gauge having a cylindrical housing to which a bushing is fixed, which penetrates the housing. The processors may comprise acceleration units for comparing acceleration signals with acceleration thresholds, and magnetic field units for comparing changes of magnetic field signals per time interval with rate thresholds. Methods for making a semiconductor device having a substantially reduced internal stress are also provided. Photoresist monomers of the present invention are represented by the following Chemical Formula 1: .

1459826912-c4f586eb-5d4d-451f-955c-773b5b51e6a0

An image forming apparatus includes: a plurality of trays; a plurality of full-stack detectors; a first storage section; a second storage section; and a controller. This structure can preclude the main circuit part from being discerned by visual observation, a visible light microscope and an IR microscope, and accordingly imitation, copy and altering of the main circuit part by other people can be prevented. In addition, an arbiter for a bus grant among a plurality of master devices for access to a shared bus is disclosed.

1459826912-d3185a44-1ceb-440d-8390-bf498f1a80f9

A method is used in managing system IO load. A coffee maker includes a second water passage in which the flow of water is controlled so that it is converted into steam for delivery to the brew basket. An optical element is inserted into the optical axis so as to be retractable from the optical axis during imaging. The p+-type impurity region has a higher impurity concentration than the p-type well and is shallower than the p-type well.

1459826913-3c3ba9b2-b30b-403c-bd5a-c79406ba0859

A gas species monitoring system includes a laser, a fiber amplifier configured to receive an input signal from the laser and generate an amplified signal, and a variable optical attenuation system configured to receive at least a portion of the amplified signal and generate an attenuated signal for delivery to a measurement point, where the measurement point includes a gaseous fluid. With this structure, it is possible to reduce the magnitude of a polarization-dependent loss generated when the lid and clad layer are combined. A pattern obtained by repeating, for each predetermined period, a pattern processed in this way is superimposed on an image.

1459826913-d6174c92-0150-4f06-b87f-10ac1e8f831a

The invention discloses Cyphometry a cryptographic system comprising ciferglifs, chaotiglyphs and word auras. A snap-fit coupling attaches the wall plate to the bezel, and a snap-fit coupling attaches the hall fixture to the bezel. Further included is an outer housing surrounding and retaining the wire guide and a substance disposed within at least one of the plurality of slots of the wire guide. The photocouplers have the same delay characteristic. Other methods and a package containing an addressable array are also provided. In addition, since a progressive bitstream is generated, 3D volume data can be shown progressively when decoding is performed.

1459826913-efdda76b-d01d-408b-addf-d8e6c1f484f1

Transfer devices for handling microelectronic workpieces, apparatus for processing microelectronic workpieces, and methods for manufacturing and using such transfer devices. 8-15 wt % of at least one graft-modified ethylene-olefin elastomeric copolymer; about 0. According to the invention, a gate-source voltage of the driving transistor is set higher in the low gray scale display than that in the high gray scale display. The present invention further includes a substantially annular top section connected to the plurality of support members, and is spaced at a predetermined height from the base section for allowing a child to enter and exit the toy. A plurality of carbide precipitates and micro-cavities is disposed in the substrate below the at least one shallow junction.

1459826914-a2e5e823-dd18-4126-b07a-1b3aa689bf52

A logging tool is disclosed for measuring the resistive anisotropy of formations around a borehole. An information address corresponding to the object is then used to access information and initiate communication pertinent to the object. By being pressed by a finger of the user, the closure lever can be pivoted from a closure position, in which the closure body closes the pouring opening, to an opening position, in which the closure body unblocks the pouring opening.

1459826915-8ee04ef7-554e-45f3-b68b-e74161659a97

A flat bottom, stand-up bag and a method of manufacturing the bag is provided. A differential encoder performs a differential encoding of a data series that is an aggregate of data having a matching number of elements to that contained in the first signal, and generates a second signal. Each column has one or more slots extending in a second direction generally perpendicular to the first direction. Adjustment of the complete tooth model for the tooth can be provided through additional patient information, such as X-ray imaging, to address variations in root shape between a generic root and an actual root shape for a patient. The driver software requests, to the peripheral device, a list of the attribute values settable for the start mode, then displays the attribute values in the list to the user, and sets the attribute value, designated in the list, as the job attribute. The lights have covers to protect the lights from breaking and can protect the user or a bystander from the impact of the lights as well.

1459826915-feed49aa-1d65-40ed-ab63-747550eb350e

In a dynamic mechanical analysis, a test specimen is coupled to an excitation device by a holder device. An E-frame defining at least two compartments that are open on at least one side that extends between the front and back ends of the rack. The structure member is provided between the dielectric substrate and the conductive housing. A shunt may be connectable between the receive side and a reference potential.

1459826916-2aa4e11c-38d5-450e-84a5-a75135387841

Acidic milk based beverage products which do not precipitate over time and are physically stable, and a process for preparing these products, are disclosed. The circuitry includes an audio path and a pulse metering path, where the pulse metering path includes a metering generator to generate a digital sine wave from a plurality of stored values, a first interpolator to interpolate the digital sine wave, a filter to filter the interpolated digital sine wave, and a second interpolator to interpolate the filtered interpolated digital sine wave. If the controller judges that the stage does not reach the fourth position, the controller controls the movements of the stage and the arm, and the elevation of the elevating member so that the arm starts to move toward the second position before the end of the elevating operation.

1459826916-f3c571af-cc8b-4976-b624-8e114037d298

A new and distinct cultivar of Verbena plant named \u2018USBENAS18\u2019, characterized by its low and outwardly spreading plant habit; vigorous growth habit; numerous large light purple-colored flowers; and tolerance to Powdery Mildew. Features of the DC vacuum chamber tester are modified to include new op-amp circuitry that provides the ACDC testing functionality of the non-vacuum chamber systems, resulting in an ACDC probe system that can be used in a vacuum environment. The piston is received in an aperture defined by the cylinder. The camera of a mobile phone photographs the label at a close-up distance, with the lens of the camera regrouping the split image elements of all the color bars to reconstruct the product code that will be displayed on the screen of the mobile phone.

1459826917-1e6f685e-09f7-4cc2-94ee-72632d05de5c

The present invention is directed to a process for purifying siloxane. An external process on a client or server may initiate a plurality of connections with the multi-core system, such that some cores have a plurality of connections and others have none. According to the embodiments of the present invention, the DRM Agent acquires RO related information which is stored on the SRM and does not have Move rights, and interacts with the RI to move the RO out from the SRM, so as to move the RO without the Move rights out from the SRM, thus extending an application of the RO without the Move rights. Around of the beam splitter, total reflection mirrors are disposed in three directions per angle of 90 except for the direction

in which the fiber collimator is disposed. The displays described herein include displays having one or more 3D images and sample 3D viewers.

1459826917-310f14a1-77ab-4866-990a-92bcbcb25b7df

The present invention relates to novel metathesis catalysts with an imidazolidine-based ligand and to methods for making and using the same. The liquid contains an organic EL layer material. When a packet is received by a network switch, the network switch can compare fields in the packet to fields in the flow table entries and can take corresponding actions when matches are detected. \u03b3-HRG antagonists as well as uses therefor are also described. The second face is substantially perpendicular to the first face. The muffling device comprises a plurality of screens of different fineness of mesh, and a frame for holding the plurality of screens arranged in a progressively finer parallel spaced-apart relationship.

1459826917-3ea22754-0593-445a-aec7-8d33b307e0ac

A retention system for retaining a climbing skin to the tail end of a ski comprises an elongated resilient tensioning member secured to one end of the skin, a generally C-shaped clip adapted to removably hook about the tail end, and means on an upper portion of said clip for releasably retaining a portion of said tensioning member thereon. Each of the target gas electrode and the reference gas electrode is made up of a plurality of crystal grains defined by grain boundaries having a total length of 1000 m or more in a surface area of 100 m<sup>2</sup>. One of the jet engines has a lesser maximum thrust capability than the other jet engine as a result of limiting the former's maximum thrust capability, but the two jet engines are otherwise equally powered.

1459826917-e2767703-e317-454b-b011-3e1ede9bbfca1

A transponder assembly for use with fiber optic digital communication cables having multiple parallel optic fiber elements. The system operates by sending a stream of packets from the sender to the plurality of receivers, wherein the packets include information specifying a sampling window for the stream of packets. The agent shortcut operation can be activated by sending an agent shortcut operation to the electronic device, receiving an activation signal from an agent activation device for the agent shortcut operation, and in response to the received activation signal, sending a signal to the electronic device to activate the agent shortcut operation. In such a manner, repaired tissue which is capable of withstanding physiological pressures may be provided. in a cool-down chamber in less than 30 sec. Next, a column-shaped conductive layer is formed to fill the trench via a side wall layer.

1459826918-0ecc1b93-179c-41a2-add6-c8d12b8484af

A particle monitor in the process chamber of a semiconductor device manufacturing apparatus provides a measure of a flux of contaminant particles in the chamber. An ODT control system in accordance with one embodiment calibrates and maintains the termination resistances for the signal transmission lines. 00, and a thermoplastic resin having a functional group capable of forming a chemical bond with the inorganic fine particles at one or more polymer chain terminals and having a number average molecular weight of from 1,000 to 500,000.

1459826918-29c9a514-bdc6-45d9-a76f-8844cbd11663

A one-wire protocol is described, wherein a one-wire bus has either a wired-AND configuration or a wired-OR configuration. Each inductor circuit comprises a primary coil which carries a first current that varies with an RF input signal, and a secondary coil which carries a second current that varies with the RF input; an on-chip current source provides the second current. This antigen formulation is preferably lacking in an immunostimulating peptide component, or has sufficiently low levels of such a component that the desired CTL response is not diminished. A processor, coupled to the pulse generator, varies the second set of interpulse

intervals according to a predetermined protocol after each group of pacing pulses is delivered to the chamber of the heart.

1459826918-4d30fea6-ad1d-4950-9cf6-a154191fdb6f

A circuit arrangement which comprises at least two acceleration sensors for measuring an acceleration of at least one part of the hazardous device, at least one logic circuit for evaluating measured values of the at least two acceleration sensors, at least one memory for storing a comparison value, and at least one safety device controlled by an output of the logic circuit. To allow enhanced control over the output of the slave clocks, the frequency of the local oscillator used to generate the synthesized output of the master clock may also be conveyed to the slave clocks to allow a second level of control to take place. A synchronization signal to one or more control nodes causes the nodes to adjust to a predetermined setting.

1459826918-7f4cef50-d40f-4af3-8ee1-acbbba7a48eb

I describe and claim an improved digital-to-analog conversion device and method. Also, the EUV radiation does not significantly erode the nozzle and contaminate source optics. An engine includes a computer configured to determine a performance status of intake or exhaust valves of the engine responsive to monitoring an engine acceleration parameter such as crankshaft acceleration. The second part of the respective strap loop is connected with the first part on a level with an upper second connection device.

1459826918-c4e86f86-ffde-4b73-8004-245c5dda30ff

Electric wires are described consisting of a metallic wire able to conduct the electric current, the outer surface of which is coated in an alloy consisting of specific metals in set quantities. In the present invention, an ablated tag is capable of being combined with a tape so that the tag attached to the tape can be adhered to a packaged object. The first volume is a copy source or a copy destination of a volume pair. The writer module may write the data from each of the backup data sources in the group to a target storage device in order to concurrently backup each backup data source to the target storage device.

1459826919-0a85dc18-7c66-4061-81f2-bdbc333289b0

A control system for an internal combustion engine having a throttle valve disposed in an intake passage of the engine. The analysers have an electrode structure comprising coaxial inner and outer electrodes having inner and outer electrode surfaces respectively. This bonded magnet 13 is press-fitted in a housing 12 and is held. The system performs OCR on a first device. An anti-reflective hard mask layer left on the radiation-blocking layer provides functionality when the reticle is used in a semiconductor device manufacturing process.

1459826919-103c980d-51a3-4bd5-9749-47de78a11618

A radio access network facilitates transmission of a Multimedia BroadcastMulticast Service to plural user equipment units served by a radio base station. In doing this the melt surface position is kept at the same level by maintaining one of the output parameters of the inductor feed within a predetermined range. Using the loader template, a user can access the database with the spreadsheet program in order to add, edit or retrieve data from the database.

1459826919-e9032fd4-045e-4a46-8a49-7379afff6da8

A utility knife includes a housing and a blade carrier movably mounted to the housing. The type of the battery is determined using, a two-pronged fork and a pusher slider assembly which may actuate two switches using a spring leaf. The ticket identifies the user and is passed to an adapter. The system routes the incident reports to the appropriate groups, so that the groups may address the incident reports and resolve the problem. The remote unit comprises a receiver for receiving wireless transmissions of the activation signal from the transmitter of

the base unit. In the formula : a dopant concentration in the silicon melt is represented by C ; an average temperature gradient of the grown monocrystal is represented by Gave; a pulling-up speed is represented by V ; and a coefficient corresponding to a kind of the dopant is represented by A.

1459826920-127e5ec4-ce59-45a8-8fab-da2fbb7753e6

A method is disclosed for representing a sequence of images constituting a moving image by processing signals corresponding to the image. A smokeless pyrotechnic propelling charge is disposed within the launch tube below the solid pyrotechnic compositions, and separated therefrom. A controller may cause an interocular distance and a convergence angle between the left and right cameras to be set based on a maximum allowable disparity, the focal length of the lenses, and a convergence distance. The estimation is based on a segmentation of the one or more projection images. Switching by the transistor is stopped when an abnormality is detected.

1459826920-2453ee0c-ed54-4d28-97f5-5225c3f5c345

The invention provides an estimation of key flow-independent parameters characteristic of NO exchange in the lungs, namely: 1) the steady state alveolar concentration,  $C_{alv,ss}$ ; 2) the maximum flux of NO from the airways,  $J_{NO,max}$ ; and 3) the diffusing capacity of NO in the airways,  $D_{NO,air}$ . A longitudinal intermediate portion of the bag projects toward a vehicle occupant. The hub assembly also includes a stylet handle having a stylet extending therefrom. Attachment members extending from the central shelf unit allow the shelf to be mounted in either a horizontal or a forward sloping orientation.

1459826920-3875d997-453d-467e-83a0-5cf7a331a129

Methods, arrays and kits are provided for rapidly and efficiently identifying and quantifying multiple different activated transcription factors in a biological sample at the same time. A pair of LEDs is mounted on the circuit board. Outputs from the sensors can be used to reduce unwanted noise due to angular rotational rates, angular accelerations and linear accelerations that may be coupled to the GGI. Further still, the embodiment includes reading the mbean descriptor file after the populating, and determining, based on the reading, whether the user has an authority to perform the request. It is configured such that a part of the light scanned on the screen from the beam scanning means is provided to a photodetector element that converts the intensity of the light into an electric signal so as to correct a driving signal to be supplied to the self-emitting element by the intensity of the light detected by this photodetector element. A final stage step generator enables a gradual brightness transition to minimize, if not eliminate jitter and jump.

1459826920-cc2f404c-9682-4672-9fb7-f194f23f2f6b

The present invention relates to a simple and efficient process for the preparation of amorphous form of torsemide. The fuel vapor pressure management apparatus performs leak detection on a headspace of the fuel system, performs excess negative pressure relief of the headspace, performs excess positive pressure relief of the headspace, and performs a diagnostic on the purge valve. The transfer station is positioned in relation to the casting roll in such a way that the gelatin ribbon is sandwiched between the casting roll and the transfer station; elastic tackiness of a passing gelatin ribbon causes the rotation of the print roll.

1459826921-02ecbd53-0664-4186-b09e-f94c07004b8d

An organic light emitting diode display device having a frit which can improve mechanical strength and adhesion between the upper substrate and the lower substrate, and a method of fabricating the same are disclosed. The hydrogen-containing gas may be a H<sub>2</sub> gas. Under appropriate biasing conditions, when the antifuse is unprogrammed, the conduction channel is turned on unless a voltage above a first threshold voltage is applied to the gate to turn off the conduction channel. Each cradle comprises a pair of seat flanges upon which the magnets seat.

The oxidant and fuel supply systems may be fully distributed. A three-dimensionally extending microscopically small contact element is integrally one-piece connected to the contact area.

1459826921-49246778-02a1-4a6e-9198-9c86334cc1c9

A new and distinct cultivar of Acer named 'AF#1' is described. Convolution simulates for blurring; erosion and dilation correct for edge diffraction. The calibration modes include amplitude calibration, frequency calibration, and time delay calibration. This new and distinct variety has shown to be uniform and stable in the resulting generations from asexual propagation.

1459826921-bc249df8-f82e-4d2b-be77-d6c118e9cb89

A display for a computer system comprising a display screen and a support for supporting the display screen, the support comprising a base and a column attached to the base, the column being provided with a screen support part and with at least one connector to which a module of the computer system may be connected. The hand-held image display apparatus detects a marker from a real world image shot by at least one of the first imaging section and the second imaging section, and determines the relative positions of a virtual object and a pair of virtual cameras with respect to each other in a virtual space, based on the result of the detection. The characteristics may be compared to one or more references. A routines component may be configured to identify a current routine associated with the health data. A first plug filled vias is formed on a central region of the cap layer, which extends downwardly to permit a bottom portion of the first plug to communicate with the photonic crystal lattice.

1459826922-4050d569-452b-4bd8-8c9b-ed26ae7e6e09

A frame construction tool system, for wood frame buildings, or for metal, polymer, concrete, or composite frame buildings, and methods of using some or all of the tools of said tool system, are particularly well-adapted for roof and/or wall construction. Linear movement of the actuator causes rotation of the rotary cam relative to a bending cam. Switching circuits electrically connect the power supply to the memory circuits of the memory device. A transmission is disposed in the middle of a second oil passage for returning an oil discharged from the hydraulic motor to the hydraulic motor-driving device. In another embodiment, air is introduced transversely through cylinder into combustion chamber, and diesel fuel is injected into combustion chamber and ignited when compound piston assembly reaches the top of its stroke to drive down compound piston assembly and rotate drive shaft. At the end of the expert's evaluation of the image, the system sorts the findings in the database and presents the findings by prioritized categories.

1459826922-58a00260-d3ce-4587-abaa-fcdabe383693

Creep control is performed, in response to an accelerator-off operation, to control a second motor to cause a predetermined creep torque  $T_{cr}$  to be output from the second motor to a driveshaft. In a content supply system 100, in order to use a streaming server 102 to perform a live distribution, a user PC 106 to be used makes a reservation for a time zone, etc. The NSC keys are respectively associated with the plurality of nodes and are used for secure communication between the security controller and the respective nodes. An optimal path through candidate notes is identified by minimizing an overall cost function through the candidate notes relative to the input musical score.

1459826922-f03910dd-6ab4-4c16-a09e-1efbae107236

Techniques are described for carrier frequency offset and channel estimation of orthogonal frequency division multiplexing transmissions over multiple-input multiple-output frequency-selective fading channels. In one or more implementations, the method includes, in response to receiving a request to declare email bankruptcy of an email account, identifying emails based on one or more predetermined parameters and automatically moving the identified emails to a

predetermined location, and sending a notification to one or more senders associated with the identified emails. In some embodiments ground potential is applied to both terminals of the pair of terminals during the delay period. The polynucleotide may, for example, encode a G2M cyclin. Said base can be prepared with a further step, which is a subsequent or simultaneous fermentation of the resulting product from step.

1459826923-0d475d7d-cb48-4274-bb08-834fbe0657b0

The semiconductor integrated circuit includes a first transistor which flows a current from a high voltage source to a first node, a second transistor which flows a current from the first node to a low voltage source. Each of the magnetic tunnel junctions includes a reference layer, a storage layer, an insulating layer inserted between the reference and storage layers, constituting the tunnel barrier of the magnetic tunnel junction concerned. Further, the device and apparatus allows monitoring of the listed parameters in a non-destructive manner such that the blood sample under analysis can be returned to the patient. Each of the six lug bolts is further coupled rigidly and perpendicularly at the center of each of the two corresponding helical springs and secured on both ends at each side of the hollow disc structure. The outer rim is then heated so as to thermally expand it to receive the wheel center. Then, a second aqueous fluid is introduced into the well bore and substantially diverted from the portion of the subterranean formation penetrated with the first treatment fluid.

1459826923-62127058-884a-41ad-b9e9-dc16a81f92de

The present invention observes the status on the server side from the storage device side, and controls the processing priority in accordance with the server status. The system includes a translation lookaside buffer configured to store a number of entries, each entry having a size attribute, each entry referencing a corresponding page, and control logic configured to modify the size attribute of an existing entry in the translation lookaside buffer if a new page is contiguous with an existing page referenced by the existing entry. Peripheral devices in the computer system chassis couple to the bridge logic unit through the IEEE 1394 bus. First and second flange sections 20,22 extend from at least some of the first and second sections. When the data is transferred to the target, the bits are inverted during the transfer if the inversion flag is set.

1459826923-7fb1d2aa-0293-45a5-9eca-f6544877bf02

In some examples, a protocol accelerator extracts a queue identifier from an incoming packet, for identifying a first buffer queue in which the packet is to be stored for transport layer processing. An example device may include a transmitting unit, a dielectric waveguide, and a receiving unit. If both input signals are activated, a feedback circuit can activate a feedback signal after a predetermined delay, provided both output signals remain inactive. Multiple panels can be connected in this manner, with a relay between each successive pair of panels. A release liner is located on the adhesive to protect the adhesive prior to use. The stepping motor is constructed to form magnetic paths together with the number of magnetic turns of the excitation coils without increasing the size of the magnetic yokes, thereby enhancing operations and reliability.

1459826924-56b2554c-56cc-4808-92bc-a317f5a0f3e4

A system for transparent local and distributed memory management overcomes the requirement of keeping track of whether a memory space allocated to a new object or a new program or data structure can be reclaimed. It finds a typical application in networks whose terminals cannot listen to each other, which is the case in satellite networks, for example, whereas management implies sending a query message to the terminals in order to determine the presence of an active group of terminals as a function of the reception of a response message from a terminal of said group. The print head has a first side opposing to the paper path and a second side opposite to the first side. A universal vocoder is proposed that allows the

vocoding element to encode or decode data according to any desired vocoder format. By receiving an order directly with the requestor and building the order using a master questionnaire which includes questions and answers that may be incorporated into the sub-questionnaires, the association data may be obtained by requestors in a direct, efficient manner without the use of a third party service provider. In this case, the teaching provides for the routes and/or objects to be recorded to be surveyed repeatedly and for the positions to be determined with the aid of statistical methods using measured values obtained by the repeated surveying operation.

1459826924-bb08224a-ce31-4b84-87f7-5c6953ae05e2

An active matrix type display panel is a hold type display panel which has a plurality of pixels arranged in a matrix form, and holds and displays an electrical signal pixel by pixel for a predetermined time. When a vehicle starts moving or changes gears, the electric-motor drive control means drives both of the two electric motors in drive modes that require high responsiveness from an automatic clutch device and drives the two electric motors alternately in other drive modes that do not require high responsiveness. There is provided at least one MMIC extending from the input microstrip at the offset across the input connector axis and having an output on the other side of the axis.

1459826924-d3e5c941-68fb-435f-800c-074cf07dc591

A compressor system includes a compressor for supplying compressed air to a commercial vehicle that has an engine with a turbocharger. The fitting or a part connected thereto can be fastened to the base plate. A cylinder head with a predetermined port configuration has selected ports cast with protrusions. The CBCM or BCM may be positioned so that the observer, in a line of sight, may see a visual exterior view of an outside scene through the CBCM or BCM and the projected image in the CBCM or BCM. When the screws are fastened fully up to the allowable torque, the HDD is firmly attached to the upper wall.

1459826925-5e2bd289-89b6-412b-80ee-bd4474944fc6

A bicycle rear suspension system that includes a main frame and a rear wheel suspension system, the main frame generally is comprised of a seat tube, a down tube, a top tube, and a head tube. In some embodiments, the escape interval is adjusted to achieve and maintain a percentage of pacing. It is thereby possible to obtain an ion-generating device and an electrical apparatus, capable of efficiently emitting both of positive ions and negative ions to an outside of the device, and easily achieving reduction in size and thickness. Each satellite includes satellite circuitry and one or more effectors that interact with the tissue. Measurements can be made before the flow affects the measuring volume and after onset of the flow through the measuring volume. The bundled cable has a cable jacket and cable filaments.

1459826925-a106f216-a68f-41e1-b1a4-20f093903dff

The present disclosure provides a method for a catalyst-free growth mode of defect-free Gallium Arsenide -based nanoneedles on silicon substrates with a complementary metal-oxide-semiconductor -compatible growth temperature of around 400°C. Accordingly, the stop band of the desired bandwidth in the desired communications band can be formed and the size of the communications system can be reduced. The system comprises memory, another memory, and a processor. A slider is coupled to a free end of the load beam extension, and a gimbal coupled to the second end of the load beam and to the slider. For analysis of prostate samples, each of these reference Raman data sets may have an associated known prostate sample and an associated known disease state, metabolic state, clinical outcome, and/or disease progression. The position-shift amount is smaller than the branch width of the first or second sub electrode branch.

1459826925-ef4d15ee-ea0d-4db3-a253-33469f2ebe1f

The present teachings provide a device and method of making and using thereof. A solution containing the core material and shell material of the microcapsule is temporarily stored within a discharge tank to which is disposed the oscillating body of the droplet discharging device, and microcapsules are formed within the solution by oscillating the oscillating body at a high frequency  $f_1$  and levigating the core material. The client's state information may include, for example, the client's authentication credentials, the client's authorization characteristics, and a shared secret key that the server can use to encrypt and authenticate communication to and from the client. The second server is programmed to execute the steps of the method described above. A chamber is formed within the discharge tube to receive the gaseous solution at the upstream end and release the gaseous solution through the diffuser into the discharge tube towards the downstream end.

1459826926-0985bd16-063e-44ff-a2d8-19baf13a24d4

Methods and systems for performing mass spectrometry of analytes labeled with isobaric tags are provided herein. One or more second conductive layers may be formed on top of the first conductive layers, with the second conductive layer material filling the hole structure. Alternatively, the jacket is defined by a double walled sleeve surrounding the AD and defining the space for the heat transfer media. When checking for patterns in the activity or historical data, techniques may include inferencing, frequency checking, location and distance checking, and relationship checking, and any combination of these. The results of the filter are displayed on the screen.

1459826926-2b48f775-fa30-4ce5-a9d8-f6dd2b68bc5e

A leadless implantable device delivery apparatus that enables testing of an implantation site before permanent implantation and enables secure attachment at the site while minimizing effects of the implantation procedure. A wellbore servicing system, comprising a pump group comprising a plurality of plungers wherein at least some of the plurality of plungers are substantially configured according to an equal phase angle distribution arrangement. When the SMS-C receives a Mobile Terminated SMS message destined for the mobile device, the SMS-C stores the SMS message for delivery. First and second sets of a second rebar group have first ends extending into adjacent sheer walls, and second ends within the coupling beam.

1459826926-80b77558-bad4-4872-b012-0ee023f2c3b3

A bellows for an articulating vehicle has improved performance by using fewer discrete pieces of flexible material, and a multi-piece frame. The present invention relates to a multi-piece solid golf ball comprising a core composed of a center and at least one core outer layer formed on the center, and a cover covering the core, wherein the core outer layer is formed from a rubber composition which does not contain zinc salt of unsaturated carboxylic acid. A detector detects the load current flowing through the main transistor by measuring the voltage across the resistance. A processor is also contained in the vehicle which calculates a preferred path of travel of the vehicle to position the hitch pin in alignment with the hitch socket.

1459826926-dc034f9b-94fd-4b42-b3fa-c127ef4acd3d

Disclosed herein are a delay-locked loop circuit using a phase inversion locking algorithm and a method of controlling the same. The CDR system includes a sampling circuit that produces a recovered clockdata signal and an interleaving feedback network that provides feedback to the sampling circuit. The fluid separation chamber is adapted to be mounted to the rotor so as to be rotatable therewith, with the first port located at a greater radial distance from the axis than the second port, and the third port located radially intermediate the first port and the second port. By providing a carrier which is mobile within the wood, the timber has a self healing effect wherein the carrierpreservative migrates to any freshly cut or exposed surface of the wood to thereby redistribute and treat such a

surface within the preservative and hence maintain integrity of a treatment envelope surrounding the wood. None, one, or more than one of the various WT materials may be selected by the user, to allow either the primary UV radiation, or the transformed radiation, or both simultaneously, to be emitted from the apparatus in a preferred direction.

1459826927-3d0a6ba1-d61f-422c-aae2-74417ce2bf5a

An apparatus for multi-bitrate content streaming includes a receiving module configured to capture media content, a streamlet module configured to segment the media content and generate a plurality of streamlets, and an encoding module configured to generate a set of streamlets. On the basis of data of a torque profile, a first loading state of the axial joint is determined at the axial joint during at a first working cycle of the industrial robot. The absorbent assembly is folded laterally inward at both of its side edges to form laterally opposing side flaps.

1459826927-cd4df929-7dc3-42a8-90d6-19d9fa0ffbc1

A method of accurately detecting the value of a dot of sensed image data, said image data comprising an array of dots and said sensed image data comprising a sampling of said image data at a rate greater than the pitch frequency of said array of dots so as to produce an array of pixels, said method comprising the steps of:.. The package may include a leadframe having a first side and a second side opposite the first side. This antenna is particularly suitable for domestic wireless networks. An operator compares the two images and performs an entry operation for executing calibration if the amount of displacement between the two is significant. The antennas can be formed using methods such as injection molding, overmolding, or extrusion.

1459826927-ef43ed6a-fb25-4526-80a2-9657b66b55aa

A method of manufacturing a sensor is provided. The tool is made of a hard sintered substrate and has a hard coating layer deposited on a surface of the substrate. Where the transmitter scrambles the signal prior to transmission, the receiver will also scramble the signal after error correction and prior to counting the number of zeros or ones. The transmission power between the rates can be a fixed or variable difference. The resilient bias member acts as an electromagnetic gasket while urging the floating heatsink against the component.

1459826928-369a43ba-7fbe-4fb3-9029-c4cb2d47e093

A business card having a QRC image, and method and system for transferring business card information from a QRC to a mobile communication device is disclosed herein. The radiators project first, second and third sound vectors respectively, with the second sound vector oriented vertically and the first and third sound vectors directed generally toward each other at angles above the horizontal so as to intersect at an inclusive angle between 90 and 170 degrees. The manipulating member is configured to be operated in conjunction with the moving part to selectively turn on and off the switch and is provided with the remote control signal passing part to allow a signal from a remote controller to pass. The content processor requests and receives content from a selected content source. The second film of the second device structure is etched to define an under-cut space between the first and second films. A collecting point position forming optical system is configured such that the collecting point is moved in an inspection range  $Z_r$  in a height direction  $Z$ .

1459826928-67fbc8c0-73f1-4b86-a1ee-c193761fff621

A gearshift mechanism for a motorcycle or other sequentially geared vehicle having a solenoid assembly, a solenoid plunger, a switch apparatus and a linkage. The present invention allows the rate of flow of the liquid from the container to be predetermined and controlled economically and accurately. The bearing arrangement includes a first bearing ring fixed to a support arrangement in a torque-proof

manner and disposed coaxially with respect to the rotor axis, and a second bearing ring being rotatably, with respect to the rotor axis, supported on the first bearing ring and fixed to the rotor hub. The actuator stem can then be driven to open or close a valve in a controlled manner without first compressing or releasing the springs. A tongue is fixed to and extends from the fixed portion. These layers are successively stacked in bottom-to-top order.

1459826928-92aaf285-d9d6-4c44-a05a-828049956840

Methods and apparatuses are provided for an electrical device that employs a feedthrough including a hermetic seal that seals an interior region of the electrical device. The boom cradle slide system includes a boom cradle that holds a sprayer boom in a stowed position. The ammonia conversion system receives the ammonia solution from the ammonia absorption system, and converts it into gaseous ammonia, and then converts the gaseous ammonia to produce liquid ammonia by vaporization and cooling-pressurized liquefaction. The bracket arrangements are each formed by tongue-shaped brackets which seen in peripheral direction extend successively from both sides of the recess. Systems of the present invention allow multiple users to remotely access the information and model via a computer network, such as the Internet, in order to make informed decisions regarding the structure and its characteristics.

1459826928-fe425f86-f2c8-4e35-bcfb-18e818ac8a6f

A tunnel junction having reduced free layer coercivity for improved sensitivity. The twisted pair slots are provided with funnel-shaped entrances to assist in routing the twisted wire pairs from a rear end of the wire containment cap toward wire slots of the wire containment cap. The lower layer is a Ti compound layer, and the upper layer is an aluminum oxide layer. The output unit superimposes and outputs to the wire the pulse signal and the carrier wave. The collar may be removable and may also include a handle.

1459826929-6f2895b4-df2b-4a74-867e-2ad5174e8cb5

A method for reducing the transport delay in a computer image generator. The main body has an adapter at one end. The method prevents a film from being delaminated at an interfacial surface due to film stress or adhesion fault, after processes for forming the low dielectric layer and a low resistance metal wiring have been completed to achieve semiconductor devices operated at a high speed.

1459826929-779a3ac3-900b-41ba-8f58-f810ca58c15c

A data storage device mounting apparatus includes a drive bracket and a cover. The system comprises an AC power source from a power grid and a DC power source from an alternative energy source. Each of the oil inlet and outlet holes is formed with an enlarged receiving space for receiving a ball. A thin insulating layer is formed over the sourcedrain junctions. The invention also concerns the use of a CO<sub>2</sub>-rich gas stream for injection into marine formations, and the use of a H<sub>2</sub>-rich gas stream for hydrogenation, as a source of energyfuel in fuel cells or for production of electricity.

1459826929-9211a5fa-701f-485b-8ff8-db8d405c38e8

A system, apparatus, and method are disclosed that include generating a scannable physical gaming component associable with a game. The illumination section irradiates at least near infrared light onto a biological portion placed in contact with a housing surface. The semiconductor chip is fixed with its surface being mounted on the substrate and with its electrode being aligned within the elongate opening. The data includes a signal identifying the desired medications, nutritional supplements, nutrients and minerals to be ingested and a time at which they are to be ingested. The towable scraper system is provided with a carriage assembly that offers rolling support for the rigid chassis as it moves over the work surface.

1459826930-07fda808-e8bf-46a0-9500-4c27b2ac215e

Disclosed herein is a process for the preparation of fluorine-containing olefins comprising contacting a chlorofluoroalkene with hydrogen in the presence of a catalyst at a temperature sufficient to cause replacement of the chlorine substituents with hydrogen. In order to perform the light quantity adjustment, a voltage to be applied to the light emission portion of the optical sensor is obtained by performing calculation based on a relation between a voltage applied to the light emission portion before the adjustment and an output from the light reception portion before the adjustment. The ram block has at least one block groove. Also, the printing elements are partitioned into plural groups each including continuously arrayed printing elements, and the printing elements in each of the plural groups are time-divisionally driven based on drive sequences. The automatic adapting mechanism is power operated and electrically coupled to an internal power supply source of the vehicle.

1459826930-591f3e31-d316-4c36-a79a-d9d37787506d

The present invention is directed to novel thiazolopyridines, pharmaceutical compositions thereof, and the use thereof as inhibitors of ATP-protein kinase interactions. The image is provided from data describing at least one object. A plurality of holes is formed in the carrier board. According to certain aspects, a relocation cancellation message can be sent from an RNC to a mobile switching center if a new measurement report, such as a 3a report, is received by the RNC. In a decorative film comprising a substrate and an adhesive layer formed on one surface of the substrate, the substrate is formed from an ethylene-acrylic acid copolymer.

1459826930-bc708b1e-c3a8-4024-b08b-e30d2975a0eb

A new and distinct cultivar of *Argyranthemum* plant named \u2018Cotton Candy\u2019, particularly characterized by its mounded, decorative inflorescence type in which the ray florets become progressively shorter in length toward the center to produce a ruffled appearance and a mounded effect, light-pink inflorescence color, dense flowering on short stems, and compact growing habit. When the topological structure of the community changes, e. A device having multiple film-layers may take a non-adherent form during delivery to a target location within or on tissue, and thereafter may be exposed to moisture to take an adherent form on the tissue. Each spring is independently capable of closing the valve. The refrigerant tube extends through the first aperture. The gauge allows the on-site user to alternately record coating thickness measurement data and descriptive textual or graphical data relating to each coating thickness measurement.

1459826931-066e5b42-4678-463a-9769-12d0f4b4985b

It is an object of the present invention to provide a substituted propanamide derivative or a pharmacologically acceptable salt thereof that is useful as a prophylactic or therapeutic agent for a bone metabolic disease. The guide pad is divided into a central and two lateral sections. In addition, a longer time period is available for gripping, tensioning and transferring the sheet.

1459826931-d3acffdc-e52d-4659-9455-6f4809d8ac98

Methods for determining a concentration of an analyte in a sample, and the devices and systems used in conjunction with the same, are provided herein. Each toroidal speed change unit includes a pair of input and output disks rotatable about a common rotation axis, the input disks being axially spaced from each other, the output disks being disposed between the input disks and axially opposed to each other in a spaced relation, and a gear set drivingly connected with the output disks. Spin and Drift conditions are detected through presently generated yaw moments and critical yaw moments which can be generated by a road reaction force assumed to be maximized. The contents of the particular partition can be indirectly read by determining the contents of the particular partition based, at least in part, on an error correction code based, at least in part, on contents of memory partitions of the memory array. A weighted internal stop member is slidably

disposed within the first telescoping section for movement between a first position blocking the detent pin when the first telescoping section is below the second telescoping section and a second position not blocking the detent pin when the first telescoping section is above the second telescoping section.

1459826931-d475467f-0304-4ac4-9a83-d0096e6476e5

An economical integration of trench VDMOS devices into a conventional BCD process is provided, with the optimization of key aspects of the device layout for low Rds area. Message details are stored and a tracker record published in a common format. The processor is further configured to execute computer executable instructions to extract the location identifier from the tone, and transmit, via the network interface, a signal that includes at least a portion of the location identifier. Additionally, the blade bias voltage is decreased for a period of time corresponding to the first turn of the developing roller and increased for a period of time corresponding to the second or more turns thereof. The first portion of the power grid is characterized by intrinsic capacitance that is larger than the intrinsic capacitance of the second portion of the power grid.

1459826931-ea309f4e-49b8-4f5d-8ae6-6ee0b057bf84

A wireless network includes transmission power and data rate adaptation based upon signal quality experienced by the user. The automated mover is preloaded selectively released to automatically reconstitute the medicament at a controlled rate. The owner of the user profile also may specify whether a particular term is always moved, never moved, or moved only when the user is alerted that the term is selected and the owner chooses to move the term.

1459826931-f73bef45-9756-4476-8392-d40fd0feb144

An improved method of attaching paper and cloth pennants and flags to automobile antennae, ropes, and the like is presented. Further, at least a part of the microactuator includes an electrically conductive region, and the ground region of the suspension is electrically connected to the slider by the electrically conductive region of the microactuator, such that the slider is grounded so as to prevent an electrostatic breakdown of the electromagnetic transducer element or the optical module. It can be conducted in a fluidized bed, which includes nanoporous particles and a fluidizing medium, wherein the nanoporous particles have a density lower than that of the fluidizing medium. The GFCI circuit is configured to detect a ground fault condition. The method further includes comparing the user fingerprint with the select server fingerprints to select a server fingerprint for recommendation, and generating a recommendation of a public entity corresponding to the server fingerprint for recommendation. The magnet ring includes two annular magnet rings composed of the same axial polarity separated by a non-magnetic spacing of at least the axial length of one magnet and associated poles.

1459826932-253bd9c6-13a2-4e91-9672-d02c3b75ebc7

An oral cleaning device includes a reservoir with a pump attached to the reservoir, the operation of the pump increases pressure within the reservoir such that liquid contained in the reservoir becomes pressurized. A pixel path through the captured print image frame is traversed. Real-time data points are stamped with the times at which their data were collected. The latch means is carried on the base for latching the cover onto the base.

1459826932-666b9fa3-242f-42b2-aaaa-27bd18b72ee1

Embodiments are described including those for controlling peak current consumption of a multi-chip memory package during power-up. The circuit breaker contains an electronic module which is configured to record and transmit data associated with the circuit using wireless technology. The carrier is transported by means of a driven roller positioner into the process chamber or out of the process chamber along a transport route defined by the movement. The adapter has a latching member that includes an exposed surface.

1459826932-6f307b0a-7346-421d-b345-17b0ee12a97f

The present invention relates to eukaryotic host cells which have been modified to produce sialylated glycoproteins by the heterologous expression of a set of glycosyltransferases, including sialyltransferase and/or trans-sialidase, to become host-strains for the production of mammalian, e. The invention also provides a medication management system and a medication dispensing system based on the pillbox. The ladder extender offsets the ladder from the shingles of a roof when gutters are not present. Since the metal island pattern has the same thickness as the gate line, the passivation layer can have the same height both in a drain region and in a storage region. 0.2 to 2% by weight, based on the weight of the diisocyanate starting material, of at least one trimerization catalyst containing a quarternary amine component and then removing excess diisocyanate from the reaction medium.

1459826933-3c320172-ab4b-4693-a915-12f6c76f852c

Provided herein are compounds of the formula :as well as pharmaceutically acceptable salts thereof, wherein the substituents are as those disclosed in the specification. The slow recovery stretch laminate may be joined to one or more article elements selected from the group consisting of the topsheet, the backsheet, the core, an anal cuff, an elasticized topsheet, a fastening system, a leg cuff, a waist elastic feature, a side panel, an ear, and combinations thereof. The second winding includes a second plurality of winding components, wherein each of the second plurality of winding components is on a corresponding layer of a second set of layers of the supporting substrate and the first and second sets of layers are interleaved. As a result, Schottky barrier height suitable for the nMOSFET and the pMODFET can be obtained, thus being capable of realizing high-speed CMOSFETs. In a specific embodiment, the structured material has an optical absorption coefficient of at least  $10^3 \text{ cm}^{-1}$  for light comprised of wavelengths within the range of about 400 nm to about 700 nm.

1459826933-73669146-9698-43a8-8542-0fecd33dcc1f

Partial oxidation steam reformers which use heat integrated steam cycles and steam to carbon ratios of at least about 4:1 to enable efficient operation at high pressures suitable for hydrogen purification unit operation such as membrane separation and pressure swing adsorption. Single electron imaging is used as a component of the 4D UEM technique to provide high spatial and temporal resolution unavailable using conventional techniques. The positioner is operably coupled to the charge roller and includes a discrete step drive configured to maintain a minimum spacing between the charge roller and the seam region of the outer surface when the seam region passes underneath the charge roller. A sample frequency is also octave and harmonically related to all frequencies in the sum.

1459826933-a2bb10d1-ded6-4bf6-bab1-7d294362f0d8

A connector includes a connector protrusion to be inserted into a connector socket and including a locking lever provided on a first surface and a connecting terminal provided on a second surface opposing the first surface or on a front surface; and a connector frame surrounding the connector protrusion and having an opening in a surface opposing the first surface of the connector protrusion. The battery charging circuit sets termination current, however, according to the capacity of the battery under charge, regardless of the properties of the charging source. The separating elements are part of a set that is provided with at least two separating elements  $T_i$  encompassing different stationary phases  $S_i$ . At the same time a scratch protection layer may be formed over regions not overlying optical sensors. The invention also provides pharmaceutically acceptable compositions comprising the compounds of the invention and methods of using the compositions in the treatment of various disorders.

1459826934-0587a0db-00ea-4048-aef6-fd16288ecb97

Embodiments for moving object detection in an image are disclosed. As soon as the circuit by way of first switches is separated from the global power supply path, because of the voltage loss in the transistor diodes it is supplied by the rest state power supply path which is provided exclusively to supply circuit parts set into rest state and on which therefore fewer current or voltage peaks can occur. Once the thread is chosen, be it the current thread, the most favored thread, or the affinity thread, the chosen thread is removed from a run queue and then is run on the data processing system on a selected processor. One or more conditions are detected with the location aware sensors and it is determined whether to manipulate at least one of the one or more cooling system components to modify a characteristic of cooling fluid contained in the plenum based upon the detected one or more conditions.

1459826934-05ea304c-f70c-426c-823e-7c68c0b5338d

The holding device of the endoscope allows suspension of the tissue while it is held and fixed securely. The system provides a user of an exercise machine with a virtual competition in which the user competes against virtual competitors based on his past performances or those of other users, either as an individual or as a member of a team. Additional uninterrupted surfaces are separated by the ribs and create softer hand impact zones.

1459826934-3494ce19-2d4d-4336-ad9f-b01c6d19169b

An electronic expansion valve includes a drive component including a screw rod which reciprocates axially and a nut which cooperates with the screw rod by screw threads, and a lower end of the screw rod forms the valve needle component. In one exemplary embodiment the device comprises a frame with a grip portion, and a waste receptacle with an open end for receiving a waste material deposit. An objective lens images the scene onto the SLM and the modulated image is mapped back to the original scene via an eyepiece. Inclining the cylinder lowers the center of gravity of the engine and disposes the axle positioned below the cylinder at a high position, thereby reducing the height of the engine generator. The logic device also locks the gun when the gun user is intoxicated or acting in an irrational manner. Suitable flap closing means close the end flaps and upper and lower flaps after the mandrel is withdrawn from the carton.

1459826934-95916f24-794b-4f66-a69f-8e5881590423

There is disclosed a radiation stable shield for use in space or high altitude applications. The system includes a first head configured as a bar shape that extends approximately a diameter of the substrate. The invention further provides an industrial process for obtaining tomato pulp and tomato concentrate from tomato juice.

1459826935-43618e7a-b999-43cd-a62b-6246243ef6de

The present invention relates to a method for fabricating a functional dental element, such as a crown. An inlet valve is provided adjacent the first end for permitting entry of liquid product into the passage. An evaporator is in thermal communication with at least one of the computer components, and vaporizes a coolant to cool that component. The interconnect structure is completed by first removing the masking material and sacrificial substrate. The mixture containing glycerol and consisting of a mixture of glycerol, ethanoic acid and water.

1459826935-892a0aa0-2090-415b-a173-0f68462d189e

Provided is a semiconductor integrated circuit according to an exemplary aspect of the present invention including first and second transmitter-receivers that execute transmission and reception of data through a signal line. A biasing device such as a torsion spring acts on a locking arm so as to pivot the locking arm such that it engages a slot on the pawl. The material and thickness of the walls define a specific heat capacity with regard to the geometric unit area. The latch members are generally semi-cylindrical in shape and include flat truncated semi-circular

upper and lower surfaces.

1459826935-c0033524-c0b2-48b1-81b3-55723186aeeb

Embodiments of the present invention relate to a flexible fluid enclosure interface system comprising a flexible fluid enclosure, one or more components and one or more strain absorbing interfaces in contact with the flexible fluid enclosure and the one or more components. The pulsating voltage is input to a switching circuit, and an AC voltage having a pulse width corresponding to a control signal is output. The invention further relates to methods for producing a corn plant containing in its genetic material one or more transgenes and to the transgenic plants produced by that method and to methods for producing other inbred corn varieties derived from the inbred LH311. The network node determines, for the first user equipment, that the alternative base sequence should replace the default base sequence.

1459826935-cd00d86e-210b-464c-ae8c-bc47e5a40f2e

A wagering game system and its operations are described herein. In use, the fastener cartridge can be positioned in a first jaw of a surgical fastening device, wherein the first jaw can be positioned opposite a second jaw, or anvil. A portion of nonvolatile memory, when meeting certain criteria determined from the data, may be proactively refreshed during a downtime when the nonvolatile memory is not otherwise being accessed.

1459826935-f7836aed-3548-4e65-906f-32b58e2c8515

Improved carrier recovery, symbol timing, and carrier phase tracking systems and methods suitable for use in connection with a dual-mode QAMVSB receiver system are disclosed. A processor resolves conditional branches and avoids repetitive resteeering by delaying branch resolution. The call center then extends the incoming call from the switching system to the terminal.

1459826936-2e8686d3-0c7e-485b-9d06-e2df1eb02c3b

An apparatus analyzes components of particulate materials suspended in air. The apparatus comprising a link member which is adapted to be pivotally mounted on the jockey wheel assembly adjacent the axle and a lever assembly removably securable to said link and adapted to engage a peripheral surface of said wheel, whereby movement of said lever rotates said wheel. By analyzing the anchor text of the references to the document, the system is capable of determining if a document is relevant to the set of facts. A plurality of LEDs and a current limiter are coupled in series. The electromagnetic wave shielding member according to the present invention comprises: a transparent film substrate; and a mesh consisting of a metal foil provided on the surface of the substrate through an adhesive, the adhesive comprising a styrene-maleic acid copolymer-modified polyesterpolyurethane and an aliphatic polyisocyanate.

1459826936-b285927a-b78e-4a37-a241-9e122dcf1ebe

A hermetically sealed housing having a base deck, a cover member and a seal assembly constructed of a liquid crystal material, the base deck and cover member forming an enclosure containing an inert gas atmosphere. In addition, the invention describes methods of preventing and treating protein kinase-related abnormal conditions in organisms with a compound identified by the invention. A third chamber is disposed adjacent the first chamber, relative to the diaphragm, and is in fluid communication with an exit passage. When the screw rod is turned clockwise, it brings the cam sleeve to rotate at the same time while moves in the cam-shaped bore to mesh with the screw threads in the bore, causing the cam sleeve to axially move along the screw rod and finely shifts the adjustable jaw relative to the fixed jaw.

1459826936-ec94e7ea-a405-4296-bb5a-3dd72bdc117b

An Internet based system for executing transactions is described. Applying multi-phase control signals to voltage boost internal nodes allows for eliminating

threshold voltage drop losses and thus improves the voltage pumping gain compared to circuits with diode-configured FETs of prior art. The first harmonic phase tuning filter includes an LC circuit coupled between an output terminal of the first harmonic phase tuning filter and a ground and tuned to provide the low impedance at approximately the harmonic frequency generated by the RF switch. The coolant then traverses and cools a manifold extension and a turbocharger.

1459826937-1fbd670e-c196-4248-ab0c-f8bbde2cf486

A notch 30 is provided at partitions 16, 26 and side walls 14, 24 to support slidably a coupling member 50 from a slide start to a slide end of the notch 30, said partitions and side walls partitioning terminal receiving chambers 18, 28. Similarly, the second attachment strap for attaching to the bottle has a redundant set of latches to ensure that the bottle is held thereby. opioid dependency comprising microparticles of a pharmacologically-effective amount of buprenorphine, or a pharmaceutically-acceptable salt thereof, in associative admixture with particles comprising a weak acid, or particles comprising weakly-acidic buffer forming materials.

1459826937-9e1f6b19-067d-4b04-a5d8-b7ead07ec5bc

A television receiver receives a programming signal including programming content and EPG data. The antennal element 1 has a ground part 3 and a radiating element 2. A mat support material is wrapped about the periphery of the catalyst substrates to form a subassembly.

1459826937-b4f9f4dc-eb2b-4e8e-aaf9-549942882fc2

Methods and systems are provided for geometry-based virtual memory management. The at least one input multiplexer can receive a plurality of analog input signals and output at least one multiplexed analog input signal. Voice traffic is detected and the trunked pager determines whether the voice traffic is for a communication group that includes the trunked pager.

1459826937-dc31e126-d6ee-49ed-8adf-8b878ad9f5fc

A distinct cultivar of Mandevilla plant named Monrey, characterized by its vining growth habit; glossy, dark green leaves; and large double pink-colored flowers with 20 petals per flower. The film insulating area is applied to the support element so that the area of the film matching the shape of the recess is congruent with the shape of the recess. With the outputs from the terminals Q of the flip-flop circuits thus fixed, an operation of a shift mode is carried out. The high voltage electrode plate is provided with a plurality of spacers for allowing a gap of a substantially equal height to be formed between every area of the high voltage electrode plate and the insulating sleeve so as to uniformly distribute the corona on the high voltage electrode plate when electricity conducts therethrough. When the pumpmotor is placed within the seat, the console terminals are connected to contacts on the module to provide a source of direct voltage for the pump motor. The device includes an active medium, a resonator for confining the light having a first wavelength emitted from the active medium within a three-dimensional space and a wavelength conversion medium for converting the wavelength of the light having the first wavelength into a second wavelength.

1459826937-ed29742a-5781-4259-b1eb-a238edabb529

A caster assembly is provided which may include an attachment means for attaching the caster assembly to a base of an object, a caster yoke, and a cam assembly operable in at least three states. This semiconductor device is provided with an IC chip and a wiring layer having one side that is electrically connected to surface electrodes of the IC chip. The switch comprises an isolation block connected to the connection terminal, the connection node, and the driving central circuit node and including a voltage limiter block, a diode block and a control transistor.

1459826937-f2af59f7-aa95-401c-8742-71c3ac1ec99b

The invention pertains to a safety cabinet with a workspace that is surrounded by a housing and is accessible on the front side of the housing through a work opening that can be closed with an adjustable front window. The upper portion defines an upper hood having an open position and a closed position. First polysilicon lines disposed against the insulating sidewalls extend from below the top of the openings to the gate oxide layer. The invention also makes it possible to obtain a coloration which, under certain conditions, does not stain. At least a portion of the spherical outer surface is made from a material that changes from at least one of the first shape, first diameter, and first hardness upon being immersed in water continuously for a time period less than one hundred eighty days so that the golf ball has a second performance characteristic that is different than the first performance characteristic. Each CP is mapped to a corresponding TEP that distributes each CNM for the CP, wherein the corresponding VTEP forwards the CNM to a VM contributing to packet congestion at the CP.

1459826938-0c293596-2bce-4eea-a1c7-37524f9eb5d9

The invention provides a system and method for calculating a backlight level for an image being displayed on an electronic device. The apparatus avoids deposition on windows or other microwave transmission elements that couple microwave energy to deposition species. According to the invention, the separating plane between the partial rails runs in an obliquely inclined manner. Partial 3D image data records are generated and formed into a set of projection image data records. The target network agent uses the received information to announce itself as the device to the target network.

1459826938-0d9e50d6-9f47-4d2d-950f-e33b6921fa6f

Methods, systems, and articles of manufacture for scalable processing of collections of files are disclosed. The stator includes a stator core and coils winding on the stator core. The rigid portion of the device is inserted therein.

1459826938-239d951e-a549-4759-8988-1d240494e6ef

A trimmer attachment for mower deck having a servo connectable to a lawn mower deck. The resolution test method is adapted for testing a resolution of a camera device. The second contact returns RF energy to the control box to signal that the bolt is in its extended or locked position. This process for preparing salicylamide intermediates from salicylic acid or derivative thereof generally has a cycle time of about 2 days, and yields about 95% of a 99% pure material. The read circuit pole is separated from the feedback pole in frequency.

1459826938-6aa8bb26-ff32-40a5-b9dd-4159b07b6f1f

A method for manufacturing a vertical light emitting diode of the invention allows an easier process of individually separating chips. The first multi-layer via extends through the second dielectric layer, the first cover pad, and the first dielectric layer to the first contact pad. It is possible to generate a stable and uniform glow discharge under the atmospheric pressure at low cost by applying a considerably low voltage between said electrodes. Each composite is disposed between and contacting two conductive layers in a multi-layer fashion.

1459826938-7a512d6a-abc7-4b0b-9322-35909a752f71

The invention provides a DNA molecule comprising a promoter sequence operably linked to a DNA sequence encoding first and second proteins linked by a hinge region wherein in that the promoter sequence can be one having activity which is induced in response to a change in the surrounding environment and the first protein can be Tetanus toxin C fragment or one or more epitopes thereof. A transformer circuit may be coupled to the fuel pump for increasing the driving speed of the fuel pump when required. Additionally, the system further comprises at least one extra surface parallel to the second lens surface, wherein at least one extra surface has a length L and is parallel to each other.

1459826938-8dac1cf6-ae0a-47fe-be3b-16e19de8722d

A vision display system for a vehicle includes a plurality of cameras having exterior fields of view, a first display screen disposed in an interior rearview mirror assembly of the vehicle, and a second display screen disposed at or in a console or instrument panel of the vehicle. The packet-switched communications device has a corresponding unique identifier, such as an address or extension. Login credit accumulates with time. The photon receiver determines a reflection time of the photon and further determines an arrival position of the photon on the photon receiver. 0 mgm3 at standard temperature and pressure.

1459826939-0ce24d60-e767-4afd-8bdb-35b786ad2c45

A point card system according to the present invention includes a customer ID recording area 20, a service point recording area 24, an information recording area 22, and a browse flag recording area 23. 3V technology using a nominal power supply of 2. A first distance is defined between the radially inner surface of the ledge and the radially outer surface of the hub. The present invention is applicable to communication systems. Both applications of the acoustic impedance matching enclosure are to insure that the drivers' diaphragm is clear of disruptive internal standing waves, properly loaded at all frequencies and not easily affected by room reflections.

1459826939-23716262-164c-4eba-a2d1-00d7f2aa62e2

A shift registers circuit having a series of cascading shift registers comprises a first transistor coupling to an output signal of a pre-stage shift register, a second transistor coupling to the first transistor, an output and a first clock signal, and a pull-down module coupling to the output, output signals of pre-stage and post-stage shift register, a second and a third voltage level. An identity authentication method includes the following steps: generating the dynamic display character sets; inputting a dynamic input code; and comparing the dynamic input code with the user password. According to another aspect, a catalyst and an oxidizer are fed into a wastewater stream at first and second predetermined points of addition. A visual cortex thought detector also coupled to the wearable computing device obtains information regarding the wearer's thoughts and manipulates a display on the display screen based on the obtained information.

1459826939-6895b7a3-e48e-49e5-8a7d-e8af959bbdff

An improved corrosion measurement system for determining the rate of corrosion of a fluid medium. The robotic arm includes a sensor to sense when a disc is in a position to be held in a picker on the arm. The tubular sleeve is held in place by a mechanical fastener and a pipe liner is installed or otherwise placed through the tubular sleeve and against the wall of the pipe. The scanning module is installed inside the main body for scanning the image of an object placed on the flat glass platform of the scanner.

1459826940-063db0e4-390b-40a3-8f42-f16d551e255e

A resorbable extracellular matrix for reconstruction of cartilage tissue includes a purified collagen II derived from natural cartilage tissue from which non-collagen proteins have been removed. The operating element can also be moved on an plane that is orthogonal relative to said axis in order to control the movement of a cursor that can be shown on a display in any given direction. Secondary media channel is automatically established upon an affirmative match made between parameters contained within database and characteristics associated with the primary media channel selection. Following partial hydrodeoxygenation, the partially hydrodeoxygenated product can be reacted in a hydroprocessing step to form a bio-fuel. Access to the laundry contained within the invention is easily achieved by lifting a side or sides of the circumferential skirt and laying it or them on top of the cover sheet, after which the laundry may be laced within the skirt of removed therefrom and the skirt may be let down again. The first and second knife are adjusted to a first and second height by adjusting the first and

second adjusting screws, wherein the second height is greater than the first height.

1459826940-06a9921b-06c0-4077-9bfc-09ab0ae79a70

A hardware overvoltage disconnecting circuit wherein a DC power supply module is disconnected from a power network when the AC power network is in the state of overvoltage. Most preferably, the pigment is provided as a homogenous dispersion in a transparent color-matching layer positioned adjacent to the film layer. An optimum alignment between these sequences is then determined using a dynamic programming alignment technique. The power compensation device is controlled to deliver, for a second period of time following the first period of time, reactive power to the utility power network at a level that is a factor N greater than the steady-state power delivery characteristic of the power compensation device. The upper portion includes an upper u-section which is used to slip the gutter clip over the gutter. Because the bandwidth reduction may be transitory, the RTBM constantly monitors the end-to-end available bandwidth so as to invoke the CODECframe per packet combination that provides the best quality of service achievable over the current end-to-end available bandwidth.

1459826940-35977aab-cb9b-432d-a420-5de77363025e

A shock absorber for a vehicle suspension includes a pneumatic actuator that is fluidly connected to a compressed air source in the vehicle suspension, such as a suspension air bag. A message detection element 410 detects at least a first message and a second message in the data received by the transceiver 405. Neighboring sections are non-collinear and at least one of the sections is parallel to a rotational axis. The monitor detector output is demodulated at said higher harmonic  $Nf_0$ , and the modulation of the light source is predistorted at said higher harmonic  $Nf_0$  in dependence on said demodulated monitor detector output. The latch includes a mount 6 having a projecting lug 7 and a slidable bolt 8. The flexible mounting between the rear portion of the inner bypass duct wall and the core case allows hot engine areas of the core case to thermally grow and contract relative to the inner bypass duct wall without imposing additional loads on the inner bypass duct wall.

1459826940-9aed4ccd-eb3a-46a3-b529-638978f1f5bb

A system facilitates communication between a control component and a plurality of processing components. The Inverted-F Antenna includes a first arm and a substantially parallel second arm connected by a conductive bridge. Another preferred embodiment of the invention is a suspension system for a vehicle including a biasing device and the above-described shaft.

1459826941-25533ca4-fa1a-4c43-915e-6415d1e05700

Coated substrates containing a barrier layer comprising hydrogenated silicon oxycarbide having a density of at least 1. At least the intensities directly emitted from laser light sources, or values of optical modulation data for modulating the laser beams corresponding to the image data are varied. Optical alignment and realignment are accomplished following the soldering and/or hermetically sealing of the entire package. The collection part is configured to collect the mist generated by ejecting the liquid by separating the mist from air suctioned by the suction section. A master node dispatches a seed value to initialize the random number sequence generation on all segments, and dispatches the query slice information and information as to the number of segments during a normal query plan dispatch process. The invention also relates to methods for placing such a closure into a liquid container and removing thereof from a liquid container.

1459826941-6c353d10-0fc9-432f-a148-2d4d43663a54

A hand-operable device of mounting an anchoring pin and inserting the pin into the ground includes a hand-graspable elongate handle having an upper under and a lower

end and a magnetic puck assembly fixed to the handle lower end for picking up an anchoring pin and maintaining in an insertion position until the pin is inserted into the ground. The data queue operates on first-in-first-out principals, and has a variable width input and output. When a threaded bolt is inserted through a bracket attachment bore located on the TPMS and into the threaded bore on the vertical section, the TPMS is secured to the first end of the TPMS wheel mounting bracket.

1459826942-08a142be-7a44-4fd2-bad2-77e484d08a79

During contactless transmission of energy between a receiver for receiving the energy and a transmitter for transmitting the energy for the purpose of charging a battery of a motor vehicle, a temperature is measured in a region between the transmitter and the receiver. Such media can include hole-punched paper, transparencies with non-imaging stripes, or paper that will be hole punched at a later time. The substrate is floated on a thin layer of air over the upper base plate. This also reduces performance degradation which may be caused by being one pulse behind a laser measurement and the resultant laser control signal being applied. A tangible machine-readable medium and a graphical user interface providing same are also provided herewith. The apparatus includes a media server directory module which stores and manages meta data of the media content comprised in all media servers existing under the home network environment and stores and manages connection information regarding the media servers.

1459826942-70dee24c-8a21-4b5e-a0be-9d16a9d67e44

At least one set of values of parameters is determined, each set of values defining a respective troposphere model. The lubricating oil for a compression type refrigerator of the present invention has high miscibility and high viscosity index, and excellent in wear resistance and storage stability under carbon dioxide atmosphere. The compositions provided contain one or more mucoadhesive proteins and an agent to be delivered. The socket connector comprises a connecting tube, an outer collar and a latching device. When a matching fingerprint is located, prediction data is used that is associated with a matching fingerprint for the web page. The unit includes at least one coil structure configured to allow various degrees of translational and rotational freedom of movement of the power-receiving device relative thereto.

1459826942-96281895-78cb-48c2-9977-673bd2c08f47

A system detects a transaction outcome by obtaining video data associated with a transaction area and by obtaining transaction data concerning at least one transaction that occurs at the transaction area. The skin material comprises an air-permeable sheet and an adhesive layer formed on the back side of the sheet by applying a melt of a hot-melt adhesive in such a manner as to form scattering dots of the melt or to leave scattering uncoated dot areas and hardening the melt. In accordance with the present invention, each of the first and second flow circuits comprises a plurality of concentric annular ducts that are interconnected.

1459826943-0ebc2f5a-d8e1-4473-960b-8955d75c5c9b

Provided are a method, system, and article of manufacture for updating metadata in a logical volume associated with a storage controller. Since a polyimide copper clad laminate is not used during the fabrication of the rigid flexible PCB, an increase in cost resulting from use of the polyimide copper clad laminate and poor reliability of adhesion at an interface between different materials are avoided. In the following formulae Y1 to Y4 and Y6 are each alkylene, A2, A3, A41, A42, A51, A52 and A6 are each a cyclic group, Z2 to Z4 and Z6 are each a bonding group, P4 and P6 are each an integer of from 0 to 3, R2, R31 and R32 are each hydrogen, halogen or alkyl, and Q1 and Q2 are each a polymerizable group.

1459826943-2ce6d83f-a7e8-4ae4-b7d9-d43c206c7d4a

A system 100 includes a content management system 221 having a material

identification and business rules for content including targets and a work flow system 220 in communication with the content management system and receiving the material identification and targets. Characteristics are obtained from the signal. Also provided are compounds and processes useful for making the dihydroisoxazole compounds. An image can be displayed that is a function of the corrected number of pulse counts for pixels of the system. The mobile stations of today with their simplex filters can perform only one thing at a time, i. The port is allocated to the userprogram until the userprocess is complete, and other requests for access to the port are ignored until final completion of the ongoing process, even when a temporary disconnect of the port occurs.

1459826943-36b45560-284a-4840-9328-737375262081

A composition for the formation of an electric field programmable film, the composition comprising a matrix precursor composition or a dielectric matrix material, wherein the dielectric matrix material comprises an organic polymer and/or an inorganic oxide; and an electron donor and an electron acceptor of a type and in an amount effective to provide electric field programming. The invention also pertains to methods of treatment for various autoimmune diseases, transplant rejection, inflammatory disorders and infectious diseases by administering humanized anti-B7-2 and/or anti-B7-1 antibodies. The method renders rendering the repackaged document at the client as it arrives until complete, and in parallel with the rendering step, schedules execution of the scripts by the client to validate corresponding data elements no sooner than the step of rendering. The sheath distal end may be pre-shaped to bend when slid distal to the probe. The state server returns an operation code and an identifier identifying any selected voice message.

1459826943-65c3453c-ebcb-46a3-82d6-072fab5d443f

Disclosed are methods for forming a thin film resistor and terminal bond pad simultaneously. The sled vastly increases the total volume of grass, leaves, and other lawn residue that can be picked up and transported to a disposal site. The method involving obtaining a name-based lock on a filename. The fastening means include at least one clamp movable between an idle position permitting engagement of the top attachment end by the circular top plate or removal of the circular top plate from the top attachment end of the supporting shaft, and a work position to grip the circular top plate between the radial projection and the clamp.

1459826943-7f1f9ca0-3fcf-4068-ad31-94ac7f5b1671

A cardiac rhythm management device is configured to detect mechanical oscillations in cardiac rhythm. The device is configured for receiving an event, providing the event to the event selector, and providing the identifier to the event type recognizer. A baffle-plate is disposed within a portion of the stack so as to form a chamber boundary and thereby to define a circuitous fluid flow path between the chambers through the at least one passageway.

1459826943-bf231f86-63d5-445c-a2c2-54bc7fabcb244

A light irradiation control system for a vehicle lamp includes a control unit configured to provide control signals for controlling light irradiation of the vehicle lamp based on detection signals detected by sensors. The silicide substrate has two doping areas. In another preferred embodiment, recording devices are required to embed a registration code in copies, thus aiding in tracing illegal copies. The second signal portion is applied to a component, and a component output signal portion is received from the component.

1459826943-f38fa28b-c587-401e-840e-fb06001e5d00

An antenna coupled to a wireless communication device that is comprised of a series of conductive elements that form a conductor when placed under a force. An operation is possible wherein low-temperature water, let out from a lower part of the hot water storage tank and entering the circulating path, is heated and boiled

up by a heat pump heating source for forwarding to an upper part of the hot water storage tank. Suitable microorganisms can be from any one of the genus of Stemphylium, Gliocladium, Bacillus, Botrytis, Cyathus, Rhizopus, Pycnidiosphora, Pseudomonas, Helicostylum, Mucor, Gelasinospora, Rhodotorula, Candida, Mycobacterium, and Penicillium. A tie replacement crew can use a GPS monitor to locate each tie that requires replacement, and the crew can remove those ties and install a nearby replacement tie. The multi-coil unit has a winding structure in which the coil wires are wound a plurality of times to be stacked in a magnetic flux direction to form a plurality of tires.

1459826944-9ac8f89f-c5df-488c-86b5-462be343e4d7

A method of using a residential fire protection sprinkler. The shape of the socket is designed for applying desired forces to a tooth through the wire when the bracket is attached to the tooth. The results of the secondary search are then used to rerank the results of the primary search before the client displays the results of the search to the user. In the spectroscopic ellipsometer, with this construction, the polarization state of the polarized light or its reflected light is not changed by mirrors and it is therefore possible to achieve measurements with high accuracy. A support for control electronics that operate the elevator machine is connected to the machine support. The content of silicon of the silicon-rich channel layer within a film depth between 10 nm to 170 nm ranges from about  $1 \times 10^{23}$  atoms/cm<sup>3</sup> to about  $4 \times 10^{23}$  atoms/cm<sup>3</sup>.

1459826944-fef94066-5fc6-44d8-9fd7-369b8e2a2a29

A warning system for displaying a warning that a device unit is in use includes a sign unit configured to display warning information. This BDNF being modified with a 1-acyl-glycerol derivative of the present invention has more efficacious and more excellent pharmacokinetic properties with retaining the useful effects being characteristic to BDNF which are useful as remedies for neurodegenerative diseases and diabetes mellitus, and hence, it is particularly useful as a therapeutic agent for treatment of type 2 diabetes mellitus. The MUI system is used in displaying information in a selected language on the mobile electronic device. Each float serves as a \u201cground\u201d for the other; thus avoiding the need for anchoring the floats to the floor of the body of water. An endless wall extends from the substrate assembly and surrounds the skirt portion to define a nozzle chamber in fluid communication with the opening.

1459826945-21af9bf4-54cc-4cea-9af1-18a53c3287d5

Changing batteries in hearing apparatuses worn in the auditory canal is to be designed in a more user-friendly manner. The heating device comprises a heat-generation compartment with a cooling jacket around which a coolant flows, and a rotor mounted on a drive shaft. The query subsystem accesses an inference model to infer a probability distribution over a user's goals, age, and preferred level of detail of an answer.

1459826945-bb04bec6-f9d0-4bcc-87f4-afcb26591ea9

The present disclosure relates to a non-acidic, sulfur-containing, phosphorus-containing compound of the formula I where R1, R2, R3, R4, R5, R6, and R7 are as defined herein. When the read image corresponds to the first species of business form, the terminal apparatus cuts an image from a field corresponding to a format inherent to the first species of business form to thereby recognize contents of statement from the cut image and executes processing in accordance with result of the recognition. The substrate, gate, and gate dielectric are irradiated to discharge the charge across the gate dielectric. Using that gap determination, a custom implant is constructed to engage the abnormal surface and fill the determined gap. Accordingly, a packet loss or jitter is compensated for at both transmitting and receiving parties in a communications network such as the Internet so as to prevent the occurrence of a decoding error at the receiving party.

1459826945-cbefabc4-9f32-465f-961a-469df8df014f

A system and method for characterizing the atrial wall of the heart is provided. A die attached to a substrate by connectors is provided. The execution unit can be clocked at a first clock rate, whereas the memory controller can be selectively clocked at either the first clock rate or a second clock rate that is approximately one-half frequency of the first clock rate. The first reinforcing member has a planar surface and a first reinforcing edge. To accomplish this, in an image processing apparatus including a system control board configured to perform image processing, a memory backup function is enabled for an image memory storing data to be processed by the system control board, when a facsimile communication board is connected.

1459826945-d6625e8c-0b23-4400-81df-271d81ef6201

The present invention provides an apparatus for white-matter-enhancement processing, and a method and a program for white-matter-enhancement processing that makes it possible to analyze distinguishing characteristics of the brain of a living body, such as degree of growth and development, left/right brain dominance, areas of strength and weakness, and personality traits. Preferably the mammal is human and the compositions have comprise at least two compounds selected from magnolol, honokiol, and magnoflorine. The essence of the invention is that the piston and the crank of a piston machine are interconnected by means of a hinged joint with at least a flat hinge which enables the piston to self-center along the cylinder surface owing to the movement of the piston with respect to the crank in any direction on a plane that intersects the longitudinal axis of the cylinder. The torque limiting clutch further includes an output element and a coupling portion, with the coupling portion including a projection for selectively rotationally coupling the input element and the output element. A hafnium oxide material is formed overlying the first and second silicon oxide layers and filling the undercut region. The protruding portion of the second substrate extends along the extending direction of the groove portion of the first substrate, and mutually corresponding parts of the protruding portion of the second substrate and the groove portion of the first substrate are in direct and linear contact with each other without an adhesive therebetween, and the channel is thereby formed.

1459826945-f84a9ed3-2d16-4689-b7d8-30cb3d8e5c8e

In some examples, aspects of the present disclosure may include techniques for audio control of one or more multimedia objects. The system comprises a cable headend, at least one fiber transport, at least one distribution hub, at least one hybrid fiber coax plant, and a plurality of set-top terminals. The ClF3 gas is bound to the surface of the object to be processed W, and although the supply of the gas to the processing vessel is interrupted, the ClF3 gas bound to the surface of the object to be processed W serves to clean the surface of the object to be processed.

1459826946-113cea11-75ca-4be1-828b-87d489cb73c3

One embodiment of the present invention is an endless non-woven tissue making fabric having a three-dimensional texture suitable for use as a fabric for producing three-dimensional fibrous webs. The GPE block device may then access associated hardware devices through a well known mechanism. The flexible resin material may be chemically reactive with the curable resin material to form an adhesive bond therebetween. of a glass transition temperature  $T_g$  obtained by emulsion polymerization or suspension polymerization of at least one of an acrylic ester and methacrylic ester with a vinyl monomer containing crosslinking group with an aqueous latex of copolymer showing about 0°C. The effect can be mediated directly by administering a pharmaceutically acceptable basic solution or alternatively, the effect can be mediated by enhancing the activity of glutaminase.

1459826946-2e249103-dfe0-4208-abdf-1bfdcbb4cee5

An ambulatory spinal unloading method and apparatus are implemented to achieve a

desired minimum level of residual cushioning in response to a biasing force applied to the associated apparatus tensioning and/or compression mechanism. List information presentation means returns list information which makes the digital contents stored in the internal storage device and the network storage device as the held digital contents in response to a list presentation request for the held digital contents. The other program or station specific text is separated from the associated text string, decoded, processed and stored in function specific memories. Then, in a subsequent step, the roughened copper surface is contacted with an acid resistance promoting composition. The distal end of the sheath is subsequently expanded using a radial dilatation device.

1459826946-3a3b1a46-8f4e-4543-9e91-043afc8e466d

A liquid crystal display device and a method for fabricating the same is disclosed in which deterioration of picture image resulting from different lengths of interconnection lines is compensated with a capacitor having a layered structure. The reflector has a first slope having a plurality of LEDs mounted thereon, and a second slope having a reflective film mounted thereon, the reflective film arranged opposite the LEDs. At least a portion of the laser and amplifier share a common waveguide, which may have non-uniform optical or geometrical properties along the waveguide centerline or across a normal to the centerline. Methods of manufacturing a musical pizza box and methods of advertising are also disclosed. The delay lock loop is coupled to the OR gate and the input buffer for enabling the delay lock loop again according to the enable signal. Each pixel may also include a pixel-integrated optical detector.

1459826946-aaa716b8-d4d0-4d1e-9aed-11b5c17ee636

A maintenance station for servicing a printhead mounted on a carrier includes mechanisms that separate a wiping function from a capping function. The terminal device includes the following components. The application of the query operations are sequenced with the computing device to reduce or eliminate certain complexities and ambiguities during generation of reports, thereby providing an improved experience for user. The parking and lock system includes a number of upstanding members that are positioned to generally flank the front wheel of a bicycle to maintain the bicycle in a generally upright orientation. The first and second electrode interconnection parts located to face the IGBT are soldered only to the first and second connection electrodes, respectively. The mount seat includes a base portion 41a extended in one direction and mounted to the front cowl, and a support portion provided on the base portion 41a to support the basal end of the mirror stay so that a direction Dp in which a turning shaft of the mirror stay extends is inclined to a length direction DL of the base portion.

1459826947-1f53a52b-8f91-4796-8461-250ba8b9b32f

A user, such as a clinician or the patient, uses a control device to manipulate at least one neurostimulation parameter. A manufacturing method of a flash memory device according to embodiments includes forming a plurality of gate patterns over a semiconductor substrate including a tunnel oxide layer, a floating gate, a dielectric layer, and a control gate. The voltage loop control unit and the current loop control unit contain a proportion-integral-differentiation controller for receiving signal related to voltage and current of loading device to form voltage control loop and current control loop. Further there is at least one water communication channel connected at a first end thereof to the water connection device and at a second end thereof to the water communication outlet port for communicating water from the source to the outlet port. At least one association is identified between the configuration items and the key indicators. The first level surface of the slider is at a different distance from a surface of the first rail of the slider than the second level surface of the slider.

1459826947-223ed87e-cfde-4a1c-9468-f19467a98199

An apparatus for synthesizing polymer chains includes a controller, a plurality of

precision fit vials circularly arranged in multiple banks on a cartridge, a drain corresponding to each bank of vials, a chamber bowl, a plurality of valves for delivering reagents to selective vials, and a waste tube system for purging material from the vials. Through use of the compositions of the invention a heretofore unobserved synergy is observed in the treatment of perimenopause, menopause or any other cause of ovarian failure. The thickness of the layers must be precisely controlled. The second holding member has a second reference position along the second side of the main body and is coupled to a second transport apparatus that extends outward from the main body.

1459826947-328f3c35-a46a-4b8e-be4b-af646d435833

In one embodiment, in a development apparatus in which at least a first screw conveyor has been provided in a case, a developer affixing prevention member that prevents a developer from affixing to the first screw conveyor is disposed in the vicinity of a toner resupply port provided in the case. The transmission table includes a list of frames from various link control entities in the order in which they were multiplexed together to form a stream of frames. pa In order to solve the problem, a pulsed laser beam 1 having a wavelength absorbed sufficiently in the semiconductor film is used in combination with a laser beam 2 having a high output and having a wavelength absorbed sufficiently in the melted semiconductor film.

1459826947-7a5f8501-46a3-4f2a-a7d4-2a304836faee

A structurally reinforced, durable baking tray for use in high-volume industrial baking applications. The control unit performs a successive feeding operation. Other methods, apparatuses, and systems also are disclosed. An isolation terminal is provided that receives and dissipates energy reflected from the input of the doubly terminated network, such that substantially no energy is received or seen by the output of the singly terminated network.

1459826947-88b3ca2c-e195-47da-9538-0231215d64c6

Inner core barrel head assembly includes an upper latch body, a plurality of latching balls which are retained in the latch body and a locking sleeve disposed within the latch body. Reputation reports may be received from a plurality of users receiving messages that they interpret as either spam or non-spam. A semipermeable membrane is positioned to protect the first electrode from a body of liquid under test. Then, a additional demagnetizing process is performed for magnetic powder adhering to a surface of the compact by applying an magnetic field to the compact after the compact is ejected. One embodiment includes accessing electronic communications, and determining physical objects that are representative of at least a subset of the electronic communications.

1459826948-02192ad6-2d9b-4cc0-8592-d71034a8a1d2

An intra-subject observation system includes a first liquid inserted into a desired organ of a subject; and a second liquid inserted into the organ without being mixed with the first liquid due to a specific gravity lighter than that of the first liquid. The scaffold presents at least two functionalities; one sulphur-comprising group for coupling to the base matrix and one group that can be transformed into an ionic group. The interface device is capable of delaying only the specific data transfer being preferable not to be interrupted thus effectively protecting the hot swapping function. Afterward, the push-up needles of the die push-up device are lowered, resulting in that the die is held by the die holding levers.

1459826948-34ba1c24-7723-42a1-8fab-281681e543e4

Disclosed is an observation apparatus capable of eliminating in a suitable manner astigmatism and chromatic aberration generated in an observed image. In particular, feigned belt utilization is also detected by evaluating the temporal sequence of belt lock actuations with respect to further operations and/or states determined in the motor vehicle. The driver circuit includes shutdown control to drive its output terminal to a high-impedance state to accommodate sensing voltage across the voice

coil. Particularly, a part or a whole of the end portion of the rotary cylinder in the vicinity of the tool inlet is covered with the cover section of the housing. A recorded session may be stored and played back.

1459826948-948242bb-db1d-4a65-a1eb-476cea6dc145

An operating- and braking-assistance device for wheelchairs is attachable on the frame of a wheelchair. These compounds inhibit tubulin polymerization and/or target vasculature and are useful for treating proliferative disorders, such as cancer. An additional mixing matrix is then formed, and also includes the different summations of the source signals.

1459826948-a33829b5-04b2-42e7-be34-56f10d0ef900

A manufacturing system and method for use in the production of high strength plastic materials which can be used in the construction arts. The device maintains a substantially continuous converted power source connection during operation, including operations adjusting the length of the retractable cord. The peripheral end portion is disposed outwardly of the frame space. An electronic component is arranged between the functional element and the first electrode, overlaps with the first electrode and the second electrode in planar view, and drives the functional element.

1459826949-6c28d54a-f994-4e65-8648-66b584fa53bf

A printer includes a print roll unit. A command of a first type to perform device management operations with respect to at least one device in the network is received, wherein the received command is capable of being directed to at least one of a plurality of devices in the network. By averaging over a predetermined period duration of the calibration signal, it is possible, in the case of a partial discharge measurement, to recalibrate the measuring device continuously during the measurement, and additionally on cables to determine the fault location with great precision. The second circuit includes a second input that receives the first output current from the first circuit and a second output that provides a second output current. An efficiency of the stack is regulated based on the observation. A fastener track is applied in-line with a plastic web and is bonded thereto at the same time that a peel seal is formed.

1459826949-70e3d1be-59c9-42d8-97ce-92c0295b9aab

A personal misting umbrella consists of a water distribution tubing network that exists within the umbrella canopy. The first sampling element and the second sampling element are separated by an output matching network defined by a set of S-parameters. The heat treatment chamber may include an external tunnel and an internal tunnel installed in a preheating zone, and an external tunnel and an internal tunnel installed in a main heating zone. Transmission of pilot signals after granting of a transmission request and a decision to transmit traffic data has been made occurs in some embodiments.

1459826949-f6049ffa-5e29-47df-9548-12799a4df683

The present invention is directed to a novel method for increasing the production of acetate, decreasing the production of butyrate, increasing the population and species of beneficial bacteria and slowing the rate of fermentation of prebiotics within the gut of a formula-fed infant. The decoder also accesses a table of treelet translation pairs and returns a target dependency tree based on the source dependency tree, based on access to the table of treelet translation pairs, and based on the application of the statistical models. The same lens array 1 is employed in the three-dimensional display device as the lens array employed for generating the two-dimensional images. A sorting module uses the accept list to sort the electronic messages into various folders. The adjustment occurs when a serving cell signal strength is below a threshold for a serving RAT and the target RAT is successfully acquired during IRAT measurement.

1459826949-f8428ea8-abd9-497d-a2aa-da4899c7b603

A New Guinea Impatiens cultivar particularly distinguished by having red-purple flowers with light purple eyes, a strong root system and a compact growth habit, is disclosed. Improved x-ray scatter control is provided through the alignment of the system with the focal line of an anti-scatter grid. The cylinders preferably are secured to the drawbar frame at a position close to but offset from the axis of rotation of the circle member. A de-duplication module may be configured to detect duplicate information or activity events, wherein the duplicate data may be removed and/or consolidated. An interpretation of these two chronological scenarios is eventually carried out so as to reconstruct the depositional conditions of the sedimentary layers.

1459826950-878480e4-9da8-4c74-8a57-a0a51580b0f9

The present invention relates to a process for the enantioselective enzymatic aminolysis of racemic 2-3--4,5-dihydro-5-isoxazolylacetate -I) by methyl N-Boc-L-, -diaminopropionate. The preamble unit generates or detects a first preamble having a first length for a first data line, and generates or detects a second preamble having a second length for a second data line. The implant is moveable along the guiding member to the surgical location for securement with a bone anchor engaged to the patient. The test result can then be transmitted to a location outside of the building structure. The potential defects are detected at the spots where luminance shifts in the captured image.

1459826950-8cf56220-c3a5-4682-8803-51b1035287a3

A nuclear medicine imaging apparatus according to an embodiment includes a gradation width storage, an estimating unit, and an image generating unit. Stations in the relay network may be grouped into multiple depths. A mobile application scans the QR code, which causes the mobile application to identify user profile data and send the user profile data to a Campaign server.

1459826950-9f27c3b4-ad8a-4fe4-acbb-6081dd478bd4

Disclosed is a pigment dispersion composition for producing a color filter. The first electrode is formed on the substrate. Thereafter, a delivery catheter is passed through a lumen of the penetrator to the target site. A determination is made that the first shape and the second shape are colored using a first color.

1459826950-de2e9463-f32e-43e2-82c9-66e33d986a2e

A method for managing a multi-user animation platform is disclosed. Base stations transmit electromagnetic transmissions. When a lock is requested and the lock is available, the only data gathered is a counter that is incremented to keep track of the number of times the particular lock was requested.

1459826951-22f733ae-a8c3-40d3-82a1-d16e1b22e203

An error analysis tester for an optical component includes an optical transmitter, an optical attenuator, a port, a receiver, a processor and a graphical display. The fibers may contain a single sulfopolyester or a blend of a sulfopolyester with a water-dispersible or water-nondispersible polymer. The IP datagrams are respectively assigned to one of the time intervals and are transmitted within the respectively associated time interval by the transmitter in line with the Internet protocol. If an access request of less than a defined data amount is granted in periodic arbitration, the remaining access chance can be used in arbitrary arbitration. Next, an oxide liner is deposited by a CVD process on the first and second sidewalls of the trench and over the substrate after the hard mask has been removed.

1459826951-a353a832-9a4e-4660-a9f9-d135cca9a8f8

The present invention provides to a system and method of sharing contents using a messenger program. When a caller calls a person driving, play to the caller a query whether the call is important enough to put through, and put it through only if the

caller responds affirmatively. Additionally, the cantilever probe comprises an electrical circuit coupled to the cantilever wherein the electrical circuit is capable of measuring a change in piezoresistance of the cantilever resulting from an atomic force and/or a magnetic force applied to the cantilever. In preferred embodiments, the oligonucleotide primers are modified with particular chemical groups such as esters. The display support apparatus further includes a mechanism for providing a constant orientation in relation to the base for the plane bisecting the range of rotation of the second arm about the pivot axis between the first arm and the second arm even as the first arm moves pivotally relative to the base. Each text segment can be tagged with a garbage score indicating its quality.

1459826952-91a8850c-8851-4a25-8fd6-eda492f730ed

Externally supplied program data is latched into data latch circuits DLL and DLR. A buyer request searching module locates a buyer request listing corresponding to a search criteria. The projecting members are positioned a distance apart from one another and include openings disposed therethrough at distal ends for engaging sections of a launching device. The moving table is supported relative to the stationary base with slight displacements made possible in the XY plane, using an elastic deformation of each of the elastic hinges in the flexible direction. The STS management block routes the traffic to the ATM cell management block and to the non-ATM payload management block, according to the traffic type.

1459826953-60af1482-e18d-4c5d-aa16-a6fc076758b4

The present invention relates to a conical wedge-shaped lensed fiber and the method of making the same. The methods comprise administering a therapeutically effective amount of oxytocin or oxytocin analogs to alleviate one or more symptoms of Parkinson's disease. The invention further provides methods of producing such organosilicone fine particles.

1459826953-d18b1c02-146a-4bbe-ae07-72999db942dc

A marker for marking the location for drilling holes to pass the line of bolts in a plate to be secured to the slab of a building. A natural language data extraction module extracts problem data and related solution data from the narrative data, and a database module populates an aircraft service information database with the extracted problem data and the related extracted solution data. A non-synchronous incoming pallet conveyor is aligned horizontally to receive a set of incoming pallets.

1459826953-ff94b6b2-e22c-4bee-8d27-05c051e5627f

A milking liner for an automated milking machine includes a barrel that moves between an uncollapsed position and a collapsed condition when it is subjected to a vacuum milking condition. The pixel areas includes a pixel electrode formed of a transparent electrode having a plurality of slits including a slit opened in a first direction and a slit opened in a second direction, and a counter electrode formed of a transparent electrode disposed between the transparent electrode of the pixel electrode having the plurality of slits and the one substrate. However, single cell genetic analysis is challenging, inaccurate, and in many cases impossible, due to the small amount of sample, and difficulties in handling small sample volumes. The side nozzles have their axes inclined with respect to the axis of the lance and can be positioned along the axis of the burner. First and second mixers generate a first clock signal and a second clock signal which is 90 degrees out-of-phase with the first clock signal. The size of an abnormal shadow present on a current medical image obtained by imaging a subject is measured, and the size of an abnormal shadow present on a previous medical image, which has been obtained by imaging the same subject, at a position corresponding to the position the abnormal shadow on the current medical image is measured.

1459826954-1a30a86e-0e1a-4ad2-b62c-0fc3450e7457

Disk drives are described in which blocks of data spanning multiple sectors are

encoded into a plurality of codewords which are then divided into segments that are physically separated on the disk surface over multiple sectors in a distributed codeword block so that the codewords have an improved worst case SNR in comparison to individual sectors. A plurality of the photoelectric converter and the transfer element are disposed at least in a horizontal direction share the amplifier and the read signal line. Screws are provided in one embodiment and are dimensioned or configured to be inserted into a bony structure and to lock against each other to retain the screws and consequently secure the plate in place against the bony structure. The ground of the low pass filter is separated within the multilayer ceramic substrate from the grounds of the other circuit. Or, alternatively between the applications and programs that created them and the pay station sales, and the control system takes account of these correlation data sets in replaying the data or in selecting the programs or applications. In an alternate embodiment of the invention, the fan is mounted on the carrier and the rack has a lateral opening.

1459826954-a31f6c0f-ff03-479b-81c7-603357cd021e

A vibration control apparatus using a water tank, which is installed at the uppermost floor of a tall building, the water tank being formed at the inner wall surface thereof with horizontal protrusions. The invention provides a method for rapidly and inducibly generating point mutations and other types of diversification in expressed genes, such as antibody genes. The optical-fiber taper is a matrix of optical fibers with the core material made of, e. The coin containers lift a coin above the interior surface of a cover such that the rim of the coin may be viewed while the coin resides in the coin container. A determining unit determines the pair of foreground pixel and background pixel with the highest value of the probability function.

1459826955-5f2c5bdd-849a-4b82-9881-f135855be658

The present invention relates to a transmitter for high speed communication systems, comprising a plurality, preferably two, drivers each having series terminating resistor, wherein the series terminating resistors are joined at the transmission line. The coil electrode section is sandwiched by the first magnetic layer and the second magnetic layer from both directions substantially perpendicular to the plane. The present invention also relates to a magnetic matrix display and electron beam source and methods of manufacture thereof. The system can be an air conditioning or refrigeration system.

1459826955-99cd097d-8de6-43b8-8174-17651d57136d

Disclosed is an optical component, which comprises a prism element adjacent to a lens element, where the two elements are separated by a small air gap. Disclosed herein is a method comprising fixedly attaching tubes to a shell; wherein the shell is operative for collecting a fluid; wherein an internal diameter and/or a wall thickness of the shell vary with a change in pressure and/or a change in a fluid flow rate in the shell; and wherein the tubes are in communication with the shell and are operative to transfer fluid into the shell. Transitioning to a rectangular cross section at the dump end provides more even load distribution across the dump end compared to a conventional half-pipe dump body. The vehicle communication system can determine which devices are within the vehicle.

1459826956-1f561a99-465a-4f7e-8352-2b35430c2b35

Previous limitations in utilizing energetic vapor deposition means are addressed through the introduction of a novel means of vapor deposition, namely, an Electron-Assisted Deposition process and apparatus. An input beam of S-polarized light is reflected by a polarizer 1 and advances to a Pockels cell 2. The wireless device includes any wireless apparatus having wireless communications capabilities. The largest one of the first and second measures is then selected as the output signal that reflects the state of the autonomous nervous system of the sedated patient.

1459826956-32422f49-3a16-4bfa-8eb1-812a9d2dfef1

A mounting arrangement for accepting a pipe through a boundary in a vehicle includes a dash defining a boundary between an engine compartment and a passenger compartment. A compressive lower layer of spring material may be formed at a thickness that is three-eighths or less of a tensile upper layer of spring material. The housing can be at least partially submerged in a road surface or protrude from the road surface so as to be driven over until deployed. The integrated circuit further includes a barrier located on the major surface for inhibiting a flow of the gas across the sensor element.

1459826956-637f138f-29ba-4780-95ca-3a9b62798fde

In one aspect, a spellchecker is provided that differentiates between code and natural language parts of a source code file. A ramped stop comprises a body having an upstanding front ramp portion having opposing forwardly and rearwardly sloping surfaces for the passage of a wheel therealong, a rear ramp portion extending rearwardly from the rearwardly sloping surface. This SOI substrate is composed of a stacked structure of a silicon substrate, an embedded insulation film and a silicon layer. The fabric has uses in inflatable devices, including airbags, or lifting devices.

1459826956-c84d34d8-9ba3-4a10-b20e-61101e757072

A system and method is disclosed for maintaining synchronization in a communication system in which a signal is sent from a transmitter to a receiver which includes a phase lock loop. The controller controls an oxidant supply to the anode and cathode sides to exothermically react with the hydrocarbon fuel when a temperature of the fuel cell is below a threshold temperature. 0 percent of the marking stain, an optical brightener present in a concentration of about 0. The program also calculates award points, updates the award account of enrolled users, and communicates that number of awarded points to the user.

1459826957-15de17e6-e47c-4006-8359-9038819d8159

The present invention provides wind flow bodies for use with a structure for decreasing the carrier wing effect on the structure by the formation of turbulence or reducing the dynamic pressure by deflecting the wind flow. The substrate includes a plurality of fluid ejection actuators disposed on the substrate. The demand control section determines a demand for prompting the consumer to adjust the amount of power demand based on the first and the second predicted amounts of power demand. Routing demands, working communication paths, and protection communication paths are selected. The imaging lens assembly has a total of three lens elements with refractive power. The present invention enables any member device to store protected data on the network such that any other member device can access the data in plaintext without having to communicate with the device that actually stored the data.

1459826957-e4195e56-47b0-4f49-b089-0889cc4a18be

A rectangular transparent sheet 15 is printed with black dotted density patterns 21 and 22. The proposed method and system is characterized by the use of protocol-oriented rule rearrangement, the probable bit vector based on the aggregated bit vectors and folded bit vectors, an ABV-FBV index table dataset whose data structure is based on a featured split full-tree schema, and a DCBV dataset for packet classification. Using the image data in the spectral domain, one or more one-dimensional spectral signatures can be generated and features of the signatures can be extracted and compared to features of one or more known objects. Furthermore, an isolation effect of a leakage signal of a transmitting unit to a receiving unit can be maximized while adaptively changing an attenuation value of a variable attenuator. The optical system includes a first imaging optical system comprising a concave reflecting mirror and a dioptric optical member arranged along a first optical axis. This prevents foreign material from being trapped between the transfer belt such as an intermediate transfer belt or transfer material conveyance belt and a sheet member and thereby reduces density irregularities in a

longitudinal direction of the belt.

1459826958-307498dd-ddb5-4360-a1fa-774b048ee372

A liquid crystal display device which includes first and second organic interlaminar insulating films between pixel electrode and wire. A driver receiving opening extends longitudinally from the proximal end. The optical fiber received can be produced using different technologies: CMOS, BICMOS, BIPOLAR.

1459826958-5363c52c-e24e-4005-8692-2f30701d158f

In a dry or concentrated liquid fertilizer when local water is added to dilute to a working concentration, the hardness components in the local water react with the fertilizer components and begin to form low-solubility salts. A cuff is attached to the stump of the severed limb which contains a diagnostic transducer array and a HIFU transducer. A pair of electrodes are connected so as to be capable of providing an actuation voltage across the lithium storage material and the volume changing material. Dielectric material separates the source and the drain from the gate, and the control gate from the first charge storing layer, the second charge storing layer and the gate. The motor driven gear is disposed on one side of the crankshaft and the cam chain is disposed on the other side of the crankshaft. Bismuth compounds each represented by the following formula 1, 5 and 9, processes of producing the same, and processes of producing a film.

1459826958-5473bd26-9f29-41ec-96a1-9a55f30c0259

A filter substrate including a transparent support substrate 11, a pattern layer 13, a first overcoat layer 15 formed of a reaction product prepared by a chemical reaction mainly based on hydrolysis of a starting material comprising at least a material selected from aminoalkcyltrialkoxysilanes, aminoalkcyltrialkoxysilanes. The bandwidth divider includes a plurality of counters for measuring the bandwidth of data packets transferred from the bandwidth divider to a respective packet processor; and a controller for analyzing the plurality of counters and transferring a data packet to a selected packet processor based on the contents of the counters. Additional embodiments are disclosed and claimed. In various embodiments, the fingers may further comprise cutting elements to assist in the dilation of the puncture site. A display is positioned adjacent to the second member.

1459826958-7bc773bd-7c6e-4e1a-bf7e-5068d037e8c2

Sealing elements locate an annular seal plate in an annular recess. Transaction data may be exchanged electronically with industry clearinghouses or in-house administration systems. The outer part is movable relative to the inner part from a first position in which at least part of the first and second portions are adjacent each other to a second position in which there is a gap therebetween. Further, depth estimates can be levered in object or scene recognition to trigger or initiate an action taken by a computing device. The status parameter may be automatically stored and/or displayed via the MMS.

1459826958-b7a52080-c8ba-49a3-a5e5-71359a2ca5e3

The present invention provides a method, system, and computer usable medium for indicating road direction for vehicle instruction for a one-way street. The rotation of the rotationally connected members is broken in a predetermined manner. The jack is in removable communication with either the air compressor or the electrical inverter, both powered by a cigar lighter plug removably fitted into a cigar lighter. If the sensitivity of at least one of the variables is greater than the respective sensitivity threshold, then the at least one timing test is considered to fail.

1459826958-bd543c66-8768-43b4-a3fd-5190ae7f9220

A labeling machine for labeling containers such as bottles, cans, and similar containers. The system comprises a multi-tier buffer cache. The locking pin may be

removable from the flywheel, and the flywheel retaining locking knob may include an aperture for storing the locking pin. The casing is at least partially materially engaged with the current conductor via the contact area. The gas generating additives and the polymeric microspheres provide void spaces in the material matrix, and such void spaces act to increase freeze-thaw durability of the material.

1459826959-275420c0-ef5a-46c3-83cb-e4093d94ec1e

An interconnection wiring system incorporating two levels of interconnection wiring separated by a first dielectric, a capacitor formed by a second dielectric, a bottom electrode of the lower interconnection wiring or a via and a top electrode of the upper interconnection wiring or a separate metal layer. Disposed in the feed path of a sheet is a transport nip for feeding a sheet and for transversely registering the sheet and image by displacing the transport nip transversely of the feed direction. The network device determines whether the client density data of the first access node overlaps with the client density data of the second access node.

1459826959-82e1bc58-4807-4be6-b807-456a6ccc4567

A side frame assembly for a wheelchair suspension includes a mainframe, and a front caster frame connected pivotally to both a front end of the mainframe and a front caster. A communication line test unit is incorporated into the remote security system and its communication unit. The plating/depositing process can be performed using brush plating or electrochemical mechanical deposition and the polishing process can be performed using electropolishing or chemical mechanical polishing. A first inclination angle is formed between the rotation axis and a first imaginary plane that is orthogonal to an optical axis of the projector lens. The photosensor also has a charge accumulation region for accumulating charges generated in the IR sensitive region and an electrode above the charge accumulation region for providing a voltage to accumulate the charges generated in the IR pixel.

1459826959-b5707929-8845-4a9c-aaf1-c5a5955d2d46

The present invention includes an electronic device workpiece processing apparatus and method of communicating signals within an electronic device workpiece processing apparatus. A transport path conveys a series of mail pieces at a print velocity. A measure related to a gas flow may include, but is not limited to, a measure of fuel consumption by a device or appliance attached to an output port of the valve assembly.

1459826959-ef77d57e-fc6d-4e5f-ad13-fef065f63d80

A master information carrier for magnetic transfer includes a substrate having an irregularity pattern representing information to be transferred to a slave medium and a magnetic layer formed on the irregularity pattern on the substrate. The optical fiber has an untapered segment and a down-tapered segment. By using a ferrite-embedded element positioned between the filter and the RF shield, some of the undesired harmonics produced by the mixer can be dissipated into heat. The bypass arrangement may include a bypass tube and an element for selectively blocking the bypass tube. A second phase is performed when off-line and includes decoding the remaining content of the composite image and the portions to reconstruct the composite image of the collaborative session content and formatting the composite image.

1459826960-1f6bf30e-0d7f-494f-bea7-59a790c7461d

A computing system having a memory riser sub-system. A LCD is also provided in the transparent fixing cover, and a rotary ringed stand is provided under the rotary disk. Gaps between the film and the core are formed by the projections. These information need to be collected by control management station at its and the associated systems' boot up time or at the time when a user logs in and requests to access and manage these resources.

1459826960-2349f518-ea33-4c54-8973-ec8d82613f79

A power saving method is disclosed. The optical device includes a demultiplexing portion 4 separating TE waves and TM waves of incident light of a wavelength and an optical fiber 1 inputting incident light into the demultiplexing portion 4. The electrical feedthru may be very small, facilitating its use in MEMS devices. The manifold plates together form a closed flat tube and each of the manifold plates has a pair of cup portions.

1459826960-24316326-7858-4f5c-b3b1-c66e30f56da4

This disclosure provides a method and a system for large volume data processing for solving the problem of system collapse caused by processing delays resulting from a failure of processing a large volume of data within a scheduled time. In the strap feed assembly, a rocker arm has an engagement surface and a pivot axis parallel to both the axis of rotation of the pinch wheel and the axis of rotation of the drive wheel. A conductive column electrically connected to one electrode of the vibration motor is formed on a top of the accommodating body. The sealing arrangement has sealing surfaces for contacting outer circumferential surfaces of the sleeve and the shaft as well as means for effecting sealing engagement between each of said sleeve and said shaft and a respective sealing surface.

1459826960-c2d91804-ef93-4174-b780-52fb065e6216

A mixture of a polyester, such as poly PET, or a polyamide, and a suitable stabilizer selected from the group consisting of hydroxylamine stabilizers, substituted hydroxylamine stabilizers, nitron stabilizers and amine oxide stabilizers, when extrusion compounded exhibits a lower residual acetaldehyde content than does polyester or polyamide alone when similarly treated. The system includes a shield of magnetic permeable material positioned on one side of the object to be tracked. A backside surface of the chuck has a central protrusion that can be a D-shaped mesa to facilitate alignment with a mating cavity in the pedestal. Having one PA and LNA set for each antenna removes the need for diversity switching between the PALNAs and each antenna improving signal reception.

1459826961-0c7c7042-30a0-4b6a-a0da-25817496c1c5

An active layer contains quantum structures. The traces may be smoothed, straightened, or otherwise adjusted by assigning forces to the nodes and moving the nodes in accordance with the nodes. The system further includes a plurality of input/output devices communicatively coupled to the MILS controller via a plurality of corresponding device-side buses. An angle between the target object and the device can be determined based on the target object information. During operation between initial start up and before the introduction of engine load, fuel is introduced into the primary zone only by the first plurality of injectors.

1459826961-1b2b1e76-f7c5-4dec-89b3-b01dbf6f2c39

A control apparatus for a switching device which suppresses surge voltages at the time of current shutoff of a switching device to protect from overcurrents although the switching device is not in an overcurrent state, including a current sensor, a comparator, a timer latch, a control circuit, and a transistor. To minimize the number of bits required for a residual block, quantized transform coefficients are adaptively divided into a plurality of subsets according to a size of a transform block, and non-zero quantized transform coefficients of each subset are scanned and encoded. The scaffold also has a reduced crimped profile and a modification of the scaffold's ring structure at the crowns that contributes to the reduced crimped profile. The system may also include receiving a plurality of location data associated with an animal, determining a location of a debris item associated with the animal, and a cleaning portion coupled to the housing. Use of alkylated indenoindolyl complexes with the support-activators provides improved activity compared with metal halides. A repeat sensing pass will then produced more accurate results.

1459826961-96748c5c-fa47-4552-97da-66e78652db4a

A fire retardant head-of-wall assembly configured to seal a linear head-of-wall construction joint or gap when exposed to a heat source such as a building fire is disclosed. A determination may be made as to a primary transport power and a primary transport block size for a primary stream. The invention further relates to a medical device comprising said adhesive composition.

1459826962-38c05204-a4f5-49cb-9eaa-bfc501321781

The present invention relates to the production of a series of holes in a layer of material, in particular to the production of a target rupture line in a first layer of an airbag cover. The slew rate control circuit is configured at the input terminals of the output driver circuit to suitably control the slew rate of the input signal for the output driver circuit based on the level of voltage of a power supply for the output driver circuit. In one embodiment, a first layer in the form of a lightguide substrate receives unpolarized light from a lamp. The system includes a software program comprising a data record masking module for selectively providing a first view for displaying one of the subsets to a first user. In various embodiments the amplitude, excluding the thickness, may be at least 2 mm.

1459826962-711f664c-1b5b-42d0-907e-13b7b84e7a01

A color cathode ray tube is provided in which an inner radius of curvature is designed as 0. A time of exiting from the reduced power consumption state is read prior to an execution of an interrupt routine. The identified dynamically generated code may then be stored in a separate file for further display and debugging. By using this processing procedure, the invention realizes a disaster recovery system which carries out copying transactions from one site to another site without losing the transactions, while reducing the influence of copy operation on the transaction processing performance.

1459826962-7aa0e08e-006d-4dbc-bc53-e977a2faaed1

Method and apparatus for providing inserts, such as lift inserts and step inserts, in cast members. The skid steer loader includes a hydraulic cushioning mechanism at one or both ends of the hydraulic cylinder such that the grapple component does not come to a hard stop when it impacts against the implement bucket. In addition, in the photographic lens, an image forming magnification of the second lens unit during focusing on a closest distance object is appropriately set. The hydroprocessing catalyst is particularly effective in the conversion of the heavy hydrocarbon feedstock. The second locking tongue is resiliently connected to the sleeve and has a second blocking projection which is engageable with the circumferential groove in the pipe, the second locking tongue having a lever arm which extends toward the open end of the sleeve.

1459826963-ad503aa4-dcd7-4f43-a600-6dc795d878dc

A device and method for reducing noises created by a movable seat back that is tethered to a cabin wall. The sender of the graph-text document enciphers at least one graph-text document with digitizing algorithm provided by a control center and producing an enciphered and compressed cryptic document. These peptides range from 3 to 10, preferably 4-8 amino acids and have a sequence that binds to each subunit of the thymidylate synthase dimer at the level of dimer interface, stabilizing the dimeric inactive form of the thymidylate synthase enzyme. In preferred embodiments, the process is cost-effective and not environmentally harmful.

1459826963-d9f4e3f7-67f8-4778-8b6b-566e830115c6

An optional surface fastening system for an electronics housing facilitates its attachment to pre-manufactured fixed panel systems, enclosures and the like. The growth habit is tall and bushy. Furthermore, the array of receivers may be used to significantly enhance the preferred reflection energy and damp undesirable near surface energy. Notches are cut out of the rear edge of the platform so that one of

the U-shaped bolts straddles each notch. In one embodiment, the camera-based system can be used in conjunction with a training aid that is attached to a basketball rim.

1459826964-02284b8f-9eac-41e0-b571-bbcd157b55fa

A highly corrosion-resistant, rust-prevention coating material comprising: an inorganic binder; and Zn metal particles comprised of Zn and unavoidable impurities and dispersed in the binder at the rate of 30 mass % or greater based on a dry coating film, wherein the Zn metal particles include fine-grain Zn metal particles of 0. When a networking system is configured using an earlier version of SNMP, such as version 1 or 2, and is to be reconfigured to employ a later version such as version 3, certain options are to be reconfigured. The event information may be processed by the server to assess the security state of the mobile device by comparing the event information to the mobile device security information. One or more of the feeder body walls and the feed holder have cooperating sliding structures, enabling the feed holder to be slidably received into, and/or removed from the remainder of the feeder apparatus.

1459826964-f28af368-16b4-4c72-ba5c-3e4ce958e315

A variable frequency Helmholtz resonant cavity includes a Helmholtz resonant cavity body, two Helmholtz resonant cavity pipes with different cross-sectional areas and lengths and a control valve plate. In another embodiment, a restore mechanism is provided by copying the saved contents of the protected area from the backup storage device to the user area of the storage device, booting into the protected area of the storage device, and copying the saved contents into the protected area. A direct, wired electrical connection between the patient support platform and the base frame allows full rotation of the patient support platform in either direction. Preferably, the inflation bladder is secured by a body support having at least one support pad on which the patient is positioned. The ridges include side surfaces that mate with side edges of the engagement tabs to maintain the peripheral rim of the bonnet against the ridges as tension is applied to the peripheral rim that forces the peripheral rim away from the ridges.

1459826965-495e3cf2-3f8e-4bef-b004-da8b4be1cdf5

A battery cathode comprises an electrode of silver, molybdenum, oxygen, fluorine and chlorine and having a higher discharge capacity expressed as milliampere hour per gram of material available from silver reduction at a potential above 3V as compared to that of SVO material versus lithium. Embodiments of the present invention relate to a multiport network analysis that is derived from a family of two port calibration techniques including ThruReflectLine, ThruReflectMatch, LineReflectLine, LineReflectMatch and several others. The method further includes determining the estimated battery state vector indicative of a state of the battery at the first predetermined time based on a plurality of predicted battery state vectors, a second plurality of predicted battery output vectors, and the battery output vector.

1459826965-7f626247-1d1d-48b5-8d7f-dee27f422c6a

A driver reminder system to remind at least the driver of a vehicle, prior to leaving such vehicle, that there is at least one other occupant in the vehicle. The biometric-information processing device further includes an extracting unit configured to extract a frequency component having a frequency higher than a predetermined spatial frequency at the image acquired by the image acquisition unit. The stiffeners are configured to prevent torsional flexion or bending of the connective structure to which they are to be secured. For a new event, the digital signature is appended to the Server Name, the Server Serial, the First Occurrence timestamp, and the NsRaw fields. When this happens, signal data may be stored in a subsequent buffer and if a local extreme value of the subsequent buffer does not exceed the global extreme value, further signal data may be stored in the subsequent buffer in a circular manner until either an instantaneous extreme value

exceeds the global extreme value or the recording period ends. The second memory cell has its control gate coupled to ground.

1459826965-d6941b41-7f42-45b4-9e5e-f4780f08117c

A method for on-orbit calibration of the temperature sensors of a blackbody is disclosed. In an embodiment, a method of navigating a course is disclosed. , aluminum, to the dilute composition. The second arm is rotatably coupled to the first arm between a first expanded configuration and a second collapsed configuration.

1459826966-318830da-9473-43e5-ba3f-7ce4849b3e70

Systems, methods, and computer program products are provided for optimizing liquidity that an Audience Producer can access for the sale of audience profile access rights by having each individual audience profile access right listed using symbology that can garner the highest price discovery and depth of market. The laminated structure as an anode for organic light-emitting devices is provided on a flat surface of a substrate. With this arrangement protection in three directions is necessary.

1459826966-51b34902-825c-49ed-a8eb-955eff973325

A wheel stud installing and removing system includes a C-frame; a forcing screw configured to communicate with the C-frame to move laterally through the C-frame; a swivel mounted on an end on the forcing screw; an adapter receiver mounted on an opposite end of the C-frame from the forcing screw, and configured to receive at least one of either a stud installing adapter and a stud removing adapter. A medicine cartridge or a modified seed cartridge, having a reservoir on its proximal end, can be attached to the applicator body for dispensing medicine into a needle or medicine can be injected into the needle via a three-way fitting attached to the applicator body. The DB is disposed outside the channel. The pixel electrode of the first liquid crystal element is electrically connected to a pixel electrode of the second liquid crystal element through the second switch and the first resistor. The PID values of transport packets within at least one transport stream are compared with the n possible PID values of the PID re-map table, and when a match is found, the table is indexed using the matching entry and a re-map value is generated therefrom. The OCT control signals are used to control the on-chip termination impedance at one or more IO buffers.

1459826966-816ab533-3247-41b2-85b6-4833ff7b2660

The invention provides, in some aspects, methods and apparatus for registering 3D image volumes by utilizing a graphics processing unit to facilitate maximizing the \u201cmutual information\u201d of the two image volumes being registered. In a similar manner one may estimate the process conditions to prepare a polymer having a target PENT value based on the conditions used to prepare the samples for the graph or algorithms. The active metal foil and the solder material are heated to form a bonding layer and the metallic member is disposed on the surface of the bonding layer, and these are pressed and heated to bond the bonding layer and the metallic member through solid phase bonding.

1459826966-8a18a64a-0d98-43de-af80-22bd2588350b

A method for storing data in a memory chip that includes a memory core having dynamic random access memory cells, is performed by a memory controller chip. Connecting components including splice bars, splice plates, and mounting clamps are aligned in, positioned along and secured to backing bars which are co-located in backing bar slots in one or more of the slotted frame cabinets. The inner chambers are in fluid communication with extension and retraction ports provided in the stationary cylinder wall. The groove is formed in each of side walls of the roller body at opposite ends in an axis direction of the roller body, and extends outward in a radial direction from the spindle. The receptor, together with peptides encoding its extracellular domain, have application in methods of immunomodulation,

including the blocking or inhibition of humoral immune responses in transplant patients.

1459826967-4db077c1-e2e3-4a39-bcf8-89d65a955602

A method of presenting an image of a receipt to a consumer includes electronically capturing a receipt and storing the receipt at a host computer system. The pulse reverberation is estimated by two transmit events, where the second event is determined by measurement and processing on measurement on echoes of the first event. A clutch spring performs energization to narrow an interval between the clutch center and the clutch piston. The method includes providing a holder substrate, which has at least one recessed region, the recessed region having a predetermined shape. The drain passageway extends along a straight path at an oblique angle to a piston axis along which a piston actuator moves in response to the return spring and/or the pilot air pressure.

1459826967-99e01472-8aff-43c1-8115-fc5cf03c541f

Translating gestures made by one avatar to a second avatar in a virtual world by receiving an input from a first user representing an input gesture to be made by the first avatar to the second avatar. Versions of the versioned resource are associated with compatibility information, such as a feature version and a service version, for example. The insert is formed from milled aluminum. The metal light reflection layer is located on the upper surface of the substrate for surrounding the LED chip, and reflecting the light emitted from the LED chip. The nozzle may be driven in an oscillatory manner at a predetermined amplitude and frequency so the nozzle spray is delivered in a manner to provide pulsing of the spray and to provide as \u201csnow plow\u201d effect on contaminants as the spray delivers the cleaning medium against the surface.

1459826967-a370b9fd-d7f2-4828-a34f-b0300338cffa

Wide area camera vision systems can respond to variations in light beams projected into a region being monitored. The base body includes a layered body of a plurality of insulating layers. Thus, a suitable film quality can be obtained. The key server transmits the decryption key to the mobile device after authenticating the user of the mobile device.

1459826968-5610d79a-11bc-45f2-83d0-390003956507

In a semiconductor device formed on a silicon surface which has a substantial crystal plane orientation, the silicon surface is flattened so that an arithmetical mean deviation of surface Ra is not greater than 0. Here, configurations for an amplifier and switch network are provided, which generally cancel noise from the \u201cground switch,\u201d so as to provide an improvement over conventional configurations with little overhead. The first conductive layer is held at a first voltage.

1459826968-6f980e36-bdd8-42db-973f-b41cf995086a

A biomedical polymer composite that exhibits ultra-low thermal conductivity properties. The massage apparatus 5 comprises a housing 10 having a hand portion 26 and a cuff portion 42. The frame includes a rear swing frame pivotally connected to a front frame. The second surface 32 has a series of parallel elongated concave surfaces 32a that have an arcuate cross-section and extend in a direction substantially perpendicularly intersecting the elongated convex surfaces 31a on the first surface. Also disclosed is a system and technique for automatically resetting a Raman pump unit once the source of an optical leak has been located and addressed. The relaxation oscillator circuits described herein exhibit superior low temperature coefficient performance characteristics, and do not require the use of expensive off-chip high precision resistors to effect temperature compensation.

1459826968-b7586cbb-1133-444a-8179-7df34c9b844d

An existing security association is re-established when a communication handover

event occurs in a radio communications system such as IEEE 802. Each support shelf is secured to the first and second members by respective first and second mounting brackets, and each support shelf is configured to support communications equipment thereon. The encoded and re-encoded bit streams may be MPEG-encoded bit streams. Besides video and audio, the digital media cartridge can also store and execute games that use the user input and display screen of the host device. On the basis of the input, the mobile station transmits configuration information to a mobile services switching centre in a configuration message.

1459826968-de7bd0eb-c714-4c27-87e5-fcbefd279367

A reconfigurable processor module comprising hybrid stacked integrated circuit die elements. The technique includes determining a geophysical trend of trace amplitudes indicated by the seismic data based on non-linear regression and performing quality control analysis on the seismic data based on the determined trend. The method then determines whether each head does not exceed a threshold BER value.

1459826969-38258143-ed8a-4cca-8940-67a857e6b117

A user activated, disposable insect bait station particularly adapted for use with liquid bait, including attractants and toxicants is disclosed. The system has a heat spreader and a heat sink structure. An end of the burner, which is used for supplying fuel and is arranged opposite from the nozzle end, is located outside the pressure vessel. The process enables epitaxial deposition of silicon-containing layers over semiconductor surfaces, particularly enabling epitaxial deposition over a silicon germanium base layer. The shielding structure limits the encapsulant entering the chamber and the baffle directs the encapsulant away from the magnetic core thereby limiting an amount of the encapsulant that contacts the magnetic core within the chamber.

1459826969-a545ac83-a30e-4298-b699-e31f74d409ac

A tread portion includes land portions partitioned by circumferential grooves extending in a tire circumferential direction and lateral grooves extending in a tire width direction. Also provided is a fluorescent labeling agent to be used in vivo or in vitro, including the fluorescent labeling material, in which: EDC or the like is bound thereto through the amino group; and a substance capable of selectively binding to a target to be fluorescently labeled, such as an antibody, is linked thereto. ; and thereafter dismantling the magnetic field generator. In another embodiment, the underlay is disposed between the radial ply structure and the innerliner. The retention edges are capable of stopping the stop block. Queries are formulated from the user search and transferred to each selected supplier over a network coupling.

1459826970-00ae5260-2d8f-43d0-ab9a-025decab1bd0

A method and apparatus for managing data resources on a computing device. The inner wall forms a cavity including a delivery chamber from which a single dose of medication is ejected. The method includes initiating an encoding operation of the set of data bits according to a second error correcting code to generate computed parity bits. The plurality of high-illumination LED lamps are coupled in electronic communication with the printed circuit board via the one or more electrical connections.

1459826970-3da793f8-12ae-4023-8866-fd70baccb593

A system and method for managing a construction payment process. A selector shaft is disposed in the camshaft tube. The method also calculates a first expected bit error rate based on said at least first traffic statistics parameter, said available bit rate and said re-synchronization parameter, and admits said first broadcast transmission session if said first expected bit error rate is less than a first bit error rate threshold.

1459826970-88c1bbab-0103-4dd4-9548-5453dd7e776f

A method of generating an intermediate format for configuration values of telephony devices. This invention implements the smart antenna interface based on a single digital programmable counter. The electrical signal is converted into a readable format and is processed and stored in a computer. Another aspect of the invention is a non-metallic frame defining a forward open region and having a rearward region having a rearmost portion adapted for securement to a support member.

1459826970-8fdaf1c6-f985-41e5-85d0-aaa2fc37402b

A button fastening device for attachment within an opening in a duct base for securing elongate cables and the like as well as structural duct dividers thereto. At least one of double-row inner raceways of the bearing and a wheel mounting flange are formed on a hub ring. The example gas channel plate includes a heat exchange surface including a plurality of heat exchange structures separated from one another by intervening gaps. In response to the read command, the apparatus reads data from the memory cells, and outputs data to outside of the apparatus in response to the first clock signal via the other terminal except the command terminal. The grid is oriented on the cue stick so that the main neutral line is aligned with the cue stick's longitudinal axis. The phasor approximation circuit receives the variable envelope input signal and produces a bandlimited estimated phasor signal.

1459826971-03d8dde6-5e8c-446f-881c-50e1e1433b45

A radiation detectionimaging system includes a first set of radiation detectors spaced from each other in a first direction and a second set of radiation detectors spaced from each other in the first direction. Accordingly, there can be provided a solder jointing system for jointing solder layers of a semiconductor device, an electronic device, or the like to the wirings or the pads, which is capable of having a high processing ability and preventing re-oxidation. The cross-sectional profile of a lower portion of the duct is vertically elongated where the duct passes through the fiber column so as to facilitate the flow of the fiber column over the duct.

1459826971-1db87a35-55b1-4212-b310-9bd30edcf538

In a method of manufacturing an optical fiber base material including depositing soot generated by flame hydrolysis, the fluctuation band of the surface temperature of a burner fixing section including a burner holder and its fixture for burners for compounding the optical fiber base material is kept equal to or less than 80 degree C. Both plies are then passed between the first cylinder and a second series of small externally smooth coaxial cylinders of axis YY\u2032, the axes CC\u2032, XX\u2032; and YY\u2032 being horizontal and parallel. An intermediate member is displaceably mounted and supported on the element, and is in engagement with a cam lever of the camshaft, as well as the stroke transfer arrangement. In such a configuration, an upper limit current value is determined according to a laser output power command determination value, whereby an increased current to be supplied to the pumping means, i.

1459826971-57138bd7-902e-4f57-a649-d52bd4f5951e

A measuring device including a sensor that generates data representing a detected body parameter, such as body fat, body water and weight of an individual. The structure includes a light-guiding plate for receiving, from a light-incident surface, light coming from a light source, and for allowing the light to exit from a bottom surface; a reflective liquid crystal display panel opposed to the bottom surface of the light-guiding plate; and a prism disposed on the side of a top surface of an upper substrate of the liquid crystal display panel. The housing is configured to direct air from the air supply nozzle through the filter medium. The second power supply apparatus has a second connection interface. The valve is a gas restriction valve, a throttle valve, or a directional valve. A conductive layer is formed between the conductive THV and contact pads of the semiconductor die.

1459826971-963ff3fa-6565-4f74-a5c9-0b6523554b2c

A method for estimating a clock skew between a first clock and a second clock. The top frame is provided with a plurality of through slots for holding the barrels of the pistol-type sprinkler nozzles. The system also includes a transport arrangement for transporting the sample to the sensor surface, and a magnetic field inducing structure constructed and arranged to establish a magnetic field at and adjacent to the sensor surface. The structure is simple, compact and highly integrated, has high carrier mobility, and avoids polysilicon gate depletion and short channel effect. The polyelectrolyte layer is either chemically bonded to the anchoring layer or has a thickness of less than about 20 nanometers.

1459826972-8a969aba-660c-4d78-8997-f4f2998617f0

The invention provides methods of controlling environmental conditions within a fluidic system, where such environmental conditions can affect the operation of the system in its desired function, and fluidic channels, devices, and systems that are used in practicing these methods. The color-forming layer includes a leuco dye that can be developed upon exposure to energy to produce a developed color. In some embodiments, the tips are formed before the main portions of the probes and the tips are formed in proximity to or in contact with a temporary substrate. Upon updating notification, the route number is referred to to determine a stage number  $m$  of a transmission range and the updating notification is transmitted to a higher order router corresponding to the stage number  $m$ . Such events may be location-based, or based on other events or tasks scheduled by the user and other events or tasks scheduled by another user.

1459826972-c4c2cf53-98af-42b5-a4a0-8b81c16636d8

A data processing system enables a network of interconnected public access computers to act as a continuous transactional exchange for electronic advertising. In this way, light utilization efficiency and display luminance of the LCD are improved. Sealed portions 10 are formed in the opening end portions of the through channels 3 by the sealing material. Some of the conductive traces include bond sites carried by the projection and having an outer surface at a first distance from the first side of the support member. In order to avoid the phase uncertainty associated with electronic modulation, the quadrature servo feeds back a DC signal that is modulated mechanically by means of an interdigitated variable area electrostatic forcer. A motion detector associated with the capture device may provide a bit that is incorporated into the image data stream in place of image data, in one embodiment of the present invention.

1459826973-3778a6e5-bb96-43fb-bd27-afeaedf34700

A method for forming an integrated circuit with a semiconductor substrate is provided. The package is configured such that the integrated circuit device is disposed within the package, thus assuring that the device remains associated with the package's contents. The images displayed in the gallery may be obtained using different settings or different combinations of settings, and settings may be selected by selecting one or more images from each of several sequentially displayed galleries. In particular embodiments, portions of the graft are either self-expandable or balloon-expandable. In an embodiment, the final element is attached to the apparatus via the layer and/or edge barrier, which may be made of a material with a coefficient of thermal expansion lower than the coefficient of thermal expansion of the final element. One or both of the opposite first and second insert sidewalls and/or the insert bottom wall may reside within and be encapsulated by the seal body.

1459826973-4f22ecbf-bcba-4527-863c-d81908701b5d

An automatic warehouse includes a rack including vertically arranged shelves and traveling vehicles each of which is provided to a corresponding one of the shelves. The invention also is directed generally to methods for expressing an endogenous

gene in a cell at levels higher than those normally found in the cell. Further, the light source configured to include a first light source and a second light source disposed to cause light to be incident from an end portion surfaces of the first and the second rod shaped light guiding portions, respectively, and then configured to make each of the first light source and the second light source to emit a different color light with each other. In another embodiment, a timing circuit measures the instantaneous path delay profile drift incurred with each frequency correction, and integrates the instantaneous drift measurements over time to yield a path delay profile drift.

1459826973-e57f5970-87a4-4cd7-a55e-bc06ab2b409d

The present invention provides a method for coating an aluminum wheel using a coating composition capable of forming a coating film having a superior cosmetic property as well as an anticorrosive property much enough for preventing corrosion even in the use in an area where the coating film is susceptible to salt damage, and an aluminum wheel obtained by the method. A primary exhaust pipe portion 16 is connected to the exhaust manifold 14 via a spherical joint 18 provided close to the engine E. % is supplied into a reaction zone and into contact with the cerium-promoted zeolite beta having a silicaalumina mole ratio within the range of 50-150 and a cerium-aluminum ratio of 0. Pairs of child nodes are generated from the root node.

1459826974-01a7e640-3d71-4f68-8993-3e1b97afa76b

A capacitor structure which has generally pyramidal or stepped profile to prevent or reduce dielectric layer breakdown is disclosed. 3% or less, determined by the same method as the JAPAN TAPPI No. This end disk also comprises a supporting section which extends, relative to the filter member, in a ring shaped manner on the axially outer side of the end disk. Preferably, a user downloads e-mail messages from a server to the client device. Usage of the nanowire structure permits the phase change memory device to release its stress upon amorphization via the minimization of reset resistance and threshold resistance. Various embodiments provide systems, methods, and software that separate physical storage from logical storage of data.

1459826974-0c80c76d-91b9-4843-9194-dd1977a74160

A radio communications system includes radio devices, and antenna and an array antenna. Exemplary embodiments provide real time medical testing data to a cloud computing resource via middleware. The PTDDC intercepts and translates PTI port input to the requirements of a SATA disk drive connected to the DDI. A heat exchanger has a first side that receives the first flow and a second side that receives the second flow such that the second flow cools the first flow.

1459826974-152c613a-e88c-4554-822a-41709b5ab898

A window assembly includes a window frame and an exterior window treatment system mounted to the window frame. In some fiber lasers and amplifiers having large cores problems exist related to energy being generated at multiple-modes, and of mode hopping due to limited control of energy levels and fluctuations. An output shaft coupled to a lower end of the lamp unit can be rotated around its axis and slide in a direction perpendicular to the axis. Cables prepared using such methods are also disclosed.

1459826974-55bc191f-66df-42d7-b23f-2a043d5fa94b

Methods are provided for preparing and delivering an adjuvant for vaccines including lecithin and a polymer. Blue, yellow and brown pigments are illustrated. A system for continuously detecting contaminants dissolved in a carbon dioxide stream is also described.

1459826974-7c45050f-3c85-4586-9b34-75ac2cfadd1f

A method and system of generating performance metrics for network traffic being

transferred in and out of an intranet. Related systems and applications are also described. The drive linkage includes a drive and transmission attached to the drive motor. Each of those cell compartments houses an assembly element comprising a plurality of positive electrode plates and negative electrode plates stacked with separators placed between them.

1459826974-f3b60a74-9470-4818-950e-75121413167a

The invention that meets the needs identified above is a web browser plug-in or feature comprising a modification program, a configuration program, a table reduction program, algorithms and rules, that interacts with a web browser to analyze a web page for tables. This body has an intermediate curved section extending between two ends that curve inwardly. Two variations of tensioning assemblies are shown. The present invention more particularly relates to a means wherein impedance modification may advantageously be carried out as a function of the location of one or more conductive bridge along the length of a gap region. This can assist older users who often find their mobility hampered by declines in sensory, cognitive and motor abilities. The sheet feeding device rotates the pickup roller under a state in which the pickup roller abuts against a friction body, to thereby clean the pickup roller.

1459826975-1620271a-6ba6-4ff1-a46b-19eb0b3773b3

A vertical channel transistor includes a plurality of active pillar patterns extending perpendicularly from the top surface of the substrate toward an upper part. In addition, a method for reading an access token, verifying the validity of the access token, setting security policies in a computer system, and unlocking a computer system and a nonvolatile storage device attached to the computer system. The vibration noise signals are generated by the process, such as by operation of process control elements. The mixer comprises a plurality of controllable switches. The present invention then selects at least one reference baseline based on the characteristics of control subjects that do not have thalamocortical dysrhythmia and/or patients that have thalamocortical dysrhythmia. The surface active agent is poly trifluorobutyl methyl siloxane.

1459826976-45b373da-708a-4235-86aa-ed6133d26de2

The present invention provides compounds useful as inhibitors of protein kinase. The invention thus relates to the plants, seeds and tissue cultures of tomato hybrid EX15567631 and the parent lines thereof, and to methods for producing a tomato plant produced by crossing such plants with themselves or with another tomato plant, such as a plant of another genotype. A deployable rigidized, photon momentum transfer plane of sufficient thickness may then be inflated and filled with foam. This container allows individuals to show off their favorite team in a new and revolutionary way. The distal ends meet underneath the coupling area and are mounted to a non-rotating base.

1459826976-cbb462c7-5484-47d4-b751-156176fdb655

The invention includes a method and apparatus for providing SIP message prioritization between network elements along at least a portion of an end-to-end path between a SIP client and a SIP server. Video is provided by one or more surveillance cameras and recording devices to assist in visually identifying the bearer of WiFi-equipped mobile devices. The tube is sealed hermetically by a rubber cap with two drilled holes.

1459826977-94e2b00d-2600-4579-a3c1-507e5fdd525e

In one embodiment an input device is provided. A gradient detecting circuit detects a gradient on the basis of a wheel speed detected by a wheel speed detecting circuit. The spacers provide an aesthetically pleasing appearance to the wheel as well as provide support for the inner hub within the wheel.

1459826977-96a314db-76bd-4905-ac60-07035d976adb

Various technologies for delivering contextual television advertisement are described. 7 mm or less and largest size dimples having a diameter of 4. A waste collector has an upper segment which is fixed to the midsection and which adjoins an intermediate segment which is in turn connected to a waste receptacle. In addition, a user may modify parameters of a specific icon. This composition includes a caramel color and a thickening agent, and undergoes browning reactions upon microwave or conventional heating.

1459826977-ac1d69a1-c209-4914-861c-3257100543f9

Disclosed herein are techniques and systems for evaluating exercise performance of a user by utilizing one or more intelligent sensors, including at least one camera-based sensor configured to detect image data of the user. Write completion interrupts are queued until a write cache flush has been performed and are then sent to a host system. The control section provides a control communication path between the baseband processing module and the RF circuit. The sidewall defines a first gripper passage and a second gripper passage. Then, when the magnetic field is provided to the magnetic substance fixedly holding the SIL which is floating, the movement operation to separate the SIL to the higher position than the height of the foreign material from the information reading surface together with the magnetic substance, is conducted. After this, the interior of the chamber 1 containing no wafers W is cleaned by discharging Cl<sub>2</sub> gas as a cleaning gas from a shower head 10 into the chamber 1.

1459826978-7e98a95e-1eac-4128-a98c-969567eb7fb9

This application is related to co-pending application Ser. Specifically, images or frames in a video sequence are represented as collections of flat moving objects that change their appearance and shape over time, and can occlude each other over time. The microclimate model translates a set of climate and other environmental conditions into a set of microclimate conditions experienced by an animal, given a set of the animal's characteristics. The first active surface includes at least one conductive bond pad.

1459826978-7f0b4ad8-888d-4365-b3da-4328779ff992

A method of distributing a data over a network includes protecting the data as a protected document by encryption and watermarking, controlling access to the protected document based on permissions, checking for permissions from a database, recording a record of the step of checking in the database, and accessing the protected document if allowed per permissions from the step of checking. The mating mechanism comprises a first plate fixed to the display panel comprising a pair of prongs having an opening for receiving the pin of the mounting base, and a second plate movable coupled to the first plate, comprising a latch for securing the pin between the pair of prongs of the first plate. With the outputs from the terminals Q of the flip-flop circuits thus fixed, an operation of a shift mode is carried out. The devices may also be particularly suitable for use in pediatric populations where their absorption should not hinder growth, and provide in all patient populations wound healing with long-term mechanical stability. A viewing event may be arranged with users receiving invitations, responding to the invitations, and receiving reminders about the viewing event.

1459826978-a0c22dc8-5c40-4a98-93f7-52070a8e23a7

Known operating processes for an irradiation device for irradiating a substrate by a UV emitter include the process steps of: operating the UV emitter at a nominal operating radiation power; continuously feeding the substrate at a feed rate into the irradiation field; and irradiating the substrate in the irradiation field defined by the UV emitter. The ability to analyze such reactions provides an opportunity to study those reactions as well as to potentially identify factors and/or approaches for impacting such reactions, e. The first coupling part has an opening for at least the partial acceptance of the second coupling part. The write head also includes a coil formed from electrically conductive materials. The blood

flow measuring apparatus is suitable for use in a cardiac pacemaker.

1459826979-106fb1df-fcef-4c9e-a419-cfc167440d3d

Surgical robots and other telepresence systems have enhanced grip actuation for manipulating tissues and objects with small sizes. The output module is configured to output a plurality of acoustic signals. The vertical wall is continuous with no steps. The height of a top face thereof is larger than twice the height of a top face of the side sill, which is more than twice the height of a top face of a rear end portion of the floor tunnel.

1459826979-160ee649-8fb3-448d-a4b3-5f6a6d7b8c7c

A contamination-free apparatus is provided for moving and drying coated photoreceptors. A detachable daughter card may be coupled to the memory module for converting a memory bus voltage to a second voltage for memory devices on the memory module. The heat engine system also includes a start-up mechanism configured for inducing initial movement of the element in a desired operational direction to thereby start the heat engine. A preferred embodiment of the engine includes a pair of turbines mounted symmetrically about an expeller along a single shaft.

1459826979-cfa15edb-4f50-4916-9846-779a9eabedb5

New fluid separation devices and absorption materials are disclosed. The main panel 200 has a plurality of gate bus lines 24, source bus lines 16, TFTs 25 and pixel electrodes, each of the source bus lines 16 being connected to the corresponding source bus lines 16 of the first liquid crystal panel 10 through a switching TFT 17. As a result, a switch or other such entity may send a signaling message to a central controller, thereby providing the central controller with an indication of the mobile station's current location. The audio processing system may adapt the front and/or rear audio signal channels based on the determined loudness and localization. The uniformly-spaced mounting portions are achieved by providing neck portions, attached to the mounting portions, angled with different degrees with respect to respective planes of base portions of terminals in the plug connector and the receptacle connector. A redesigned hanger, a large ball pivot, a load-redirecting pivot cup, a tapered kingpin and other improvements give the hanger a high kingpin ratio and a high angle of mechanical advantage, thereby improving the performance and turning characteristics of the truck.

1459826979-db1c52a0-f5ce-428e-9ecf-cc2b7f068ea9

A mobile terminal comprising a frame, a flexible circuit wrapped around a portion of an edge of the frame, and a bracket located at an appropriate location between the frame and the flexible circuit along the edge of the frame. The selection of gates for replacement may be based on a multi-path timing analysis. Further, a communication apparatus which reduces a control packet on a communication line is provided. One or both of the main body and cap portions may include a bore to receive a fastener for attaching to an end of the inserted load cell, and both portions include a bore oriented to receive a pin of a mating dual link of the conveyor chain. The washing machine comprises a rotatable drum that receives laundry, a motor that rotates the drum, a balancer that is connected to the drum, the balancer changing a center of gravity of the drum, and a controller that rotates the motor at a constant rotational speed and then calculates a temperature of the balancer based on a period of a variation in rotational speed of the motor.

1459826980-692b24fd-f01c-4265-a3dc-93d5e6848306

A method for fabricating a ferroelectric capacitor of a semiconductor device is disclosed. The order in which choices are presented in these modes may differ from a mode in which they would be presented to an experienced or fully-sighted user. A gate layer is formed over the high-k gate dielectric layer. The 12-volt external source may also be used to recharge the rechargeable batteries. The first switch is disposed on the housing and has a controller.

1459826980-af9985ef-2b3d-4a0e-8daa-13318eb4bfcb

The present invention is directed to processes for preparing supported metal catalysts comprising one or more catalytically active metals applied to a porous catalyst support and to processes that use such catalysts. The second antenna group includes individually-controllable, longitudinal second antenna elements. When the identification device 4 receives an electromagnetic wave from a trap operation diagnosing device, a rectifier 46 derives DC power from the electromagnetic wave, which DC power drives the memory 47 and a modulator 48 so that an electromagnetic wave containing the trap identification data can be sent to the operation diagnosing device. The silicon carbide conductive layers can comprise doped silicon carbide, or alternately thermally oxidized silicon carbide. The side sections enter into a receiving pocket enclosed by the main segment when the length of the pull-out profile is reduced.

1459826980-ba1bf332-d39d-43de-9c66-ae27c76b6dba

The present invention relates to shape deformable materials, which are capable of being deformed, storing an amount of shape deformation, and recovering at least a portion of the shape deformation when exposed to a humid environment. The compounds are useful in the treatment and prophylaxis of diseases caused by parasites or bacteria. In connection with a browser-based display of a synchronized multimedia presentation, the browser displays a navigation bar labelled with the text-based elements. Of course, other combination and claims are provided as well. Lastly, the method includes selecting the communication network for accessing a requested service if the service information matches the service-related datum.

1459826981-9dc046e7-0579-4f04-b8e2-7c7c32f0fa78

The present invention discloses a LED luminance control circuit comprising one or several LEDs and a driving circuit, the driving circuit being connected in series with said one or several LEDs to provide energy to the one or several LEDs, wherein a control circuit is connected in parallel on both terminals of said one or several LEDs and controls on/off of the LEDs connected in parallel thereto. An insulating layer is provided on the one side of the base member around the semiconductor constructing body. The fiber has a hollow form similar to that of natural fur, is excellent in terms of bulkiness, a lightweight feeling and warmth retention, and can be used as down hairs in pile products. Magnetic flux selectively pulls the armature toward opposite sides of the main axis causing it and the valve member to pivot in the flexure pivot such that an end of the valve member moves toward or away from an orifice in a nozzle passageway to control metering. In the first wiping, while liquid is forcibly ejected from the ejection face, the wiper moves along the ejection face while being in contact with the ejection face. In the open loop mode, the sender transmits multicast data streams to all multicast addresses continuously.

1459826981-aee71335-28c7-453a-af13-422180564b46

A method for managing a flow of information in an object oriented software environment. A second spacer layer is formed on the first spacer layer. These systems may also include a special pointer register whose value identifies a location in user memory or in dedicated on-chip storage at which a copy of a register's value should be saved by a checkpointing operation. A shampooing head on the end of the barrel has first and second orifices connected to the barrel and to the tube, respectively; and the respective first and second orifices are independent of each other and are arranged intermediately of the bristles on the shampooing head.

1459826981-d27bc1c0-fbd6-4782-9340-fa96650fda25

Embodiments relate to systems and methods for detecting register corruption within CPUs operating on the same input data enabling non-invasive read access to and comparison of contents of at least one set of according ones of registers of different CPUs to detect corrupted registers in form of according registers with

inconsistent contents. The methods involve generating at least two different magnetic field pulse sequences. A first user input device is moveable between a neutral position and a non-neutral detent position.

1459826981-e0d09aa3-7d77-4f45-ba7d-c796420f3d8d

A dispatch service is provided for a cordless communication system. A power island is surrounded by a plurality of mixed AI-EBG structures to provide a power distribution network. An anti-cancer therapeutic agent containing an IGF-1 receptor ligand linked to a toxin is also provided, as are methods of using the toxin conjugates for treatment of cancer. Further, there is provided a test system for the quantitative determination of parathyroid hormone and active fragments hereof in a sample. This system is particularly suitable for use in ADSL and VDSL modems which can be used to give broad band access over copper networks.

1459826982-0c8f398a-f88e-4167-b7f5-29c41b99ae21

An automobile roof top carrier for securing equipment to an automobile rooftop includes a body made from a resilient material having a plurality of protrusions disposed about a top surface. The device is comprised of a combination of a remote armsafe mechanism, a remote deployment controller, spikesnare deployment mechanism, a \u201cspeed bump\u201d type housing that can protrude or be submerged, and one or more snares with a plurality of spikes. Using the transmitted network-specific information of the caller, a current locality information of the caller is determined by a network-specific location information server. The pixel unit includes a pixel electrode and a TFT.

1459826982-1fe6d7a1-60e3-4c25-9682-9d0e3e92dcff

The present invention provides an adeno-associated virus 5 virus and vectors and particles derived therefrom. Also disclosed are methods for making the cell culture article and methods for performing an assay of a ligand with the article. In the above manner, a fatigue resistance of the ferroelectric capacitor is increased substantially. In a second embodiment, resistors within the attenuation circuit are selectively grounded to vary the amount of attenuation between the input pin and the output pin. At least one cluster is generated and includes at least one of the plurality of identified programs based on the determined relationship.

1459826982-41e9d99b-aac5-4361-b7ba-c521899ea976

A CT imaging system includes a gantry and a table in a movable relationship with the gantry. When the cumulative credit consumption of a certain player reaches a predetermined upper limit, return is executed to this player. The fan shroud comprises a covering portion having an opening disposed therethrough.

1459826982-75c7b471-7b65-4dd4-8043-3f167a28ae6a

A new Aubrieta plant named \u2018Aubnere\u2019 particularly distinguished by the large, vibrant purple-violet flower color, compact and mounded plant habit that is early flowering, and has a longer flowering period. The beads provide an ergonomically pleasing sensation to the user and further provide an element of amusement to the user. The solvent or mixture of solvents is unevenly distributed between the polymer matrices. The bone plate is disposed at the proximal rear end of the intramedullary pin and lies in contact with the greater trochanter.

1459826982-ce2f56b9-7b19-4000-8cdc-24266c56c32c

A supported polymerisation catalyst system comprises a porous support, a polymerisation catalyst and a cocatalyst wherein the support has been treated with an inert material such as polyisobutene. Each session contains its own unique RLP sequence numbers that are not shared. 5 nm, and providing a reflection layer composed of a noble metal alloy, achieved is a magneto-optical recording medium able to record constantly in near-field magneto-optical recording, suitable for narrow track pitch, and having excellent SNR, resolution, and recording sensitivity. The memory control unit configured to store the externally input data

classified by the data classification unit as busy data in the high-speed nonvolatile memory, and to store the externally input data classified by the data classification unit as free data in the low-speed nonvolatile memory.

1459826982-f4a6aa75-8a6d-4bd2-bf48-8df5d562331e

An eye-use steam-generating heating sheet contains a steam-generating composition, which is covered with at least a first moisture-permeable sheet and a second moisture-permeable sheet in that order. An MZI-based SISCAP modulator is responsive to an incoming high frequency electrical signal and is biased in a region where the capacitance of the device is essentially constant and the transform function of the MZI is linear. The serial data source that frames serial data drives a serial port in an exclusive manner. A mux is also provided between the trace cache and the instruction execution pipeline to select a next instruction to be loaded into the instruction execution pipeline from the trace cache based, in part, on a branch result fed back to the mux from the instruction execution pipeline. The secondary conductor is formed using design guidelines such that it provides the required electrical connectivity when the primary conductor is not present but minimally interferes with the RF performance of the primary conductor.

1459826983-00bd8fa5-66c1-4ac4-a449-d265cd4a9ab8

A vehicle body lower structure includes a gadget that couples a cross member and a center pillar to each other. The semiconductor light emitting device is positioned on a top side of the submount with a solder material and a flux therebetween to provide an assembled stack that has not been reflowed. The no-power optical group includes the wavelength selecting device for making short wavelength light be selectively substantially non-transparent. satisfy a specific formula, and a sheet or film obtained therefrom.

1459826983-4c6719b8-a627-49d0-a4db-390c3c4cb924

A gradient charged particle beam apparatus capable of moving highly accurately to a specific position by eliminating influences of warp inside a wafer surface is provided. The path expressions are composed from tokens selected from the group consisting of object identifiers, attribute identifiers, a relationship operator, and path qualifiers. The carrier module is then plugged into the test head of the test system. Light emitted at other angles does not impinge on the external mirror.

1459826983-6b97aab9-9d7c-4eba-8b64-62fa91cbc7c5

The present invention relates to noble metal-containing catalysts which are composed of at least one organicingorganic hybrid material which is composed of at least one titanium component and at least one Si\u2014H group. The film may be formed in any convenient manner, such as by chemical vapor deposition techniques, which may be followed by an anneal to better define and/or crystallize the at least two phases. The microcomputer estimates a time period required for the operator to watch a screen to operate the dummy switch, depending on the displayed screen. By providing a visual display of the uncertainty, a user can make better geosteering decisions. The method adjusts the voltage at an end of a capacitor connected to a gate of a metal oxide semiconductor transistor serially connected to the OLED when the MOS transistor is actuated and emits the currents for the OLED to emit light. The system includes a transmission line structure including three or more elongated transmission elements each having two distal ends.

1459826983-ffd57287-956d-4d2f-9e99-9ab495b84d0e

In a die plate having a hardened surface for sliding a knife, a plurality of WC alloy plates 1b are diffusion-bonded to a base metal 2b, whereby the hardened surface h is formed. The apparatus includes fetch logic, and translation logic. A first light source is positioned within the first socket and a second light source is positioned within the second socket, wherein more light sources are used for additional sockets.

1459826984-38e744bf-c9f4-4b03-a65a-63fec458de0a

A maintenance facility for an inkjet printer that has a printhead with an array of nozzles defined in a nozzle face. The catheter is particularly adapted for introduction into the pulmonary system. The first and second portions are communicatively coupled by data lines extending across the portions. Second multiplexers are included, each of which is configured to receive an output of a plurality of the first multiplexers. A utensil basket utilizing the method of the instant invention is also provided.

1459826984-69cfe250-236d-4b9b-82d6-07b604e35627

A wire arrangement mechanism including a guiding slot and an arranging slot is formed on a fan frame. Experimental design is employed to select a set of training points that provide the best information. The housing includes a mounting sleeve that is rotatably attached to the base section. In one non-limiting embodiment the acid may be a polyamino carboxylic acid. Various jumper terminals and connecting wires provide for programming of the system to accommodate a variety of applications.

1459826984-70199128-4ca4-47a8-befb-9188be22e617

A null direction control method allows optimum antenna weights forming designated null beam directions without calculating an inverse matrix. The system comprises the endoscopic accessory with a working end to be placed at the distal end of the endoscope, a control sheath extending proximally external to the endoscope and a control handle joined to the proximal end of the control sheath. The session credentials themselves may include metadata that may be used in determining whether to fulfill requests to access the one or more computing resources. When assembling, the drive bracket stays in the chassis, the confining patch is engaging in the confining hole, the elastic patch presses the baffle; when disassembling the drive bracket is pushed outwardly by the elastic patch pressing the baffle.

1459826985-15e1c7fb-5b08-40c5-9f2c-f1d8aa15ccd9

A rolling bearing includes: a first raceway member having a first annular raceway surface; a second raceway member having a second annular raceway surface opposing the first raceway surface; a plurality of rolling elements arranged between the first raceway surface and the second raceway surface so as to roll; and a guide member formed integrally with or separately from the second raceway surface. A geographically accurate street map is populated with the geographic location of the network component, the geographic location of the terminal network element, and the estimated geographic path. In one implementation, the device evaluates the amount of energy in a certain frequency band located near a selected null of the RF spectrum.

1459826985-1e815c17-17cd-4411-a7f7-395a8133f07b

The invention provides methods to detect molecular recognition events. In one embodiment, a method for aligning an electronic feature to a through-substrate via includes forming a self-aligned alignment feature having a wall around at least a portion of the TSV and aligning a photolithography tool to the self-aligned alignment feature. The present invention is applicable to network devices in a communications network. The controller stops the engine when the overturn signal persists for longer than a predetermined period of time while the engine is operating below the preset engine speed. The wafer tilt apparatus uses the endpoint signal in establishing when the wafer was in a tilted orientation during processing. Key advantages are hermeticity, vertical vias, vertical and horizontal gap capability, single crystal materials, wafer level packaging, small size, high performance and low cost.

1459826985-360767ac-f81f-4aec-958b-c64c6465a245

A device scans text of an image media and generates text data corresponding to the scanned text. A micro-generator coupled to a rotatably mounted shaft is positioned

in the housing. A pump is provided below the bottom of the tank to feed the drill cuttings through an unloading line. An analytical diagnosing processing of diagnostic data information for each diagnostic item is conducted by referring to an allowance value of each diagnostic item and to a maintenance record inclusive of the diagnostic result to judge whether the valve apparatus is normal or abnormal to further conduct degradation estimation. When the notches are engaged in the slits the transverse rod is fixated such that it will not move sideward in relation to the longitudinal direction of the conveyor belt. The illumination wiring arrangement includes a first wiring unit including a connector plug provided at a first connector end of a first post of the main frame to electrically connect to the illumination system.

1459826985-606a7f8f-af18-472b-bbab-396d7a59f667

A system and method for printing images for use in an authentication document from a plurality of different printers and/or capture devices. The base fabric comprises at least a first planar component, which includes a first transverse joining edge area and a second transverse joining edge area. During laser cutting in the second line, said peripheral blank is held and maintained in position by said at least one holding apparatus.

1459826985-ccfb34b1-49f3-48a4-bc25-22f95f980ff7

In a method for prescribing an essentially linear ramp with a prescribable slope by a quantity, and which is clock-pulse-controlled and which describes the ramp by an increment per clock interval, the ramp is described by a number of regular increments and by at least one first and one second irregular increment. The feeder has a base that can be buried in sand or crushed coral in an aquarium. Diagnostic DNA sequences are presented so that DNA based tests for the presence of the obesity associated virus can be conducted.

1459826986-0b3664ea-3291-4d8e-ba62-84a029ddbf4f

The present invention provides systems and methods for secure transaction management and electronic rights protection. The layers are patterned lithographically to form first elevated structure elements on the substrate with a first degree of transmission and second structure elements with a second degree of transmission, where the second degree of transmission is different from the first degree of transmission. The semiconductor component substantially completely overlaps the region of the cooling channel comprising the microstructures. 25 to cooperate with a standard Gigabit Ethernet 50  $\mu$ m graded-index fiber jumper between each individual transmitter interface and the fiber bundle, and with a standard Gigabit Ethernet 62.

1459826986-5102e7e9-db56-4637-aae3-4db039fe5ddd

An active memory device includes a command engine that receives high level tasks from a host and generates corresponding sets of either DCU commands to a DRAM control unit or ACU commands to a processing array control unit. A voice coil, connected to the loudspeaker's diaphragm, is free to reciprocate within the flux gap. The cover is configured to engagingly fit over the base. The first layer includes amorphous carbon. The two positioning signals have carrier frequencies offset from one another by an offset that is less than approximately twenty-five percent of the bandwidth of each positioning signal of the two positioning signals.

1459826986-65667441-8cca-43b1-a3d2-3b30bc551a01

An encrypted broadcast messaging system determines the management crypto-keys held by each selected subscriber device and not held by each excluded subscriber device of a group. The bracket has a lug and a plate attached to the base. An anionic poly-electrolyte can be added to the resulting slurry. The upper and lower interlocking members may be designed to press the panels against the building surface and to hide the locations of screws or other attachment devices when the interlocking members are engaged. Portions of the 4\201320 mA current not required

to power the external device may be shunted to ground, or may be driven back through the DCDC converter, to thereby present a negative impedance to the 4 mA current. The flow channel projects outwardly from the exterior of the cassette so that a peristaltic pump having pump head rollers mounted radially from the axis of rotation of the pump motor compress the elastomeric flow channels against the rigid substrate during operation.

1459826987-459c2d64-1f30-47b1-b569-72cd6bfdf7fa

A control system controls a physical layer quality of user data transmitted between first and second ends of a serial bus. When the radio modem terminal is not connected to a notebook computer, it can be used as a mobile communication terminal, using a power supply unit as its primary power source. The selected data is processed to predict future values of a time series associated with backend response time. The water, now containing extracted coffee chemicals, is collected in a coffee vessel. The pivot pin may selectively engage the first and second apertures to provide relative rotation between the first and second hinge portions.

1459826987-7c88c72d-ebf3-484f-82c0-c2c40c882686

A non-noble metal based catalyst includes a compound represented by Formula 1:  $ZrM_bO_xNy$  where M is at least one element selected from Group 4 elements through Group 12 elements, a is a number in the range of about 1 to about 8, b is a number in the range of 1 to 8, x is a number in the range of about 0. These facilities allow initialization software to quickly bring the two processors to the same state by rapid, repeated resets and execution of the initialization software. A method of conducting a wagering activity includes providing a player with a plurality of differing games of chance, at least some of which are mutually concurrently playable on a single screen display of a gaming device and enabling mutually concurrent play of the plurality of differing games of chance on the single screen display. Inlet and outlet air vents are covered by porous foam to reduce fogging in an outdoor environment. The electrostatic pattern can be used to bend or split the molecule while the molecule remains captured by the set of proximal probes, thereby allowing the system to engage the molecule in chemical reactions, e.

1459826988-363fc06d-abd5-458b-91b1-35aed1398cdd

A new and distinct cultivar of Penstemon plant named 'Blue Riding Hood', characterized by its upright and compact plant habit; vigorous growth habit; freely flowering habit; blue and violet blue-colored flowers arranged on strong flowering stems; and good garden performance. At least one of the first motor and the second motor has as many teeth as the number of phases of the motor multiplied by an integer, and the  $M \times d/7N$  coils of the motor are wound around the teeth by equal to or more than two coils for each of the teeth. Subsequent to the performing, the series of the two or more drawing operations is displayed in a history list of drawing operations. A reciprocating member engages the elongate cam slot and is extendable to a sealing position with respect to each of the electrodes to define a predetermined gap distance between a particular electrode and an opposing tissue clamping surface. The electronic module includes a casing and a fastening implement connected to the casing. The method comprises combining the PHA, a first solvent and a second solvent to form a combination, the first solvent and the second solvent being capable of forming an azeotrope with the second solvent; and heating the combination to substantially remove the first solvent from the combination.

1459826988-ac038e90-5560-40a8-a80a-3beb64fc49d0

A flash memory cell can be read by selecting a local bit line. In a particular embodiment a semiconductor wafer substrate is prepared and a conductor layer is provided upon the wafer. At least one task menu, specific to the object class selection is provided. and the logic employed by the DVD drive allows for random or specific selections to be played at predetermined times, such as displaying a clip during the flipping process of a dual-sided DVD disk. The guiding member has a

multi-route circle groove, which has a first route, a second route, a third route, and a fourth route in turn.

1459826988-c25e7231-e31e-4e81-ac8a-33deba88a59c

The instant invention provides nucleic acid molecules encoding insect ethanolamine kinase, as well as ethanolamine kinase encoded thereby. The internal combustion engine includes a chamber having a primary piston and a secondary piston with a combustion portion of the chamber situated adjacently between the primary piston and secondary piston. The inclusions and their concentrations are detected at the measurement surface using either an electrostatic detection system or an optical detection system. Methods are provided for identifying reagents that modulate MKK function or activity and for the use of such reagents in the treatment of MKK-mediated disorders. Software manages the SRAM and the other storage assembly components and makes use of virtual paging or virtual addressing techniques to keep track of where various pages, including object store pages, are stored in the system. The controller is operably connected thereto and is adapted to be powered off when the magnetic resonance imager is being used to collect images.

1459826988-ca000f61-bf0a-43c8-8c04-34f4f17fa91d

An information processing method and an electronic device are disclosed. The information processor has a normal power mode and a power saving mode. Retainers of the proposed bridge are shaped and positioned to abut the adjacent teeth. A bit rearranging unit is placed in the path of the data. Inbred maize lines derived from inbred maize line PHB6R, methods for producing other inbred maize lines derived from inbred maize line PHB6R and the inbred maize lines and their parts derived by the use of those methods. The invention also relates to a safety cut-off for any type of device for domestic use which is designed to produce pressurized steam for different purposes, such as to avoid the risk of accidents by scalding when filling with water, when pressurized steam exists in the steam chamber.

1459826988-ffe7e29c-0299-4666-bad3-bd918ce53caf

This invention relates, at least in part, to compositions comprising synthetic nanocarriers and immunosuppressants that result in immune suppressive effects. The proxy server transmits an outgoing request for the action to be performed on the identified resource to a network address of the destination origin server in a second packet that is of the second protocol version type. The second step is to test the purity of at least one sample from the purified organic small molecule material by spectroscopy. The condenser column includes a non-wetting surface.

1459826989-77d622b7-b8bb-420c-9ffe-13ef3cbdbafb

What is provided is a fixation system that offers a strong and stable construct for maximum fusion augmentation and yet is versatile enough for any patient and is easy to use. A screen structure of the monitor is pivotable about an upper edge thereof, such that the monitor occupies little volume within the headrest. Furthermore, because the image beam is no longer due to the elimination of the flyback period, the scanned image is often brighter for a given beam intensity.

1459826989-7c7c27c2-ce57-4948-8aca-b1094c9fa54e

A display device includes a plurality of pixels each including a mechanical shutter. The latter acquires user priority or application priority on the basis of the reported identifier and, in accordance with the priority, controls the router on the communication path between the communication terminal and the server. The pigment dispersant has an acid value of from 30 to 300 mgKOH/g, a number average molecular weight of from 5,000 to 30,000, and a content of organic compounds, boiling points of which are not higher than 250°C. A controller halts the print head mechanism, when the operating rate exceeds the threshold operating rate, for a halting time period corresponding to an excess amount of the operating rate. When the device includes an optional separate applicator with pins for delivering a specimen to a surface, such as a slide, the device can be used in a method for

making microarrays.

1459826989-db44908d-67c1-424c-ae74-f5240c7d6d40

A modular telephone plug includes an elongated housing, a connector module and a flexible engaging tab. Phase-locked loops may include an oscillator, a phase-frequency detector, a charge pump, a loop filter, a voltage-controlled oscillator, and a programmable divider. The TRIAC dimmer controller compares the detected current with a threshold current value called a TRIAC holding current, and adjusts the amount of bleeder current based on the difference between the detected current and the threshold current value. In different aspects, the apparatuses may be configured to generate white light and/or multicolor light, may be formed to resemble conventional light bulbs, and may be arranged as a linear chain of nodes. When the data of the first data address is being accessed, the decoding process will begin for a second data address. The meta-data information may include information describing conditions under which the image was acquired, captured and/or digitized, acquisition device-specific information, and film information.

1459826989-f90b3496-8ed4-4bb8-b99c-baca56344b8c

A surgical implant suitable for treatment of a prolapse is provided. A dispenser which is secured pivotably on a pivot axis between two limit positions, is shaped and dimensioned so that in one limit position it completely covers the viewing window and in the other limit position completely exposes the viewing window. The method also comprises detecting when the mobile device has moved away from the computer, and logging the user off of the computer upon detecting that the mobile device has moved away from the computer. A sample mount and a sample affixed on it can be rotated by a motor in the range of 0 to 360 on an axis extending in the Y direction which differs from the direction of the electron beam incidence. Changeover of the connection target is performed transparently with respect to the host 1 and so is not recognized by the host 1. Thereby, there can be provided a water for storing a silicon wafer, a method for storing it, a water for showering it and a method for showering it wherein degradation of the wafer quality can be prevented.

1459826990-1eac120d-e041-41b1-891a-8867d5d62a7a

A computing device boot-up method begins by a processing module detecting a boot-up of the computing device. A statistics file is generated while transcoding a first output file of the set. The first and second conduits are separate tubes having respective bores that are separated from one another over their entire lengths, the inlet of the engine is operatively connected to the air filter via the first conduit, and an air duct window of the engine is operatively connected to the air filter via the second conduit. Accordingly, at least one of the plurality of semiconductor films formed over one base substrate has a crystal plane orientation different from that of the other semiconductor films. Presenting the user-defined graphical object can include selectively presenting information associated with the user-defined graphical object based on user settings, such as abstraction information that can define an abstraction level for presenting the user-defined graphical object. If the host is required to be quarantined, the host is provided only limited access to the protected network.

1459826990-e9e37bee-874b-4c7c-8f3e-73c61874a6d1

A closing device for a flap on an incubator hood or thermotherapy apparatus hood is equipped with flaps, which make access possible to the premature or newborn baby from the outside. The chemical vapor deposited film is formed by a plasma CVD method such that the concentration of the oxygen atoms is 10-35% by element. A waveguide comprises a plurality of waveguide segments with each of the plurality of waveguide segments comprising a tapered end and being adjacent to at least one other of the plurality of waveguide segments. The encounter object may include information about the transmission itself, such as a date and time when the media object was transmitted and the source and destination media players involved.

1459826991-4a16d51e-bf5f-4372-a766-fa66c7980b72

The landing gear system for an aircraft includes a shock strut assembly that is coupled to the airframe with a universal joint. The system function relies on a photonic tunable delay line, which consists on an optical Mach-Zehnder interferometer with a predefined time delay difference between arms. In the lowered position, the end of the plant chassis is standing on the ground adjacent thereto. Methods of making and using these genes and proteins are disclosed as well as methods for the recombinant expression, and transformation of suitable host cells. The invention is also directed to pharmaceutical compositions comprising these compounds and the use of these compounds and compositions in the prevention or treatment of such diseases in which CGRP is involved. Also provided herewith are compositions useful for treatment of c-kit mediated diseases or conditions and/or c-fms-mediated diseases or conditions, and methods for the use thereof.

1459826991-849ca168-3476-4061-9d9b-593804cb6826

A system and method for configuring expansion bus links to generate a double-bandwidth link slot are disclosed. The coil electrode section is sandwiched by the first magnetic layer and the second magnetic layer from both directions substantially perpendicular to the plane. A plurality of charge signals detected by the charge coupled device is sequentially output to the pixel processor according to the driving sequence. The apparatus employs centrifugal force to urge portions of the plant material into engagement with the drum's cylindrical side and the openings therethrough so as to allow bring the brush rollers to mechanically shred and destem the plant material.

1459826991-ac8495bd-9018-4bce-8bf1-24cf9e1c3840

A method of synthesizing magnetic nanoparticles comprising soft magnetic phases is provided, wherein the method comprises degassing a first mixture at a temperature in a range from about 80°C. Tokens are identified in unformatted source code, which contains simple statements. The assembly further comprises two cup members, each cup member being coupled to each respective cap member. Location information input through a location input unit corresponding to the printed image information is compared with the URL region information to select an extracted hyperlinked URL corresponding to the input location information. Additionally the waterbox includes an inlet or a plurality of inlets for introduction of mixture into the pond area located below the pond level. The server may update analytics information related to the receptacle, determine a future pickup schedule for the receptacle based upon the updated analytics information, and transmit a schedule update message based upon the future schedule.

1459826991-b1280dbc-9e18-4fbc-8006-f957bd39e0d9

A system assesses one or more applications for retirement. Fast fourier transform digital filters are used to provide a frequency spectrum of the sum and difference I. A driving magnet is arranged at an outer side of the driven rotating member and is attached to the magnet holder. A slip is set at the converter lockup clutch, and a speed of the electric motor is then increased. The first interface is arranged to connect the computers, and the first interface has a port for connecting a network interface of the computers.

1459826991-ee01a08c-547a-47a4-8013-99a2f9035b6f

Aerosol delivery systems and methods for delivering an agent to a patient are described herein. The method comprises the steps of depositing on a first layer to be polished a second layer, the physical properties of the first layer being different from the physical properties of the second layer. The refractive index of the inner portion of the clad layer is lower than that at the outer radius of the core region. At least one of the cut metal sheets comprises several parallel strips having different strengths while each local reinforcement zone lies within a reinforced strip.

1459826992-141338a1-8bb8-4687-846a-f6716ac8ba75

A process for preparing a homogeneous, solid cleaning composition that comprises a cleaning agent, and optionally an additive agent and a hardening agent is provided. A variation uses the method in a cellular radio system. The growth mode control layer is formed by sputtering or vacuum deposition in an atmospheric gas, using a metal selected from a group of Ti, Mo, V, Nb, and W.

1459826992-2f046052-5c97-4f17-ba0d-1bb56542480a

Methods and apparatus for resolving frequency errors in a wireless device transitioning from a first communication network to a second communication network are disclosed. In one such embodiment, the gaming device enables a player to selectively apply or associate a plurality of modifiers to a single game component or apply the plurality of modifiers across the plurality of game components. The thinned regions may be shaped as slots having a specific width, length, end shape, spacing from each adjacent slot, and depth into the metal sheet. Cross-pleated membrane cartridges comprising water-permeable membranes can be used in a variety of applications, including in heat and water vapor exchangers.

1459826992-7c704681-f030-465e-8321-663f9080a544

The present invention provides substituted puleganic amides and compositions thereof, which are both useful as a topical treatment for skin, such as a repellant for insects and arthropods. The defroster can be fabricated by forming a masking layer with a certain shape on an electrically resistant substrate; patterning a thin film heater on the substrate based on the shape of the masking layer; adhering the film heater to a heat transfer plate; and connecting a power supply to the film heater. With this, clustering is achieved, which also works efficiently and correctly where there are segments with strongly different or almost equal combined similarity values. In this case, it is possible to regulate particular services which use packet communication, while it is also possible to avoid regulating particular services. A control unit is connected to the current meter and the electronic circuit, for controlling the electronic circuit based on the measured parameter. A plasticized layer is applied to an end face of each bone and coacts in substantially frictional reducing fashion with an opposing end face of a further selected bone.

1459826992-95492948-51f7-41d1-b7dd-dbb28c180256

An ultrafast laser machining system and method to form diffractive structures in optical fibers. An example of an apparatus in accordance with the present invention includes two broad functional components: 1) tables of translation information stored within a database and 2) application software. This technique may be utilized to perform a variety of different testing of a touchscreen device, such as to test latency and probabilistic latency. A linear actuator, having a motion axis parallel to the torque tube, drives the torque tube, through a linear-rotary convertor. Thus, if the transmission capacity at the node decreases and the quality requirement of a data stream cannot be maintained, the data stream in question is shunted.

1459826992-e9ef11f3-4710-4140-baad-caa2e2a09d26

The invention relates to a variant of a parent Fungamyl-like fungal alpha-amylase, which exhibits improved thermal stability at acidic pH suitable for, e. At least two bobbins per stand are provided. The method comprises transmitting an image through the optical tissues of the eye. A sealing zone is disposed between the first section and the second section. The housing is formed to include an exit port spaced apart from the tray. The memory address and the secure storage area can be compared to determine whether the at least one data block falls within the secure storage area.

1459826993-1c7e4114-fafc-46d1-9eb9-1018d7ef9ae1

An apparatus for forming pressed food products can utilize up to 98% chicken breast meat in high profit margin products. Generally, such apparatus may include a volume Bragg grating element that receives input light generated by a light-emitting device, conditions one or more characteristics of the input light, and causes the light-emitting device to generate light having the one or more characteristics of the conditioned light. The characteristic may be an attribute.

1459826993-a85318f3-3d67-4bf9-be26-713ec88cef89

A semiconductor device of the invention comprises a logic circuit to which a power supply voltage, a sub-power supply voltage lower than the power supply voltage, a ground voltage and a sub-ground voltage higher than the ground voltage are supplied; a main power supply line supplying the power supply voltage; and a main ground line supplying the ground voltage. A wrench head is pivotally mounted in each yoke, and each wrench head has two sets of wrenching surfaces. The open end of the suck-back chamber is closed by a second diaphragm. The electrically conductive and electrically non-conductive ceramic materials are chosen so that they have the similar thermal expansion coefficients so that the sensor remains virtually stress free at high temperatures. The vehicle includes an outlet for flowing water passing through the filter bag back into the pool.

1459826993-f141569c-cb80-4e26-af1c-e17767316458

The present invention provides ceramic powder capable of being incorporated into rubber or a resin for the preparation of a composition, which shows excellent heat resistance and flame retardancy and which is used, for instance, as a semiconductor-sealing material. A portion of the videotelephony image is selected to be zoomed and re-transmission of the videotelephony image source is limited by preventing instructions to zoom the defined portion from being transmitted to the videotelephony image source. Such portion may be associated with an interference signal that includes a first electromagnetic radiation received from the sample and a second electro-magnetic radiation received from a reference. The second block 5 includes a second member 52, 53 arranged to be slidably inserted into the first member.

1459826993-fd07d1f4-4494-4cc2-8b41-de2333d4be1a

A wet clutch includes a rotatable hub and a rotatable drum having an aperture extending therethrough. This compound is a tetrazolato-bridged platinum complex compound represented by the following formula, wherein A is optionally substituted tetrazolato, B is an inorganic or organic anion, and m and n are integers determined in accordance with the charge number of the platinum complex ion and the charge number of the anion. These supply and return conduits enable the device to be connected to a fluid flow line containing a flowmeter which is to be proved such that fluid flowing in the flow line will flow in series through the flowmeter to be proved and the two flowmeters of the proving device.

1459826994-502093f8-d24b-4fbe-9fad-94ed4ba965a2

The chain boards of a metal filings conveyer are respectively formed with a rectangular base plate having two short sides respectively bent inward to form a side plate. The nitrate esters of paracetamol are prepared by reacting the paracetamol with dihaloalkyl compound and followed by reaction with silver nitrate to obtain the corresponding nitrate ester derivatives. The communication module is operable to receive a location response message responsive to said location request message, said location response message comprising location information for the service; and forward the location information of the service to the location identifier. The vent control is attached to a grill so that the panel is located adjacent a surface of the grill and the actuator protrudes through a hole in the grill and is manipulable by way of a control knob. Next a unique capability key is computed from one or more cryptosystem parameters, the one or more shares and the random number. A visual indicator may be used to communicate to a user an operating status of the recording device.

1459826994-64697261-369e-4c9f-880a-512806d10eac

A rotor for an electric machine having a number of poles includes a shaft that extends along a portion of an axis and defines an outer surface. This is accomplished by decreasing effective pixel size for a CCD array defect line scanner while not decreasing signal-to-noise ratio, with minimal changes to the current machine. The bistable relay has an integrated circuit, wherein a control unit activates the integrated circuit by way of a control line and defines one of the two switching states via a control signal.

1459826995-1f8fdd14-228b-43a3-ad6e-6929e8785969

The invention relates to a method and to a device for discharging used operating media of a fuel cell in a fuel cell system, at least some of which are explosive, comprising a sensor unit for examining the operating media discharged from an operating space. The adjusting device includes two gripping members adapted to be manually moved towards or away from one another by the user in order to vary a size of the headband. The moving mechanism is interchangeably attached on the base unit, and the end effector is interchangeably attached on the moving mechanism. The second computer system is in operable communication with, and is configured to extract the health care data from, the first computer system. The semiconductor die is encapsulated with the thin sheet material supporting it during encapsulation. The channel has a channel mouth along its length, which faces interiorly of the frame.

1459826995-2e184d72-58a8-4890-a72c-3ac35d054c07

An adjustable ceiling panel lifting apparatus for installing ceiling panels without using ladders. The controller formats work center information to be displayed on the output device as single-valued and multi-valued display segments. A number of conditions is introduced. Instructions for a user to enter the unique code in an authentication process via an authentication portal of a management device are also displayed. The flatbed processor is coupled to the drum processor such that the arcuate transport path and the generally planar transport path together form a processing path through the thermal processor along which the imaging media moves from the drum processor to the flatbed processor during development. A data storage device may apply a different write fault threshold to each side of a target track, allowing a write head to deviate from a track center more in one direction than in the other direction.

1459826995-4172c001-a992-4bce-a8c8-2989ce51176d

Activity sensing in the home has a variety of important applications, including healthcare, entertainment, home automation, energy monitoring and post-occupancy research studies. Various techniques can be used to mitigate the effects of spurs on a received signal. The adhesive scrim is softened as the warp yarns pass over the heated section of the mandrel and shortly thereafter, weft yarns are wrapped around the warp yarns and the supporting transfer belt within a rotating tube having a plurality of longitudinally and circumferentially spaced spools of weft yarn disposed on its outer surface. Accordingly, it is possible to set an optimum transfer unit according to an environment of a data processing system in order to improve the performance of the data processing system. Using an OR-routing, the primary source node may propagate the messages either to the transit node, or to the surrogate node, whichever is alive. The device may be a neurostimulation device having a miniaturized housing with a low profile that permits subcutaneous implantation at a stimulation site directly adjacent a neuralgic region at the back of the neck of a patient.

1459826995-575b63ff-7670-40c3-8866-f5d2f70d30e6

A system and method for actuating at least one engine valve in an internal combustion engine to produce an engine valve event is disclosed. A valve network is fluidly associated with the linear actuator and allows the operator or pilot to

variably define the degree of frictional engagement. The fine objects are diode elements, each of which has, as an alignment structure, a front side layer composed of a dielectric material, and a rear side layer composed of a semiconductor. The detector generates a precharge signal which turns off the precharge transistors when the reference bit line has a voltage near the target level, and turns on the precharge transistors when the reference bit line has a voltage below the target level.

1459826996-244aba83-b20d-428f-b33b-cc510ef4abea

The present invention relates to an absorptive heat pump circulation systems and heating method. Such methods can provide nanomaterials with improved morphologies relative to previous methods. When a process is created to execute the code of a software component, the security system causes the security code to be executed before the execution of the code of the software component.

1459826996-8f282912-b1db-40b1-aa1f-36545580232d

A system and method for effectively performing a clock adjustment procedure includes a multi-core processor that has a plurality of processor cores that each operate with reference to a target clock signal for performing various processing tasks. The composition comprising 18 to 25% by weight of Co, 15 to 20% by weight of Cr, 1. The invention relates to a technique in which a preheated raw ceramic material is introduced into a laminar-flow thermal plasma obtained using a high-voltage type direct-current plasma gun and is cooled and solidified and the resultant ceramic beads are collected. The original security settings remain unchanged so that other systems and applications functionality that depends on the original security settings remains unaffected for the local machine zone. Therefore, the signal transmission method provides a space-time code provides a space-time code having higher performance and lower encoding complexity, and can effectively transmit the signal via the multi-antenna system.

1459826996-b33d7b6a-4029-46f5-a554-1cbb7f2cc506

An electronic product having an airflow-guiding device is disclosed, thereby preventing most of the airflow from being carried away by power supplies, wherein most of the air flow directed towards the power supplies will result in other electronic modules failing to have proper heat-dissipation. The system may be used for identifying concentrations of high density mineral deposits or other geological structures or formations well below the earth's surface. The encoding step of the signals is preceded by a preprocessing step that includes thresholding the eight absolute values of the successive pixel-to-pixel differences between fields of the same parity. Also provided is a computer readable article of manufacture tangibly embodying computer readable instructions for executing the steps of the method.

1459826996-b3ad27e9-74a9-41ab-be29-d675d63d3b12

To provide a frequency conversion device which uses a magneto-resistive device and thereby can correspond to a Si-based MMIC and a GaAs-based MMIC. Compositions comprise the nucleic acid sequences of the transcriptional regulatory region of the PpSEC10 gene of *Pichia pastoris*. A group of lines may first be selected as a candidate list. When the hypervisor is notified that the hardware has detected the guest operating system instructing a central processing unit to execute code stored in virtual memory accessible by user space while the CPU is in supervisor mode, the hypervisor may consult a policy to identify what, if any, responsive action the hypervisor should perform. The second part connects to the first housing such that the parts connect together with the plug inserted into the gap.

1459826996-ddd753d2-828a-44eb-b9e5-3f2debf85927

Disclosed is a multifunctional urethane monomer prepared by reacting an epoxy compound having two or more epoxy groups, a diol compound having an acidic group and a compound having an ethylenically unsaturated group and an isocyanate group with one another. Preferably, the plurality of laser beams having different

wavelengths are generated by inputting single wavelength beam to a multi wavelength generator from single mode laser light source and by inputting light waves having a plurality of wavelengths generated from the multi wavelength generator to wavelength selecting means. The invention is applicable to organic synthesis.

1459826997-1e889b35-cbb3-4b9d-b519-b535be239502

A method of testing a logic device that includes the steps of identifying a first test vector corresponding to a test failure resulting from testing of the logic device, converting the first test vector from an input pin format into state data associated with the logic device, and searching the internal state data to identify a set of last shift transitions. A groove 16Aa formed in at least one of the front-facing face and the back face of the transverse wall 16A. In one embodiment, a portion of each of the holding devices extends into its respective opening in the part-retaining position. The installation is accomplished without tools, and two snap locking tabs in the injection-molded plastic body automatically secure to the access hole of the mortise lock mechanism. The resulting tissue web has good formation without pinholes, yet contains a watermark corresponding to the shape of the structural icon. A pressing mold maintains the defined outer contour of the handrail.

1459826997-68aa7ea7-91be-48a9-bf99-dcb8cfad2096

A radar apparatus is provided which correctly combines and displays detected data obtained from a plurality of radar antennas. The signals may be modulated with a spread-spectrum spreading sequence, or other analog or digital signal. The particulate material is lowered to surfaces and removed by vacuuming, damp-wiping or using a dry cloth with a cationic charge. The remote control unit includes a reader for a storage medium for AV data, or a cable or wireless interface to an AV acquisition device such as digital video or digital still camera or digital music player or recorder.

1459826997-bb9434dd-4615-4c7a-b344-56b45bd112a0

The present invention discloses a floating gate structure of a flash memory device and a method for fabricating the same, which relates to a nonvolatile memory in a manufacturing technology of an ultra-large-scaled integrated circuit. The data dictionary may be used in computer operations on rights expression metadata, such as for digital rights management applications. A visual tag may be obtained via a communication method or optically captured via an optical device. Additionally, the oxygen gas may be used to power a scavenger for the creation of electricity for charging a battery within the dispenser. The heated filament of each electron gun, which is used as a source of electrons, is inclined with respect to the aforementioned longitudinal axis whereby modulation applied to the elongated outer electrode of the electron gun provides different ionization conditions for specific particles of predetermined masses for analysis of which the aerosol TOF MS is tuned. Specifically disclosed is a plastic crystal containing a compound represented by Formula or below: and at least one compound BF<sub>3</sub> salt represented by Formula :Mn+BF<sub>3</sub>\u2212n\u2003\u2003wherein M is an alkaline metal, alkaline earth metal, aluminum or H; and when M is an alkaline metal or H, n is 1; when M is an alkaline earth metal, n is 2; and when M is aluminum, n is 3.

1459826997-bc91762b-cbcc-4952-83fe-4f7314b2eda4

A table positioning device has a moving table and three table moving mechanisms for moving the moving table, and three position sensors for detecting positions in different directions of the moving table. By driving the servo system on a predetermined trajectory such that encoder errors occur at frequencies outside the servo loop response, these errors are sampled. The method for identifying the stored items includes receiving RFID tag signals from the stored items, generating a null RFID interrogation field, and moving the null RFID interrogation field to identify an item by its RFID tag signal dropout in response to the null RFID interrogator field encompassing the item's RFID tag. Vehicle mount and ground stand

configurations are disclosed. The processing unit is operable to back-propagate from the collision zone a capture set as a function of a disturbance for the first and second vehicles.

1459826998-21540199-3922-4ec9-a37e-af0e7d645dc2

A finFET structure includes a semiconductor fin located over a substrate. A portion of the cast brake housing is cast around a portion of the air chamber component. Routing is controlled based at least in part upon the comparison. After the bending operation, the edges of the sheet-bar blank are joined together by a longitudinal seam weld, so as to form a preform of the hollow profile, which is then deformed into the final form by internal high-pressure fluid. The referenced read operations can be initiated at the same time or prior to that of the destructive self-referenced read operation. A block co-polymer layer is formed to fill inside regions of the first separation walls and gaps between the first separation walls.

1459826998-95d0c9fc-ce66-41ff-90c3-8469fb23ddd2

A surgical extractor for removing objects from a body including, for example, calculi, such as kidney stones and gall stones. In particular, the present disclosure relates to methods of diagnosing BHD disease and related conditions, such as spontaneous pneumothorax and kidney cancer, and methods of treating BHD skin lesions. The face of the cuber dies is divided into four quadrants. A scribe guide extends from said alignment head, said scribed guide including a scribing side. Furthermore, the present invention relates to processes for preparing compounds of formula, to insecticidal, acaricidal, nematocidal or molluscicidal compositions comprising them and to methods of using them to combat and control insect, acarine, nematode or mollusc pests.

1459826999-51321506-c81a-4fdd-9f19-05d4e9a1692b

The disclosure relates to integrated circuit fabrication, and more particularly to a metal gate structure. The control gateway is electrically coupled to the devices. A total current flowing in the selected first conductive trace and a leakage current flowing through unselected second conductive traces are sensed by a sense unit in a one cycle or a two cycle pre-read operation. This device, being bidirectional will also operate as a multiplexer.

1459826999-5cb358b9-42a2-485b-8eb7-fbd621d4f77e

Flow rates in a microfluidic device are modulated after performing serial dilutions by flow reduction channels that draw fluid from the main channel, thus reducing the flow rate. The gas laser further includes a lasing gas disposed in said discharge region and an excitation means for energizing the electrodes to excite the lasing gas. The mutant protozoa additionally lack certain enzymes within the heme biosynthetic pathway, making the mutants susceptible to porphyria and eventual lysis. Each of floor devices 30 and monitoring center device 40 display image information taken by camera 20 related to the detection device which has detected the emergency event.

1459826999-7899594e-5bf7-458a-99fc-cef9fe22f98b

A system and method for improved Time Of Arrival distance measurements between nodes of a wireless ad-hoc network. The porous material includes channels. The buffering of the data is associated with a buffering delay.

1459826999-a9509810-4976-4491-baf7-d4dfd369b7b3

Provided are a method, apparatus, and medium for encoding/decoding a high frequency band signal by using a low frequency band signal corresponding to an audio signal or a speech signal. The invention accesses RFID data associated with product stocking events for identifying product movements in a retail supply chain and within a retail store. Methods of using these peptides for type-specific detection of HSV-2 antibodies and differentiation of HSV-2 viral infection from HSV-1 and other herpes family viral infections are further provided. After that, a

photocatalyst-containing functional coating material is applied to the surface of this first coating layer in a semi-cured condition and then both of the coating layers are cured.

1459826999-e78ac5a1-2395-4320-8e79-1c1ae19d3d38

A skimmer pool closure assembly for closing off a swimming pool from a pool skimmer that is mounted to the pool adjacent a side wall opening includes a face plate attachable to either the pool skimmer or the side wall and having a configuration generally coextensive with the side wall opening. The ultrasonic probe design system includes an interface for inputting statement parameters,insonification requirements, and geometric constraints, with an engine responsive to the interface and configured to determine and provide an optimized transducer geometric design output. Scores represent a measure of relevance to the topic. The process also includes removing a portion of the LNG cooling loop as LNG product.

1459827000-a7a2df4c-10c6-4f52-92f9-3976e2a53159

A low cost method and apparatus for indicating when to replace a water filter in a water and ice delivery system for a refrigerator. The game is played with cards of four different colors, which correspond to the same colors of the pyramids' sides. The air piston is linked to the liquid piston. At the end of the measurement phase, the set of latches contains a multiple bit word that is an indication of the back pattern effect experienced by that particular series string of memory cells.

1459827000-e6467516-1a95-42ef-9280-ced400be773b

The electric massage comb is a handheld electrical tool that can be used to thoroughly scratch the scalp area or to provide a soothing massage for the scalp. The present embodiments allow for an indication of a customer's language preference to be stored in some fashion and also allow for that indication to be accessed when the customer places a call that may require communications in a specific language. The driving device includes a rotating shaft journaled within the seat body. The track-and-hold unit samples and holds the input voltage signal in response to the sampling control signal to generate a sampled signal. The controller determines if an understeer or oversteer condition exists and generates an appropriate steering assist signal that is then communicated to the road wheel steering actuation system. The progressive, or modular, treatment can be provided by a system or kit of one or more treatment devices.

1459827001-0e08df25-75f4-4081-af14-d825b53744e4

A nonvolatile semiconductor memory according to the present invention includes a memory cell transistor which is disposed in a first region and which has a gate electrode of a stacked structure, and a dummy cell which is disposed in a second region neighboring the first region and which has a gate electrode having the same structure as that of the gate electrode of the memory cell transistor. An input video signal representing a digital image is processed in the detail filter, wherein detail signals are extracted by the detail filters at different frequency ranges. In such a configuration, inadvertent complete-locking or release thereof of two workpieces can be prevented. In accordance with certain embodiments, a correlation equation is manipulated, for example, to eliminate certain products by ensuring that they equate to zero, to eliminate redundant calculations by recognizing repeated subsequences, to eliminate common subexpressions, to determine a negative of a correlation result, etc.

1459827001-2a2da109-377b-4ede-983e-0037ff937a83

Compositions and methods for modulating HSP70 function, particularly for the targeted killing of cancer cells, are disclosed. According to the invention, the assembly plate has clip pins by means of which the module can be locked in a position on the assembly side as defined by the clip pins. In another embodiment, the fuel injection timing is adjusted to spray the fuel directly onto the piston surface to cool the piston. The article can be embodied as a swab, gauze, shield,

hygienic napkin, diaper or interlabial absorbent structure and can be used to indicate the presence of amniotic fluid, or secretions associated with bacterial vaginosis without giving a false positive result upon exposure to urine or after drying. Therefore, the data is restored without any corruption of valid page by using a proper restoring method. The method includes detecting a special boot condition during a pre-boot test of the computer system; and altering, in response to the special boot condition, an operating system access configuration of the hardfile.

1459827001-8481d470-d580-46f7-bd7f-52a563e7e84b

A composition, reactor apparatus, method, and control system for growing epitaxial layers of group III-nitride alloys. With a quick, convenient, and flexible installation of a meat grilling pan, a hotdog broiler, and a bread tray onto the oven, the electric heating device and each cooking food item are kept in an appropriate distance with partitions to avoid the food from being burned and achieve the purpose of heating and warming the food appropriately. The at least two insulating elements have a first face facing the semiconductor substrate or the mold compound and a second face facing away from the semiconductor substrate or the mold compound. One or more machine controllers are selectively programmed to control the output color and duration of each light emitting device responsive to programming associated with the controller and an operative condition of the associated transaction function device. The production key server includes various security devices including a hardware decryption device to decrypt the installation keys, a smart card reader for authenticating authorized operators, and a limiting switch to disable the production key server if it is tampered with. In this arrangement, the amplifying unit amplifies the deviation of the primary current based upon feedback gains consisting of eight respectively independent factors.

1459827002-4f9c751e-0a2c-4b36-bb56-0b97f2a3d658

A method and an apparatus for anchoring a medical implant device within a blood vessel or other body passageway are described herein. More particularly, a channel specific sampling sequence is defined for each electrode, the sequence having a particular duration, pulse amplitude distribution, and number of pulses. A total score is computed from weighted scores assigned to factors associated with the message. The method further includes encrypting the data transform function and the function key value applied to the base biometric reference template. The resulting linear equations are solved to compute one or more reflection coefficients for the subject. In another embodiment, the transverse axle rotation axis of the axle assembly is elevated above the suspension roll axis.

1459827002-d7ab0dd7-bb3e-4586-a837-a4ef156e18c1

The present invention is directed to novel polypeptides and to nucleic acid molecules encoding those polypeptides. One such transmitter circuit includes a signal output and an encoder configured to provide control signals based at least partially on the plurality of data digits. The device of the present invention integrates this low flux and transforms it to a measurable fluid flux, so that the fluid can be measured by the fluid meter within its optimum error range. The technique can include displaying the GUI.

1459827003-0fcc09dd-0857-46c4-bb4f-4ef2bf3dbd90

A wafer polishing method is provided. A mandrel portion with a sharpened end has two or more guiding or directing members attached to it. A checkpoint is generated for the selected link.

1459827003-12f0eaab-1609-4466-a464-a219c1958d71

In one embodiment, a system includes power management control that controls a duty cycle of a processor to manage power. An N diffusion region, a P diffusion region and an N diffusion region are formed in the surface for the N<sub>u</sub>2212 epitaxial layer. The added-up signal, which is dependent on the error matching, controls a

VCO which readjusts the operating frequency of the FOG until the correlation tends to zero. The expandable medical device may further include a plurality of ductile hinges formed between the elongated struts, the ductile hinges allowing the cylindrical device to be expanded or compressed from the first diameter to the second diameter by deformation of the ductile hinges.

1459827003-29b657b0-4c1f-43ed-9c25-5577696f7fd0

The present invention provides a system for wide-range microwave communications over wireline networks. In one implementation, flash abstraction logic, tracks how many physical sectors are free to receive data; track how many physical sectors contain data that is dirty, and compare whether the physical sectors that are free to receive data outnumber the physical sectors that contain data that is dirty. Although any suitable means can be used to fasten the conductive grid into the housing floor, the grid is preferably press fitted into the top of the housing floor. Besides, an engagement of engaging parts of the metal covers in corresponding arched cavities of the middle plastic frames is utilized to permit a rapid fastening. If it is determined that the first unique identifier and the second unique identifier match, then it is determined that the asynchronous transaction started with the first method and completed with the second method.

1459827003-37652391-4c5b-4661-b43c-ce8091e39057

A motor control system for a hoist drive having an electric motor operationally connected to a hoisting member for hoisting a load, the motor control system being adapted to generate a final angular frequency reference for control of the electric motor, the motor control system comprising a power limiter means adapted to generate a correction term for angular frequency reference. A plunger with an open channel is slidably mounted in the barrel. The connecting waveguide includes a first material having a first index of refraction and a second material having a second index of refraction higher than the first index of refraction.

1459827003-57038633-0a9e-4cac-8981-ed3a139f7695

A method and system for manufacturing radio frequency identification tag antennas is described. A lock housing has a first end having a first end opening, a second end having a second end opening and an open interior between the ends, at least one opening for receiving the engagement portion of the shackle and a blocking member can be attached to the lock housing. The first packaging material fixes the at least one filter unit, and so no abrasion can take place during transport and handling. The well fluid circulated through the fluid bypass is discharged into the well annulus below the packer elements on the upper packer apparatus to circulate stimulation fluid through the stimulation port and upwardly through the upper packer apparatus and the tubing used to lower the upper packer apparatus into the well. The torque-limit signaler operates during cap installation to interrupt temporarily a driving connection established between the handle and the closure to provide a tactile and/or auditory signal to a user turning the cap in the filler neck indicating that sufficient torque has been applied to the handle to seat the closure in a filler neck-closing position in the filler neck.

1459827003-cb6a13e3-f8ed-497b-b476-2a23cf77c6c1

A wave thread form for threaded fasteners includes multiple thread pitches along a generally helical path, and includes multiple wave thread portions each deviating from a straight-line helical path, with adjacent wave thread portions along the helical path being separated by standard thread portions extending along the generally straight-line helical path. The imaging unit adds signals of respective N pixels out of M pixels per single frame and outputs signals of MN sample points at each frame for high-speed imaging and imaging at a second frame rate greater than the first frame rate. A controller is notified that the earlier of the first or second machining tool has reached its selected position for completion of its machining operation. The detection device also comprises an infrared radiation filtering structure which covers the photosensitive area without covering the

infrared photodiode. Each of a plurality of inserts has a size and shape adapted for being removably positioned in and frictionally coupled to one of the depressions.

1459827004-76834d89-9596-4133-8d7f-891db11f6f1d

An information processing apparatus performing a plurality of processes in parallel includes a plurality of processing units and an adjusting unit configured to determine processing intervals of the processing units on a processing-unit-specific basis to gradually align periods in which the processing units operate. The actual length of the pressed component is obtained by applying pressure using at least one pressing ram and measuring the length with a measuring device. The rotating member has an operating portion and a protruding portion. 95% or more is prepared, and is hydrolyzed by adding a small amount of acids to the solution. , they are made concave, in a plane transverse to the direction of flow path.

1459827004-9233bd63-11b0-4a1a-9a1e-33f6157dd043

An image forming apparatus includes a fixing device including a fixing rotary body and a heater for heating the fixing rotary body. A write charge control circuit is controlled according to a write control signal and the same or a different address value. As a result, the cost of creating a usable merchandising system and database is reduced. In the first position, the oblique surface faces the first and second openings and the outer surface shuts the third opening, and in the second position, the oblique surface faces the second and third openings and the outer surface shuts the first opening.

1459827004-9438c91d-01df-43b2-b81f-2c35537c475e

This invention relates to a test sensor cartridge assembly that dispenses test sensors individually while shortening the distance of the lateral movement required to eject the sensor. In order to obtain a dynamic detection and calling of processes in a loosely coupled production structure and infrastructure, the invention provides for devices providing the production and control services to be associated with a DPWS-based web service, wherein device functions are implemented into the DPWS-based web service as device service and agent functions. The spark plug further includes a metal shell surrounding the insulator; and a ground electrode in which one end is joined to the metal shell, and another end portion opposes the noble metal chip to form a spark discharge gap between the ground electrode and noble metal chip, wherein M, D1, and D2 as defined herein satisfy Mu226610. The airflow is drawn from beneath the frost line, exhaust ventilation or sunspace. When a slow sync is detected, the client and server can depart from the normal SyncML protocol and process summary data without having to compare all items on a field-by-field basis.

1459827004-be76113b-f53d-44a7-a815-5a68c2e84509

Embodiments of the present invention include a composite electromechanical machine which can operate as a motor or a generator. The bottle could provide sufficient radial rigidity\u2014or resistance to squeezing\u2014to return to its original shape at a suitable rate without experiencing permanent deformation or denting and to withstand the rigors of filling, shipping, transporting, dispensing, etc. It supports a variety of different type of content identifiers and allows for overlap among different content identification schemes. The frequently occurring group of n-grams is transmitted to a deep parser component and a deep parse output from the deep parser component is generated.

1459827005-183e1fde-d68d-4669-83bb-201ba5bbef1d

An image forming apparatus includes a sheet feed unit which feeds a sheet to an image forming unit forming an image on the sheet, a re-transport roller which reverses the sheet with a toner image fixed on the sheet and re-transport the sheet to the image forming unit, and a control unit which controls a sheet feed operation of the sheet feed unit for feeding the sheet. Contaminated drilling

medium passes into the space between the bearing races. The bytes of a chunk are read from the pipe object in the same order as they were written. The post of the base assembly is received within a bore of the handle, a mandrel being interposed between the handle and the clamps of the base assembly.

1459827005-2e0aa829-9845-49b8-abac-34c42377bd03

Certain aspects relate to monitoring and managing storage drives installed on a backplane and performing backplane controller firmware update through a universal serial bus interface. The organic EL display comprises a substrate, a pixel-driving circuit unit, and pixels arranged in the form of a matrix on the substrate. A slider guides the sealing unit to the sealing position by moving rectilinearly in one of two opposite directions. A unique identification value is assigned to this customer and is stored with each of the identified records. Each of the fixed paging receivers receives the broadcast paging message, extracts the broadcast customer identifier, and compares the broadcast customer identifier with the customer identifier stored in its database. The airbag is protected by the reinforcing cloth even if it contacts with the key accessories upon deployment.

1459827005-7b62eec6-e6ef-40ff-91b5-76e0b06723fb

A wiper blade includes a lever assembly that has several types of levers. A processor for a computing device allocates an address range with an address to write to an intermediate storage location. The cover includes two hooks formed thereon for insertion in the holes for retaining the board engaged with the cover. In some embodiments, the covering member may be configured as a floating covering member and/or as a flexible elastomer seal. As such, an optical axis alignment is completed for the first and second recording media.

1459827006-3b9b5e68-ecce-4dfb-b9cc-adda2a7cccb8

The invention is a cryptographic system using chaotic dynamics. A reference code, or other identification information, associated with the desired signal format. The first ceramic layer consists essentially of partially stabilized zirconia so as to comprise the tetragonal and cubic phases of zirconia.

1459827006-8fa51e70-b5c3-478d-94bf-3cda1dd82454

A convertible travel case has a frame including an upright with a handle for grasping and a base with wheels for towing. The traction transmission capacity control device is configured to perform a traction transmission capacity control based on a second-roller turning amount given from the turning-motion reference point of the second roller. An overlay extends down the length of the piece of fabric, with a plurality of ribbons attached to the overlay in a straight column. R-PDCCCH may be transmitted in one of a plurality of layer-specific search spaces corresponding to one of a plurality of antenna ports. The second metal strips of the second antenna unit are located densely in such a manner to provide an electromagnetic induction to achieve a second frequency band different from that provided by the first and third antenna units. Said charging device is further capable of calculating a characteristic signature for the stretch of road traveled by the vehicle by means of location co-ordinates for the vehicle and transmitting the same to an accounting centre, outside the vehicle.

1459827006-b632c548-e154-4992-a504-56d335928cba

The invention is related to a cost-effective method for making a silicone hydrogel contact lens having a crosslinked hydrophilic coating thereon. The system described herein provides techniques for controlling the provisioning of users' virtual machines among clusters based on determined requirements obtained from users' service level agreements and in accordance with an optimized allocation of resources to service the processes corresponding to the virtual machines. When the network is in the wireless packet communication mode, the network manager coordinates wireless communication of packets among the network node modules, the switch modules, and the bridge-routing modules based on individual content of the

packets and wireless channel mapping.

1459827007-1b167ece-cc08-4f0f-a935-06374f6b9e13

A headlamp assembly having a mechanism for reducing water based contamination is disclosed. A combination is formed in a medium where the combination comprises the sample, a hemolytic agent where a determination of the hydrophobic drug is conducted, and a bioavailability agent for the hydrophobic drug. Each key includes a moveable engaging member disposed proximate a waveguide branch to engage the waveguide branch as a function of key operation. As such, ions of the second isotope of the element are selectively implanted into a region of the substrate. In these more advanced phones, the programming can be done by a system administrator or by the user of the phone via a computer with internet access. The program product and method create object models that have a consistent structure from and about information assets that are of diverse types and come from diverse software, and display browse cards about the information assets in a time-ordered stream, together with glance views related to the document object models.

1459827007-8092a7a8-533a-478f-b92d-1648dd3fae21

Seat inlay in the form of an elastic grid having at least two longitudinal bars which are connected by cross bars and have hangers for suspending the inlay in a frame of a seat, and the cross bars are made of plastic and are molded to the longitudinal bars. The front section is more rigid than the rear section, and the center section is less rigid than the front section and more rigid than the rear section. In another aspect of the invention, the pusher cap has a single, common mounting surface which accepts pusher pads of different divert angles. The reflecting mirror is supported at its back surface by a supporting column upper end of the supporting column, a first cylinder upper end of the first cylinder and a second cylinder upper end of the second cylinder in a tiltable manner, which are arranged to form a triangle on the back surface of the reflecting mirror. The digital lookup table output is converted into an analog signal with a digital-to-analog converter, the analog signal is filtered to generate the drive signal, and the horizontal drive signal is generated based on the drive signal. The composite line has a central core of heavy metal and metal salt particles surrounded by a polymeric monofilament for use in long line fishing as well as fish nets.

1459827008-2034df94-1113-4676-af6d-20136639f2fa

A field effect transistor according to the present invention has a semiconductor layer through which carriers injected from a source region travel toward a drain region, the semiconductor layer being formed from a composite material including an organic semiconductor material and nanotubes. An input/output system activates the active-partition switching program when a specific operation is performed. Grid lines of the second group are spaced between adjacent grid lines of the first group, with the height of the grid lines themselves in the second group being less than the height of the grid lines in the first group. Inside the CDSA framework, the corresponding public key is used to verify at runtime those applications that were appropriately signed.

1459827008-7985f95d-e68a-4e1c-8d7b-f9f97bf2b876

A neural network system including a plurality of tiers of interconnected computing elements. The space remaining around the resistor core is filled with a soldermask material and the assembly is coated with metal. When the tape is fired at a sintering temperature of the low temperature ceramic layer, densification occurs in the z direction, but essentially no shrinkage occurs in the x-y planes. In this fishing reel, a large amount of information can be displayed while the size of the reel is kept small. The present invention provides an active material for lithium ion battery represented by a composition formula:  $\text{LiLi}_3\text{Mg}_x\text{Ti}_{304}$  in which a part of the element of lithium titanate is substituted with Mg, and a lithium ion battery using this active material as a negative electrode active material.

1459827008-7a1daeb8-1ab2-465b-b3fd-9f038d2c9808

Systems, methods and computer program products enabling customers to communicate requests to travel experts located in a cities around the globe. In an embodiment, signals and the parameters of the signals may be identified and indications of available frequencies may be presented to a user. The various embodiments disclosed herein incorporating the aforementioned hot peel carrier have significant advantages stemming from the fact that immediate after a graphic is heat applied to a substrate, the adhesive of the carrier has substantially no adhesion to either the substrate or to the heated adhered graphic. In certain embodiments, a housing specifically adapted for easy power source replacement and disconnection of the power source is utilized. Thereby, the logical composition for the logic circuit description based on the hardware description language can be optimized and the necessary time can be shortened.

1459827008-7afc86b2-2db9-462b-bcba-94caf0a5308c

The method and system serve to notify the user of an event through a control device. The recording medium includes at least one recording layer, and a data area on the recording layer. Groups of dimples are provided in each geometry, the dimples of each group having different depths, respectively. The second current stage is configured to source and sink a second range of second output currents and provide a second measurement current representing a second output current in response to the first range being exceeded.

1459827008-b854b6fc-15db-4c18-8479-bca2585cf151

A tarping system that automatically covers and prevents trash from spilling from a trash opening in the rear vertical panel of a CRC. A second word line is coupled to a gate electrode of a second transistor. The method comprises transmitting an image through the optical tissues of the eye. The downstream port is configured to provide a downstream component including a downstream portion of the drive component and at least one additional read channel component of the transmitted signal to at least one additional sensor disposed downstream of the sensor.

1459827009-01d6fbe9-966d-457e-acd8-9841d9e165d9

The disclosed invention provides an oxygen laser oscillator which can obtain a direct lasing from a singlet oxygen molecule ). The heat exchange element has a substantially cylindrical structure with a first end and a second end and the length of the element is greater than the diameter. When the hinged tray is lifted, the coins travel through a waste management system and into the coin sorting and counting apparatus. The upper portion of the lever also has a suction lockrelease that allows the user to manually adjust the angle of the lever by pegging onto scooped cogwheel with a slider, so the suction strength can be adjusted desirably for continuously holding onto the same spot in extended use. A convergent channel is recessed within the third bearing surface and trails a portion of the recessed area.

1459827009-c701f330-ef61-4951-819a-07f92485e9e8

A method and apparatus for customizing a graphical user interface on a multifunction peripheral is provided. A system for enablingdisabling write-protect of a basic inputoutput system is also disclosed. The first organic light emitting layer may be on the first hole injection layer. The function then returns to another function that invokes it either with a new token error token representing a new error chain containing the error occurred and the errors contained in the error chain or with an error status. The present invention specifically provides isolated peptide and nucleic acid molecules, methods of identifying orthologs and paralogs of the protease peptides, and methods of identifying modulators of the protease peptides. The refractive indices, orientations of media, and alignment relative to a propagating wave define a refractive boundary at which reflections may be reduced or eliminated, and at which, for certain incident angles, rays may be refracted on the same side of the normal as the incident ray.

1459827009-d221b373-6910-48a0-9ce8-0aa7726b1c3f

An arrangement of a side door on a body of a motor vehicle is provided. The device includes a housing having a working head attached thereto, an electric motor provided within the housing for actuating the working head, the electric motor being rearward of the working head, an actuating switch for actuating the working head, a rearward switch provided within the housing rearward of the motor; and a lever extending from the actuating switch to the rearward switch. Also, some embodiments employ a hub movable within an elongated aperture, and can also have a projection engaged with a second elongated aperture to help control the orientation of the display screen relative to the screen housing. Thereafter, first audio data specified by the mute setting is played with audio data from the call on the communications device. The first response sent from the terminal to the network is also used as the second random number, and the network has previously requested the second response from the authorization center together with the first random number and the first response as a triplet data set. When an error is detected in the encoded data in the forward decode processing, backward decode processing is started by a backward decoder.

1459827009-eeeea6575-6ee3-49d5-a93c-489de329d778

P-chiral bisphospholane ligands and methods for their preparation are described. A controller and a readwrite channel convert the digital bit patterns to analog data signals to be stored in a memory array at a particular bit capacity level in order to achieve a desired level of reliability. A set of one or more navigation tools is contained within the badge control along with a set of one or more editing tools.

1459827009-f833f9e8-7e9d-4579-ab90-ea71aa600321

The invention relates to a built-up piston, comprising central screwing and a central cooling chamber. One embodiment of a system logic device includes logic that assumes a transfer size of a predetermined length. At least one partial view of an examination object is subsequently generated and compared with a stored standard view, on which at least one accessory required for the examination mode is displayed.

1459827010-5bb3a40c-6fdb-4ed5-a097-e99103e77e17

A center beam car has a main deck structure extending laterally from a main center sill, a laterally extending top truss structure, and a central vertically oriented central beam structure. The DC input voltage is set to an intermediate value between a high voltage level and a low voltage level of the binary logical input voltage, and the switching circuit is turned into its OFF state at or before a time when the selecting circuit selects the binary logical input voltage as its input. A dielectric gasket is provided below each SMA connector to provide pressure on the leads thereof so that the leads adequately contact corresponding pads on the PCB. The memory cells are substantially smaller than prior art cells, and the array is biased so that all of the memory cells in it can be erased simultaneously, while programming is bit selectable. Methods are provided for its therapeutic, cosmetic and non-therapeutic use and operation.

1459827010-645d154f-eede-4c2b-8863-2e1eb01731be

The present invention discloses a frequency-changing voltage regulation circuit, which applies to a power supply device that has a booster unit and a power conversion unit. A motor opens the shield material so as to block sunlight entering a vehicle through a window. The terminals and positioning hooks are mounted through the base into the tongue. In another embodiment, the receiver includes a receive unit configured to receive preceded data.

1459827010-6eb863d6-d710-4564-85e0-8d84dd21aa50

Novel 1,2,4-oxadiazole benzoic acid compounds, methods of using and pharmaceutical compositions comprising an 1,2,4-oxadiazole benzoic acid derivative are disclosed.

The method comprises pressurizing an internal space of a collapsible package to expand the package. A top rail and a base rail span between the uprights. The multiplexer reads the instruction data one by one from the instruction memory, and reads data units stated in the instruction data sequentially from the data memory, for generation of a multiplexed stream. Thus, the electrolytic solution will not adhere to and stay on the lead wires. The apparatus includes a second cam, which has an upper rib to be latched with the upper portion of the housing and a lower rib to be latched with the bottom of the housing, thereby providing structural stability.

1459827011-59a8562c-ac1f-4600-9f0e-ea3f02b86bc3

Methods and systems for processing Ethernet data are disclosed and may comprise receiving Ethernet data via a single gigabit Ethernet IP telephone chip. A credibility factor is determined for the author in association with the online content item. Methods of treatment and combinations with other agents are also disclosed. The amplified signals are converted to a binary pulse train signifying the temporal length of each active carrier period and the temporal length of each quiescent carrier period. The pressing end of the pressure application spring is set under tension by the can surface during inserting the plug part into the socket part and is released not until the plug part is inserted in the socket part to such an extent that the first conducting track carrier has reached its contact position. In addition to the traditional \u2018184-1-1\u2019 dialed digits, a mobile user would also dial a number representing a feature code for a particular service, e.

1459827011-f8f9b366-1d91-4fd0-b306-bceaa7d4c9fd

A self-sealing shell useful as a component of a soft fluid-filled prosthetic implant is provided. The local variation of the catalytic converter efficiency can thus be monitored in the light-off area. The partitioning plate is mounted to the vacuum vessel by means of a mounting screw such that electrical contact between the partitioning plate and the vacuum vessel is achieved through said spiral shield. A gate of the select transistor is provided above a channel area between the first diffusion layer area and the second diffusion layer area. A second RGB switch is connected to the first RGB switch and to the RGB generator for receiving respectively said fifth RGB signals and said fourth RGB signals.

1459827012-52ea4909-f9c2-4dc8-86e0-cdd19fc20079

In a normal operation, an output of a differential amplifier for amplifying a difference between first and second bit cells is output as readout data. The fissile material, phenolic resin and the one or more hollow microballoons are combined. In accordance with one technique, it is determined whether a ventricular event should be classified as a ventricular tachyarrhythmia.

1459827012-c8de11e9-f345-49ef-b00e-f4fa12d677da

According to one embodiment, an image processing apparatus includes an image block generator, a pixel extractor, a correction parameter calculator and a corrector. The composition for a wire protective member is produced by including a polypropylene having a propylene monomer constituting 50 to 95 percent by mass of monomers forming a polymer, a melt flow rate of 0. An internal divided clock input receives a divided clock signal from a clock divider that is driven by the clock pulses. The first actuator is coupled to the first control valve and has a first end and a second end. The sanitary ware of the present invention is the sanitary ware which includes a ceramic body and a glaze layer formed on the desired portions of the body surface, and is characterized in that the CaO component segregation portions in which portions the CaO component is segregated are dispersed in the body.

1459827013-d6cff9ee-851b-4b52-b511-c5df6c58dc29

A method of achieving ion beam uniformity control using ion beam blockers. A controlling device has the ability to cancel a pending notify command, by sending a

cancelling command to a target device while the notify command is pending. In use, tape is adhered to the exterior surface of the main body member at the plurality of apertures. The sheath is axially movable relative to the catheter to selectively uncover at least a portion of the infusion ports and thereby control the amount and distribution of the infusate delivered by the infusion section. The storage system can detect that a write issued by the file system was lost by one of the functional layers that provide the data storage path between the file system and the mass storage media.

1459827014-1e0e12bd-3afd-4ff7-9d05-d341523bb704

A dielectric porcelain composition of the present invention includes a first component and second component. Each concentric capacitor comprises a first plurality of perimeter plates formed on a first layer of a substrate and a second plurality of perimeter plates formed on a second layer of the substrate. The jaws and the extension section define a driving area therebetween. The at least one magnetic element is configured and arranged to apply a magnetic attraction force directed in the longitudinal direction toward the rear end of the elongated fence body.

1459827015-8b371899-b552-4c7a-857d-db21bae2e483

In a cutting tool having an indexable cutting insert with three cutting portions, the cutting insert is removably securable to an insert holder by means of a fastener. The resulting gels possess improved degradation characteristics, and are useful in a variety of medical and cosmetic applications. polystyrene particles, used to form foam containers e. An imaginary central plane defined in the insulative housing about which the mating portions and the retention portions of contacts of the upper row and the lower row are symmetrical.

1459827015-ea80e40a-6738-4cab-b310-de9432afea61

The invention relates to a feed arrangement for feeding chips to chip bins in the production of cellulose pulp in continuous digesters, in which the chip bin is constituted by a treatment vessel having a top and a bottom, in which the chips are fed into the top of the treatment vessel and fed out via the bottom of the treatment vessel using suitable lock members. In one example, a user activates the radial menu after touching a first finger at a first or anchor point on a touchscreen that serves as a center of the radial menu. The emitter temperature of the switched-off UV emitter is measured, and provisions are made for counter-measures to counteract a decrease of the emitter temperature by more than 10°C. A pulsatile pump mechanism is operatively coupled with the transmission mechanism and provides irrigating fluid to the surgical site.

1459827015-edaee22c-73bf-4118-a730-cb77c6a63d5b

The present invention relates to an absorbent article for managing bodily fluids, comprising a high coefficient of friction backsheet and at least one tape tab extending therefrom. The system includes a messaging application executing on a computer. When determining it as the group name to be responded, the network scanner sends back a search response packet to PC. The left side portion of the receiver after coupling with the right side portion of the receiver to form a receiver is capable of coupling to a barrel as well as a pressured gas container. In the present invention, the difficulty in the bandwidth design of the antenna is reduced, and the effect of the variation of the use mode or environmental condition on the performance of the antenna is compensated adaptively. The elastic member internally has spaces to release stress that arises in the elastic member due to swelling caused by contacting with fuel.

1459827016-e7481a35-4c9d-4997-89b5-2884ae8427b0

Transmission-based data security is provided in dense wavelength division multiplexing systems using a transmission scheme that incorporates hierarchical scrambling techniques with a unique multiplexing arrangement. The ends of

collimator plates are potted with the aid of a top plate and a bottom plate with the formation of interspaces, defined by spacings, between the collimator plates. Indicators may include citation indicators that measure the impact of companies' patents on later technological developments, the strength of the link between companies' patents and scientific research, the speed at which companies innovate, and the proportion of companies' sales spent on research and development. The first partition identification value is stored in the first physical address to produce a partition-identifying address, which may be transmitted to a system fabric. Compared to traditional physical or chemical processes, the method disclosed in the invention is simpler and operates at a lower temperature.

1459827016-fd346589-c5c9-42ea-bdf2-a4bb86f6cc6c

A semiconductor memory device according to the present invention includes a memory cell capacitor for storing data thereon. The wireless sensor with digital detector comprises a configurable wireless transceiver with quadrature down and up converters, memory to store the real time received in phase and quadrature phase samples, a bank of phase rotators to phase rotate the received stored samples and a bank of in phase and quadrature phase constellation level slicers to detect the received bits. A semantic entity is associated with the active entity describing the actions to be performed for updating one or more entities of the relationship pattern in response to modification, copying, or deletion of one or more entities participating in the relationship pattern. An input or output terminal of each of the transmitting-and-receiving modules of the wireless terminals is connected to any one of the signal transmission lines with a wiring scheme.

1459827017-1db591c1-8a62-4d32-a172-da38b570b631

A hair apparatus and hair retention method includes a spine having a longitudinal axis, wherein the spine includes a hole and a peg outwardly protruding from an edge of the spine and substantially along the longitudinal axis of the spine. The cartridge includes a flexible elongated casing having a drying composition therein. The plunger is positionable in a first loading position relative to the housing to expose the opening to the receptacle such that a medicament is insertable into the receptacle through the opening, and positionable in a second loading position relative to the housing to expose the opening to the receptacle such that an edible composition is insertable into the receptacle through the opening. Unbonded plies are allowed to move substantially freely with respect to one another thus providing a lower friction zone.

1459827017-26cb69db-9de9-4389-9c06-7267a4f61943

An apparatus including a capacitor formed between metallization layers on a circuit, the capacitor including a bottom electrode coupled to a metal layer and a top electrode coupled to a metal via wherein the capacitor has a corrugated sidewall profile. The invention includes a meeting requester interface that allows a meeting requester to submit a meeting request. The radio link quality estimation process calculates two average signal to noise ratio values over the complete frequency bandwidth for two assumed control channel formats corresponding to in-sync and out-of-sync conditions.

1459827017-5738bf33-5f3e-4f05-bf54-5c9d2ad39aad

A collective storage system and method for restoring data in the system after a failure in the system. Preparation process and diagnostic and therapeutic use. Systems and methods are provided that share and forward information for the users' online services within the single context. The facing is drawn onto the ceiling tile by a vacuum applied through the vacuum table.

1459827017-8b3739fa-78b1-4cab-9c8f-98529b636569

A language processing unit identifies a word by performing language analysis on a text supplied from a text holding unit. The vibration sensing device comprises a body whose geometry is such that it exhibits flextensional properties. The signal

input is used for receiving a control signal.

1459827017-b06de766-6797-442b-b9f9-eea1d00cc709

A system for and method of enhancing web page delivery and visitor tracking. A method incorporating teachings of the present disclosure may include receiving a first communication in a format that complies with a first protocol. The contact elements protrude from both sides of the interconnector plate at a predetermined height, and the openings are sealed in a gas-tight manner. The electronic controller controls a heating level of the cooktop in a first manner in response to rotation of the rotary position input in a first direction. The tray expansioncontraction part includes a rear end regulation member configured to be moved in a direction in which recording media stacked in the sheet cassette are fed to regulate rear ends of the recording media and a sliding guide part configured to support the rear end regulation member to freely slide and forming a moving path of the rear end regulation member. Also, a method including displaying a menu, including a plurality of menu elements, on the touch screen; detecting a first touch over one of the displayed menu elements, including detecting a corresponding first touch characteristic; and determining a user interface mode to be one of a shortcut create mode and a normal selection mode based on the first touch characteristic.

1459827017-e05bd1bf-2513-4ca7-a0c8-e51d4717c384

A headerless heat exchanger has a core comprised of a stack of flat tubes of rectangular cross section through which a first heat exchange fluid passes. The sock has a length from a toe to at least an ankle, and is knitted from a knitting yarn. A group of trailing edge holes extends from the trailing edge to the trailing edge cavity and a group of tip holes extends from the tip to the trailing edge cavity. The optical waveguide layer is provided to fit into this recess to form a channel optical waveguide. This allows assembly of a program, even though some components may be created using totally different methodologies and/or are constructed by different programmers. The storage apparatus is capable of controlling operation of the storage device of the housing B according to an operating state of the storage device of the housing A through communication via the transmission path; and controlling operation of the peripheral device according to an operating state of the storage device of the housing B.

1459827017-e84a8d57-db1a-4d3f-b3db-38726637115f

The invention includes semiconductor constructions comprising dielectric materials which contain cerium oxide and titanium oxide. Thus the venetian blind comprising these slats can be made to cover very large window openings or other parts of buildings and rooms. At least one engagement mechanism is mounted on the worktable and is displaceable relative to the worktable to engage and retain the core in position on the worktable.

1459827018-291ad89c-d082-4513-800a-6758dcc092db

The present invention provides methods for detecting biomarkers based on Abscription\xae, abortive transcription technology. The capture latch can directly drive the checkpoint register circuitry in the recovery unit of the microprocessor. For example, a preferred embodiment of the present invention enables cutting of nanotubes into shortened nanotubes. In the second mode, the at least one control device transmits a message to the point of sale terminal via the antenna to request that the point of sale terminal download transaction information to the mobile device. An enzyme capable of catalyzing the electrooxidation or electroreduction of the biomolecule is typically provided as a second electron transfer agent.

1459827018-3acce4d-fe6f-44a8-b614-a513d8bf5f24

A process apparatus and a mutual insurance method performed by the process apparatus are provided. The silver halide color photosensitive material contains a compound selected from the following type 1 and type 2 compounds, and wherein the

blue-sensitive layer meets the relationship of the following formula : $SBSB \leq 0$ . The stamp substrate is etched using the resist pattern as an etch mask. The AFT is indexed by the reference age of the tracks.

1459827018-496360a3-369f-493d-b83c-8fea4c18de37

In order to implement a memory having a large storage capacity and a reduced data retention current, a non-volatile memory, an SRAM, a DRAM, and a control circuit are modularized into one package. A first gate dielectric layer having a second thickness is formed for low-voltage transistors. The clutch engages by means of oil pressure supplied as a shift lever is changed over from a neutral range to a drive range. A decoding apparatus is described including a packet identifier receiving a plurality of data packets, and identifying a data packet based on information in the header, a byte code decoder decoding the identified data packet using a byte code decoding process, and a Reed-Solomon decoder decoding at least the decoded identified data packet using a Reed-Solomon decoding process. The process is characterized in that the alcohol is removed in an amount such that the residual alcohol content of the composition is not more than 20% by weight. The bridging pillar is disposed on a surface of the base and movably disposed inside the sleeve.

1459827018-f6b0c72f-aaeb-45ad-bebe-c2bfbbe2f925

A method of recovering elementary phosphorus from an aqueous sludge containing about 1 to about 15 wt % dispersed particles of phosphorus is disclosed. The exemplary method involves depositing a first material layer on the top layer of the optoelectronic device, where the first material layer having a refractive index and a thickness of about an odd multiple of a quarter of a wavelength to which the optoelectronic device is tuned. The different thicknesses may be fabricated utilizing a double SOI process and/or a selective area growth process.

1459827019-9f3ccf41-e381-4707-8821-8f7f5d1ae45c

A headset is described for use in connection with either mobile telephones, conventional landline telephones or personal computers. Upon receiving a request submitted by a given one of the processes to its respective doorbell address to access one of the allocated service instances, the adapter conveys the data over the network using the specified instance of the service, subject to verifying, based on the doorbell address to which the request was submitted, that the specified instance was allocated to the given process. As a result, additional transmission errors have no influence due to the error correction. The anode electrode is irradiated with a light having a wavelength of not more than 350 nanometers to reduce the carbon dioxide on the cathode electrode. The methods comprise the steps of applying to a subterranean formation a pre-flush fluid, applying aqueous surfactant fluid, applying a low-viscosity consolidating fluid, and applying an after-flush fluid. The absorbent article exhibits a Bunching Resistance in the range of about 205 g to 450 g and may be formed with an absorbent core comprising at least two absorbent layers having different Gurley Stiffnesses.

1459827019-a50cff25-6f81-43ff-b836-efc6bfa91f48

An automatic strainer assembly for straining a slurry comprises an inlet for receiving the slurry, a horizontally disposed strainer body in fluid communication with the inlet, and a rotatable strainer member received within the body having an inner surface and an outer surface. In one exemplary embodiment, an Ethernet virtual network system has a multi-node E-Tree network comprising a plurality of nodes, including at least one ingress node and at least one egress node. A primary user may designate which users can view specific items and should purchase specific items. In particular, the second database stores Internet Protocol address prefixes and user-specified geographic regions for those prefixes. 11 media access control error-correction mechanism. In connection with the freezing of the image, the latter may be magnified in such a manner that a highly magnified image may be viewed without such discomfort as is due to shaking movements of the image while the user may perform a wide-angle-of-vision search for an image to be magnified.

1459827019-c313545a-052c-4aee-b5db-af621c1944f2

An interface for connecting networks includes an interworking function provided between a wireless local area network and a public mobile land network to provide communication interactions between the PLMN and the WLAN. Examples of articles include kitchenware, dental brackets, and reinforcing fibers, cutting tool inserts, abrasives, and structural components of gas engines,. The cover is also comprised of an optical enhancer. The computer system refers to a mapping that maps computer systems locations to corresponding electronic addresses. The Si substrate has a thickness less than the diameter of the through holes. Inter-radio access technology measurements are performed based on the collected AFRCN samples.

1459827020-0d17bab7-5db2-450f-8142-68d67ba17cca

Methods, systems, and apparatus, including computer program products, for ranking images are disclosed. The passive shielding elements are conducting layers located on the outer radius of the cylindrical gradient coil assembly in a cylindrical magnet system, conducting layers located at the ends of the gradient coil assembly in a cylindrical magnet system, and conducting layers located inside the actively shielded gradient winding inner elements in a cylindrical magnet system. By this, the outer leads can be easily attached to the semiconductor optical device. At least one actual MAC is computed based on the bitstream using a hash algorithm.

1459827020-2d82b9f6-977b-41de-8de5-74aed52042f6

A microfluidic device containing liquid reagents having an extended shelf life contains the liquid reagents in micro-reservoirs that limit the escape of moisture to less than 10% over the shelf life of the device. To provide a dry welding environment, segments of a lower caisson are passed through the core plate holes and assembled along the interior surface of the bottom head. The present asymmetric field ion mobility spectrometer is capable of improving accuracy of identifying peak positions of the ions, reducing scanning time of DC voltage and types of compensation voltage, thereby increasing ion detection efficiency. The first under-layer has a thickness of 0.

1459827020-318c93c5-ce8b-418f-8637-7acfeab17d9f

A method for section reducing an encasing tube to achieve excess length of fibers within the tube. According to one embodiment of the invention, a curable composition includes an oligomer and at least one monomer, which when cured forms a cured polymeric material having a Young's modulus of at least about 1200 MPa, and a fracture toughness of at least about 0. A supra lithographic blocking mask may also be utilized.

1459827020-8fd53f94-4109-4305-abde-f37f1fa1176e

The present invention includes a toy figure having a torso connected to a first leg and a second leg. When using the intra-vehicular network, a communication relay within the vehicle routes communications from the wireless device to a wide area wireless network such as cellular network or satellite network. The second wiring structure includes a wiring layer formed on upper surfaces of the first insulation layer and the via wire, an insulation layer formed on the upper surface of the first insulation layer, and an uppermost wiring layer including a pad used to electrically connect a semiconductor chip and the wiring layer.

1459827020-989998c0-b429-4637-9b63-8d27a058daed

A method for fabricating a conductor includes providing a plurality of conductive nano-scale material elements, dispersing the nano-scale material elements within a resin to provide a resin-nano-scale material mixture, aligning the nano-scale material elements within the resin-nano-scale material mixture, and curing the resin-nano-scale material mixture. The method includes determining if the buffer is congested, responsive to determining the buffer is congested randomly selecting at least two occupied units of the buffer and identifying a source of each of the data

packets stored in the occupied units of the buffer and generating a congestion notification message. Embodiments may also include design techniques for planar electric signal filter tuning. When an at least partially upward force is applied to the bassinet a lower end portion of the C-shaped hook element then receives a part of the support rod.

1459827020-ca7f7127-e7da-449e-8b82-33b164fc764b

A backrest of a motor vehicle seat has a sheet metal shell having several cutouts and an upholstery member arranged on the sheet metal shell. After the preliminary ejection operation of the large nozzles is finished, only the small nozzles are made to perform the preliminary ejection operation 2,000 times at an ejection frequency of 10 kHz. 05 \u03bcm to about 2 \u03bcm, and the grain size of the piezoelectric layer is preferably configured to be in the range from about 1 nm to about 50 nm.

1459827021-4215a0c5-451f-461e-a975-6afda0bb37c7

Disclosed are apparatus and methods for determining overlay between a plurality of first structures in a first layer of a sample and a plurality of second structures in a second layer of the sample. A second layer comprising at least 50 weight% carbon is over and physically against the first layer, and a third layer consisting essentially of a photoresist system is over and physically against the second layer. The distance traveled by the valve using these devices is more than 2 cm, commonly at least 20 cm, and in some installations up to 40 cm or more.

1459827021-4488f93a-458a-4f1f-a8bd-dd4ef6b05c1a

A lost circulation material and method for treatment employing the material is provided that has particular utility in offshore applications because the material may be used with saltwater or brine, as well as with fresh water, and is biodegradable. Each vaccine composition provides antigenic dnaJp1 peptide and, optionally, other peptide fragments of the microbial dnaJ protein and/or human homologs thereof. The service center computer configures the monitored computer system to boot from a bootable image file in the monitored computer system and reboots the monitored computer system into an alternate operating system environment of the bootable image file. The aperture may be protected by a leaf guard to prevent an accumulation of debris in the downpipe. A synthesis unit synthesizes the masked edge image and the foreground boundary image to generate a contour image. The virtual machine instance can be physically located outside the customer's network while functioning as part of the customer's network.

1459827021-a434ed2a-d343-4202-a5c8-0348e1a3c5df

This invention relates to capturing an image of a subject as a three-dimensional image using a single image-capturing apparatus. Such power consumption can be determined using an algorithm providing a functional relationship between switch-mode power converter power consumption and at least converter drive signal pulse width or frequency. Master host unit converts between analog spectrum and N-bit words of digitized spectrum. In accordance with another aspect, one or more friends of the user are identified from persistent data, and a check made as to whether each of them is logged in to the system. The connector can include a second housing, which can define a bore for receipt of a second electrical terminal. In a shell-and-tube type reactor provided with donut type and disc type baffle plates, reaction tubes are disposed even in the holes formed in the donut type baffle plates and an empty space devoid of a configuration of the reaction tubes is formed at the center of the shell.

1459827021-d634f3cd-37d7-4cb2-9135-a711a8142d6b

Provided is a watch capable of performing digital display as well as analog display. Additionally the first transfer body is adjustable from a first position where the first transfer body does not fit through the aperture to a second position wherein the first transfer body can fit within the aperture. The wetting

agent provides for even distribution of the aqueous car wax emulsion into the fabric and further promotes the even distribution of the car wax onto the vehicle surface when wiped thereon. These contoured structures may define a group of alternating peaks and troughs extending in two orthogonal directions. The filling body may include a thin tubular sidewall enclosing a longitudinal airflow passage that may be pressurized during installation, and deformable when unpressurized, thus providing mechanical protection against damage of the protective duct after installation.

1459827021-e12a392f-0463-4aa2-9094-4663db597db4

A method and apparatus for precoding validation in wireless communications with reduced error probability is disclosed. A water gas shift catalyst containing alumina, a platinum group metal, and oxides of Pr and Nd are also disclosed. The fin and the semiconductor layer may include different materials and have etching selectivity with respect to each other. Alternatively, the diameter of a small-diameter lining pipe R formed by winding around the forming frame 201 or 401 is expanded, and lining is performed with the back-filling material injected during this diameter expansion process. The sum of angular extents of a pair of individual thread sections is in total less than an angular extent of the corresponding angular segment.

1459827022-794c59e0-5ff1-4a66-bf35-0164e36aacba

Nanocarbon-based materials are provided in connection with various devices and methods of manufacturing. A computer implemented method for controlling an optimization transformation in heuristically controlled software includes defining at least one heuristic property for controlling a behavior of an optimization transformation, and creating at least one heuristic property modifier for each desired change in the behavior of the optimization transformation. A server receives a first input pattern from the first communications device, a second input pattern by the server from the second communications device whereby the second input pattern may be created by the same human operator. A deposition process may use an adjustment in oxidizer flow and/or partial pressure, the provision of a hydrogen-containing component, an adjustment in hydrogen-containing component flow and/or partial pressure, an adjustment in deposition pressure, and/or a modification of system component parameters, to control the characteristics of the dielectric film, e. This processing also includes decoding, by the receiving computer, a control block data structure associated with the signaling service message to determine contents of the control block data structure; and performing, by the receiving computer, an action related to the data transfer based on the contents of the control block data structure associated with the signaling service message.

1459827022-9dc7668b-621d-40f9-8bb4-6683b8f60db4

A manufacturing method based on a plastic working technique which can eliminate cutting and welding as much as possible in manufacturing an adjustable blade incorporated in a VGS turbocharger. A cross pin with a lever arm is operable to releasably hold the drawbar pin. Moreover, a stable pSiOCH dielectric film is provided in which the amount of Si<sub>2</sub>O<sub>3</sub> and Si<sub>2</sub>O<sub>2</sub> groups at least within the pores has been reduced by about 90% or less by the post treatment. A controller is adapted to provide information requested based on local queries and distal queries. The resulting multi-layer product exhibits reduced color migration between the two layers. Here, for example, there may be a threshold value that is associated with the classification characteristic.

1459827023-2cd591ff-e384-4f82-9d96-03c5966bf457

It is disclosed a dielectric element comprising a lower electrode, a dielectric layer, and an upper electrode which are provided on a substrate, in which at least one of the electrodes is a Pt layer, a Ru layer is used as a base layer for the Pt layer. The exterior face of the door faces the interior of a vehicle. The markings are formed as a plurality raised ribs protruding from the lower surface of the

planar structure. The coating is kept at temperatures for the duration of an activation time which attain at least an activation barrier temperature, whereby as the activation barrier temperature a value of at least 600°C.

1459827023-faa4684d-999e-48a3-84e2-170536f3e4f2

A fuel cell system in accordance with the invention includes a single, central electronic controller for controlling at least the Air Handling sub-system, the Reformer sub-system, the Power Electronics sub-system, and the Customer Interface sub-system. Performance monitoring is conducted on the DSL line on an ongoing basis to determine noise margins in each direction. The method also includes assigning the price level group to a grouping of at least one of services and retail products. The fixing roller has an elastic layer and a release layer of a fluorine resin having an Asker-C hardness between 60 and 85 at the time of application of a 1 kg load. The compound is represented by the formula :wherein the symbols are defined in the specification.

1459827024-34f84c10-53df-48e0-841a-bc23b23bb623

A method and system for performing adaptive tessellation of a subdivision surface. The LLF trajectory section takes account of predictions of the aircraft's mass and speed and climb and descent performance. There may be any number of senders and receivers, and any receivers may be a sender and vice versa.

1459827024-3d751487-bee0-4355-bf6d-133cf48a8902

An ice fishing slush remover for the quick, efficient and orderly capture, removal and discharge of slush from an ice fishing hole. The head support has a frame configured for arrangement between collapsed and assembled dispositions. The hold ring includes a groove in a ring-like shape for constituting a burr storing space at an outer periphery thereof and is welded to the inner periphery of the socket by ultrasonic welding. Simple motions may be used to retrieve an individual tag for programming, move the tag to a programming station, and then route the tag to a dispensing portion of the tag dispenser or to a storage area for defective tags.

1459827024-5ca88446-0c6a-43ef-9f15-135109df747c

A novel decompressorPRPG on a microchip performs both pseudo-random test pattern generation and decompression of deterministic test patterns for a circuit-under-test on the chip. It looks like a vanity with a built-in laundry machine and could be installed in any bathroom, kitchen or any utility room, mobile home, RV or even a boat having standard provision for sink connection. The printed circuit board has a connection portion and an extending portion extending from the connection portion. 05 degree or more and 2 degrees or less.

1459827024-62fc229a-aa66-4e09-8362-5ec9afc278ce

A tuning-fork vibration gyro including a ferroelectric tuning-fork vibration body generating a plurality of sensor signals and a sensor circuit to which the sensor signals generated by the tuning-fork vibration body are input. A container seatable on the base has an inlet for introducing food and an outlet for processed food. Each row can be electrically coupled to an associated transmitting electronic board or detecting electronic board to reduce electronic crosstalk.

1459827024-e64dd899-59eb-4c16-82b2-38c7a3372a03

A pipe for transporting hydrocarbons including textile tape of fibers or fiber windings having a thicker central section and thinner longitudinal edge regions, the tape being wound in a helical winding. The assembly includes a fixture that holds a surface profiling device. A retainer is located adjacent the top edge of the configuration. Via the associated data network, data communication is established between the computing device and the document processing devices. However, the ozone flows into the space and is retained in a housing to be thereby prevented from leaking to the outside.

1459827024-f300d78f-a481-4ddf-9077-67a8ca2b1449

Conductive contacts in a semiconductor structure, and methods for forming the conductive components are provided. Thus, the priming effect in the following discharge is generated. It may further include an electronic data processing and delivery system receiving a digital description of the pattern to be written, converting the pattern to modulator signals, and feeding the signals to the modulator. The interpolated device driver caches requests to the flash memory device, and when status is restored to just before removal, replays those requests to the flash memory device, so the flash memory device responds to those requests as if it had ever been removed. The pinned window may display content that was previously displayed within one of the tabs in the tabbed window or may display new content. The ideal impulse-producing time is a middle point of the n-th symbol of the received signal.

1459827025-36d02c46-6b57-4bd6-885e-667d13e8ab8f

A wheelbarrow including a wheel guard having tines with a reduced lateral width. In an image forming apparatus having a belt-formed member supported by a plurality of supporting rollers and a plurality of opposing members located side by side in a line to oppose and contact the belt-formed member, a pivot mechanism is employed to temporarily separate the belt-formed member from a part of the opposing members for color image formation. A leading-side transmission path from a connection point with the first capacitor to a connection point with the input terminal section is formed by only a conductive pattern. The reciprocation passage is formed of two fuel passages for connecting the switching port of the control valve with the control chamber in parallel. The pitch and yaw motion of the device is possible in a range of much more than  $\pm 221290^\circ$ . A method for manufacturing the multi-layer capacitor includes, in the same vacuum chamber, forming a dielectric layer, treating a surface of the dielectric layer, forming a pattern in a metal electrode, forming the metal electrode on the dielectric layer, and treating a surface of the metal electrode.

1459827025-a61c925c-8dda-45e7-a0ca-71ee2d436c28

A serial interface apparatus comprises a driver for generating a differential communication signal and a pre-driver for driving the driver circuit. The projections may be formed in a thermoplastic substrate to have a variety of shapes, including a shape that defines a base portion and a spring portion. The two 3D iris plates move between a retreat location away from the first through hole and a photographing location where a first photographing hole and a second photographing hole are formed.

1459827026-6eed52f3-3d86-47e4-938d-7366b9109c95

The invention provides improvements in reconstructive imaging of the type in which a volume is reconstructed from a series of measured projection images by utilizing the capabilities of graphics processing units. The powered airship may include an exterior shell having a front portion, a rear portion and a main axis; the exterior shell may be configured with an aspect ratio greater than or equal to 9:1.  $\theta$ , and sound proportional to a current is output by current drive. Each of the multiple weights associated with a given synapse, may be specified to have its own weight-adjustment facility, with its own error-values, and its own specified learning and aspect includes a separate sum and transfer function for each synapse weight. The system utilizes a switch kit application and associated system that can determine services at the old account and facilitate the transfer of these services to the new account.

1459827026-e1cb1cac-efa9-477a-903f-f1761d72b859

An improved system and method for moving an object includes a first correlated magnetic structure associated with a first object and a second correlated magnetic structure associated with a second object. A cavity is milled in a card body. Messages may also be transmitted from end-user devices to the server computer

system, translated, and transmitted to the operator switchboard computer system. The lip also may define a hole for receiving the stem or, in accordance with an alternative embodiment, for receiving a post or the like associated with the oil filter element. The interface is thereby utilized to interpret the abstract model to create a formatted interactive video, which is a version of the abstract model compliant with an export format from the plurality of different export formats. By such configuration of a head slider, when inertia force caused by external impact or the like is applied to the head slider, air layer formed between the air bearing surface of the head slider and the recording medium surface acts as an air spring while the head slider rotates in the pitch direction.

1459827026-ed7d49a0-1e8e-4eb6-989d-ecae93b90286

A packaging substrate structure with an electronic component embedded therein and a fabricating method thereof are disclosed. Pharmaceutical compositions comprising the compounds and methods of preparing and using the compounds are also disclosed. The Internet facsimile apparatus registers an Internet facsimile function and Internet address of a partner apparatus as destination data. The stator also preferably has a coil support finger plate positioned at an end portion of the plurality of stator coil slots. Also, a conversational browsing architecture is provided for use with these and other authoring techniques.

1459827027-0197e609-f3ba-44b1-bf12-df3b6162bbb5

A method for producing Group 8 metallocene or metallocene-like compounds employs a compound that includes a Cp<sub>2</sub>U<sup>2+</sup> anion, such as found, together with a counterion, in a cyclopentadienide or cyclopentadienide-like salt. The comparator compares the input signal relative to the reference signal and generates an output signal transitioning between a first logic state and a second logic state responsive to the magnitude of the input signal transitioning through the magnitude of the reference signal. If the impulse exceeds the threshold, the tool pulses the impulse data to the surface where the calculated impulse is correlated to efficiency of the assembly as the drillstring is used to drill in real time.

1459827027-12dd1e57-980a-43a1-ab6f-4543de0bcaa9

A communication network such as a cellular network or a WLAN includes a set of user terminals. A plasma grid assembly is positioned in a reaction chamber to divide the chamber into upper and lower sub-chambers. Memory is operatively connected to the imager and stores the electronic image as a stored image. A tensioner pulley is mounted for rotation on the tensioner mounting ring and is configured to engage the drive belt on a side of the motor-generator unit drive pulley. The electrode is configured for unwinding when the proximal portion rotates about the inner probe shaft in one direction, thereby placing the electrode in a radially expanded geometry, and configured for winding when the proximal portion rotates about the inner probe shaft in another opposite direction, thereby placing the electrode in a radially collapsed geometry.

1459827027-8b545b6c-b5dd-428d-9c84-bf5a4a103a08

A semiconductor package with connecting plate for internal connection comprise: a plurality of chips each having a plurality of contact areas on a top surface; one or more connecting plates having a plurality of electrically isolated connecting plate portions each connecting a contact area of the semiconductor chips. Each EEPROM memory cell comprises a drain region, a source region, a gate region, and a body region. A carbon-based resist layer is deposited on the negative-tone resist layer, and a region of the carbon-based resist located over the black pixel is exposed using a second mask. The high resistance region embraces an antinode region of the particle velocity distribution with respect to a standing wave occurred in the hollow cavity at a resonance frequency, thus causing an acoustic phenomenon decreasing the resonance frequency compared to a single unit of the pipe member. The first power supply sensor examines the first power supply to recognize when a failure occurs.

1459827027-ab0f8b20-027a-4f8f-9159-64f921a82444

Embodiments of the invention relate to a method, system, and storage medium for providing automated purchasing and delivery services. The actuator includes combinations of magnetostrictive alloy compositions and prestress values to provide improved temperature response for automotive applications, such as fuel injectors, without the need for complex electronic controls. In some embodiments, the processor activates a visual indicator, such as a diode, to indicate the direction of vertical. Between the longitudinal conveyors there is placed the endless conveying chain, which has to its entire extent fastened clamping units that have inside the fixed housing inserted the clamping mechanism, the operation of which is regulated by the control field and control indicator.

1459827028-035fbf2e-f375-40c8-bcbe-e6f854f0cdef

A soybean cultivar designated S050226 is disclosed. A series of the devices are placed in side-by-side relation essentially parallel to the shoreline. The pulse oximeter has a sensor port that receives a photo-plethysmographic signal as input to an internal processor. The snapshot repository may also be monitored for determining if the amount of information stored in the snapshot repository has reached a predetermined maximum snapshot repository volume whereupon a warning may be provided. A support bracket has a bottom arm telescopically engaged with the central shaft and includes a tubular top sleeve that is adjustably connected to the linear bottom arm. To deter dirt particles from proceeding to electronic components, the cooling structure can include a second flow channel, which starts from a port oriented transversely to the first flow direction or away therefrom and receives part of the flow from the inlet, and which conveys the part of the flow to an electronic component located in the second flow channel.

1459827028-53747a7e-d94b-40bc-8d96-0238231a2666

A social media platform is provided for interacting in a three-dimensional platform. Each of the sub-drivers includes: an output transistor connected between a first power supply and an output wiring line to allow the output data to rise or fall according to the digital data; and a switching transistor and a slew-rate control transistor which are connected in series between a gate of the output transistor and a second power supply. A housing includes an anti-rotation seat configured to engage the first and second opposing surfaces, the anti-rotation seat including parallel first and second contact lines positioned at a front of the anti-rotation seat. End members adapted to be secured to a structure at opposite ends of two transoms. First separator vapor stream is expanded and sent to demethanizer.

1459827028-70bbd4a5-bd26-4d9a-b540-476b9b80e26f

A flexible sleeve for containing a pot and/or floral grouping and/or growing or retaining medium. The preferred embodiments also relate to methods of using such compounds, or derivatives thereof, e. A muzzle velocity calculating device converts the detector signals to a muzzle velocity, which is displayed on a display screen.

1459827028-9f47188e-d1ea-4e6f-93f6-55334ff5ff6e

Platinum and palladium complexes are disclosed that can be useful as narrow band phosphorescent emitters. The machine includes a work surface, a portion of which is upwardly pivotal. The apparatus can comprise any high peak power pulse source and delivery fiber supporting Raman soliton generation. According to this embodiment, the memory array further comprises a channel region situated underneath the tunnel oxide layer and extending along the trench sidewalls and the trench bottom, where the channel region has an effective channel width, where the effective channel width increases as a height of the trench sidewalls increases. Short tubes are constructed from pairs of approximately aligned 3D circles.

1459827028-ce3b53d5-152b-4a31-ba13-4ea994d76ddb

An infant support structure having a frame, a support, and a height adjustment mechanism. There is provided a fiber-reinforced composite material including an assembly of cellulose fibers impregnated with a matrix material. The dual core also comprises a core layer disposed about the center component, formed from a thermoset material, a thermoplastic material, or combinations thereof. One system includes a server system including graphics memory, a frame buffer and a processor. At least some of the adhesive pellets are in contact with an adhesive layer of the waterproof membrane so that the waterproof membrane and the concrete layer are both adhesively bonded together. The second holding unit is configured to be displaceable on a surface of the first holding unit along a groove portion formed thereon.

1459827028-f97fae21-4f8d-45ef-b898-2fa39f810e7c

The present invention provides a bowl stacking separation device and a method of stacking bowls using the bowl stacking separation device. The routing units input there into an optical signal outputted from either of the wavelength branching unit and the intra-office signal input unit via a first optical path group, and convert an input optical signal into a predetermined wavelength to thereby output a wavelength-converted optical signal to a second optical path group. The first photon is reflected off an object. The socket comprises a first retainer ring and a second retainer ring.

1459827029-38106b68-bd36-441c-bba8-637f7bb1cefe

When reconstructing low-collimation nuclear scan data into a nuclear image volume, a spatial frequency-dependent filter function is applied in Fourier space to the reconstructed image to improve image resolution given a predefined number of reconstruction iterations and/or to reduce the number of reconstruction iterations required to achieve a predetermined level of image resolution. The circuit board includes a first surface, a second surface, a connect part, openings, metal contacts and metal units. The holder plate selectively opens/closes the lower portion of the frame so that a pipe connection operation can be easily performed. The switch is driven by an on/off control line extending from a decoder circuit.

1459827029-7adc9b2e-40e3-4dc4-90a6-46e5a5af76e7

The invention provides an image forming method and apparatus capable of forming an image with a desired shape at a correct position on a recording medium having expansion and contraction properties. Depending on the vertical location of the engines with respect to the wings, the anti-ice subsystem is configured on an upper or lower portion of a leading edge of the wings. The absorbed energy causes the reaction of an activator and a color-forming material to form a mark. The left and right inputs of the directional controller control various options at the active level of the user interface and the select input allows the user to select an option.

1459827029-93f2d24e-2565-4c9e-9c0a-405deacfe664

A client-side mechanism that enables a web browser user to manipulate an animated graphic served from a web server. The combination also includes a plurality of connecting components mountable on the tree trunk and a plurality of display components mountable on the connecting components. Production managing information is written to an RFID tag, and includes a roll number and slitting number, which are related to the film web and the continuous photo film. This invention also relates to soybean cultivars, or breeding cultivars, and plant parts derived from soybean variety 83121431, to methods for producing other soybean cultivars, lines or plant parts derived from soybean cultivar 83121431, and to the soybean plants, varieties, and their parts derived from use of those methods. Copies of this patent with the color drawings will be provided by the Patent and Trademark Office upon request and payment of the necessary fee. A refractive index  $N_{d1}$  of the first fluid material, a refractive index  $N_{d2}$  of the second fluid material, a minimum value  $RA$  of a radius of curvature of the cemented surface of the cemented lens, a focal

length  $f_a$  of the whole cemented lens, and a focal length  $f$  of the whole lens system satisfy the conditions specified in the specification.

1459827029-f06e1c24-2669-470c-9a2b-a24e75a34632

A nonvolatile memory capable of acting at each 1 bit and having a high integration density. The second pad has third and fourth sub-pads that are connected to each other via a route bypassing the mounted circuit chip and that are connected to two terminals formed at two positions on the other diagonal of the lower surface of the circuit chip, respectively. The adjusting shaft is guided into the adjusting mechanism through one of the bearing points.

1459827030-01ca88ed-e8f9-4550-9728-201d4c0edfdb

Methods, systems and devices to dynamically generate community based parental controls for cell devices based on most common parental control settings selected by members of the community. Such systems utilize predetermined lengths of microfluidic tubing that act as storage buffers for the substantially all of the output of each column, preserving all data and, because the storage buffers are microfluidic, there is minimal diffusion between sample bands and solvent and signal clarity is preserved. In certain embodiments the conversion of a labeled substrate to a labeled product may be detected.

1459827030-0d11a75e-6f67-43c3-871e-1d3f029793db

Disclosed are carboxamide compounds, as well as pharmaceutical compositions and methods of use. In one embodiment, a controlled voltage is applied to conductive leads in the display and the resulting current is measured. Then, by twisting a knob of the plugging device behind the connector, the two sticks are opened so that the hooks at the front ends of the sticks lock to the network socket for reliable connection.

1459827030-20fc0bfff-097a-4d95-87d7-2466ac253b81

In a method for manufacturing an element of a modular scaffolding system, an at least partly galvanized pipe part having a first end and a second end is provided, together with an at least partly galvanized first connection head which is designed to be connected to the first end of the pipe part. One register block includes logic for performing limited left shifting, while the other register block includes logic for performing limited right shifting. In one embodiment, the base fitting is a recess formed in the base; and the room module fitting is the floor of the room module. Water is drained from the column until an SOI criterium is met. The molecular exchange device comprises a casing, extending from a proximal end to a distal end, supporting at least two fluid passageways extending from the proximal end to the distal end; the casing comprising at least one exchange aperture between the distal end and the proximal end, wherein a portion of the fluid passageway exposed by the exchange aperture is porous. The signal digitizing circuit includes a variable gain amplifier and an ADC having a fixed number of bits.

1459827030-329624a5-a175-44a8-9a62-0532c5609b89

Synchronous local and cross-site switchover and switchback operations of a node in a disaster recovery group are described. The polymer is melted and mixed in a zone. A projection of each of the reflecting sheets covers one LED element. The set of reservoirs in which a reservoir is being filled is isolated electrically from the applicator, and of the set of reservoirs in which a reservoir is dispensing coating to the applicator is isolated electrically from the supply system.

1459827030-8fcb20e0-e91c-49de-937d-7f21bd2772ef

A vehicle seating assembly includes first and second side supports defining a seatback structure that is operable between upright and reclined positions. A flexible metering housing is disposed in fluid communication with the fluid storage region a first one-way valve disposed between the container and the flexible metering housing. The programming instructions further operable to model the at

least one source of variation for at least two patterns in at least one level of the integrated circuit design as at least two sources of variability respectively.

1459827031-2a509491-b5aa-4898-aa23-c6e3e92c4894

A method for exhausting gas from an aircraft engine assembly is provided. The system and method detect whether the propulsion unit is generating the stream of water. A second layer of ARC is next applied over the surface of the etched first layer of ARC, this second layer of ARC provides a layer of ARC that is of uniform thickness over the supporting surface. This is achieved by either shifting the X-ray sources axially with respect to the ring-shaped phase grating or by disposing the X-ray sources in the interior of the ring. In the exemplary embodiment, the value of one or more individual operations are explicitly expressed by the rules that are imposed on the results returned to the arbiter facility by the various verification points within the test script. The one-dimensional detector unit has an ionizing radiation sensitive thickness, which is larger than the thickness of the fan-shaped beam when impinging on the one-dimensional detector unit.

1459827031-6fad7a9c-8d6a-411b-94d7-d1a38e282d2e

An image forming device includes a photosensitive unit, a developing unit, and a positioning unit. A reference electrode connected with a reference voltage line of integrated circuits is increased in number to plurality, and each of the reference electrodes is disposed on top of the semiconductor piece, and on opposite sides of the respective signal electrodes connected with the signal lines of the integral circuits while short circuited at a conductor layer. The substrate includes a reservoir in fluid communication with a passage. If the player purchases the first card, the player can thereafter keep the six card hand or purchase a second card at a second higher cost.

1459827031-7607f4b5-c7b3-46ab-b2bb-6547835502c9

The invention relates to novel active compound combinations of certain cyclic ketoenols and certain insecticidally active compounds that together have very good insecticidal and acaricidal properties. The outer surface of the core includes a conical surface which tapers in the axially inner direction, having a straight profile, when viewed in axial section. Thereby it can be automatically determined based upon absence or presence of an optical signal from the light-receiving device whether or not an attachment state is appropriate. The system of the present invention is a system capable of multiple functions with minimal losses with respect to efficiency. Moreover, the structure can be simplified to contribute to a reduction in cost, as compared with a system in which a ball is disposed at an abutment point.

1459827031-ee89da30-6b4c-4cf1-9170-8f16065549a4

An adhesive formulation including an acrylate monomer and/or a methacrylate monomer, a chlorosulfonated polymer resin, and a reducing agent. The method allows bananas to remain in the ripened condition for an extended period of time while, at the same time, having improved sweetness and taste characteristics. The temporary storage server is provided with the capability to determine whether a state exists that allows communication with various servers. A protection system features multiple lengths of such protection sheet joined by hook seaming tape. According to an embodiment of the invention a resistance variable memory element is provided having at least one silver-selenide layer in between glass layers, wherein at least one of the glass layers is a chalcogenide glass, preferably having a GexSe100-x composition. Messages can be identified as being exempt to being filtered by editing an address book or selecting entries from an address book.

1459827032-5a4638ff-ff92-48df-9c0c-4e0ebb292f02

A capacitor is provided, in which an anode and a cathode are led out in a same direction, whereby ESL and ESR are lowered at high frequencies. The light-sensitive and/or X-ray-sensitive sensors of the sensor arrangement are arranged in a planar

distribution on a substrate, thus forming a sensitive layer. The method monitors the configuration file stored in the storage system, determines whether the configuration file has been modified, and generates a notification message to notify a first application program that the configuration file has been changed. Upon completion of execution of the job, the service provider transmits, to the server without intervening the Web browser, completion information indicating the execution result and added with the session ID. The at least one filament is located at the second opening and is configured for emitting electrons to escape the space from the first opening.

1459827032-7db9660a-115c-4a9b-a39c-b14412da3748

Speaker normalization is carried out based on biometric information available about a speaker, such as his height, or a dimension of a bodily member or article of clothing. An output of the first comparator is frequency-divided by the first frequency dividing flip-flop, while an output of the second comparator is frequency-divided by the second frequency dividing flip-flop. At least one projection is disposed on at least one boundary face of the slot, and a recess, neighboring the projection, is disposed in the circumferential direction of the press-in pin. In one embodiment, a plurality of chair covers are packaged so that the plurality of chair covers are combined together on a roll and separated by first perforations. A request is then received for one qualifying base table row. A unipartite edge dual graph is generated from the bipartite graph, and a minimum clique partition of the edge dual graph is recursively determined.

1459827032-aebd993d-516d-4f87-ba80-df49448cae69

In a variable valve mechanism, a control shaft is associated with an advance oil passage such that the same passage is closed by the control shaft when a maximum valve lift amount of an intake valve is equal to or larger than a reference lift amount. The switched mirrors are controlled by a voltage source and based upon the desired controllability of the switched mirrors and wide range of switching and or routing of an optical signal can be effected. The filter unit may include a filter for purifying the air flowing therethrough, a filter basket in which the filter is seated, and a door fixed to the filter basket so that the basket may be drawn in and out in a drawer-like fashion. The end cap assembly has a plurality of internal feed passageways through which fluid from the internal delivery passageways flows into the mixing chamber. The process is well adapted to the known SIP protocol and allow the end-users of the network to share the same QoS information relating to the communication. According to one embodiment of the invention, an argument reduction stage uses an approximate reciprocal table in the computing device.

1459827033-42917c1a-7df5-4580-b70d-2eff0039f682

The data to be recorded onto a recording medium is directly spread and then recorded onto the recording medium through a needle-shaped member, such as a probe. The receiver and transmitter together define an active transponder. The fixed external field is created by other components in the sensor device housing which have a high but static field with respect to the low magnetic field that describes orientation information. The compositions are useful in cleaning applications.

1459827033-83d4ee3a-3505-4e5d-bd26-c33a9a6df0b1

A method for making a multiply fibrous structure. An input member is connected for common rotation with a ring gear of the first planetary gear set. The indicating assembly has a second printed circuit board, a number of LEDs assembled on the second printed circuit board, and a number of L-shaped terminals mounted into the L-shaped slots. The lock mechanism, integrated with the hinge mechanism, locks the seat-cushion at an upright position, at which the seat-cushion is pivotally flipped up about the hinge mechanism so that the compartment is accessible.

1459827033-8651a408-a0cc-436c-8cdc-855fb4baa629

A circuit includes an inputoutput circuit, a first node configured to have a first

voltage level, a second node configured to have a second voltage level, a third node, and a switching circuit. Each lamp on the track may be set to respectively different intensity levels or the user can uniformly control the lamps to be set to the same intensity level. A signal processing unit receives from the catheter ablation structure the recorded one or more intercardiac electrograms from the potential ablation site and performing Fast Fourier Transform on the recorded one or more intercardiac electrograms as so to produce one or more spectral power distributions of the potential ablation site. Subsequently, each transceiver receives laser energy as it is backscattered from the air. An aerodynamic fairing may be disposed on the pylon to decrease drag.

1459827033-a3e16f04-c1ff-4f32-add6-a514ac67601a

The generation of a ski jump along a peripheral portion of an optical recording medium when a resin layer is formed by a spin coating method is suppressed. The wire body has a plurality of protruding portions on the external surface and recessed portions between the adjacent protruding portions. The score lines enable the user to remove a dulled or damaged cutting point, which in turn provides the user with two additional cutting points defined by the points of intersection between the score lines and the cutting edge. The two ropes extend through a ring positioned between the two termination units.

1459827034-47729c23-4bb3-4c06-84d3-281bcbce2aa8

A method of manufacturing a composite wheel. The method includes, generating a control signal according to a regulating signal inversely proportional to the output voltage of the voltage converting circuit. The overvoltage protection portion is disposed on the surface and thermally coupled to the overcurrent protection portion.

1459827034-6e67604f-872b-4ed9-b2ae-21b790b3d903

A variable capacitance measuring device can comprise any one or more features in various different embodiments allow a reliable, compact device to be achieved. A sensor is attached to the fabric base and disposed at the point of interest during the isometric exercise, and measures a pressure magnitude at the point of interest and provides a pressure signal corresponding to the pressure magnitude. Thus, a twin-cell type semiconductor memory device capable of reducing a plane area occupied by a memory cell part while maintaining good retention characteristics. The control mechanism is coupled to the mounting member and is adapted to control braking and shifting.

1459827034-7d4c1686-7f4b-4148-8343-0639d36ca1d0

A code sequence made up multiple instructions and specifying an offset from a base address is identified in an object file. An auto-restart system can include a parent task control block, a child process, and a shared resource. The wireless communication device is coupled to the wave antenna to provide wireless communication with other communication devices, such as an interrogation reader. A motor mount is removably mounted to the connector beams and is adjustable to accommodate various lengths of motor shafts. One node of the loop is grounded and a voltage detection node is located on the loop.

1459827035-031cb186-834c-4178-b3a4-c80507f9692a

A cross-process layer is generally directed to exposing instant messenger presence information on a mobile device. The heated air is discharged as a heated primary airflow through one or more outlets, wherein the primary heated airflow mixes with the airflow created by the distribution fan, thus creating distribution of heated airflow throughout a room. Among a number of advertising messages, the facility distinguishes advertising messages identified as corresponding to any of the distinguished subjects. The support may form a portion of the front edge of the complete fin when the partial fin is in the deployed position.

1459827035-0f2a7991-dc1d-4ace-8b40-a317064de630

An image sensor and a method of manufacturing the same are disclosed. The present invention also relates to a process for the manufacture of a shaped article including the step of injection molding the polymer blend. A first resistor of the two resistors is connected between the first terminal and the second terminal. The perimeter wall has a lower section that includes the bottom edge.

1459827035-28d4bbf6-cc97-4187-8a5c-a3d138f8a6d8

Provided is a tooling system for use in an associated press comprising a lower tool shoe, an upper tool shoe, a first set of tooling plates, and a second set of tooling plates. A composite sole volume between an outer sole and an inner sole incorporates shock wave guide elements of a material having a high acoustic speed, in the form of glass strips which extend spatially from the outer sole obliquely laterally outwardly to a side of the sole volume. The selenium-containing runoff water is caught in ponds. The respiratory mask may also include an external shield to enhance sealing and provide a barrier of protection for the healthcare provider.

1459827035-4e9e044c-5185-4154-8a0a-2fb2953a1e4d

An optical waveguide device includes an active optical waveguide device and a passive optical waveguide device. A method of forming an ESD protection circuit with a diode string coupled to a diode-isolated, gate-grounded NMOS ESD device. The primer coating composition is formulated preferably as a fast setting polymer latex capable of forming a chemically crosslinked polymer matrix when applied to the surface of a compressible mat.

1459827035-5d9ba4b6-493b-484b-8bc3-593b0b97ecd8

A naming service implementation method and apparatus. An embodiment is a semiconductor device including a molding material over a first substrate with a first opening having a first width in the molding material. The pillar layer also includes a plurality of radial heat conductors that have at least a portion overlying a heat source that is within and overlies the semiconductor substrate.

1459827035-81ceda9f-e83a-4d71-89db-7a7ed458922e

An information system environment is described that, among other things, facilitates integration of electronic commerce and physical store front retailer selling channels. The riser tower includes a plurality of fluid conduits, which may comprise production flow lines, gas-lift lines, water injection lines and/or umbilicals. Some predetermined unit intervals of the additional information generated in N unit intervals of one field of the video signal, are phase-inverted. If no edge occurs or is expected to occur, the bias current has a low value during the whole select time of a row of pixels. Furthermore, the position of the manipulator is modified as needed following a rotation or scaling operation so that it is oriented for ease of selection by a user.

1459827035-a59890a3-1865-4bdb-89bb-3e8c8a568ee0

Apparatus and methods provide for an aircraft empennage that utilizes two torque tube members to create opposing sides of the empennage. The antenna includes a quarter-elliptical shape that maximizes the antenna area to facilitate transmission of electromagnetic waves through the enclosure. Utilisation of primary fossil energy according to the invention also reduces the specific CO<sub>2</sub> emissions per ton of crude steel.

1459827035-c88b8b92-a4ce-493c-b168-0679ca26238a

A network transport layer accelerator accelerates processing of packets so that packets can be forwarded at wire-speed. The fiber includes a core extending along the waveguide axis, and a confinement region extending along the waveguide axis and surrounding the core. The wireless voice information is scraped from the online bill and stored in a database for subsequent access, processing and output. The output of the rotor is input to a sun gear 220 and transmitted to planetary gears

230. The ventilator has a detector for determining a parameter related to breathing dynamics for the patient, this detector being connected to the control unit and control unit controlling the pneumatic unit dependent on the parameter related to breathing dynamics in the case of loss of EMG signals at the input. The second length does not overlap the first length in a vertical direction, so that the tooling can be downwardly inserted between adjacent wafers and press on a top face of the rib of the frame.

1459827036-37e2a89e-16dc-4794-82d0-78cd39cd6114

Mobile terminated call establishment during inter radio access technology re-direction. Examples include linking internet users, searchers, viewers and/or listeners of the same and/or similar internet content to each other via a platform that enables any of the following in n-dimensional environments: social networking, communications, sharing, e-commerce, advertising, search, hosting and registry services, push and pull applications, anonymous communications, and rich presence. The target vessel has a target vessel wall defining a target lumen and has an opening in the target vessel wall. The user may select the link to a particular panel to navigate to that panel, without also having to pass through any intervening panels.

1459827036-77a3a20b-f862-4360-911b-dd28267e363b

An object is to provide a charge connector that can close an inner lid section and an outer lid section by one action to reliably avoid forgetting to close the inner lid section. The relationship between the combined focal length of the first and second lens units at wide-angle end, the combined focal length of the third lens unit and the lens units on the image side of the third lens unit at wide-angle end, the focal length of the second lens subunit, and the focal length of the rear lens unit at telephoto end is appropriately set. The two drive circuits taking charge of the two printing element assemblies send printing input signals to the respective printing elements which are to be driven according to the two sorts of printing timing signals received by the drive circuits. Pins in the most difficult group are placed first by applying a method that, in a preferred embodiment, places pins within the limits imposed by current density requirements while achieving high pin density within those limits when pad resources are relatively limited. Each cover unit has two cover plates disposed pivotally at two transversely opposed sides of the passage opening and movable toward each other to a closing position that covers the corresponding end piece, or away from each other to an opening position that permits passage of the corresponding end piece.

1459827037-1a92b736-763d-46b7-ac52-735c8ddd612e

A boat comprising a wake shaping system comprising starboard and port wake shaping devices located aft of the transom, each wake shaping plate device comprising a first mounting portion coupled to the transom and a second plate portion pivotably coupled to the first mounting portion. When one switch opens, one plunger is shifted into its opening position and the other plunger is shifted into its locking position. Airborne particles are channeled into a detection device, where the particulates are concentrated. The calculator determines a reference value of the rate of slug by which the ash deposition ratio is reduced on the basis of the relationship between the preliminarily measured ash deposition ratio and the slag ratio. These coatings may also comprise additives such as UV absorbers, corrosion inhibitors, and electrically conductive materials. The method includes to self-detected writing to a multi-bit thermally assisted MRAM.

1459827037-3d5840df-101c-4deb-8fb6-ec6b4550723e

A vehicle seat, in particular commercial vehicle seat, is provided with a framework, in particular scissors-type framework, a seat frame which is articulated thereon via a pivot axis, and a backrest which is attached to the seat frame and by means of which a torque acts about the pivot axis on the seat frame in the event of a crash or misuse. The drill string includes a shifting tool, a receiver in

communication with the shifting tool, and the drill bit. In a first mode, the pump may pump fluid in one direction and in a second mode, the pump may pump fluid in the opposite direction. A gain control device is coupled to at least one from the group including the first stage input ports, the first stage output ports, and the second stage output ports. In various embodiments, the cable drive system may comprise a winch assembly or a pinion driven rack.

1459827037-b8597585-96c5-4067-a7db-57d23dd077c1

Security of ADS-B transmissions is improved in a first embodiment to detect position spoofing. The process starts with a substrate over the surface of which are designated a first surface region for the creation of CMOS devices there-over and a second surface region for the creation of LED devices there-over. A communication control adjustment module included in a communication control adjustment unit, based on request conditions from a user, determines an execution position of the communication signal control module used for the control of the communication flow. A rectilinear stabilizing bar traverses longitudinally across the body, is statically seated within the solid core, is intercalated between the outer layers, and has a threaded aperture formed at a midpoint thereof.

1459827037-d37bdcb9-2f4e-4e48-8817-c6adc3adde78

A multilayer mounting mat for an exhaust gas treatment device including high temperature resistant inorganic fibers, optionally organic binder, and optionally intumescent material. The differential pressure sensor also includes a sensor housing having a sensor chamber containing the sensor chip, a first pressure guiding duct guiding the first fluid pressure to a first inner wall face of the sensor chamber, and a second pressure guiding duct guiding the second fluid pressure to a second inner wall face of the sensor chamber. The determining unit determines one of a plurality of operation modes of the apparatus. The generator R being a generator with permanent magnet excitation is mounted to or into or in lieu of the casing 20. The vacuum surge suppressor also includes a second fluid path for coupling to a vacuum pump. The second pumping section comprises an externally threaded rotor.

1459827038-60321e62-a2a2-4a12-be14-61e0dff2b682

A client-server based electronic medical record replaces paper records in outpatient clinics. The force vector may be used to facilitate manipulation of the catheter either directly or automatically using a robotic system. An n-side electrode and a p-side electrode are formed on the buffer layer and the diffusion region, respectively. When the drain pan fills with water, the safety float switch used to shut down the air conditioner is coupled to a solenoid valve mounted on the purging device wherein a charge of gas is directed into the drain line for removal of the clog.

1459827038-bd706ddd-3c12-4123-a13c-08a11af437ee

A surface-mountable optoelectronic component has a radiation passage face, an optoelectronic semiconductor chip and a chip carrier. A program is scheduled to be broadcast at the same time in different first and second formats respectively in the first and second multiplexes. The second circuit can generate an upper control voltage limit and a lower control voltage limit associated with a control voltage received by the VCO based, at least in part, on the output common mode voltage. Routing to the egress terminating interface in the controlled compatible network is performed on the internal routing address only, without reference to the external service address. The controller sets different values of the F-number of the light amount adjusting unit in accordance with a state selected by the mode switching member, or varies a moving range of the movable optical component in accordance with a state selected by the mode switching member. An update module interfaced with the voltage regulator monitors operating conditions of the voltage regulator to update the coefficients used by the controller.

1459827038-e3ab03ac-3be1-4fbf-bc98-32768e4fdbbb

The system comprises a light source, supplying an incident light beam illuminating the ophthalmic lens. The system includes one or more splitter modules which are designed to be mounted in the fiber distribution rack. Display data is provided to an electronic display that causes the display to show the runway centerline and the one or more distance markers. A curriculum item from within the first curriculum is selected. The transition signal may be a pulse width modulated signal having a duty cycle between 20 and 100 percent to provide for an acceleration that avoids the problems of conventional control systems. The filter may be a spin on oil filter, which includes a combination dual valve element defining an integral anti-drain back valve and an integral relief valve, a retainer assembly for maintaining the combination dual valve element in position in the end cap, relative to the filter.

1459827039-1e8bdba4-3297-4495-907f-5bbb1ecf1a72

A new and distinct cultivar of Lobelia plant named \u2018KLELE06114\u2019, characterized by its semi-upright and trailing plant habit; freely branching habit and short internodes; dense and bushy plant form; continuously and freely flowering habit; and dark blue-colored flowers with white-colored eyes. A doubling circuit receives the input signal and doubles the input signal to provide a doubled input signal using an amplifier and a first capacitor. Bragg gratings of demultiplexer units are parallel each other. Namely, the number of data lines interposed between data lines respectively connected to two adjacent sense amplifiers is set to even numbers. For the next M data bursts the receiver estimates the timing location of each data burst based on the average timing location for the first N data bursts. An option method of a semiconductor chip includes setting a first option mode of the semiconductor chip by use of the first option circuit; setting a second option mode of the semiconductor chip by use of the second option circuit; and determining a final option mode of the semiconductor chip by selection of the first option mode or the second option mode.

1459827039-51105258-6893-49b3-bb1c-fb49b5969286

A grey glass composition is suitable for architectural and/or vehicle window applications. The bristle is produced through cutting an extruded monofilament to length and tapers towards its useful end to form a kind of tip. The second computing service can receive the message that includes the session token from the passive client, and the second computing service can verify that the message is valid.

1459827039-d124bdea-5e45-4c7e-bff5-16380557f631

A device and method for connecting a camera to a scoping apparatus for viewing and taking photos of an eye-ball or other object imaged by the scoping apparatus. In this connection the first mirror element is additionally tilted in a transverse direction perpendicular to the longitudinal direction and the apparatus has a second mirror element besides the first mirror element which is tilted in the longitudinal direction and in the transverse direction with respect to the first mirror element. If the playback apparatus is in the state of currently performing the AV playback, the playback control engine instructs the playback engine to perform the AV playback at a predetermined speed level.

1459827039-d35af056-69ec-4a61-8950-2cddf8dc8f3e

A method and system of coating an implantable device, such as a stent, are provided. The high pressure rail is connected to the pump with a supply line. The content receiver may modify the received content by periodically inserting subliminal frames in the received content as specified by the setting. Compressibility comparison data is prepared by calculating, from a section of the first conductor clamping section after clamping the first conductor clamping section, compressibility of the first wire with respect to the first conductor clamping section based on the one of the dimensional variation and the ratio of the dimensional change. Optionally, data in the temporary storage can be archived.

1459827039-f41ca165-40ea-4b25-865e-39cad65eec9c

The described implementations provide arrangements and procedures for scan converting data into compressed representations of pixel data. The electrical machine includes a stator winding, a rotatable electromagnet, and a voltage regulator. The sliding contact surface of the commutator has a plurality of peaks and valleys that are substantially regularly and alternately arranged in both axial and circumferential directions of the commutator. Sourcedrain regions drawn back from the gate electrode of the field effect transistor structure reduce an overlap capacitance between the gate electrode and the respective sourcedrain regions.

1459827040-17c6584c-056a-4833-b210-5ed0d2ad0d74

An insulated icemaking compartment is provided in the fresh food compartment of a bottom mount refrigerator. In one embodiment, the device may include a transparent concentrating lens having an outside surface and a top and bottom portion wherein the bottom portion may be configured to receive concentrated light. The data-intensive computer also includes an operating system sub-system formed by a plurality of operating system servers that extend a unifying operating system environment across the processing sub-system, the database sub-system, and the operating system sub-system to act as components in a single data-intensive computer. The device may be pushed onto a threaded stud to rapidly affix the substrate to the support structure.

1459827040-1f2333f2-dad4-4616-adaf-a79a1e451840

Clamps are disclosed for holding an optical element relative to a support. Projecting locks project laterally along the plate surface and a bent lock bent outward substantially at a right angle with respect to the plate surface are arranged vertically one above another on each lateral edge of each fixing fixture. The one or more viewing events or actions may have associated therewith location information indicating a location at which the one or more viewing events or actions occurred.

1459827040-35a4e4a5-c99d-46a3-a01b-fe9c81bd9cfc

A server includes a storage module, a processing module, a motherboard and a fixing assembly. Balancing against misalignment of the ejector package is obtained at the same time through the incorporation of this two-stage ejector, and, at the same time, it replaces extra guides. Such a combination can be more practical, affordable and efficient than the usual arrangement of a several separate devices. The path switching information is also output from the integrated circuit for transmission to a pair of ATM switch fabric units. A mobile station transmits a delivery acknowledgement to the base station when the wireless transfer block is properly received and a re-transmission request when the wireless transfer block is not properly received, and reproduces the packet from received wireless transfer blocks.

1459827040-3965dd65-6972-40b4-8081-e725df4eb462

An adddrop node for an optical network comprises a passive splitter to split an ingress signal from the network into a first ingress signal and a second ingress signal. The liquid crystal panel has MN pixels P that are arranged in such a manner that each pixel P corresponds to one of the odd-numbered data lines and one of the even-numbered data lines that is adjacent to the one odd-numbered data line. A retainer is disposed in the flashlight body groove and is adapted for cooperation with the tangs for releasably retaining the tangs in the slots. In one embodiment, the step of activating at least one of the surface region of the first substrate and the bonding surface of the handling substrate is performed in a plasma activation chamber.

1459827040-93f436ec-d9ea-41df-b729-16b9a419deef

A compact modular embedded device. Each burst has an associated midamble sequence

of a set of known sequences. Selection of the updated reference voltage is based on a comparison of error counts, each error count associated with a unique one of the reference voltage, the first alternate reference voltage, and the second alternate reference voltage.

1459827041-d9d109e5-c418-4921-ad8e-8bfcd0ad51b2

A device having a carrier, a light-emitting structure, and first and second electrodes is disclosed. The modular implant includes a first orthopaedic component, a second orthopaedic component coupled to the first orthopaedic component, and a micro-motion damper interposed between the first orthopaedic component and the second orthopaedic component. The adjustment member includes a projecting member having a substantially V-shaped projecting slope, and a recessed member having a substantially V-shaped recessed slope.

1459827041-f2d72d5c-51db-498d-8a01-4698440dc210

The present disclosure describes a performance enhancing shoe sole that includes an anterior support structure and a posterior support structure that are connected by a first support structure. Control logic is coupled to the rows and columns to enable a ring oscillator of either a row or a column to oscillate. A measurement module, such as a camera, is used behind each lens. The bonus award indicia are stored and displayed at a bonus award escrow display. The controller operates the fluid discharge device based on the at least one operating parameter and locks the system after the at least one operating parameter is set such that the at least one operating parameter is unable to be modified. A sphincter electropotential mapping device includes a mapping electrode.

1459827042-43c30ae0-963d-4459-b6e6-5fc1be56b13d

The present invention relates to novel phalloidin derivatives and their fluorescent dye conjugates. Also provided are methods for comparing two or more radiographic images including standardizing the images against at least one reference value of at least one image characteristic obtained from a digital radiographic image of a variable attenuation plate. The inlet compartment is interposed between a sample inlet port and a sample outlet port and includes a gas permeable, liquid impermeable filter element for separating liquid from a gas sample, the liquid separated from the gas sample passing to a collection chamber.

1459827043-b07a03c2-c893-448a-9847-2165bb2b84a4

An optical compensatory sheet comprises an optically uniaxial or optically biaxial transparent stretched film. The temperature difference at such locations is determined and the blood flow is calculated as a function of the change in energy level and of the temperature differences measured prior to and following the change in energy level. An estimation of the information bits carried by the signal component is obtained through demodulation of the signal component by the receiver. In certain embodiments attachment holes are utilized for ease in transportation and movement.

1459827043-d65a2734-698a-46fb-8cac-1ce9643b45f1

The present invention relates to cosmetic compositions having improved application benefits to keratinous tissue and keratinous fibers wherein said compositions have improved application benefits, while avoiding the negatives associated with compositions currently known in the art. The base station retransmits the data, using the antenna with the higher receiving quality. A plate-shaped cooling unit coupled to one side of the frame can deliver heat from the heat-source connecting unit to the dissipating unit.

1459827043-d6de31e7-e3e8-4e0d-a1d5-9481b8e5c885

A gate insulating film composed of silicon oxide and a floating gate electrode composed of polysilicon are formed sequentially on a P-type silicon substrate. The first electrode is coupled to a first voltage source. Flash memory stores the pump

application program during use.

1459827043-eed38652-6bcf-40ac-9304-c9dca9677154

A method of performing an endovascular procedure within a patient can include inserting a filter into the patient's vascular system to restrict the passage of emboli through the filter while allowing blood to flow through the filter. In aspects, the users are placed into common virtual rooms or virtual interactive environments to permit sharing of content and chat between the individuals in a same virtual interactive environment. The common mode rejection comprises two resistors that combine to remove the common mode current from the two input lines, produce a reference current, and drive two output transistors that cancel the common mode current from the outputs. The mount may also include a slide bearing attached to the support cradle which may releasably engage a second key attached to the conveyor belt, the slide bearing adapted to accommodate longitudinal forces applied to the support cradle by the conveyor belt. The split ring electrodes of the at least one ring array are arranged about the circumference of the lead body. A valve is positioned in each of the bypass paths and is actuatable to divert the fluid sample stream entering the direct path via the inlet from the direct path and into the bypass path.

1459827044-28598cf7-a7e0-4e15-aed5-c73979cfd445

The present invention is a system for joining tubes in a structure. The profiles include an alternate destination and at least one media format for the alternate destination. A flow channel can be etched on the cap with an opening and exit on the sides of the cap so that liquid can flow through the flow channel. The system is configured such that after the faucet is turned off, a portion of permeate is delivered to the reservoir and then delivered to the inlet of the module to flush the module.

1459827044-c3c3b31b-e145-4b52-813a-c3b0931ff2f1

Embodiments of a surgical access port system that comprises a retractor that is adapted for being coupled to a cap and that is particularly useful in natural orifice surgery are described. Biometric information is read from a living body moving and attribute information abased on the biometric information is added to the file. Another disclosed embodiment comprises at least one via in the substrate. Specific server data may be retrieved, or such data may be retrieved recursively among several levels of containers. The clutch includes an emergency operation actuation device with at least one emergency operation actuation element, which defines a centrifugal oil cavity which includes oil and which is coupled with the drive. Then, by comparing the set of criteria to the information, at least one travel route will be identified from the possible travel routes for treating the medical condition.

1459827045-18e886b8-9d1d-494d-9d15-b76e149a12d8

A light emitting apparatus has a light source for emitting a first light in a forward direction. Use of this type of small gel simplifies blotting procedures, such as Southern and Western blotting, after electrophoresis. When the material enters into the cavity of the hammer mill, the material form a rotating material ring after being hit by the hammers, and the material is milled once again after the material ring hits the stationary hammer blade. The support member with attached component frames is placed over one side of the multi-chip module substrate and the external leads of the integrated circuit devices are aligned with corresponding conductors on the multi-chip module substrate. A particular available time slot is identified in the array for both of the testing units corresponding to the respective trunk group. The dummy pattern is at least partially overlapped by the metal structure and the light-shielding layer pattern is at least partially overlapped by the photodiode.

1459827045-3fa9df20-574a-4a65-b799-6c6df21792a2

A propeller shaft PS1 comprises a front pipe member 10 and first and second yoke members 20 and 30, which are attached to both the ends of the front pipe member 10. Kneading blocks including such kneading elements and screw extruders including such kneading blocks are also provided. Accordingly, a phase separation structure can be obtained which can regulate deformation of the cable and prevent abnormal deformation even for a superconducting cable. In one embodiment, the related search phrases are scored and selected for display based at least in-part on an evaluation of the usefulness of each search phrase, as reflected by actions performed by prior users while viewing the corresponding search results. bovis as provided herewith and one or more further immunologically active components effective for the treatment and/or prophylaxis of infections caused by a further pathogen of cattle.

1459827045-f79955cd-bdec-4dcf-add6-4cd759fbd683

A method and apparatus for applying an application of a database service, such as X. The fixing device has a heat-generating endless belt that includes: a resistive heat layer that generates heat upon receiving electric current; and a pair of electrode layers each disposed along a different one of widthwise edges of the heat-generating endless belt. The emergency signaling device may be removed from the vehicle for use as an emergency signaling device.

1459827046-373cd600-7d89-426e-b280-23c1f815dac8

Provided are a flash memory device and a method of driving the same for improving reliability of stored set information. Cardiac signal information is sensed from far field electrodes implanted in a patient. Accessed lid URIs provide a binding name and access scheme to the objects in the ATSC TSFS, as a lid URI embedded in an Initial Object Descriptor is used to locate resources in the TSFS such as a BIFS scene description stream and/or an object descriptor stream.

1459827046-69fbd315-1a75-478b-9e00-92068e7393c9

A disk reading device has a housing having a disk receiving space provided therein, a first rod having a first guide pin, a second rod pivotably coupled to the first rod at a pivot point in a manner such that the first and second rods achieve a scissoring movement about the pivot point, with the second rod having a second guide pin. According to some embodiments, the desalination systems are transiently operated and/or configured to facilitate transient operation. In the methods of the invention where hydrocarbon containing gases are dissociated, fine carbon black particles are also produced.

1459827046-7bddcccc-94fb-48cf-a855-bdd0088e05eb

An NVRAM fail-over controller including a NVRAM device connected to a host computer, the host computer having the ability to directly control the NVRAM device. The gear train may also include a second planetary gear set, which may include a second sun gear, a second ring gear, and a second carrier. A first ADC is also included for generating a digital representation of the input signal sampled by the first converter stage. In a practical situation, combinations of the elements allow ribbon beam expansion between source and work piece to 350 millimeter, with good uniformity and angular accuracy. The inner gerotor includes one or more entrance passages operable to communicate a lubricant into the outer gerotor chamber. Prior to the crossover, the training projectile maintains a gyroscopically stable trajectory, which enables extrapolation to ascertain the trajectory of a non-training projectile that does not have an augmented roll damping section.

1459827046-cdfc7db2-45c6-4f3f-8c91-f049d6be6d91

A non-volatile memory cell and method of fabrication are provided. This prevents the counter for detecting a recorded area from erroneously outputting a recorded area detection signal due to the noise. A polymerization reactor is operated to provide for the reaction of propylene supplied to the reactor to produce a stereoregular propylene polymer fluff.

1459827046-e21ce3fc-9db0-4a58-a2d4-5d06c623e8fb

A system and method for fabricating a FED device is disclosed. A sink communication device includes a sink network clock synchronized with the source network clock, a sink streaming clock associated with processing of audio or video data, and a sink time stamp mechanism to compare a sink streaming clock value with the source streaming clock value, and adjust the sink streaming clock based on the comparison. The power module is characterized in that an inductance component of at least one of the first and second connection means is adjusted so that the inductance component between the emitter electrode on the first power device and the emitter lead is substantially equal to that between the emitter electrode on the second power device and the emitter lead. Two specific examples of the present invention include a cascaded, multi-level inverter, or a variant referred to as the multi-source, flying source inverter, whose ac input voltage is derived from an electromagnetic generator. Also provided herein is a material made according to the method, designated either as EMM-19 or as EMM-19\*, and a method of using same to adsorb and/or separate gases, such as carbon dioxide.

1459827046-e9ce64f5-aab6-4a98-ab5c-cabfb75c58ef

An image display system includes a polarized image projection device, a polarization preserving transmissive diffusiver, and a polarizing reflector element as a non-blocking mirror. The vibration detecting unit, inclusive of a differential transformer having a plurality of coils and a magnetic body, is disposed between the supporting metallic part and the washing machine base and detects a vibration of the water tub. The primary digital content is identified, and the supplementary digital content is selected and transmitted, with an indication of timing for play of the supplementary digital content based upon the sample time. A detection decider determines whether to perform detection on the feedback information based on the maximum of the sums.

1459827047-1feae9a0-d50c-4228-a08a-e26ad10123d0

A surgical apparatus has a clamp and a stapling mechanism. Each of the light source groups includes a light source, and the converter boosts an input voltage to a driving voltage that is supplied to the light source groups. The electrode bumps protrude from the encapsulating material for connection to an external circuit. A guide catheter, including a distal end, is adapted to enable the interventional procedure to be performed, and to be inserted over the guide wire and through a patient's vasculature to a position in the blood vessel relative to the interventional procedure site.

1459827047-5c78fce7-378b-4643-aeda-70e9d1cb9e66

Provided is a front structure of a vehicle 1, and the front structure includes a pair of side frames 2 and a first cross member 31. The invention more particularly relates to fluid purification methods and systems having improved heat transfer capabilities and controls such that the purified fluid produced from the process contains reduced impurity levels and/or exhibits more uniform concentrations within the final product. The packaging assembly also includes a self-supporting plastic liner that fits inside of the carton for containing liquids, viscous material, or particulate material. A front zone and an intermediate zone of the pad are placed on the upper surface of the supporting sheet, the rear zone of the pad is inserted into the slit so as to be interposed between the pants and the supporting sheet, free front and rear zones are fastened to the upper surface of the supporting sheet and thereby the pad is attached to the pants by means of the supporting sheet.

1459827048-a7e8c6e5-bd4f-46bc-b90c-c4e2965aaf87

The present invention provides integrated framing in pluggable optical transceivers to extend the OTN framework into metro, regional, and core applications. A level indicator has a display shaft extending along and pivotal about an axis, and coupled to the float shaft. These films exhibit exceptional strength, durability,

emission and aesthetic performance properties. The upstream communication, which may include status information about the node, essentially piggy-backs onto upstream communication originating from the subscriber devices coupled to the node.

1459827048-aac6189e-b294-43f4-abdf-335933ff1147

A low paper sensor mechanism for a printer includes two paper supports. An identification scanner may scan an identification document into digital form. The expanded diffracted beam is transmitted through a second surface of the grism either to another grating surface of an additional grism or to a wavelength-selective diffraction grating operating in Littrow configuration.

1459827048-c7c20a76-3934-4929-b417-d561390a54ff

Compounds of formula I: wherein A, B and D are respectively selected from the group consisting of: CH, NH, C; CH, N, N; and CH, O, C; the dotted lines represent two double bonds in the appropriate locations; and where Z is selected from S, O, C, CH<sub>2</sub> and NH are disclosed for use in inhibiting DNA-PK. In addition to holding the wafer at a prescribed position, the ion implantation apparatus subjects the wafer to ion implantation in regions where there is partial overlap of its circumference. The method further includes receiving, by the mobile computing device, sensor data from one or more sensors associated with the mobile computing device. The actuators together include a block of ferromagnetic material with a surface with multiple bores defined in the surface.

1459827048-eb908a9a-539a-42b3-a4a6-a3713ee47432

8-Substituted-2,6-methano-3-benzazocines of general structure I in which A is CH<sub>2</sub>OH, CH<sub>2</sub>NH<sub>2</sub>, NHSO<sub>2</sub>CH<sub>3</sub>, . The present invention specifically provides isolated peptide and nucleic acid molecules, methods of identifying orthologs and paralogs of the drug-metabolizing enzyme peptides, and methods of identifying modulators of the drug-metabolizing enzyme peptides. The invention provides a novel paper PCB protecting cover. The detection improvement agent may be operable to interact with a chemical or biological agent in the air sample. The invention may be combined with an internal or external monopole antenna so as to cancel out the antenna backlobe or otherwise resolve the frontback ambiguity that arises with this type of dielectric resonance antenna.

1459827049-4f72f90b-71eb-489e-80c2-04eb4b1293d3

Disclosed is a multi-mode multi-band mobile communication terminal and a mode switching method thereof wherein a mode switching can be performed between an asynchronous network and a synchronous network by minimizing interruption in communication. Methods for producing a maize plant that comprise crossing maize variety PH18TN with another maize plant. The slider member is mounted at least axially immovably to a spool shaft, on the fore end of which the spool is mounted. The communication apparatus and frequency selecting method readily and flexibly select frequency channels with an acceptable communication quality using the updateable index and reference.

1459827049-9cfb050c-ff69-45bf-9141-343c08b9b2db

An image pickup device provided with an automatic focusing function includes an image pickup unit, a face detection unit, a receive unit, and an automatic focusing control unit. Further, a system comprising a feedback control entity and a mobile terminal receiving a multicast or broadcast service is provided. The sender transmits data packets to the receiver.

1459827049-df6d5646-99ba-45eb-9f0a-7fa7f1c8752a

A system is described which utilizes a novel system of repressor titration for maintenance of a plasmid useful in gene therapy and production of a recombinant protein. The output means is in electrical communication with the converter includes a housing adapted to receive at least one of the input means, the voltage converter means and the output means. The drill bit may be used with a breach

assessment mechanism including a light source configured to provide selective illumination along the light path and a light sensor.

1459827049-e37ba05a-6d15-4822-a20a-ddc3c55f8aac

A multiple computer system is disclosed in which n computers each run a different portion of a single application program written to execute only on a single computer. Audio recording capabilities may also be provided. In practice the present invention enables a substantially balanced link to exist between the base station and a mobile.

1459827049-e8b134c7-521a-4a0c-a960-acdccc556263

The present invention relates to gas sensors using doped ferroelectric materials. The tube junction extends through the door of a water heater. In operation, only one switch at a time of plural first switches is \u201con\u201d to connect the voltage signal from a corresponding pixel to the column bus while all remaining plural first switches are \u201coff\u201d to isolate the column bus from all remaining pixels.

1459827049-f6cd01a7-c7b0-4ead-9b00-a6838d2a9eea

Embodiments related to pressure sensitive structures are described and depicted. This enables the insertion of new scan chain data and thus enabling the modification of the hardware characteristics of the processor. By so doing, a user may quickly and easily determine which applications to select based on their respective reports and then select them or their content through the user interface.

1459827050-143f0a44-67ab-417b-9ac6-5c34f2e0dc7d

On an encrypted object code obtained by encrypting an object code, there is discriminated whether an inhibited code defined in data format is present in a code concerning such encrypted object code, and, in case such inhibited code is judged absent, the encrypted object code is determined as an encryption result of the object code. Reagents are disclosed which can distinguish MSF and fibronectin, and which can distinguish polynucleotides which encode MSF or fibronectin. A display frame SC displays a currently captured picture of an object, files P11 and P12, and the icon of the folder F1.

1459827050-245ae356-b989-4095-9a44-0993be708956

The present invention relates to novel lipopeptide compounds. The captured biometrics are guaranteed to be captured in real-time, and avoids the possibility of providing biometrics that were previously captured, by sending to the user a time-sensitive challenge and requiring the user to provide the requested biometric information within a predetermined time period. At least one of the plurality of players is selected based on, for example, hisher performance in the game, and the portfolio of the selected player is publicized to the other players based on the player-owned brand data. The traditional 6466 encoding scheme uses idle bytes to pad packets to obtain a packet of fixed size, thereby adding idle overhead to transmitted packets. The method includes the steps of providing a template menu having one or more dummy buttons, activating a marking command during a video data recording session, and in response to the marking command, modifying the template menu by assigning to the dummy button a valid flow control command for accessing the video data which has been recorded.

1459827050-425c15b5-c015-4ec7-8b2a-3a1f0b4eb0e7

A composite armor including a disrupting layer and a backing layer provides protection against blast and ballistic threats. In order to control the DC voltage of the DC voltage output terminal in a state where an electric load is connected to the DC voltage output terminal of a power generation unit, a PWM signal generation unit 429 generates a field voltage to be applied to a field winding terminal of the power generation unit. The housing member is formed with an open interior. The

first imaging system comprises a single-pass lens group and a double-pass lens group. 3 parts by mass of a conjugated polyene compound having a molecular weight of 1000 or less, relative to 100 parts by mass of an ethylene-vinyl alcohol copolymer.

1459827051-548b7bac-95aa-4dc0-9a1c-f5e3f30a0430

An array of nanostructures has a multiplicity of nanostructures disposed in a predetermined pattern on a substrate, the nanostructures being oriented in a predetermined orientation, and the nanostructures being characterized by interior dimensions commensurate with the dimensions of predetermined microbes. The semiconductor device includes a resistance correction circuit. In addition to providing a higher percentage of calls completed calls, embodiments of the invention provide improved investigatory tools for the controlled environment facility through controlling, monitoring, redirecting, and/or interrupting wireless communications. The mask latch may be pivotally coupled to the mask base about an axis extending generally laterally across the mask base.

1459827051-5d260917-30ef-41af-b798-a368f48a66fc

A method and system for performing data integrity process is provided. Therefore, to improve the tightness over a temperature range of  $\sim 221240^{\circ}\text{C}$ . An execution thread that is associated with the access token thus generated attempts to access the resource on behalf of the remote peer. The rear cover includes a second panel defining two protrusions and a second sidewall extending from a rim of the second panel and defining two hook members.

1459827051-90b69ddc-973d-448b-ba1c-ada1bd471855

Lookback is defined as the ability of a logical process to change its past locally. Each contact includes a body portion, an upper arm upwardly extending from the body portion for engaging with a first printed circuit board and a lower arm extending downwardly and laterally from the body portion. A rigid header bar is attached to the storage bag along an upper edge thereof to maintain the shape of the bag, especially when it is used as a flag. By adjusting the tier at which to bill data, more accurate billing can be implemented for documents with contone or grayscale image data, for example, with greater customer satisfaction. A more simple method for producing a HTS coated conductor with reduced losses, and with improved critical current and critical magnetic field is thereby provided. More specifically, in accordance with the objectives of the present invention, there is provided a flush valve having an overflow tube that is adjustable in height and a method for adjusting the overflow tube.

1459827052-006914d8-d994-4120-881d-84c24c3de294

A handle for controlling water temperature and/or water flow is mounted on the side of a bathtub and shaped such that the handle may be controlled by a bather's foot. The aspect ratio of the thickness of each of the layers of magnetic material to its lateral dimensions is between 0. The alumina nano particles have a surface treatment applied to outer surfaces of the alumina nano particles, where the surface treatment includes a phenyl-silane. In an example of the cell in which the crystal is arranged to generate UV radiation from the laser beam, the output window is located at a sufficient distance from the crystal that the flux of UV radiation incident on the output window is below the damage threshold of the window for the UV radiation. 4  $\mu\text{m}$  and at most 5  $\mu\text{m}$  to the total pore volume of the whole pores, in such a manner that at least two reaction zones are formed axially in each of the reaction tubes. These screening methods can be used to identify therapeutic drugs.

1459827052-1f6deac2-62b6-4510-b953-f76f9213e4e6

An electronic safety device for a protection barrier includes a transponder, a transceiver device for receiving a return signal from the transponder, the transponder being movable with respect to the transceiver and adapted to be placed

at a current distance, an electric circuit which is switched when the distance is lower or higher than a reference distance and a control and switching system. The programming tool includes a tool body with an interface generally corresponding with the connection block of the motor, wiring operable to carry the signals, and a plurality of terminal connecting assemblies to associate with the motor terminals. The control drive circuit is adapted to terminate the conduction of said switchable member when said first comparator determines that the current through the inductor exceeds said reference value, and to provide another firing pulse when said second comparator determines that the bridge voltage changes polarity towards the corresponding rail polarity. This drive device provides a more compact mechanical press. zH2O where z15-20 water molecules per unit cell by autoclaving a mixture of a pre-prepared seeding gel comprising a mixture of a alkali metal cation, an alkali hydroxide, and a silica source in water, and further amounts of silica source and an aluminium source in the presence of an organic solvent with water as a co-solvent.

1459827052-28c4b1a2-1349-4df9-9d00-c8a2725a0dbe

The invention provides a fatigue exciter for wind turbine blades. The cassette includes a plurality of walls defining at least one valve chamber, a dialysis fluid inlet, a dialysis fluid outlet and a dialysis fluid pathway. A separate color changer can be provided for less frequently used colors. In this way, the user can not come into direct contact with a coupling electrode after removing the power supply unit.

1459827052-bc48d416-1e35-48c5-b5ba-6dfcf78e7068

Electronic devices may include radio-frequency transceiver circuitry and antenna structures. The spray head assembly allows for easy and thorough cleaning of the tanks to rid the tanks of sludge and debris that accumulates therein potentially causing unsanitary and unsafe conditions. The core also includes multiple slots. The invention promotes better heat transfer efficiency than tube and shell heat transfer arrangements that have been used for similar purposes. A prestressed bypass valve operating as a pressure relieve valve is associated to the control borehole and allows adjusting the characteristic damping line between the shock-absorber compression rate of 0 ms and the opening point OP of the main damping valve.

1459827053-922866d1-d1e5-4b24-89aa-faa50e0a594a

The present invention provides ester group-containing tertiary amine compounds of the formula  $nN_3-n$  which, when used as additives in chemical amplification photolithography, can yield photoresists having a high resolution and an excellent focus margin. A speed of formation of a main portion of the sidewalls of the trench at the gate lead wiring region is greater than that of a main portion of the sidewalls of the trench at the cell region, so that a thickness of the oxide film at the gate lead wiring region is greater than that at the cell region. Accordingly, a memory subsystem can redirect one or more pending page table entry fetch requests to an appropriate coalesced page table entry.

1459827053-a634581d-3d24-4277-b0a3-a9af16752a4f

Disclosed are exemplary implementations of an instrument having an RFID tag formed in or on the material of its handle. The method includes determining a location of the mobile device using a formula that uses: locations of the multiple transmitters, a first function of the power information and a second function of respective locations of the multiple transmitters. In another embodiment, such defined travel paths are merged with actual paths traveled by vehicles in the parking areas. In some embodiments, the cleaning solution has no corrosive effects on the liquid path and reaction cup of the analyzer. The roll includes opposing flat surfaces and an outer circumference, the apparatus comprises a guide roller including an elongated central portion positioned between two opposing ends and a flange positioned near each end of the guide roller. An image forming apparatus is

configured to include an intermediate transfer body to which a toner imager is transferred from an image carrier, the intermediate transfer body having an elastic surface layer having a center point average roughness of 0.

1459827053-d8a7b3a9-a8d4-447e-b948-ed6211ba2cd3

An amplitude adjustment device such as an amplitude compression device and amplitude expansion device is basically configured by a PWM modulator, a demodulator and an amplitude detector. A memory device 15 substantially stores b pieces of conversion logic equations produced with a conversion logic equation producing device 13. To share the beamformer among the phased array antenna apertures, a selector network is used to select which particular apertures are to send or receive signals.

1459827054-37523618-881c-4ae3-b6ed-23e02be113e0

A guitar or applicable musical instrument is improved to enhance string energy through integration of side materials and structural spanners to maintain the integrity of the instrument under load of string tension. The fault detection system provides the ability to detect symptoms of fault in the fuel system of a turbine engine. An analysis environment communicates with the simulation engine and displays the expected result. A plurality of power contacts are retained on the insulative housing. The mechanical assembly is then driven so as to move the end effector toward the desired state based on the computed instructions.

1459827054-5c0328a6-f0aa-4288-8bb6-1b65d052dc67

Embodiments of the invention relate to a method of functional materials deposition using a polymer template fabricated on a substrate. The present invention specifically provides isolated peptide and nucleic acid molecules, methods of identifying orthologs and paralogs of the kinase peptides, and methods of identifying modulators of the kinase peptides. The plug end of the electrical cord of the appliance is locked into the apparatus to prevent the electrical appliance from being unplugged from the apparatus and plugged into an electrical wall outlet. Conversely, one or more coolant exit channels begin within the porous member, extend through a portion of the porous member, and extend through the exit side. A method of implanting also is disclosed.

1459827054-5f05bf82-55d3-4434-90fc-d1076b0e0521

A method for dynamically switching hybrids during modem initialization to maximize channel capacity and performance includes the steps of evaluating each hybrid in the modem according to a cost function dependent on the quiet receive noise floor and the transmit signal echo, and then selecting the hybrid that results in the minimum value for the cost function. Each geometric primitive is rasterized into fragments, corresponding to screen space pixels covered at least partially by the geometric primitive. A document includes a barcode embedded into the document. The processor further transforms the partial sequence included in each sequential window into a series of digits.

1459827054-a009515b-d6b1-48e5-885d-5c8dc7019314

Method and apparatus for generating a test program for an integrated circuit having an embedded processor. The system includes a bandage positioned adjacent the wound to create a sealed environment around the wound. The basic security key resulting from the key agreement procedure between the mobile terminal and the network is then modified in dependence on the selected algorithm to generate an algorithm-specific security key. A resin coating layer is formed to cover a lower surface of the housing member. The LED light tube is adapted for use in troffer light fixtures.

1459827055-7607c361-3bc3-49a0-bac9-fdf0c7adc90d

A wind turbine for generating electrical energy may include a wind turbine blade including a plurality of vortex generators integrally formed in the outer surface

of the blade. The connector is arranged in the cutout. The block is retired from use if the number of bad strings exceeds a threshold. In addition, cracking caused by the difference in thermal expansion coefficient between an electrolyte sheet and the matrix can be suppressed, and thermal shock occurring during operation of the fuel cell stack can be reduced, thus improving the performance and lifetime of the fuel cell. Each of the metal particles includes a basic body and at least three pins projecting radially from the basic body, and is an integral part of a material forming the grid network. When the message reaches a complete state in the service centre the service centre sends the gateway a delivery receipt including the service centre generated message-id and the inter-working data.

1459827055-776fb50a-57d0-441f-8e93-320df06d7d73

A method and computer-readable medium determine word association scores for word pairs. A lock region is defined and scanned by a computer-based system which compares the RFID tag of the child within the lock region with a list of approved escorts, and maintains the lock region closed unless the child is accompanied by one of the approved escorts. First, a thermal image is received of a region of exposed skin of a peripheral body part of a subject being monitored for PVD. The T wave alternan pattern detector may also detect for intrinsic T wave alternan patterns. The vertical lift unit includes a plurality of crank members with generally rigidly mounted shelves that are adapted to carry objects continuously and indefinitely as the shelves travel through a vertically oriented closed path.

1459827055-d9283e97-b4d4-444a-981d-eca644f22b25

A syringe including a barrel for retaining fluid and having a dispensing port for permitting fluid flow therethrough. The context information may be included in a request from a control point device to the device or may be included in a response from the device to the control point device. After a Dynamic Host Configuration Protocol server has been started, addresses currently used in a network are examined by a duplicate-address examining unit and the status of the address are stored in an in-use-address database.

1459827055-f852bb8c-d1fe-40dc-83bf-58a93acc7ffb

A women's undergarment includes a fabric body having a back, a front, side portions connecting the front and the back, a top, a bottom and a crotch. An option may be purchased by a bettor to be exercised at will by the bettor during a break in play or during an indicated period of the event for the bettor to potentially receive compensation to cancel the wager. The backseat posture change mechanism changes a posture of the backseat between a first posture which is a non-use state and a second posture which is a use state. The lithography apparatus allows the use of short wavelength radiation in the 1-15 nm spectral range to print high resolution features as small as 20 nm. The set of input images comprises one input image from each input video stream.  $72$  where  $t$  is the thickness of the first semiconductor layer, and  $d$  is the thickness of the second semiconductor layer.

1459827055-f8c4719a-8743-46e9-8cc3-2b2c5c37b5cb

Apparatus and methods for distributing gases into a processing chamber are disclosed. An objective lens holding member is held by four first metal wires on a relay holding member, and the relay holding member is held by four second metal wires on a fixing part. Additionally, an indication of an application to be displayed upon resuming operation from a power-saving mode can be received, and an image generated by the application is displayed in response to resuming operation from the power-saving mode. A gain guide is then formed in the top mirror. The support frame is at least partly formed by an assembly of at least two interconnected segments.

1459827056-54546146-ed72-48f3-a33f-44e0ded5b63c

A low-density parity check encoding method for increasing constraint length includes determining a LDPC code block H-matrix including a systematic submatrix of

input systematic data and a parity check submatrix of parity check bits. In a preferred embodiment of the invention, a viewer watching a broadcast sporting event can elect to become a \u201cphantom participant\u201d in an event. 07  
\u03bbrmswhere \u03bb represents a wavelength of a light source, \u03b4SA1\u03b4U represents a change of a spherical aberration for an object-to-image distance change \u03b4U and \u03b4SA2\u03b4T represents a change of spherical aberration for a temperature change \u03b4T, the object-to-image distance is a distance between the light source and the information recording surface. and is excellent in costperformance due to a reduction in amount of supported platinum. The second grip may include an interlocking device to lock the second grip at a desired location along the shaft.

1459827056-80519158-ce1a-46e5-a17d-d4c0c3c44c0e

A system and method for accessing secured resources using a portable device. After installation upon the device, a virtual private network client connects to the server and downloads a VPN profile. The resultant supported palladium-gold catalysts have increased activity and stability in the acetoxylation. The pair of wings are spaced adequately in from the left and right side edges of the plate and extend rearwardly from the rear surface of the plate at an angle away from one another. The handle, the wedge-shaped tilt element and the body are removably secured against one another by a connecting member, such as a nut and bolt assembly passing through apertures which extend through the handle, the wedge-shaped tilt element and the body.

1459827057-6e313955-6251-4b10-b2fe-edd857bc2885

The present invention provides a method and an apparatus for cleaning substrates. The drive mode is indicative of a switching-state of each of a plurality of switching elements. , a blood vessel, of the subject an agent that increases SERCA activity. A thermal and nuclear radiation shield encloses the electronic circuit and includes a shock protection annulus. The vehicle identification system also includes a mobile computing platform in a mobile satellite communications system adapted to operatively associate the customer-specific vehicle descriptors with a vehicle.

1459827057-84762a8b-470c-4606-9b9e-d80fc4b485c8

A device for stimulating nerves adjacent the vagina includes a nerve stimulating element coupled to a main body. The circuit board comprises an elongated groove, extending into the circuit board, for accommodating a footing of a large component such as an RF shield. The functionalized surfaces generated using these methods can further undergo planar surface modifications, such as functionalization with a variety of different chemical groups, expanding their utility and application. The lower shell defines a third planar area therebottom. These formulations are useful as laundry detergents and can be biodegradable, heavy duty liquids, 2\xd7 or 3\xd7 and up to 6\xd7 concentrates, low foaming, andor effective in a high efficiency washing machine. Each point is represented as a point mass, subject to conventional laws of motion.

1459827058-c8d367ff-4701-4d79-b842-2141d75daa3e

Pre-emphasis circuitry and methods for signal transmission provide multiple levels of output signal amplification over one or more baud periods after an input signal transition. The receiver also has filtering circuitry the operation of which is altered in dependence on the estimated coherence time. The method is extendable to other MEMS-based sensors, such as microcantilevers, or to quartz crystal microbalance sensors. Such a metric can be derived from a quality measure derived in the receiver unit, e.

1459827059-2d21fd6e-6897-4b0d-b0d4-d1a676e5a69d

An improved tunnel or covered highway structure with means for easy and quick access to the interior. It reduces the complexity of electronic system and enhances

output signal quality by means of light property, with considerable leading advantage. Unlike the case where the write gap layer is formed by using a non-magnetic insulating material such as alumina, a step of newly forming a seed layer aside from the write gap layer and a step of selectively removing the newly formed seed layer become unnecessary.

1459827059-36b419de-0fb6-4f50-a74e-6d110e00f326

One or more frame slots to each transceiver are allocated for communication within each message cycle. The first recording medium that is non-rewritable prestores key data based on which a public key is derivable, and the main content. The first and second transistors have common control nodes coupled to a first bias voltage, receive a pair of input signals and respectively provide a first output node and a second output node. The head has a first bristle holder and a second bristle holder, each having a plurality of bristle tufts. By virtue of this constitution, the extrafine or ultrafine copper alloy wire has a combination of excellent bending fatigue lifetime based on high tensile strength and excellent torsional strength based on high elongation or a combination of excellent tensile strength, electrical conductivity, and drawability and good elongation.

1459827059-84b5a411-ff92-47d5-a89b-db5f92379f5c

A capsule magazine unit having a holding device for capsule magazine unit, into which the capsule magazine unit can be releasably inserted, such as of an espresso machine. A constellation information transmitting arrangement, for instance located in the multi-carrier receiver, produces for each carrier subset a limited set of parameter values and transmits these sets of parameter values to a constellation information receiving arrangement, for instance located in the multi-carrier transmitter. In some embodiments, the pressure isolation device comprises a housing having an internal chamber, a main inlet, and a main outlet. The invention also comprises a memory coupled to the receiver for storing the electronic program guide data that has been separated from the input stream. 06 mm, and the particulate coating process is performed using a silicofluoric chrome plating solution. Also disclosed is a device for open loop uplink access power control.

1459827060-0107bf67-8e22-4dc9-867b-04755bd43da7

A method of manufacturing a metallic blank into a shaped article useful as an enclosure for an implantable medical device is described. The method may include the step of formatting or arranging the CLUT into a plurality of sub-CLUTs. The mechanical sound vibrations are converted to an amplified electrical signal and the amplified electrical signal is delivered to the inner ear with a transducer operatively coupled between the microphone and the inner ear.

1459827060-0a0d4397-83c0-440e-a82d-4a83626c5983

The invention relates to a tire having a rubber component which contains short fiber reinforcement with a compatabilizer for the fiber reinforcement. The disclosure relates to collecting wireless network access point identifier information and power level observed at various locations are collected to generate various signal maps. A sacrificial spacer is formed adjacent to the first sidewall.

1459827060-6c3a68ae-a49f-4d73-a1ca-4a1f29af083b

A sport blow gun is a blow gun which is a tube with a bore, a loading end and a muzzle end. The write lines may be configured to write data to the memory cells, each write line of the arrangement being electrically coupled to a reverse current limiting device. A cannula is arranged in front of the inlet of the pump ring. The iso-stress portion extends from the corner along at least one of the sides of the sail distances greater than 20% of the lengths of the sides, respectively.

1459827060-ea62fa05-375a-4879-afdc-55f7126c1302

A tension leveling system for thin metal strip has between a brake roll set and a tension roll set, additional two-roll bridles in which one or more inlet stretch

leveling regions are followed by an elastic deformation region and the latter is followed by one or more stretch leveling regions. The bone-conduction headset may be mounted on a glasses-style support structure. Consequently, the hard mask material for the lines in the first direction form part of the memory stack. In an embodiment, characteristics may include an insured type. The transformations may vary in accordance with various wagering game functions. In the formula, R1-R4 preferably represent a hydrogen atom or a methyl group, respectively; a represents a number of 7-20; and R6 represents a hydrogen atom, a methyl group or a phenyl group.

1459827060-f00cb072-dfd2-4b98-9fbc-193303955a58

A cluster computer system and method for distributed data storage enables distributed, reliable, low overhead mass storage systems. In the process, the natural gas stream to be liquefied is partially cooled, expanded to an intermediate pressure, and supplied to a distillation column. The microprocessor is relied upon for adjusting alarm output based on source voltage, time of day, ambient noise, ambient frequencies, and ambient temperature. Alternatively, a pressure sensor may be used to sense when the child's foot comes off a pedal. The disclosure includes at least three criteria that may be used alone or in combination to determine a preferred area of the target image for placing the watermark depending upon the user's intent for the mark. In order to achieve the above-mentioned object, an optically biaxial retardation film, comprising a polymer film containing a material having refractive index anisotropy, wherein the material having refractive index anisotropy has a concentration gradient in a thickness direction of the polymer film, is provided.

1459827061-205de258-7e68-4ed7-94ee-357851b44b0a

A flexible light-guiding module with waterproof function includes a flexible light-guiding film, a light-reflecting element and a light-generating element. In some exemplary embodiments each checkbox comprises a drag status and the method includes toggling the status of the first checkbox and statefully toggling the selection status of checkboxes experiencing drag event in dependence upon drag status, the new state of the first checkbox, and the original state of the current checkbox. A discrete bumper stop has an attaching portion disposed adjacent the actuator body, and an extended portion projecting from the attaching portion engageable with a reference surface of the disc drive at a selected position of the actuator. The ACS is adjusted based on an output of the disturbance observer filter, and the head is actuated over the disk based on the adjusted ACS. A depressed ditch is formed on the coil end, and the lead wires are disposed in the depressed ditch and firmly held therein to prevent movement of the lead wires relative to the coil end.

1459827061-220ba829-12d7-4658-896b-dc6c0c546ee8

The invention provides 8-azabicyclo3. A bushing for use with a lateral pin retention system may be positioned around the pin. A weight is applied to reference images of a reference dataset based on a comparison of content of the new image to the reference image of the reference dataset. The interconnect statistical data is then used to vary physical properties of interconnects in a current design during simulation until optimum performance is achieved.

1459827061-2258db26-38bd-48eb-b33a-73fbe8bfaf00

A substrate processing apparatus 10 includes a holding table 20 for rotatably holding a wafer W, a nozzle 40 for supplying chemical solutions L1 and L2 to the wafer W, at least one light irradiation units G1 and G2, and a pot 30 placed in the outer radius of the holding table 20 for collecting the processing solutions L1 and L2 that are scattered from the wafer W. The preferred bisulphate salts are 3-3--4,4-dimethylpiperidine-2,6-dione bisulphate and, especially, 3-3--4,4-dimethylpiperidine-2,6-dione bisulphate. The computing system determines cell information from the performance characteristics of the electrochemical cell.

1459827061-4997e18d-9637-4e04-99c2-d13c622e4e9d

A liner for a shaped charge formed from a mixture of powdered heavy metal and a powdered metal binder. In operation, such an oscillator yields a contained fluid jet that issues from the inlet port into the swishing chamber and alternately switches its flow direction between the container and exhaust passages. At least one power generator is associated with the housing, and is driven by the mixing of the relatively high salinity fluid with the relatively low salinity fluid. A thickened supporting section is provided around the receiver so that the user's weight will not force the solid material out of the receiver and back into the interior of the diaper. An optional activated charcoal filter stage can be included to reduce odor in the released air.

1459827061-904d2694-dbc5-404f-8161-c10c14f62581

Aspects of the present invention relate to systems, methods and devices for imaging device job definition. In the present invention, an engine 2 and an electrical device for driving the engine system are housed in a package 1. Cooling garments placed in contact with the body of the patient circulate the cooled coolant proximate to the patient to cool the patient.

1459827062-405c3dff-c2c8-4db3-8acd-a31ac48580ab

A disk apparatus includes a disk guide member, a disk transfer mechanism, a disk rotating section, a disk clamp mechanism, and a control section. The securing mechanism comprises a frame surrounding the housing, a pressing plate movably attached to the frame, and an actuating lever pivotally connected to the frame. A dampening material is provided between the housing of the ISA and the container of the IMU. The \u201ceasy\u201d axis material is that plated parallel parallel to the magnet's field and saturates at a lower applied field. The flag can be set to a complete state and an end marker is updated. The compactor device is for compacting all materials, such as dirt, sand, and/or aggregate material.

1459827062-526c431d-5fda-4d0e-a0a1-b3b71d4e84af

A method for mapping a physical hybrid automatic repeat request indicator channel is described. Various embodiments may include a mobile image capture apparatus, which may include a computer system configured to execute an image capture application. Moreover, the present invention relates to the article, especially one for body fluid absorption, which functions to reduce the odor of urine by having compounds reactive with aldehydes to be present in absorption articles. A user can modify contents of a word processor document by directly changing the linked data without having to deal with the complexity of the presentation format, which can be constantly changing.

1459827062-5625db29-b2c0-4561-806b-e968418d1d97

A fuel cell includes a cathode-electrolyte-anode unit, and a perforated foil structure distributes fuel gas over an electrode surface thereof. The circuit switched underlying transport network is replaced with that of an IP based package switched network, while the circuit switched infrastructure, such as terminals, telephone exchanges and the like are retained. Software executing on a vehicle's computer can then cause one or more applications that are associated with a vehicle computer to be modified in a manner that changes their behavior. The guide rod also has a cylindrical proximate end which has a first diameter.

1459827062-739fa816-e4ea-49bf-8596-3d8f84a6d22a

The present invention is related to methods and apparatus that allow a chalcogenide glass such as germanium selenide to be doped with a metal such as silver, copper, or zinc without utilizing an ultraviolet photodoping step to dope the chalcogenide glass with the metal. A library of methods and data structure definitions is provided to a developer of a piece of software. Redundant data can be used to recover data stored in the non-volatile memory in case of a data corruption.

1459827062-daae264b-e311-4d29-8c7d-ac648f22af9b

A method for operating an access point in a wireless local area network is provided. A booting process for initiating a multiple operating system environment is also provided. The sleeve that slides or rolls up the tower is equipped with stirrups to provide a structural receptacle for the locking forks.

1459827062-f1e8518d-5e5d-4a75-a478-b43ecba2f254

An sensor includes a substrate with a magnetic field sensor mounted on the substrate. The invention preferably is carried out with sintered sol gel microcrystalline alpha alumina abrasive grain and a phosphorous oxide-containing, alkaliborosilicate vitrified bond composition. At the same time, against the interior hollow roll is applied a force of enough intensity to flatten the cavity of the interior hollow roll and apply the wall thereof against the interior face of the wall of the cantilevered end of the cardboard tube formed by the action of its rotatory die. The method also includes a step of proxifying an object reference used in a user request for a target server from the user device in order to establish secure connection between the user device and the target server.

1459827063-68b74ac7-72dc-470d-8d0a-38a7f9390e62

A threshold voltage detection apparatus comprises a voltage level up-shifter and a voltage level down-shifter. The outer cylindrical tube is radially spaced from the cylindrical inner tube to provide an annular cylindrical space between the inner cylindrical tube and the outer cylindrical tube. The method alerting the passenger of the inability to re-active the previously activated passive vehicle system if a fob associated with the passive operation of the same is unavailable. The method includes performing a second static analysis on the partitions of the program to produce results and outputting the results.

1459827063-bbd3f6ad-f5f4-40a5-89e4-6ad331ab6774

A dispenser and a means to be held by the dispenser. In order to increase efficiency, a compressed oxidizing gas is cooled to a second temperature T2 before passing through the first device for storing thermal energy, and the oxidizing gas is then increased, in one step, to a third temperature T3 when passing through the first device for storing thermal energy. The electrode material has a fine grained structure with fine grains having a mean size of  $<500$  nm. Concurrent operations are executable in multiple banks to improve performance. In response to operation at the high current mode being complete, the power supplies are operated at a normal mode to provide a normal current at the normal current mode. Also a part of the invention are nucleic acid molecules which encode these peptides, and uses of each of these.

1459827063-c79e285a-5f9b-4631-b578-4c13a1d06132

A natural language tool is provided for specifying a subset of data. The semiconductor memory chips are rectangular in shape and are arranged, in at least two rows with the adjacent chips being oriented perpendicular to one another, such that the area used on the PC board is optimized. The number of padding bits is determined based on respective virtual values of each of one or more encoding parameters. When polycarbosilane is produced using a specific zeolite as catalyst, SiAl or SiB ratio can be adjusted at any proportion, enabling acidity control of catalyst, and therefore the molecular weight of final products can be easily controlled and the product yield can be improved, compared to conventional solid acid catalysts. The antenna has a base film and a conductive body, wherein at least a part of the conductive body is embedded in the base film.

1459827063-d66b0de0-2cb0-44c0-9410-22695fe445f9

Device for dispensing embraces a walled, hollow housing having an inside wall surface and having an opening on a first end; a piston that sealingly engages the inside wall surface, beginning at a position away from the first end; and an actuating connection to the piston internal the housing. Each photoelectric

conversion cell includes a photodetector and a pupil restricting unit. The memory module has respective clock, command address and data signal lines.

1459827063-f8e7d58c-641c-41f1-8713-3cd4889fbe54

A process and apparatus for making a gastro-retentive device. The probe is used for entering the radio frequency plasma to measure the plasma characteristics. Also, the cooling design includes a plurality of inlets to receive cooling air from an internal cavity of the airfoil as well as a plurality of outlets located within a trench on the exterior surface of the leading edge through which the cooling air exits to film cool leading edge. One exemplary gauge includes an external dial that rotates relative a restriction scale in response to a differential pressure. The first opening corresponds to a contracted position of the lighting fixture and the second opening corresponds to an expanded position of the lighting fixture.

1459827064-01be858d-6d50-4197-89d2-c2489412f4fe

A system for easily locating goods stored in a storage area including a computer coupled with a radio frequency transmitter or transceivers and goods placed in containers that are coupled to hangers that each has distinct electronic addresses. The system provides shift staging for sequenced shifts between ratios as well as for so-called change-of-mind shifts in which a sequence shift is interrupted as a new destination gear is introduced. When image-side three surfaces of the prism are defined as a surface A, a surface B and a surface C in order from the image plane side thereof, at least one of the surfaces B and C has a rotationally asymmetric curved surface configuration that gives a power to a light beam and corrects aberrations due to decentration. These web services, in some such embodiments, just must be properly called by an authorized user. The tapping method also includes stopping positive rotation of the control motor M and rotating the motor reversely, thereby to detach the tap from the prepared hole of the workpiece, when it is detected that the control motor M has rotated a determined number of times or that a predetermined time has elapsed.

1459827064-310fa3d8-e924-4647-8464-cad358e669d1

A system and method of reliable and efficient data transfer over serial port are disclosed. The parts form a screw-nut connection with each other. The first sensing unit is arranged to generate a first output signal based on a measurement of the 5 concentration of certain airborne pollutants at the upstream side of an air cleaning unit that is comprised in the air handling system.

1459827064-75582e29-5301-4d0e-8f56-b97990026d88

In a method for synchronizing a mobile radio receiver with a radio signal time slot structure a first portion, detected during a first time slot period, and a second portion, detected during a later time slot period, of a received time slot synchronization code sequence is correlated with the known time slot synchronization code sequence sent out by the base station in the receiver. The through bolt includes at least two longitudinal through bolt elements which are interconnected via at least one connecting element. A wire network is supported by the network supports thereby forming a plurality of meshes. The dangling bond functions as a single atom gate electrode. Each of the first striped dielectric patterns covers one of the first electrodes correspondingly.

1459827064-faa8fe52-e2e9-4736-ae28-727cc40c4453

The new and distinct cultivar of perennial Salvia plant named \u2018Crystal Blue\u2019 characterized by its large light blue-colored flowers densely arranged in verticils, with compact habit and stiff, upright, branched stems and strong vigorous growth rate and gray-green foliage. Storage is configured to store a plurality of predefined escape trajectories. A system to implement the method and a computer readable medium are disclosed. The bore is adapted to receive the guide rod, and the cavity is adapted to receive the outwardly protruding lugs.

1459827065-26cab3ed-6590-4f89-b0e3-965a74ad49db

Host system data files are written directly to a large erase block flash memory system with a unique identification of each file and offsets of data within the file but without the use of any intermediate logical addresses or a virtual address space for the memory. The method includes detecting at a mobility management entity a transition of a user equipment from a first cell to a second cell to obtain at least a cell identifier. A motion compensated picture of video data may be blended with at least one current input picture of video data to generate a motion compensated output picture of video data. In one aspect, a system retrieves a profile of a client device, retrieves all device profiles existing in a profile database, and sequentially eliminates profiles not matching until a single profile is left or all profiles have been used. The first phase shifted periodic signal and the second phase shifted periodic signal are selected alternately in a way that phase shifts which are based on a portion of a control signal close to its jumping between its maximum and minimum values are excluded.

1459827065-41ea559f-afd0-4b3b-b597-4f7cb5f781fe

A source driver of the present invention includes a bypass switch which connects two source lines with each other. Various embodiments of an HVAC system are provided that may comprise at least two controllers that communicate with each other to provide a method of controlling the operation of an HVAC system, based on a communication protocol utilized by each of the various controllers. The invention is an image processing device for imaging and displaying the behavior of characters modeled on opponents in virtual three-dimensional space. When the allocation unit judges that an overlap is generated in the allocation result, the allocation unit causes one of the RACH sub-channel allocation units which has caused the overlap to again perform allocation of step ST320. In the thin film transistor in the driver circuit portion, the semiconductor layer is sandwiched between a gate electrode layer and a conductive layer.

1459827065-95875271-10ae-43ab-903b-eebfee9c9d83

A bioreactor processing unit includes at least one cell culture module comprising: a base including a receiving station for removably receiving a plurality of bioreactor vessels at respective locations ; and a clamp plate. A detecting unit, based on information concerning the position of a symbol for which an error has been corrected successfully by the error correction process, estimates whether an error occurs in a symbol for which the error correction process failed and detects the position of a symbol estimated to have an error. The tone bank associates the tone with the credit card information. The protocol further provides for isolating tumor cell RNA from biopsy material that has been prepared in paraffin block storage. Use of the DPUSB interface also provides the opportunity of new types of devices such as memory cards and cables that will greatly increase the ease of use of many intelligent electronic devices such as cameras and PDAs.

1459827065-fd0b5000-128b-473c-a680-753e06fed23d

An HO ODU signal input to an optical transmission apparatus is disassembled into LO ODUs. The transistor has two signal terminals and a gate terminal positioned in between the signal terminals. A driving transistor is connected to the differential amplifying circuit and the outputting transistor.

1459827066-3a191d94-1c4d-4fb8-b055-5e189dfafa2a

A conducting mechanism includes a conducting member, an engaging member, a spring, and an insulting member. The metal pad includes a center portion overlapped by a region encircled by the conductive pipe, and an outer portion in contact with the conductive pipe. A movable portion 28 on the free end side is a lightweight coupling member 19 provided by bend-processing an aluminum thin plate, to which a rare-earth magnet 25 is adhered. The memory management unit is coupled to the queue management unit and the memory, and is configured to initiate a plurality of binary searches based on the plurality of search requests. Dual monitors are used to

independently monitor the output power of the laser. The system provides an underlying component architecture having an object-oriented database structure and a metadata database structure which stores only one instance of each object while linking the object to multiple collections and domains for grouping into and retrieval from any of the collections.

1459827066-c808cb10-7949-494c-aff3-5763b200da8b

A yarn carrier for presenting a selected yarn to a pair of gripper jaws. The maintenance station carries wiper elements that wipe ink from the surface of the inkjet print head as the maintenance station moves past the inkjet print head. The acoustic box structure is disposed between the PCB and the hidden antenna. Before the airbag apparatus is attached to the vehicle body, the main body and the support member may be coupled with each other using at least one of a common fastening of them to the bracket members and a mutual coupling between them at the position of the fastening part. The electrical conductors extend into the jaws to form a bipolar configuration.

1459827066-d00daf85-0be9-41df-9f0f-1f63ab9f660c

A device is provided with an array of a plurality of phosphor converted light emitting devices that produce broad spectrum light. The base includes at least a snap-on fastening mechanism adapted to snap into a through hole formed in a supporting substrate of the central processing unit. 00% or more, and a Vickers hardness at its surface of 20u2266HVu226625 in a case where a maximum indenting load of 30 mN is loaded to the surface under a circumstance at a temperature of 25xb0 C. The device including the energy source is configured to add variable data to the substrate.

1459827067-10d725b1-1e8f-4a69-9072-ac4e77fe0a17

Abstract A shaft seal structure is provided around an outer circumferential surface of the bearing member located on the cylinder inside of each of the screw rotors. The tool is initially secured to a wall, and comprises a vertical surface parallel to the wall and a downwardly angled surface. An account number and a transaction amount are obtained from the communication.

1459827067-5ad91442-0752-4467-9023-0edede1dfbc8

A non-volatile memory device has a gate dielectric film formed between a floating gate and a control gate. The valve includes a piston mounted within a linear ball bearing bushing. A quality determination module determines a quality of the stored ETD records based on the stored quality check criteria. The proxy operation implies that the intercepting node is capable of terminating some protocol elements, injecting some protocol elements, or modifying protocol elements before forwarding them in such a way that the operation is transparent to neighboring nodes. The sensors are capable of reading densities exceeding 60 Gbin2.

1459827067-da383bdb-4e8a-4046-a95c-fa249bb0c35a

A brake caliper assembly having a pad shield. A magnetic sensor is supported by a housing that is mounted to a stationary frame of the image forming device. The second arm has each of the plurality of branches including a switch for selecting a length of an electrical loop formed by the second arm and an end of a ground plane, each of the switches is connected to the ground plane.

1459827067-dd16d5c9-bf85-4e37-b725-8a97aad3c3e7

According to the disclosure, the steering column comprises a steering shaft rotatably mounted in a tube-body provided on a side mount of a fixed bearing assembly via a lateral mechanism. In this method and apparatus, an LPC coefficient is obtained for every phoneme and is set to temporary phoneme data and a first LPC Cepstrum based on the LPC coefficient is obtained. The sealing portion is formed so that the external connection terminal is exposed. The lift arm is connected to the closure by a pivot coupling which maintains the lift arm and the closure

substantially parallel and uniformly spaced apart throughout the movements of the closure. The picture transmission device consists of at least partially of a fiber optics section which is at least partially surrounded by a material that is plastically deformable. The apparatus further includes a correcting part configured to perform on the first image a correction process that corrects the color blur determined by the determining part.

1459827068-0fccb018-7a25-4aa9-a8f0-6a99fb3260a7

A method co-optimizes a design and a library in such a way to choose the best set of cells to implement the design. Electric conductors of the gearbox control device are embedded in the hydraulic distributor plate and/or electric conductors are metallized onto the surface of the hydraulic distributor plate. The smoke reducing surfactant package includes an anionic surfactant, an amphoteric surfactant or mixtures thereof. The system preferably manages device pairing via a remote server that is accessed by a device application. The method also involves placing a metal gate pad layer over the landing area. The search results can list the supplemented videos which contain hotspots corresponding to the object and also the time in the supplemented video in which the object is found.

1459827068-2172cefb-ceb3-42d6-b87a-7ee58ae2b246

Disclosed is a method for preparing a clay-dispersed polymer nanocomposite. T2's base is connected to a first voltage line and between two connected capacitors. The software architecture includes a number of vehicle application program interfaces for accessing vehicles systems or data and for developing in-vehicle software applications; and a number of policy restrictions underlying the vehicle APIs for restricting the level of access to vehicle systems and data while the in-vehicle software application is being developed. Results of the emulating of the application program instructions according to the first emulation mode are analyzed for any presence of malicious code.

1459827068-5944699c-3e3b-4ce7-a6e5-570173825985

A system and method for providing early warning notifications to telephone subscribers having calling number delivery service. The method includes fabricating at least one first component of the electronic device and fabricating at least one second component of the electronic device, wherein the first component and the second component are on opposite sides of the buried oxide layer, thereby causing the buried oxide layer to perform a function within the electronic device. A strain relief member is provided to increase the strength of the electrical transmission lines to enable them to withstand the tensile forces caused by either flushing and/or pull-back operations.

1459827068-615eeb49-b511-4b2f-a8d4-39a05ba7caf3

A drilling guide assembly for drilling a bore into a pipe includes a first plate and a second plate. The method provides a more stable latex by minimizing residual monomers by performing polymerization after adding a higher aliphatic alcohol serving as a monomer absorption enhancer and then performing homogenization, and additionally, improves productivity and reduces amount of scale generated by increasing the efficiency of monomer consumption during polymerization. Authorization may also involve discovering a service being run or requested by the one or more computing devices, and determining whether the type of service being run or requested by the one or more computing devices is authorized by the wide area network.

1459827069-02f70ff5-84c6-4518-95f4-6aa34fb65f10

According to the present invention, environment indicators computed for a particular environment are converted into a common transmittable data format, wherein each of the environment indicators is computed by an electronic environment measurement device from among multiple diverse electronic environment measurement devices. The circuit arrangement has first and second protective elements connected

in series between a connection of the integrated circuit and a supply voltage. The lubricating grease includes a base oil having a dynamic viscosity at 40°C. The difference between the computed clock phase offset differences is derived, and compared with a given threshold value.

1459827069-bf506051-fa8d-4d60-90a8-b5655d10ecc1

There are several advantages to installing roof insulation in industrial and commercial buildings from above, rather than from below after the roof is sealed. The stent delivery system comprises an inner tube, a stent disposed about the inner tube and a shape memory metal bumper disposed about the inner tube adjacent the proximal end of the stent. The semiconductor body further includes an IGBT-cell with a body region forming a first pn-junction with the base region, and a diode-cell with an anode region forming a second pn-junction with the base region. In response to access requests from the cellular mobile devices over the L2 network, the server queries the subscriber database of the cellular service provider network and assigns the network addresses to the cellular mobile devices by matching L2 network addresses specified within the access requests with the identifiers of WLAN interfaces stored in the subscriber database.

1459827069-d59d40ce-c861-4651-8ee0-d96a570a3a64

A system and method for electronically managing composite documents including a repository of electronically stored individual documents, where a subset of the individual documents are associated with other individual documents to form composite documents. The processing apparatus can have a low-profile nozzle system capable of navigating through spaces in order to process target regions with relatively small clearances. The content of each dropdown includes a list of values of an attribute and is entirely or partially hidden until the dropdown is selected. In addition, the alligator produces realistic walking movements and up-and-down, as well as side-to-side head movements. The weight calculation unit calculates weights based on the distances and the feature quantity. The rotary cutting tool is then withdrawn, and the remaining thin shell of the boiler tube is manually peeled away from the periphery of the boiler vessel opening.

1459827070-1e9dca14-e05e-4f8e-90ce-72c64479792a

An exercise trainer having a first crank arm and a second crank arm respectively connected to a first foot link and a second foot link with foot pedals supported on the foot links, and bearing supports for the foot links removed from the crank arms. In one embodiment, the method includes the prevention of remodeling of the infarct zone of the ventricle. The cupola slag is optionally ground granulated. An apparatus applying this method is also proposed.

1459827070-5d0d6ee0-4283-44cc-a43a-9f039f7ed02f

A pot stabilizing apparatus includes a tubular member that includes a lower loop and an upper loop. In the present invention, the accurate metering ability of the BGF is employed to acquire accurate statistic information of the media flow, thereby accurate service charging may be implemented and service charging based on used network resources amount and QoS may be supported. One or more second pistons are arranged to reciprocate inside the substantially cylindrical inner chamber and to define, in cooperation with the substantially cylindrical inner chamber, a combustion chamber.

1459827070-7d14e536-0e1b-4373-b6fd-5a6b8ee9ae40

Electronic devices to output signals at different frequencies are mounted to a circuit board that has a group of layers, where the group of layers include reference plane layers and signal layers between the reference plane layers. The method also includes associating the electronic component on the trailer with the electrical load profile for the terminal in the electrical connection and monitoring a value descriptive of an electrical load at the terminal in the electrical connection. A first balancing surface is provided by a hub member and a

second balancing surface is provided by one or more nub members.

1459827070-bc609e78-678f-461e-927e-4ffdc61e050

The present invention is premised upon an improved photovoltaic device, more particularly to an improved photovoltaic device with a multilayered photovoltaic cell assembly and a body portion joined at an interface region. A disclosed example method comprises positioning a downhole tool in a wellbore, counting a number of rotations of a motor used to cause the downhole tool to contact a surface of the wellbore, and determining a diameter of the wellbore based on the number of rotations of the motor. The radio network controller transmits a plurality of data frames to the first base station and the second base station. A second transceiver is located on a ground hub physically and independent of the first platform. The access information defines accessible sets of contact information to be made accessible to recipients. The game court is optionally surrounded by a wall comprising at least a portion of the court boundary.

1459827071-13247423-a5f5-4288-bbac-2e2c2c343ce0

A method and system are provided for accessing network resources. The hooking members are supported so as to be in parallel with each other with an elastically changeable interval therebetween and to be rotatable about rotation axes along longitudinal axes of the main body parts. The semiconductor device further includes a contact plug unit which connects at least one of a plurality of active regions constituting the diode region and the pad within the diode region. Therefore, charge transfer and accumulation at the insulator and the subsequent discharge will not occur, suppressing instability of storage and loss of ions. An alternating-current to direct-current power converter is coupled to the audio power amplifier in a single package to supply power to the audio power amplifier. The volume within the sample holding chamber between the diluent introduction port and the sample isolation unit defines a metered volume of a sample for analysis.

1459827071-54cf8acf-7c2f-4560-b1fb-ebd1d5eab73a

A drug delivery device having a housing containing a gas generator controlled by an electronic controller. The system segments a set of members of interest for an OLAP report to define one or more segments, and determines an interest degree of each segment. The transmittance of the dielectric translector can vary from approximately 5% to approximately 95% by simply adjusting the individual dielectric layer thickness and the arrangement of layers. The game data input device is configured to receive game data input from a user. While the reel stand rotates in a second direction, the latch moves in such a direction that the claw portion is separated from the convexed and concaved portion by a rotation of the reel stand being conveyed to the at least one contact portion. A connecting linkage translates movement of the exercise arms into rocking movement of the upper torso support.

1459827071-b1aa4197-1dc7-4b7f-9bcf-bcee36e3718e

A method in one example implementation includes sending a first request to a first network address on a first server and determining whether the first network address has been redirected on the server to a second network address. A parallax scanning MOE lens creates discrete parallax differences in the objects in the recorded scene that are perceived by the viewer as enhanced texture and depth when displayed. The indentation is formed in that a part of the gas bag wall is prevented from an unimpeded movement towards outside of the module on unfolding of the gas bag. The wings are readjusted until the built-in tapes match a control tape. Various configurations of light emitting semiconductor chips and heat sinks are disclosed, as well as various structures and methods for driving, controlling and using them.

1459827072-044def3a-cdf1-4045-a612-2131b711dd1e

Provided is a printer cartridge having a resilient pliable body. The proximal housing can be provided with a plenum chamber being defined therein, the plenum chamber being in fluid communication with at least one nozzle. The rear tray

defines at least one slot. The FRU includes various features that allow accurate 3-axis alignment and registration of the optical drive within the appliance.

1459827072-32528ef9-a2b6-402f-8a71-1172963799ac

A method for integrating a document from a first document repository to another document repository in a cloud computing environment is disclosed. A mechanism for dissipating the stored clamping and/or spreading forces enables an absorption movement of the push or pull rod in the opening direction along a pre-determined absorption course, and especially detachably blocks an absorption movement of the push or pull rod over the predetermined absorption course, in the opening direction. Between these two chambers, connecting lines are present. Blade angle adjustable drives are arranged on the rotor and enable the rotor blades to rotate about the blade axes thereof. In one configuration, the top tether anchorage point included in newer vehicles as part of the LATCH anchorage point system is employed.

1459827072-4f99cb7d-4961-4b8c-b6ef-10dd8e65cc62

A metal line includes a lower metal line formed on a semiconductor substrate. The first and second path each include a rotatable nip assembly, the rotatable nip assembly including a nip drive roll and a nip idler roll positioned so as to define a nip therebetween, the nip serving as a rotatable axis around which the nip drive roll and the nip idler roll rotate to invert the sheet. The amount to be received by each player can be verified to meet minimum and maximum amount requirements. The input to a unused channel may also be used in another circuit given the loop-thru option of the switch.

1459827072-527b6f5f-a69c-458b-9cb9-f58b4bdd7a9e

This invention relates to novel amorphous and crystalline forms of 3-{[4-methyl-3-methyl--amino-piperidin-1-yl]-3-oxo-propionitrile mono citrate salt, useful as inhibitors of protein kinases, and to their methods of preparation. The method includes generating a computer model of a selected geographic region including a layout and inputting information associated with one or more components of a wireless network into the computer model. A charge keeper circuit, upon receiving the charge signal and the delayed clock input controlled signal, generates a charge keeping signal, which equals the charged signal when the clock signal is LOW and equals the delayed clock input controlled signal when the clock signal is HIGH.

1459827072-ab163065-1528-45a8-9106-9fb7c6d080b6

A backlight unit includes a light source, a light guide guiding light from the light source, an optical sheet disposed on the light guide, and an inner frame having an opening housing the optical sheet. Connector elements, are formed with one or more rod-gripping sockets arranged radially with respect to a hub. Under higher internal container pressures, the outboardmost seal may also open and vent gasses from the innermost condensation chamber through into the outermost condensation collection chamber and continuously from the latter to atmosphere through a plurality of continuously open circumferential spaced radial venting passages or channels.

1459827072-d053a67a-ea93-46fb-90bb-fdd9a3aed933

Disclosed is a melt-blended thermoplastic composition including: A) a polyamide composition including a) 55 to 90 weight percent semi-crystalline semi-aromatic copolyamide; wherein the semi-aromatic copolyamide has a DMA tan delta peak value of greater than or equal to 0. The relationships in the object model are used to infer foreign key relationships in the dimensional model. The least one trigger may be generated in response to detection of a user of the first device; passage of time the content has been rendered since a previous trigger; location of the user; behavioral pattern of the user; and/or traffic flow patterns between the first device and the second device.

1459827073-65514977-a8ed-4cde-a347-b7383f85ec61

A datapath extraction tool uses machine-learning models to selectively classify clusters of cells in an integrated circuit design as either datapath logic or non-datapath logic based on cluster features. A controllable nozzle member is disposed adjacent the outlet of the fixed duct section. The invention also relates to lens element. If so, the channel resource allocator determines whether any of the existing calls being serviced by the data traffic channels are in a soft handoff state in which the call is connected simultaneously to, two or more base transceiver stations. The transparent conductive film includes a first portion which none of the first insulating film and the second insulating film underlie. The digital video signal may be a compressed high definition digital video signal.

1459827073-a191dd92-687a-4bb2-bf7b-b0467a9867f7

Various photochromic materials are provided that are essentially free of polymerizable unsaturated groups, and comprise: a) an indeno[2,3-b]pyran; and b) an electron-withdrawing, non-conjugating group bonded at the 11-position of the indeno[2,3-b]pyran. Depending on the selected operation mode, the communications apparatus control security upon holding the communications parameter information exchanged with the specific communications apparatus and the communications parameter information exchanged with the unspecified number of communications apparatus. A damper bypass system is operatively connected to the crankshaft and the input member. A flow through device and method for the single step amino group modifications of proteins, peptides, and amines is disclosed.

1459827074-943e6948-076e-4802-b0ce-7484ad261511

A multi-mode power amplifier and an electronic device including the amplifier are described. The organic light emitting devices optionally contain an exciton blocking layer. The retainer may be a ball, the resilient ring may be an O-ring, and the fastener may be a stud or nut. Each groove region may also be positioned at differing heights on the bit legs. If a sufficient empty space is not present in the moving destination class, by finding out from allocated data, data that also complies with a policy of other class, target data to be expelled and a class of expelling destination are determined for expelling data, so as to ensure a sufficient empty space for reallocation.

1459827074-b34cb45e-fd4a-4de4-8c18-244349e815f9

According to an exemplary embodiment, a stacked half-bridge package includes a control transistor having a control drain for connection to a high voltage input, a control source coupled to an output terminal, and a control gate for being driven by a driver IC. The method comprises a detection of vertical contours of the eye, and a determination of the open or closed state of the eye on the basis of the vertical contours detected. A performance frame can be generated from the captured and stored parameters with performance-representing pixel values for each area within the performance frame corresponding to an area within the image frame and having a visual characteristic selected in dependence upon the performance parameter which was captured. A first print job is received at the server system over a web. The output phase error is provided from a block on a line to a loop filter. With the configuration, a resist pattern having an accurate recess while preventing diffraction of light is formed.

1459827074-e28f8994-f80c-4731-84a5-ccb04e1b027a

Modulated differential drive signals are created where, at least one of the signals can be controlled in phase relative to the other, and both of which could be controlled in amplitude and both of which have the same modulation envelope. Files may be used to specify LoC configurations for models, emulation, and fabrication, and scripts can be implemented to control numerical simulations as well as physical emulations of modeled LoC devices. The arrangement described can preferably be used for DDR-SDRAMs and enables particularly high clock frequencies. In an example embodiment, the trend index equation uses the weld heat input, current, resistance,

and time values to calculate the composite number.

1459827074-fe81a4c9-1af3-4570-9556-2adecfabaf05

Systems and methods for compressing data, particularly for use in manufacturing and verifying certificates of authenticity, are described herein. Trading data records are arranged as a non-indexed collection of data records.  $x$  ranges from 0 to 12, and  $y$  ranges from 0 to 2. The trays are imbricately mounted on the basking mechanism with predetermined intervals and each has at least one spout formed at an overlap with an adjacent tray. An Intensity Based Colormap may be used to convert Computer Input image data using a Computer Machine encoded with an Intensity Based Colormap. Any difference between the known observable parameter and the actual value can be used to correct for network-induced variation and other effects, thus ensuring accurate detection and identification of data types within encrypted streams of packets.

1459827075-1daf5648-2ba8-4a62-b948-8b17a657cf65

Providing for secure and efficient communication for mobile applications executed in a mobile operating environment is described herein. The device-to-server registration system comprises a device-to-server registration module for communicating with a device administration service of the wireless device and a device registration module of a mediator service for registering a wireless device with the mediator service. In the region of the pressing station or in a pressing chamber, each tobacco portion is compressed in the vertical direction on a horizontal rest, namely on a platform, and in addition preferably compressed by a pressing crosspiece in the horizontal direction. The user's account server generates a Random ID code when a transaction request is received. The system may then forward the telephone call to the subscriber via the Internet access connection responsive to a subscriber's request to do so without terminating the subscriber's Internet connection, or the subscriber may choose to answer the call in a conventional manner, or may select another option in response to the call notification. An effluent from the first wastewater treatment zone is mixed with an effluent from the second wastewater treatment zone such that a predetermined ratio of carbon to nitrogen is maintained within the mixture of first and second effluents.

1459827075-81ddb690-08b5-4b47-8f10-a6bdd3c78c96

A TFT-LCD capable of repairing discontinuous lines includes a repairing circuit, which includes a plurality of repairing OP amplifiers and a high-impedance detecting unit. A data storage apparatus that includes the transducer assembly is also included. Alternatively, a solid substrate is attached to a nucleic acid comprising one portion of a binding element and a detectable label is attached to a nucleic acid comprising the other portion of the same binding element. The latching assembly serves to disconnect, and subsequently reconnect, equipment from the annular sealing device. The control unit may be configured to i) accept an allocated operation bandwidth by the system and ii) control transmission and reception of signals with the allocated operation bandwidth.

1459827075-88847494-4c13-4e30-8342-da5635456876

A display device includes a housing for engaging into an article and having one or more projections formed in the outer peripheral portion for engaging into the article and for locking the housing to the article. Scanning Electron Microscope is used to scan the surface of a specimen. As the battery temperature prediction goes lower, the desired SOC range may need to be adjusted or shifted upwards in order to account for increased internal battery resistance and to ensure that the vehicle battery has enough power to start the vehicle. Placing step places the plate-like-shaped thin film member on the supporting member so that an opposite surface thereof faces the electrodes. The updated fragment may then be dynamically assembled on-the-fly or on-demand. In a toner including toner particles, each of which contains at least a binder resin, a colorant, and a charge controlling resin, the charge controlling resin is a copolymer of a structure A having at least a

specific salicylic acid derivative structure and a structure B having sulfonic acid or sulfonic acid ester as a substituent.

1459827075-cb09eb9b-07b6-4124-a79c-c719fe2ab3e9

Polymer-inorganic particle blends are incorporated into structures generally involving interfaces with additional materials that can be used advantageously for forming desirable devices. In the part, a channel structure is formed, having an input region for the entry of a partial flow of the medium and having a measuring channel branching off from the input region. A vertical black line search processor compares each histogram value in the histogram table with a predetermined threshold value such that when the histogram value is greater than the threshold value the histogram value and the image address indicating the location of defect are stored in memory. A screw positioned within the body housing may engage the mounting tube, and draw the mounting tube into the body housing. A mounting tool for receiving a flexible ring-shaped part of an anastomotic device on a rigid part of an anastomotic device is also provided.

1459827076-152b628b-5546-4198-adf0-6905c74778d6

A permanent magnet rotor includes a shaft, a rotor core fixed to the shaft, a bracket fixed to the rotor core, and a plurality of permanent magnets contacting an outer surface of the rotor core. A number of interference sources are obtained based on received signals. The triple seal, according to an embodiment, provides higher sealing forces than shown previously.

1459827076-166efa89-e5fd-4fc9-9a86-4ab74cfe9794

Vehicles are provided with a first air conditioning system adapted to condition at least air in the driver compartment and a second air conditioning system distinct from the first air conditioning system and adapted to operate independently of the first air conditioning system. In embodiments, a NUMA-aware memory heap manager may attempt to maximize the locality of memory allocations in a NUMA system by allocating memory blocks that are near, or on the same node, as the thread that requested the memory allocation. The insulating layer includes a dielectric rod enclosed by a dielectric material.

1459827076-6c4cf9f4-d9bd-43e8-a9d9-2c3aa4fc11fe

Systems, methods, and devices for preparation of water for various uses including blood treatment are described. The face of the dispenser has dispensing openings and, around the dispensing openings are fingers, bristles or sponge which aid in distributing the dispensed fluid. Next, the operation of the user is enabled only with the network providers authorized based on the user security information record. The clamp includes two jaws formed thereon, a mouth defined between the jaws and a gap defined between the jaws. The selected one of the plurality of processors identifies an information source to satisfy the request in response to the additional content of the request. The protective layer includes a conductive pad formed opposite the bottom of the lowest semiconductor chip.

1459827076-88085730-3da7-42eb-966b-bfb167c9aef1

To provide a process for finish-abrading an optical-fiber-connector end-surface without generating abrasion scratch on an abraded surface of optical fiber, nor generating an adherent substance. The assembly includes a housing defining a cavity with an open end for receiving the motor and a partially closed end opposite the open end. A CPU predicts a focus direction based on a focus position registered in a register when a shutter button is half-depressed. The offset mullion assembly provides strength to the cabinet while providing an aesthetically pleasing and uniform sealing surface for the fresh food and freezer doors. The processor also couples to and receives commands from the user-input device. The cocking winch apparatus includes a projecting alignment member having a non-round cross-sectional shape, where the alignment member is removably securable to a butt portion of a crossbow stock by inserting the alignment member into a correspondingly-shaped hole

formed in the stock.

1459827076-e076c27c-a2d1-4ffe-909c-b9361a39b8ea

An apparatus for randomly arranging and dealing a plurality of playing cards includes a device for moving cards and randomly ejecting playing cards from an initial set of playing cards located in a card input unit for an initial delivery of randomly arranged playing cards to a card delivery unit. The socket joint is mounted in a yoke for rotation through 180° about an axis of the yoke. The fastener includes a main body, a flange, and a receptive cavity.

1459827077-766025e6-98c6-4657-8fbd-789660571ddb

The collection of the olives is performed by a machinery, that has attached a telescopic rod, fixed from one side, and free to rotate hydraulically from the other side. The filter device is comprised of a body that is sized to fit over a flash tube in a dual light, photo strobe unit. The rod moves from a retracted position to an extended position in contact with the second bracket for rotating the second bracket relative to the member. A top layer of crystalline material, such as silicon, is grown on the alloy layer to form a multilayer structure with the grown layer and the template layer.

1459827078-7765825a-2688-4499-bc0e-adddd163902d

Disclosed are mobile communication devices and methods of a mobile communication device that determines that no response has been received within a predetermined period of time from a network to a transmission of an encoded data block in accordance with a commanded MCS. The detergent composition can be used for cleaning a precision part such as a metal part, an electronic part, a semiconductor part or a liquid crystal display panel. During a first mode of operation, a first row of storage cells in a first memory bank is accessible in response to a first column address. A profile is generated based on the factors to summarize the risks associated with the company. A concentration of impurities in the upper silicon layer is higher than a concentration of impurities in the lower silicon layer. Methods and kits according to the invention include an animal or plant species in diapause.

1459827078-c9631904-84b5-4783-9d57-777a4d4d3f50

A power supply apparatus having a soft start function that enables a startup without any overshoot within an appropriate startup time regardless of whether the load is heavy or light. An insulative base member of the spacer has a recessed portion which opposes to the anode electrode, the potential defining electrode, and a portion of the face plate between the anode electrode and the potential defining electrode. However, under conditions of low air density, stratified combustion by compression stroke injection is prevented, and either homogenous combustion by intake stroke injection is performed, or double injection combustion by intake stroke injection and compression stroke injection is performed.

1459827079-cd388ec1-73d5-464a-8fe5-9e9fe4d4671c

An application member may comprise a first portion, a second portion, and a base portion extending between the first and second portions. The keyboard includes a plurality of tabs extending from a front end thereof, and a flange is bent from an opposite rear end thereof. The memory device also includes a row decoder configured to control a word line of a selected memory cell of the memory array. Therefore, a connection section that constitutes the grounding member can be visually checked. The interface controller stores header portions of the data packets in the low latency memory and data portions of the data packets in the high latency memory. A fastener track is applied in-line with a plastic web and is bonded thereto at the same time that a peel seal is formed.

1459827080-4a1f9429-aea3-487c-95fd-d90648e0eb30

A disk cartridge 20 for a larger diameter, a disk cartridge 25 for a medium disk

diameter, and a disk cartridge 30 for a smaller diameter contains a magneto-optical disk for a larger diameter, a magneto-optical disk for a medium diameter, and a magneto-optical disk for a smaller diameter having different disk diameters, respectively. Variable valve mechanisms vary at least one of the valve timings and valve lifts of an intake valve and an exhaust valve. When a telephone 24N originates a call to telephone 241, exchange 22N inquires of the portable telephone position storing unit 25 whether or not the answer-phone-startup information is turned on for the telephone 241.

1459827080-9f8006e1-b86d-45ff-b319-659c4efc7816

Polysubstituted indan-1-ol compounds of formula I, its physiologically acceptable salts and physiologically functional derivatives are disclosed. Related apparatus and methods are also described. An outer housing is coupled to the nosepiece by three ball bearings which extend into a peripheral groove in the nosepiece, and which are held in place by a locking zone of reduced inner diameter in a quick release sleeve. With the structure, the device can be operated by the voice for natural conversation. The seat track locking system for a vehicle having the configuration described above has an effect of ensuring strength against shock and load when the seat track is fixed, and allowing fine adjustment when the seat is adjusted forward and backward.

1459827080-d138953c-01aa-47c5-8f29-e29c8388b49e

Methods and systems for no-glue pocketed spring unit construction. The method comprises the steps of receiving a prompt, from one of a plurality of service switching points in a predetermined geographic service area, for a service associated with the call, and determining one of a plurality of tandem switches to which the call will be directed based on a probability distribution. The assembly also optionally includes a polarizer, and/or a fixed attenuator, and/or an optional blocking filter downstream of the polarizing beamsplitter. An advantage of the present invention is its ability to eliminate toxic byproducts.

1459827081-b19c4a39-e5fb-48c6-8c72-0d459df7129d

A system for recovering a manufactured article is disclosed. The semiconductor device includes a semiconductor substrate having a gate formed there over. The procedure unit contains a patient monitoring and medical effector program, and a drug delivery pump or magnetic flux generator capable of delivering therapeutic energy to a patient. continuously removing from the first reactor, through a hydrophobic membrane, into a second reactor the formed diazo compound; d. Certain embodiments of the present invention enable quantification and/or removal of Michael acceptors and/or Michael acceptor precursors. The set of label can be received, the passcode can be formulated, and the client can be authenticated a plurality of times.

1459827081-e47693f9-0678-4244-8cf0-b2ca9653d857

An identity card that can be used, for example, in a travel document or as a separate card, includes at least two core layers, preferably of polycarbonate material, that are fused to one another. The backlight module provided by the utility model comprises a light guide plate, a printed circuit board, a heat-dissipating bracket and a first retaining member. The seal assembly also has at least one sealing member mounted on either the interior face or the exterior face of the seal retainer and a plurality of conduits formed in the seal retainer and extending from the exterior face to the interior face.

1459827081-f478b82a-40d2-4fb0-8e72-1cd20ca2f9be

A recordable optical recording medium is provided enabling the light transmission layer to be a single layer, the inhibition of peeling of the recording layer even when stored in high-temperature-high-moisture conditions, and the reduction of degradation of the recording/reproduction characteristics. A combined quality of service class is selected from the combined quality of service classes formed from

the first quality of service classes and the second quality of service classes. An image processor generates three-dimensional models from the optical surface data and the CT volumetric data.

1459827082-0da19caa-c38f-421c-8ea7-67bd0966fc68

An archery laser bow sight for a bow having a forwardly extending stabilizing bar is provided having a laser and a mounting system for mounting the laser to the stabilizing bar. In one embodiment, the attenuator comprises two diodes or two diode connected transistors, and the control circuit comprises two transistors as the only active devices. First channel responses are calculated for the first plurality of the partially-dependent communication channels, based on the second channel responses of the independent communication channels. The present cleaning brush can remove ordinary dirt, stains or the like, without using such pollution-causing detergents.

1459827082-932feb0c-f5e7-45d2-be97-7fda68ef6c77

A method for testing the continuity of a coil that is subjected to a high frequency pulse modulated current that includes sensing a coil voltage, determining a ratio of the sensed coil voltage to the supply voltage and comparing the ratio to a threshold to determine whether the solenoid coil is functional. Burner assemblies having burners therein are located by and supported on the drip pan. According to another embodiment, a system includes a treatment planning component to generate a treatment plan and a simulation component to simulate the execution of the treatment plan. The system includes a search engine that is capable of serving content in response to user query. The context can be passed back to the host for message processing by the host.

1459827082-cf9538eb-fa9d-4ea9-87c1-39b32047857d

An electronic controller for a vehicle leveling system comprises an extend-enable switch, a retract-enable switch, an all-activate switch, and at least one group-activate switch. The first phase is commenced for establishing a secure communication path by a data path processor within a first network device. The weighted combination is then selectively filtered and accumulated, depending on whether the automatic frequency control loop is tracking or acquiring.

1459827083-162c5438-5d2e-49c5-98be-eeffe93c562a

There is provided herein cross-linked, phosphorescent micro- and nano-particles and applications of those particles. The unitized frame has interlocking tabs on folded side plates of a base frame. The reticles themselves formed according to such methods as well as photolithographic processes using such a reticle are also disclosed. The control board has at least one functionality of a universe of functionalities, and the functionality has a unique identifier, where the unique identifier can be communicated by the software architecture over the network. The reverse passage includes an opposite conveyance area of the belt in which the medium is conveyed in a second direction opposite the first direction.

1459827083-97cffbad-b693-4005-80b7-1e19a1c3fb0e

A method may comprise determining, in an operating system instance, that a login access is being attempted by a user at an access time on an object. The scaling device comprises a pair of flat horizontal surfaces, one on the mould around the entrance opening and one on the tundish around the discharge opening, and a sealing element formed of a sheet of graphite and being in constant sealing engagement with both said surfaces. The behavioral categories include system navigation behaviors, content referencing behaviors, collaborative behaviors, and the monitoring of physical location and changes in location. An Internet Key Exchange module and a policy module may be included to generate and associate the security association, wherein the policy module is configured via Internet Protocol Security. The method then multiplies the extracted data signals by the weight values of the respective antennas, and combines and outputs the data signals multiplied by the weight

values.

1459827083-b5cb2932-be8d-464b-b6aa-7d083995bd20

An inductive load powering arrangement utilizes current monitoring on only one side of the load which in one example is a fuel injector coil. The imager is manually or automatically triggered and is operated at high speed to resist image blurring due to relative movement between the target and the imager. The pivot body includes a cylindrical body member with first and second pivot body arms extending radially outward from opposite sides of the cylindrical body member. This invention may be of particular interest when the conductive portion that may come into contact with the housing is not used to ground the connector.

1459827083-d89d75bd-d55f-422a-891f-613820c958d0

An operational amplifier is described. The support is disposed between the booster and the wall, and has a breather port. This produces a first voltage gradient between the first contact and the second contact, and produces a second voltage gradient between the first contact and the third contact. Upon delivery within the existing valve, the self-expanding stent portion contacts the existing valve and the first balloon expands the balloon-expandable stent portion to a first diameter such that the stented prosthetic valve is in a first stage deployment configuration. Then the monitoring of the adhered body is performed to detect existence of an air bubble between the first and second media. The electrical current generated by the thermoelectric module is used to charge a battery of the electronic device.

1459827084-5d4deaf3-d225-4d3e-a404-04f75b21213e

Data bits to be encoded are split into a plurality of subgroups. The holder plate and the two symmetric dispensing plane units are integrally housed in the box embodiment which is provided with a rectangular cut at each longitudinal side wall and a flanged top opening with which the top cover is registered. Each of the plurality of data bits and the parity bit form an all-one codeword. The tie is such that the steel tie associated with it is easily replaceable. The lawn mower is characterized in that the axle is pivotal about an axis with respect to the wheel suspension arrangement and connected to the cutting height adjustment device in such a way that the axle is parallelly displaced when the wheel suspension arrangement is moved.

1459827084-8d454cd7-b2c4-4264-baf6-a7a26bcc561c

A rasterizer implementing a single edge stepping interpolator to interpolate both diffuse and specular lighting components across an edge of the primitive, and/or a single span stepping interpolator to interpolate both diffuse and specular lighting components across the spans of the primitive. In one aspect, a brace portion is integrally formed along with two tubular fork members and an overlay fits in a mating relationship with the brace portion to create a unitary, tubular brace. A computer-executable program is then generated based on the trained pattern classifier, and the program is installed and executed on a subscribed identity module of the terminal. The user may take an action relative to the displayed notification without accessing the computer process that issued the notification and a reply that includes an indication of the action taken by the user may then be generated and sent. An insulating layer is disposed on the capping layer and includes a first opening extending to a part of the shielding electrode.

1459827084-e8b3911b-ea96-4f9e-b617-2167b5f19ab6

A method for indicating the user's name on a blood-sampling needle pen and the product thereof includes providing a see-through window on the housing of the blood-sampling needle pen, or having the housing made of transparent materials, forming a media compartment of hollow chamber inside of the housing such that a curled note indicating the user's name, the date and the relevant data, etc. VEGF145 has been found to be an active mitogen for vascular endothelial cells and

to function as an angiogenic factor in-vivo. The substrate may be polysilicon, silicon dioxide, silicon nitride, metal, and the like. The interface includes a client, a server, and a network. The invention also provides methods for isolating betulin; lupeol; betulinic acid; 9,10-epoxy-18-hydroxyoctadecanoic acid; 9,10,18-trihydroxyoctadecanoic acid; polyphenolic polymers and fatty acids from birch bark. The method creates a well-ordered array of voids in the block copolymer film that is maintained over a large area.

1459827085-237d34e6-2a71-4fcc-8996-5942bd930607

The present invention relates to a non-volatile semiconductor memory device and a fabricating method thereof, which prevents a programming disturbance and enables to have a programming operated by a byte unit by achieving a programming and an erasing of a memory device through a F-N tunneling. A processor retrieves actual statistics associated with data stored on one or more servers in the multi-tenant database system. The orifice pipe has engaging jaws on two side surfaces, and the orifice cover has combining holes on two side surfaces. The trench capacitor is formed within the trench. The compounds have the formula I wherein R<sub>1</sub>, R<sub>2</sub>, T, R<sub>3</sub> and R<sub>4</sub> are as defined in the specification.

1459827085-4b94e75b-8d68-4636-92cc-7264bbf91aa1

A set of objects to be rendered by an identical rendering method is specified from objects which form a virtual space. A plurality of electrodes are operatively coupled to the case and exposed adjacent the case front and rear sides so as to electrocute a rodent upon contact. Each time the business logic accesses the cache for a dependent object, such as a read from the bit mask field of the new parent member, the version of the object checked in the cache and its identification may be saved on a dependency list. Selected audio characteristics of the audio signal, such as frequency, amplitude, time and spatial placement, are correlated to selected visual characteristics of the visual image, such as size, location, texture, density and color.

1459827085-61459978-533c-4845-9985-de1b3110f619

The present invention features a low-rider tricycle kit for converting a standard bicycle to a low-rider tricycle. A support carries an array of the whole or a chosen part of a complete set of oligonucleotides, which are capable of taking part in hybridization reactions. The first and the second stage circuits operate 180 degree out of phase with each other. For each of one or more domains, a subset of the text samples of the training set can be generated that the semantic parser has associated with the domain. The enhanced differential receiver is not subject to oscillation when not actively driven.

1459827085-86af5443-6639-465e-ae9-7251b9f1f543

A noise reduction method by implementing certain point-to-point delay is disclosed. In the method of inducing a mucosal immune response, the antigen-encoding DNA can encode an antigen that is expressed on the surface of infected cells during the course of infection. At least the first ferromagnetic layer may include a first layer in contact with the tunnel barrier layer and a second layer in contact with the first layer, and an orientation of the first layer with respect to the tunnel barrier layer may be greater than an orientation of the second layer with respect to the tunnel barrier layer. Associated methods are also provided.

1459827086-35d2e087-4b60-47ea-84d3-f26470f62967

An apparatus and method for searching a handwritten memo, which is input by a user using a digital pen interface, for a word corresponding to the user's query. In the process, two different averaging periods are employed to meet a long term bit rate target and to achieve a short term quick reaction. Certain members are continuously connected for common rotation. The method also includes navigating the three-dimensional image based on a first input received from the user.

1459827086-5b9fa43f-94a3-4843-a0b2-d814ffef44e0

A Flow Cell System that utilizes a Vanadium Chemistry is provided. At this time, a trench is not formed in a guard ring part. According to this construction of the working surface of the electrode only the projections make a contact to the recipient's skin. The implant of the present invention incorporates at its rear end, an engagement means to facilitate insertion or extraction of the implant. In the BGA type semiconductor device, the power supply or grounding wires are provided in the vicinity of the center of a BGA board to realize the high-speed operation and high integration density, whereby an electronic circuit or equipment using the BGA type semiconductor device can be made high in operational speed and made sophisticated in function. Said method includes: an Evolved Packet Data Gateway notifying a Policy and Charging Rules Function entity of the location information of a User Equipment ; the PCRF entity sending the location information of the UE to a Broadband Policy Control Function entity.

1459827086-80b0d136-cc08-4240-ab51-322785c4c082

According to the invention, there is provided a novel soybean variety designated XB21Z06. The RF data carrier comprises at least one diffraction element that has a dimension of the order of a wavelength of RF radiation and is responsive to RF irradiation, the response produced by the diffraction elements in the data carrier being indicative of machine-readable data carried by data carrier. After the lid panel is lifted up to the opened position by the foot operated unit, the motorized unit only generates the decelerating force to move the lid panel back to the closed position from the opened position in a hydraulic manner.

1459827086-b77e4554-fc84-4ce8-bda3-f64bfd2c573b

The output history of image data is made traceable when image data is processed while it is transmitted between an image processing apparatus and an external apparatus. The E-block is formed by providing feed stock along a planar orientation, drawing a portion of the feed stock out of plane to form an extension portion, and stamping the feed stock to separate an actuator arm member having a substantially planar actuator arm from which the extension portion extends, the actuator arm configured to support the readwrite head. A plurality of contacts received in the insulated housing and connected to wires.

1459827087-0c4ccf2d-b871-47dc-8114-f134cb2b36f2

An electrosurgical device for directing energy to a target volume of tissue includes a coaxial feedline having an inner conductor, an outer conductor coaxially disposed around the inner conductor, and a dielectric material disposed therebetween. A terminal adapter is provided at a customer premise and supports multiple telephony terminals, which may be associated with the same or different directory numbers. The addition of nitrogen to the microstructure of the gate dielectric promotes an amorphous phase that further improves the electrical properties of the gate dielectric. Each of the decision graphs corresponds to a conversation and includes a number of nodes, each of which corresponds to a portion of the conversation. A next step includes powering up and powering down the second processor under control by the main processor to synchronize the periodic timing of the second processor to that of the main processor.

1459827087-612fec68-b9f6-4596-8a0d-8c77ec5510a9

An axle bearing suspension system and method has a pair of elongated beams having an upper section and lower section with T-shaped cross sections. Picture elements in the environment of the individual picture element for each individual picture element of the image are additionally provided with mutually independent, second weighting factors that have a magnitude dependent on intensity differences or color differences of the respective picture element of the environment compared to the individual picture element. A compressible annular locking collar is positioned circumferentially about the fingers. Based upon a current value of the branch predictor entry, a predicted path for the particular branch instruction may be

determined.

1459827088-8b164061-4c52-448c-a571-65a16b6a1a60

A method of forming via structures between a first electrically conductive layer and a second electrically conductive layer. Using user profile information derived from online activity from one of the online access IP addresses, a television advertisement is selected, such as by using behavioral targeting or demographic information, and automatically directed to the set-top box indicated by the set-top IP address associated with that online access IP address. The aerosol assembly defines a cap member and an actuator member. A pressure pulse device is arranged within the conduit in a manner that the pressure pulse device is in data communication with the logging tool. The universal base may be used with the removable panels in place to support a conventional non-adjustable mattress or the removable panels may be removed and the adjustable modules substituted to enable the base to support either a headrest adjustable mattress or a headrest and footrest adjustable mattress. Thereby, after the release film is torn and the panties are worn by the user, skin-whitening, skin-color-lighting, and wrinkle-softening agents contained in the gel blocks can perform skin-whitening, skin-color-lighting, and wrinkle-softening treatment on the above-mentioned user's body portions, while not disturbing the user's daily life.

1459827088-9dcd87b7-89ee-4ec5-86bb-3dcb3f2d0d11

An apparatus for transporting an optical signal is provided. In the active area, a second semiconductor layer of a second conductivity type is formed in a first semiconductor layer of a first conductivity type. The process may desirably include curing at atmospheric pressures to reduce the expense and equipment required in carrying out the process.

1459827088-c30f60a5-b560-4380-9bd8-22405b404e7a

A computing system for reducing logging code includes a virtual machine configured to control the flow of operations in the computing system and a compiler configured to receive bytecode instructions from the virtual machine and convert the bytecode instructions into machine instructions. Automatic selection between available communication links including links provided through telephone handsets or other telephone infrastructure including wireless links and wireless integration with presentation and/or user/participant computers for communicating the \u201cgo to page number\u201d command is also provided. The aggregate has a first, temporary delivery shape, for delivery to an interior of said body lumen and to be subsequently subjected to a change of shape to a second shape, which is a tubular shape. The second format is visually different to the first format to a human but when captured and decoded by a mobile device, the second format produces the same decoded results as the first format. A beacon packet channel having a large output power and a data channel of which a transmission range is restricted by reducing an output power to be less than that of the beacon packet channel, may be simultaneously used. Finally, the silicon nitride layer is removed.

1459827088-e52a98e1-d9b9-4100-abe7-2141a1efbc2a

A pressure sensor includes a sense element port, a support ring and a plurality of interference fit slits to provide a flexible interference fit between the sense element port and the support ring to form a substantially flush lap joint. The articular surface repairs are customizable or highly selectable for each patient and geared toward providing optimal fit and function. A correction amount control portion 10 determines a correction gain value for the color information according to depth information that has been input. The array capacitor is provided with openings which are configured to enable pins from an IC package to pass through.

1459827089-165424d1-4266-4a36-8c73-8791c30988e4

Hydrophilic, multi-arm urethane polymers are described that are dispersible and/or soluble in water, and provide wetting, foaming and cleaning benefits for aqueous

cleaning products, including hard surface cleaners, machine dishwash, and liquid hand dishwash compositions. The receiving unit receives image data to be printed. The hydraulic system utilizes a directional control valve to direct flow between the source, the actuator, and the tank. The multi-layer valve system can be used to prevent a back flow of air and thereby maintain a static pressure differential between ambient air drawn in through an air ingress port and air forced into the inflatable membrane through an air egress port. The modified routers may initially run only the IP routing protocol and only commence simultaneous use of the OSI routing protocols if, and when, the router receives an OSI trigger.

1459827089-3c34d3fb-f2ab-4251-862a-3ba7f17ba162

A memory controller that controls data transfer between a volatile memory and a non-volatile memory, wherein data being held in a plurality of volatile memories each having a refresh operation mode and a self-refresh operation mode is transferred to the non-volatile memory. Embodiments of the invention incorporate hollow body having a diffraction grating thereon and an internal cavity to retain one or more lighting elements, and in some instances, to also retain one or more lengths of conductor. A rescue driver engages the grooves of the flat head and second indented area to remove the screw from the substrate when the grooves in the first indented area become stripped. If the result of the decryption matches the unencrypted information, the device trusts the signer of the credential. The timing device is configured to indicate the passage of a single duration of time or comprises zones that are activated in a range of prescribed times and individually or collectively indicate the passage of time or the passage of a range of times.

1459827089-52e0d5ca-0001-4f19-9ad4-6ed8f81538c1

An apparatus and method for detecting noise in a power supply voltage. The portable range extender has an engine, a dynamoelectric machine coupled to the engine by a shaft and electrically connectable to the vehicle, and a range extender controller for controlling operations of the range extender independently of the vehicle controller. A pulsed laser beam is focused within the substrate while the focus is translated relative to the substrate along a scan path at a scan speed effective to induce an increase in the refractive index of the material along the scan path. In particular, the architecture can regulate lossless application-level compression at that gateway or all of the gateways in the set as a function of the bandwidth utilization and/or the aggregate message load. The system clock on the chip is used as a temperature-independent frequency to generate a count. Pre-drawing the constructed slide in construction memory.

1459827089-b6cc0035-5b14-4963-8107-e5864bbd8057

A method of operating a fuel cell assembly and a fuel cell system use a simple construction to restrain deterioration of power generating performance of a fuel cell assembly at a startup in a subfreezing environment. When viewed from a direction perpendicular to the substrate plane the semiconductor device, the source electrode or the drain electrode covers at least one of a plurality of sites at which the perimeter of the gate electrode and the perimeter of the oxide semiconductor layer intersect. An output, controlled by a first variable-process-parameter control loop, adjusts according to the determined error value to adjust the parameter analog value and thereby reduce the error value at a response rate. By recycling substantial portions of the sludge, the concentration of these iron or aluminum species in the wastewater is increased.

1459827090-32e048ab-19f1-461b-84ef-94ff754c1f9b

The present inventor conceived of, among other things, a consumer healthcare portal to help consumers make well-informed healthcare decisions. The temperature of the Si single crystal substrate is raised to 270°C., a circulation fan is provided in a transverse junction between an outlet duct and an inlet duct, for a recirculation flow of supplied cooling air, whereby outgoing hot air from the electronics, when necessary, may be mixed with the cold air, so as to raise the

temperature of the cooling air to be supplied to the electronics. The cards are read one at a time inside of the dealing shoe, either before the buffer area or after leaving the buffer area, but preferably before the cards are being manually removed from a card delivery area.

1459827090-393da230-2b50-404a-851e-fc8e25d1e9d7

An emulsion polymer and a method for preparing the emulsion polymer by the free radical polymerization of at least one first ethylenically unsaturated monomer to form a first emulsion polymer and the subsequent treatment of the first emulsion polymer with a colloidal stabilizer, at least one second ethylenically unsaturated monomer, and a redox system at 20-85 C. When one display and control window is activated, the other display and control window is automatically reduced in size to such an extent that it is represented in its entirety on the interactive user interface without overlapping the display and control window. A mounting frame is located at least partially below the moving glazing panel and is configured to capture any water entering the vehicle at the moving glazing panel and to direct the water to a drain.

1459827090-3aa82cc7-9ef1-470d-9410-060061f27df4

A RRAM memory cell is formed on a silicon substrate having a operative junction therein and a metal plug formed thereon, includes a first oxidation resistive layer; a first refractory metal layer; a CMR layer; a second refractory metal layer; and a second oxidation resistive layer. An antennaless RFID device includes non-antenna conductive leads coupled to a chip. , using conventional equipment such as a conventional punch tool.

1459827090-4851e677-6d8e-4473-ab5a-98842e9ccd26

Provided are a flame retardant, a flame-retardant resin composition and an insulated wire that have favorable low-temperature characteristics, excellent cold resistance and high productivity. \u2018Darlington\u2019 is an iceberg lettuce variety exhibiting stability and uniformity. The startup delay circuit includes a signal generating sub-circuit that generates an output signal. The power is produced by relative vertical motion of the floating units, while each floating unit is simultaneously locked in the horizontal plane.

1459827091-35ab64ae-16df-4d28-8aac-3fe7ca74acec

A method and apparatus for modifying the perceived quality of a document or image. A light-shielding layer, having an opening surrounding the portion in which the contact hole is formed, and having no opening in regions between a plurality of adjacent pixel electrodes, is formed between the pixel electrode and the conductive layer. The secondary lines are shorter than  $\theta$ . An elongated member is disposed within the internal chamber between the main inlet and main outlet, and is biased towards the open position. The treatment process also includes controlling the contact time of the alumina process feedstock at temperatures in step to ensure decomposition of alumina trihydrate and alumina monohydrate.

1459827091-8fedea1a3-df7c-4854-8567-1e70251585cb

An imaging lens system includes, sequentially from an object side to an image side: a first lens having a positive refractive power; a second lens having a negative refractive power; and a third lens having a negative refractive power, wherein a viewing angle  $\theta$  satisfies following condition,  $\theta$ . The set of shifter polygons and the set of target features are separated into aggregates that are spatially isolated from each other such that the phase assignment in one aggregate does not affect the phase assignments in other aggregates. In order to optimize the gateway functionality within the subscriber, a provision is made that at least one of the communication controllers has an active interface via which the communication controller is connected to the peripheral bus and has a logic circuit for independently implementing a gateway functionality.

1459827091-bb63c980-b0a2-4a2a-8a10-9b3f5a6b2a68

Storage shelving includes at least two base elements consisting of an essentially horizontal base support and several storage grilles, whose side rails are arranged substantially vertically and whose grille bars run substantially perpendicular to the side rails. The invention makes use of the existing factory wastegate mechanism to form a fully adjustable turbine-inlet pressure relief. Subsequent encoding or decoding process is performed adaptively according to the long-term flag; and it is not always necessary to consider the LTP processing result, thus improving the compression performance of codec. The systems and methods described herein provide shorter residence time and high selectivity for hydrogen and carbon monoxide. Electrode contacts, embedded into the carrier so as to be exposed along an inner or concave surface of the spiral, thus wrap snugly around the modiolus, thereby positioning the electrode contacts against the modiolar wall in an optimum position for stimulation. The user may easily and repeatedly alternate suction and rinsing fluid through the suction lumen, i.

1459827092-0fb9f3cf-5f2a-4a87-bcfb-660d799d3f66

In one aspect of the invention, a system for processing data includes a memory operable to store a plurality of correlithm objects. When a user puts on the wristwatch-typed pedometer and performs exercise, the heartbeat signal from the heartbeat detector is received by a wireless heartbeat receiving circuit of a control circuit and transmitted to a data processing unit. The offset allows the seed to fall in the correct location of the seed tube to reduce or eliminate unwanted seed bounce and provide better seed delivery to the ground and better seed spacing as compared to flat disks without the offset. Simultaneously the control transmits a signal to the brake apparatus to actuate and stop the conveyor. In certain example embodiments, an anti-etch layer is provided on a glass substrate in order to protect the glass substrate from attacks by fluoride-based etchant, and an underlayer deposited by flame pyrolysis may be provided under at least the anti-etch layer. The method includes delivering a neuromodulation catheter within a vessel having surrounding nerves that innervate the liver.

1459827092-2cc3029e-3e04-469d-87ab-ac10c1e9c30f

An integrated hybrid energy generating system capable of converting wind and solar energy for use with an electrical generator. The sulfonium salt is used as a photoacid generator to form a resist composition which when processed by immersion lithography, offers advantages of restrained dissolution in the immersion water and less pattern dependence or dark-bright difference. A first part that has first elongated holes for a screw fastening to the engine and openings for a screw fastening of a second bracket part. Each of the LNAs may be configured for optimum linearity in different gain ranges, which may be proportional to the input impedance of the LNAs. At a position which is below the end of a gate electrode and at which misfit dislocations occur, the impurity concentration of the n type strained silicon layer and n type silicon-germanium layer is  $1 \times 10^{19}$  cm<sup>-3</sup> or less.

1459827092-d70d07f3-b365-427f-b282-2d6183120be8

A container for shipping and/or storing a stack of paper is disclosed. A UI content creation server 10, in response to the creation request, obtains information from an information server 30 and creates UI content and delivers the UI content to cellular phone 60. The holder element defines a channel for receiving the first ferrule and a socket aligned with the channel for receiving an optical component. The holder element further defines a first cable connector adapted for connection to the first connector and a first element connector opposite said first cable connector. The uneven portion includes a first recessed portion formed at a position spaced in the radial direction from the outer periphery of a through electrode or from the inner wall of a through hole, and a second recessed portion formed at a position spaced further outwardly from the first recessed portion. By means of using the zipper in production of the luggage, the process of making the

luggage can be simplified and the zipper can be well aligned with the half shells of the luggage, enhancing the yield rate in production of the luggage. Heating assembly includes an electrically powered resistive heating element wound through armature slots of the stator.

1459827093-f92485c3-5f4e-470d-8832-b4bf00b098a6

A hanging organizer and storage device includes a semi-rigid pad or pad sections encapsulated in a fabric material with a circumferential wire reinforcement and a hanging hook construction attached to the top edge of the organizer for suspension from a panel or door. The translucent cover is disposed so as to cover the boundary portion and overlapping with both of the plurality of display panels which are disposed adjacently. The entire tool substrate and substrate-to-support structure joints are then resin-infused simultaneously through the use of rota-molded tooling aids, providing an additional reduction in cost. An insert is attached to the bottom of the main plate. An optimization assistance tool analyzes the design and constraint data and the report data to identify potential problem areas.

1459827094-809665bd-d365-4f0b-8745-f32a02f6f576

Embodiments disclosed herein generally relate to the use of low concentration additives comprising a terpene and a cetane improver in diesel fuel to rapidly promote fuel atomization and air mixing in the combustion chamber and thereby increase the fuel efficiency and reduce harmful NOx and particulate exhaust emissions. Various sensors separately provide disparate analog signals representing different measurable attributes regarding the sensed object. An indicator is positioned in the upper wall of the housing and has an indicator arm and a visual indicator. A method for treating fabric is provided. DC decoupling elements are arranged between the amplifier and the microstructure. The seat back is supported by the cover member so as to move forward and be located in its rising position in front of the seat cushion and behind a front seat located before the rear seat according to a forward rotation of the cover member via the lower end pivotal connection to the vehicle floor.

1459827094-ac5b9f0d-09e0-4cc0-b2ce-98e562334730

An arbitration device arbitrates among master devices such that each master device is allowed to access a shared memory at a predetermined bandwidth, and the arbitration device permits an access request in a first period that a designer has set as desired if the access request has been made by a specific master device beyond a bandwidth that has been allocated in advance. Further the communication apparatus includes a communication controller, an Internet communication controller and a network communication controller. , the Internet, network-distributed advertising in which advertisements are downloaded, from an advertising server to a browser executing at a client computer, in a manner transparent to a user situated at the browser, and subsequently displayed, by that browser on an interstitial basis, in response to a click-stream generated by the user to move from one web page to the next. The flow diversion device is configurable between a first configuration and a second configuration, such that when the flow diversion device is in the first configuration the first fluid flow port is communicated with the second fluid flow port. Specifically, the sliding window filter calculates an upper confidence bounds and lower confidence bounds for each data point using each of the multiple data windows that includes the data point. The nozzle includes: a housing having a generally cylindrical space formed therein, the space forming a gas flow passageway; a rod-shaped conductor disposed in the space and operative to transmit microwave energy along a surface thereof so that the microwave energy excites gas flowing through the space; and an impedance controlling structure which adjusts the impedance of the nozzle.

1459827095-2d4c5718-3326-4c6d-93a6-4f28d02a2d5f

According to typical inventive practice, a cable is grasped by a Kellum grip and is positioned through the topside \u201cV\u201d-notch of an \u201cM\u201d-structure.

The memory stores a set of data representing program code and/or an operating value for printer control. Hence, a spray face in the form of a tile having an array of outlets can direct spray in a variety of directions, or be parallel to a mounting wall for decorative purposes. Each of the row components is coupled to one of the individual tubes. Conventional, such as attenuating, rigid geometry, and unconventional collimators, such as x-ray optic, configurable, Compton scatter modules, can be selectively employed with detector modules and radiation sources. Exemplary materials for providing the temporary electrical connection may comprise a conductive film or tape, a conductive or conductor-filled epoxy, resin or RTV adhesive-based materials, a water-soluble material impregnated with a conductive filler or non-reflowed solder paste.

1459827095-c3b30321-07a0-49b4-9c46-f3500bcd0a35

A drain snake device having a rotatable handle crank at one end and an interlocking opposite end. The interchangeable piping sections having a common length and are connectable to the backbone piping via standardized interface flanges. The outer tubular body completely overlies the distensible stent. The item thus carries its own destination address and can be transported to a specific processing device that corresponds to the destination address. Doped silicon may form the monolithic structure to provide the voltage necessary to run the system. The design tool also includes a schema to dictate how functional operations within the service definition model are to be specified.

1459827096-0959f890-f4ed-4bb3-9096-910df0c58482

A method generates one or more linear blends. The modules have a set of performance parameters whose values specify the sensitivity of each module to the selection of certain resources of a system. A bale that is bound by one or more wires is transferred by the conveyor system to a position proximate the de-wiring station. The first region of the first and second semiconductor layers are in electrical contact with one another through a first opening in the second insulator layer.

1459827096-0fe83210-77e6-493a-a8d6-8361aa30db9c

A modular prefabricated deck system which includes a plurality of rectangular flooring modules. For example, determining what optimizations to use may consume significant processing power and memory on a node. During a second time period, data is transmitted at the second frequency band and received at the first frequency band. If the measure exceeds the threshold, the neighboring property values in only one of the two predictions directions are used for calculating the prediction.

1459827096-623b8e58-da60-4f2d-bfda-8d98fe4b5f51

Structures, systems and methods for transistors utilizing oxide nanolaminates are provided. The devices, which contain NOCC, are adherent to the mucosal tissue, allowing localized drug delivery. One of the links of the reclining mechanism is a backrest support link that moves in concert with the backrest between the upright and reclined positions. The apparatus also includes at least one process resource table. The experience provider can create an experience with a variety of dimensions and features. A carbon particle having an average particle size of from about 1  $\mu\text{m}$  to about 50  $\mu\text{m}$ , a degree of stabilization of from about 0.

1459827096-a76ccf18-5b18-4023-b8f7-df1fdd04be99

A sliding board includes a board body made of a light material, and at least one reinforcing unit mounted in the board body to reinforce a structural strength of the board body and including a plurality of reinforcing bars which are connected serially to form the reinforcing unit. Shock absorbing portions and hard portions are provided in an alternating fashion on at least a part of the outer peripheral side surface of the frame portion. The standard RF module may be adjusted, configured, or both during manufacturing, which may eliminate calibrations, adjustments, or configurations by customers. The pressure brazing may be performed

with the determined pressure brazing parameters to complete the fabrication of the rocket engine nozzle. If K is odd, in ST207-ST212, for sequences that cannot be paired, one of sequence numbers, which are not currently allocated, is allocated.

1459827096-c01bf05d-af0f-48d1-8365-447f91f91a42

A system and method for providing financial account messages to customers while accessing web sites is disclosed. A wash-out apparatus or element is adapted for temporary or permanent insertion between a liquid source pick-up point and where the fluid may exit the system. The agent learning system communicates with the external environment in an artificial economy through on-line auctions.

1459827097-0a3fcae2-9d8e-4da4-9e5c-d4716cf52de6

A Conveyorable Plastic Thermoformed Pallet, having a support member and support legs with outer walls, internal walls and inner walls, is utilized to transport product on a conveyor system. By including free-form optics and waveguide technology, the volume and weight of the display apparatus can be reduced, and an optical system can be realized with improved image quality, structure, and performance parameters. The heat pipe is positioned so that when the temperature of the engine exhaust is too high, the excess heat may be transferred away from the thermoelectric conversion device to the heat sink via the heat pipe. The wear resistance is increased while providing a lower coefficient of friction by the wear resistant layer relative to a coefficient of friction of the downhole equipment without the wear resistant layer.

1459827097-56da2cb0-b4f1-4425-bbe5-181ab6c1ca7f

A method and apparatus are disclosed for releasing functional units in a multithreaded very large instruction word processor. Pharmaceutical compositions containing the subject compounds are also disclosed. The feedback circuit is connected to the differential circuit. Any of a variety of known digital signal processing techniques can be used to normalize the component audio files. When the flaring surface and the tapering surface contact each other, the grab ring module compresses the surface of the pipe.

1459827097-a6ea4fc6-fbc9-472b-a6be-ae0c205134a

The light emitting device package of the present invention has a longitudinal direction and a transverse direction perpendicular to the longitudinal direction, and is provided with a first and second lead-frame lined-up in the longitudinal direction and molded resin holds the first and second lead-frames integrally. The first recording apparatus includes a recording means for recording an AV stream, a generating means for analyzing picture types of respective pictures and generating trick play information, and a transmission means for transmitting the AV stream to the second recording apparatus with the time information. The delivery amounts are added to stock amount parts data corresponding to the shared and optional parts. The keypad has an opening in the user interface area for receiving a speaker, and a navigation input key may be positioned over the speaker. The boot files may be authenticated by the client before execution to create an operating system.

1459827097-fdeabfff-7496-42f0-84b0-3bb9737fa298

Two components must be aligned to each other in the pitch, roll, and azimuth axes. The glass flux comprises two lead-free glass compositions. Thus, the muffler has a plurality of chambers of different sizes providing noise attenuation at a plurality of specific tuned frequencies, and the liner provides broad band attenuation. Spray of paint from the canister may be initiated, for example, electrically or using a suitable mechanical actuation linkage. The assembly includes a division bar mountable in a vehicle rear door window opening to create at least two air passages on opposite sides of the division bar within the vehicle rear door window opening, to thereby minimize wind noise generated during movement of the vehicle when the vehicle front windows are closed with the vehicle rear windows being opened. The engagement member includes projections or dimples which engage receptacles on an

engagement member to secure the stand in a desired arrangement.

1459827098-836b9ada-cd17-4423-8584-a4889afb933

A paper web reeled on a reeling core is affected to form a reel at least by means of the torque of a reeling cylinder and the nip load, wherein in connection with the reel change a new reeling core is brought in nip contact with the reeling cylinder above the reeling cylinder, together with a change device especially a so-called gooseneck. In one aspect, the assembly may comprise a receptacle member having sidewalls and a back wall so as to define an opening wherein the receptacle member is adapted to be positioned in the back of the vehicle seat. The terminal portions are inserted into respective through holes of the circuit board, the circuit board having a pattern circuit at a surface layer thereof and a conductive metal core at an intermediate portion in a thickness direction, so that heat of the metal core or of both the metal core and the pattern circuit is absorbed and transferred to the terminals. A relief valve may also be located in the fastener and connected to the fastener port, or in a different fastener having a separate fastener port, to permit the fluid in the hydraulic circuit to be discharged to a sump. The compositions are derived from at least carrier having at least two hydrogen bonded hydroxyl groups, organoaluminum compound, Lewis base, and Bronsted acid, wherein the Lewis base and the Bronsted acid form at least one ionic Bronsted acid.

1459827098-b1368f02-9c39-4552-a927-5fd8ed8008e0

The present invention related to oligonucleotides for use in amplifying and detecting HIV nucleic acid in a sample. The device comprises a reticulation portion including a plurality of struts connected together in a singly staggered configuration distally along a longitudinal axis. The formed-in-place gasket is formed of a cured elastomer having a cross-sectional cavity for allowing the formed-in-place gasket to compress upon engagement of the cover and the disk drive base. The composite tapes exhibit favorable tunability, low loss and tailorable dielectric properties, and can be used in various microwave devices. Hence, transistor elements with extremely shallow PN junctions may be formed on the basis of pre-amorphization implantation processes while substantially avoiding any undue side effects typically obtained in conventional techniques due to stacking faults.

1459827098-e90b7e91-6b54-4db1-9d77-14ca0dc652d1

One embodiment of the present invention includes an optical cavity, a source to provide light to the optical cavity, a sensor to detect the light and generate a corresponding sensor signal, and a servo device including a feedforward input and a feedback input. The method also consists in automatically forming digital images of the top of the stack at a certain rate, the digital image of each article of the top of the stack including a sorting indication. The decompiler API may accept a data stream, which includes a representation of the object, and output a copy of the object. The mapping rule may enable multiple messages to be successively written to the same block in a solid state drive without an erasure operation. An operator's response generates a second result. The invention also prevents premature eviction of cache lines still in use, such as lines allocated by the run-ahead prefetcher but not yet referenced by normal execution.

1459827099-08463ac5-c412-4c17-a6ba-8ab68e366f03

On the top of a central protrusion 81 of a stationary electrode substrate 80 there is formed a stationary electrode 84A. The side walls tend to deflect outwardly while under pressure, but are supported externally by a support system such as the walls of a cargo hold. Since the LCD's display section has a smaller outward form than the LCD, the LCD module is fixed to the case using the fixing sections on the side faces of the backlight module so as not to affect the LCD display section.

1459827099-5e27292e-a972-487f-8423-2346d8f46a49

A transportable play design assembly with an open operative position, an

alternative closed position and which may be folded to enclose play items therebetween when play time is concluded. A processor maps a controller workspace with an end effector workspace, and effects movement of the end effector in response to the movement of the input device. The selected web-based application component is provided along with a snippet of code for integrating the selected web-based application component into the web-based application. The fixation member may be locked in any one of a plurality of intermediate points between the first configuration and a maximum second configuration. The blade is so formed as to define means for mechanically retaining and electrically connecting the electric wire, and which act on an end portion of the inner conductor.

1459827099-7b7a5be3-4870-49d9-8626-41c05c493064

A method and system for provides a user with an ability to capture a sample of an experiential environment and deliver that sample to an interactive service to trigger one or more predetermined events. A locking device is arranged in at least one of the bus bar chambers for automatic locking engagement with the associated bridge contact, thereby to retain the bridge contact in engagement with the associated bus bar. The invention also relates to a specific interaction between the S. The conductor may also be deployed to couple or cross-couple cavity resonators in a filter implemented in a broadcast- or base station.

1459827099-ac49eb89-61f6-47e4-93c6-7a4073fd6683

The invention provides a cross section evaluating apparatus capable of analyzing the cross sectional structure in a state where the temperature of the specimen is regulated. The system may be commercially available as a kit, or may be available as kit components which can be purchased as needed. The delay locked loop is implemented to measure the period of a reference signal and to mirror the period into a second delay line such that an adjusted reference signal having a frequency approximately equal to the frequency of the reference clock may be generated. The boot is configured to maintain a sufficient level of vacuum within the fuel storage and dispensing system.

1459827100-22419bae-0950-49a2-917d-c1c45a18082f

In a fluid heating apparatus, a heat protect temperature sensor indirectly detects temperature of fluid heated by an electric heater adjacent to the electric heater. The hood isolator comprises a bracket with a mounting plate, a front plate and an intermediate plate therebetween. Four end panels connected to the side panels may be folded together to form a bottom for the carton when in its assembled condition. The ratio of the focal length of the projection lens to the focal length of each of the lens groups is such that  $|F1F| > 5, 0$ . The belt cleaning system may also include a second cleaning assembly positioned after the first cleaning assembly in the direction of travel of the conveyor belt.

1459827100-2e5fa6d4-646c-4d47-ae9b-282ee6bf84ee

Techniques for shape clustering and applications in processing various documents, including an output of an optical character recognition process. When a subscriber accesses a telephone function of a system coupled to the public exchange, the system develops a relationship between a component of the system allocated to the subscriber and the identity of the subscriber. The user then enters data describing each selected product. The lens seat covers and encloses the image sensor with the connecting section of the bottom of the image pickup cylinder sealedly attaching to the periphery of the top face of the package of the image sensor. In this method, the yaw angles of at least a subset of wind turbines of the wind farm are ascertained, an average yaw angle is established from the ascertained yaw angles, and a yaw misalignment of the wind turbine to be checked is identified by a deviation of its yaw angle from the average yaw angle by more than a threshold value. When depressed, power is transmitted to the ducted fan for vertical lift.

1459827100-f772e9ff-9a8f-4c20-9fb5-c563c8a681f0

A virtual recovery server is described herein. The display device includes a LED light source, a light diffuser positioned over the light source, and a lighted display screen mounted over the light diffuser. The driving circuit uses an amendment value corresponding to a difference between a given characteristic value set in accordance with the electro-optical element being driven and a center value of a range that can be taken by the electronic volume value to amend the electronic volume absolute value, thereby generating the electronic volume value. For example, the dispenser can include an additional button for manual operation of the pump. The dummy undersea hydraulic coupling member has a water displacement expansion chamber with a piston therein that allows trapped water and/or air to move from the receiving chamber to the water displacement expansion chamber during connection of the dummy coupling member to the opposing coupling member. If they can, the update module calls an update function in all registered modules which then change their parameters to those set by the new configuration file.

1459827101-20d24474-8107-426f-83e1-67a1ac36ead1

A system and method for determining a risk root cause are provided. A door opens and closes one side of the print unit to install and remove the developer cartridge. A second x-ray image of the area of interest is acquired using spatial x-ray modification to control an x-ray to pass through a portion of a patient corresponding to the area of interest.

1459827101-442d093b-a0a0-40c0-a058-bc404e86a4c4

Opportunities to transmit ATM cells of identical level onto an ATM line are equally afforded to respective terminal side lines. An interim gate electrode stack formed includes a top silicon portion patterned from a second silicon layer, a sandwiched oxide portion patterned from an etch stop oxide layer, and a bottom silicon portion patterned from a first silicon layer formed on a gate dielectric layer over a substrate. A sliding-window correlation is applied to the received symbols represented in the frequency domain to detect frame boundaries for multi-carrier signals.

1459827101-44c85cba-9193-412d-aa2b-c5dd7ddc661a

A liquid ejection apparatus includes: a passage unit, a piezoelectric actuator, a drive signal generator, a driver, a voltage value changing unit, and an interval setting unit. A tone signal detection part detects data representing an echo signal of the tone signal transmitted by the tone transmission part, and detects data representing a predetermined tone signal targeted to be detected. The hinged portion is pivotable with respect to the stationary portion about at least one hinge. However introducing lines of weakness may result in cavities and holes which are subject to moisture ingress and problems associated therewith. An accessory supporting pocket may be secured to an exterior of at least one of the flexible sides.

1459827101-69a47d5a-5ce6-4bec-9abf-46dd5f2f50b3

An ultra wideband loop antenna having a planar antenna element defining an at least semi-elliptical perimeter having a major axis, a minor axis and a center. The distance information may provide an indication as to whether or not the tracheal tube is properly placed within the trachea. The washer provides a leak guard opening that receives the oil plug of the oil pan.

1459827101-8fb8abc1-8e56-47e1-8735-221732859d3c

An anti-resonant circuit arrangement for an antenna wiring system, the anti-resonant circuit arrangement including a first electrical component having a connecting area and a second electrical component, wherein the first and second electrical components combine to produce an anti-resonance effect. When higher levels of noise are acceptable, the envelope tracking transceiver dynamically adjusts transmitter parameters to achieve better power efficiency while sacrificing noise performance. A first bait receptacle is disposed above the combustion chamber

with bait being disposed in the first bait receptacle such that the heat from the burning candle warms the bait receptacle to evaporate bait into an electrified grid.

1459827101-c79bd2c4-f20f-495d-ae66-de635e995271

An image processing system includes a fixed-type game machine and a hand-held type game machine. For example, content from an electronic book can be displayed in a graphical user interface. The ditherer is further configured to vary the time period between generating the indicia corresponding to the plurality of impulse trains. Each design view has a unique format relative to the other design views and includes for each pin in the embedded circuit design, at least the HDL pin name, the associated schematic pin name, and a signal direction associated with the pin. Manufacture is further simplified by molding, casting, or thermoforming the lens.

1459827101-f5ff49cd-a9e1-45d0-b282-464c225f3e21

A kit comprising the items needed to build an emergency shelter in the flexible-form rammed earth style, and a method of packing the items for shipment. The base plate includes a guide that guides the coupling of the restriction member to the base plate. In a measuring device for this purpose, a plurality of detectors are provided for wavelength regions directly adjoining one another. , the Mobile station Status Indication Bits defined by Release D of the IS-2000 standards, indicate whether the mobile station is capable of increasing its reverse link data rate, and may additionally indicate whether the mobile station has enough data for transmission to warrant a higher rate. Thus, the laminated wave plate 1 functions as a desired retardation \u039332 in a wavelength from 600 nm to 800 nm as a whole. In this manner, the computing device may control the actual force applied to a sewing body part to a desired force which depends upon the positions of related body parts.

1459827103-32d81baf-7a97-4a91-97a3-2fa59d2a40fc

Systems and techniques for creating a circuit abstraction are described. Ideally, the electro-luminescent structure comprises separate red, green and blue micro-panels providing full color capabilities. A command and control processor causes the selected dental image to be retrieved from the storage device and then displayed on a display monitor. A different channel is selected from the plurality of multiplexed channels as the reselected RTrCH when a better candidate transport channel in the ON state becomes available, or when the monitored RTrCH reflects an OFF state. The generator generates verification module code based on the interpretation of the stream of tokens representing the IO information of the hardware descriptor language code and the rules interpretation.

1459827104-2c8b5076-78c4-4ce1-823e-cdc09cc56b6f

Methods, systems, and computer readable medium for providing translated web content. The preferred polyimide is made using a molar excess of diamine which is end-capped using an anhydride. Expression vectors and isolation procedures for CBS, or derivatives thereof, and CBL, or derivatives thereof, are also provided as well as test kits for carrying out the assay.

1459827104-4d78ebf5-aa81-4db3-af74-edf62463a8de

The system and method of the present invention provides an innovative bus system of lines which can be programmed and to provide data, control and address information to the logic circuits interconnected by the bus system. A conducting polymer plug is formed over the exposed metal terminating pad. Further, the system includes a server for managing the advertising material provided to the display location, and a plurality of input sources connected with the server to provide scheduling information and the advertising material to the server for scheduling display of the advertising material on the display location. The entries of the database index are normalized to exclude precision. In order to improve the connection between cylinder floor and function block, the cylinder floor has at least one cylindrical

outer connection area into which the pressure medium lines that lead to the work chambers open to the outside and onto which the function block is placed and attached with a sealed through-hole, into which the pressure medium lines of the function elements open. A through hole for guiding the developer from the developer container main body to outside.

1459827104-68aab582-eb4a-4adb-9319-e2c004d1b6f3

A motheye mold fabrication method of at least one embodiment of the present invention includes the steps of: preparing an AI base in which an AI content is less than 99. Providing the viewer with notice of the switched channel reduces viewer confusion. In one embodiment, the tool includes a user interface layer, a business layer, a data layer, and a database.

1459827104-9be669e3-0dd3-49a1-a6a4-8ef43bbdc5e9

Disclosed herein is a portable digital communication device usable as a gaming device and a personal digital assistant. Each performance level has an associated processor utilization. Leaves of each pair in the second set are disposed in an opposed relationship and longitudinally movable relative to each other in a second direction generally parallel to the first direction.

1459827104-ba93ad40-47f7-4081-82c8-4f0a605f8129

The present invention relates to a process for preparing secondary amides with good selectivity by carbonylating a corresponding tertiary amine with carbon monoxide in a reaction mixture in the presence of a metal catalyst and in the presence of a halogen containing promoter. The method comprises providing a free end support engaged with the free end to stabilize the tire building drum by restricting lateral movement of the free end; and freeing the free end by temporarily retracting the free end support when desired, e. The contact lens chamber can be closed using removable chamber caps each of which has a flexible compressible cavity in whose center is mounted a flexible cap membrane that faces and isolates the chamber.

1459827104-c98c83e1-67f7-48f6-b532-2e03961f0485

A drilling tool includes a tool shank disposed about a center longitudinal axis. The first lens element with positive refractive power has a convex object-side surface. The process provides for the reclamation and reuse of the immobilized enzyme even when a further particulate solid is present in the effluentproduct stream. The equipment jacks may facilitate temporary connection of cables for testing or patching signals to the network elements. The catalyst may further comprise a support modifier to improve selectivity for the desired product. The redundant multiplexer is used in a semiconductor memory configuration having redundant bit lines for replacing faulty bit lines.

1459827104-cbc5ae13-bcc0-4184-a5f5-35512c30337a

An approved method and apparatus for detecting partial discharge events within a transformer comprises asserting a MEMS acoustical probe through the wall of the transformer to optically measure partial discharge events. The hole cleaning nozzles of one drill bit define a projected fluid path disposed at a lateral angle of less than six degrees in order to achieve a large impingement pressure on the hole bottom. The intermediate layer has the Curie temperature TC2 which is lower than those of the other magnetic layers. Pixels of radials radiating from the center point of the image are detected for detecting blemishes in the image.

1459827105-0c80f323-e531-4155-b20a-77dcea2f0fd0

Tubulars are joined to each other without rotation of the tubulars. The weight percent of the elemental constituents of this first alloy and a second or target alloy are obtained, and the ratio of the percentage by weight of each elemental constituent in the first alloy to the second alloy is determined. To generate valid postage indicia the virtual meter software is executed on a first computer while it

is in communication with the remotely located second computer. In this manner, an inexpensive cover can be installed on existing shelf systems without disassembly. The frequency spectrum may be modified by modifying characteristic one or more of the frequency bands.

1459827105-5d1be071-8ed5-45c7-aa69-e0b7f3eb6184

An elastic core fiber is caught to prevent production of a core yarn having no elastic core fiber. A cleaning fluid-feeding head integrates a cleaning head portion and a fluid-feeding head portion. Ceria is the preferred oxygen storage oxide. A control knob, which is attached to the tip of the cam shaft, may be turned to control the rotation of a switching cam which sets contact points to on or off positions. A method for forming the elongated spiral antenna uses a predetermined formula to form arms of the elongated spiral antenna. The second step constructs a correction function that shifts the position of frame image of each frame with respect to the frame center to compensate the error.

1459827105-cab4a68c-bb2d-4418-870b-47b2c010297b

A radio resource management technique in a cellular telecommunication system is disclosed. The BAU has a GBus trace unit and an IO bus trace unit, each with its own trace logic. The weld head includes means for securing the flanges within the weld head and further include bias means. The field winding has less inductance. If the available end system decides to instruct an intermediate system to forward certain traffic from a certain source to the end system, the end system can advertise the flow information to intermediate systems.

1459827106-53cf15b1-e8fb-4e17-8720-6ae14ff7ba30

A method for booting up a mobile phone quickly is disclosed. The building-related data, including building management system data and configuration data associated with the building, is associatively stored in a database. The user then presses an authenticate button, which causes both devices to enter a low transmission power mode. The write section writes the new path metric data and the path selection data in the path metric memory and the path memory, respectively. A controller causes the intermediate transferer to rotate continuously and causes the primary transferer to apply the primary transfer bias until a toner image forming area on the outer surface of the intermediate transferer passes the primary transferer after the secondary transfer.

1459827106-ce7a9826-0c7b-4e19-a238-eb174ba43f14

The invention relates to a device for the time-controlled intravenous administering of the anesthetic propofol by means of a method used for determining an adequate dosage profile and adequately controlling an infusion pump as a metering apparatus. The gas specie selectively form and etch a buffer layer that protects underlying etch stop materials thereby providing highly selective etch processes. A method comprising disassembling data objects, efficiently de-duplicating, securely storing and retrieving backups in shared servers on a public network, and controlling retention. In another aspect, the electrode is electrically connected to a metal component that permits electrical connection of the surface acoustic wave device to an electrical device external to the surface acoustic wave device.

1459827106-f6372ded-42fe-4aa0-b677-7d53543d0c34

An adjustable bed skirt, for use with a bed having a mattress and a box spring, includes side panels having a non-slip portion, and end panels also including a non-slip portion. The club head includes a hosel having an upper treaded portion and a lower portion with a faceted cross-section. The scanning device is configured to scan the ion beam in a transverse scanning direction.

1459827107-0a474251-2ab6-4af8-ac46-94e75ee6cd38

Described herein are compounds with affinity for the 5-HT<sub>6</sub> receptor, which have the general formula I: . The fastener is capable of bearing tension, shear, and bending

stresses and may be installed in a simple aperture or hole formed in the support. The dumped information is stored in a memory associated with the dump system.

1459827107-8508b3fc-af0b-425e-a31f-bad388d1d723

An iterative scheduling and campaign management process uses a WFM system and a CLM system. The comfort system comprises a base section having a pair of sides, an upwardly directed section having a pair of padded sides, and a pair of padded headrests located on respective sides of the upwardly directed section. The first trench and the second trench have different widths and different depths. In the examples, the material with the doped semiconductor nanophosphor dispersed therein appears at least substantially clear when the lamp is off. The first electrode and the third electrode can generate an electric field in the direction perpendicular to the substrate in the liquid crystal layer. A terminal acquires the synchronization for a first downlink component carrier by detecting a primary synchronization signal and a secondary synchronization signal in the first downlink component carrier.

1459827107-edbf8735-7c1c-4d5e-97f1-2d8a9fe0f074

A backlight module includes a light guide plate, at least one light source, and a reflective plate. The main body has a light emitting surface, a light reflecting surface, and two opposite end surfaces. If the transmission quality is adequate, the mobile unit switches from a primary speech coder to a secondary speech coder. A section of the jacket strip is cut off, wherein during the cutting operation, the support edge and the at least one cutting tool are advanced along with the jacket strip. The hypoid gearset is selectively disconnected from being driven by the first driveline, the second driveline or the wheels when the synchronizing clutch and the power disconnection device are operated in disconnected, non-torque transferring, modes. Compounds of the general formula are advantageous precursors for preparing phospholane catalysts, especially bisphospholane catalysts.

1459827107-ffff7a4d4-bb44-40bd-915b-83019a0b7e3a

The present invention provides a porous structure of fibrin or fibrinogen material. The rotational position can be detected by a magnetic marking system. According to some embodiments, the airfoils and enclosure are of integral unibody construction.

1459827108-225c6577-abd4-4aab-a839-10f011a723a3

A circuit that may be used to support testing of a memory block. The fuel cell comprises a fuel gas flow passage for supplying a non-humidified fuel gas from a side of a first surface of the ion exchange membrane, and an oxygen-containing gas flow passage for supplying a non-humidified oxygen-containing gas from a side of a second surface of the ion exchange membrane. The movable aperture member is actuated by a lift assembly comprising a lift ring and lift supports from the lift ring to the aperture member. The signal light input/output end includes a pump wavelength reflector that reflects the pump wavelengths back into the gain medium, but is transparent to the signal wavelengths. The method of use may include the steps of placing a feedstock into an upper portion of the refractory stack, measuring the temperature of each columnar cavity, and adjusting the flow of oxygen to a particular columnar cavity to maintain the temperature of the particular columnar cavity within a particular range.

1459827108-85cb1330-2ce7-49a7-894a-caf6f792453d

Nonvolatile memory elements are provided comprising switching metal oxides. In order to detect foreign bodies in the material in a targeted manner and to differentiate them from each other, so all or only the unwanted foreign bodies can be, for example, eliminated, the beams have two defined and different wavelength ranges and the reflected beams are simultaneously and jointly detected from the two wavelength ranges. The method includes selecting a total luminance level, determining a first current flowing when a first sub-pixel is energized causing the OLED pixel to emit light having 13 total luminance. The open end portion of at

least one of the outer and inner cylindrical covers has a shoulder which is placed in line contact with the open end portion of the other cylindrical cover to secure portions of the outer and inner cylindrical covers installed on an end side wall of the housing. Further, the electronic control unit changes the value of the heat capacity used to estimate the temperature of the thermo wax depending on the variation of the estimated temperature of the thermo wax across the phase transition point of the thermo wax so as to preferably control a switching valve which is operated by heating the thermo wax.

1459827108-8bdbac33-b420-4892-bea9-5ce81018f5d6

A baseball and softball practicing apparatus includes a stand, a housing mounted on the stand, a ball throwing wheel mounted in the housing, and a feeding member mounted on the housing. According to one aspect of the present invention, a method for updating firmware associated with a memory storage device includes providing new firmware to a host and sending the new firmware from the host to a reader which communicates with the host. The first body includes a first end, a second end, and a middle section.

1459827108-ae28bef8-7a1d-41cc-8db2-aec8b7ea9f37

A method for setting a color location is provided. The process includes both recovery of hydrogen already in the stream by membrane separation and PSA, and production of additional hydrogen by steam reforming of the hydrocarbons. The torque transmitting devices include three clutches and three brakes actuatable in combinations of three to establish each of ten forward gear ratios and one reverse gear ratio.

1459827108-ef17d1ad-d5da-4c36-9bdc-e90bdbb546fb

A process to increase the area of microbial stimulation in a process of methane gas recovery in a multi seamed coal bed methane dewatering and depressurizing production system by first utilizing an underbalanced multilateral drilling technique. The apparatus includes the liner assembly in place with the identifying indicia visible from the interior of the main pipe line. The server is configured for: receiving the interaction data from the handheld display device; identifying a page description corresponding to the interaction data; retrieving display data using the identified page description; and sending the display data to the handheld display device. Data is stored for a queue allocation table that maintains a plurality of buckets to which received packets for a flow are assigned and indicating which of a plurality of resource queues are allocated for respective buckets. When arranged at the selection position, each movable body allows the suction portion to apply suction to the movable body and allows the wiper corresponding to the movable body to perform wiping.

1459827109-59bc1ef0-21b5-4c69-98fa-82d6926ee690

A system and methods of the present invention advantageously provide efficient mail processing and handling that, as compared to existing procedures, enhances detection within the mail being processed or handled of biological, germ, chemical, or other harmful agents. The rack includes a bracket which is adapted to be fitted on an elongate support frame. In another aspect, a structure includes a substrate having a top surface, the substrate including at least one pit having a base lower than the top surface of the substrate, and a semiconductor material having a bottom surface formed on the base of the pit. A difference sinogram is generated for each image in the identified subset of images by subtracting a first sinogram of the high density feature from a second sinogram of the original image. At least one bearing member is disposed between the sensor housing and the rotatable shaft for limiting relative axial movement and allowing relative rotation between the sensor housing and the rotatable shaft. Also disclosed is a method for treating a human female in need of 17 $\beta$ -estradiol and a contraceptive method by oral administration of the pharmaceutical dosage unit and a method of preparing a pharmaceutical composition that may be used to form the pharmaceutical dosage unit

of the invention.

1459827109-c1f98bd2-9161-45b6-bbd8-7929d46e99d0

The invention relates to avionics equipment including a motherboard, at least one daughterboard and, for each daughterboard, two supporting slides attached directly to the motherboard and bearing the daughterboard. At least one of the electrical devices is preferably a battery operated device. The memory device additionally includes a second layered structure stacked in the vertical direction and comprising alternating topological insulator layers and insulator layers.

1459827110-03d2c8f1-c3b8-4c3b-b98e-7e4711392cdd

A vehicle seat assembly having a sliding seat bottom, a slide lock mechanism, a seat back pivotally mounted to the seat bottom, a pivot lock mechanism, a walk-in pivot release actuator, a fold-flat pivot release actuator and a blocking member. The branched radio frequency multipole comprises multiple ion channels through which ions can be alternatively directed. The power converter also includes a power converter controller configured to receive a signal from the load indicating a system operational state of the load and enable a power converter topological state as a function of the signal. The connecting rod further includes a piston pin bore surface extending about an inner circumference of the pin bore opening, and the lubrication passage extends through the shaft from the crankshaft pin end to the pin bore opening. Furthermore, according to the traveling direction of the vehicle at the intersection, a display pattern of several captured images to be displayed is determined.

1459827110-3732bc6f-62a1-4c44-aace-674bdc1a886c

A head-up sight for an aircraft having a curved windshield. The concentrated peracid solution produced is sufficient for use in a variety of disinfection and/or bleaching applications. The CCD camera picks up images of fuse 14 in the electric junction box 12 as a subject of the inspection. A common bus between the synchronizing converters includes a sync line and a common phase control line. The cover member preferably has an upper member, a front member extending from the upper member and a pair of side members extending from the upper member. The arrangement enhances the repeatability of reading in the sub-scanning direction and image input can be made with a better resolution than the intrinsic resolution of the image input apparatus.

1459827110-7b128052-1e63-453e-b20f-65a3d3bb4b62

A system providing an inductive power and data link between an external transmitter and miniature internal receiver is presented. The semiconductor facility contains processing apparatuses, installation tables and an installation floor. The support member includes first and second flanges extending out therefrom. A set of configuration rules accessible by the PSM defines the manner of processing by the PSM on the serial data streams.

1459827110-9ec5d100-68c4-434b-bd93-ec7fddc56cf3

Methods and systems for providing light weight client sessions. The cardiac device may be, for example, an implantable cardioverter/defibrillator, cardiac pacemaker, or combination device that communicates via a radio frequency link with a drug delivery device. The compliant element exhibits deformation consistent with the first substrate and a second side having been pressed together. Alternatively, the hose is formed with a corrugated portion having uneven characteristics in its circumferential direction with respect to tensile strength in the axial direction.

1459827111-794204c0-5cef-4011-883e-42fbcf392edb

A tire pressure mounting apparatus is provided including a pressure sensor for sensing the pressure in a tire. The camera can be secured to the bar using the camera's tripod mounting hole. Then, as IP Sec is performed on outbound and inbound datagrams, the NAT function is also performed. Therefore, the insulating member

incorporated in the lithium polymer battery can enhance the safety of the battery.

1459827111-942eca57-a725-4e68-95c8-6902e5b23aba

A system receives a voice search query from a user, derives recognition hypotheses from the voice search query, and determines scores associated with the recognition hypotheses, the scores being based on a comparison of the recognition hypotheses to previously received search queries. The process can include distilling an unconcentrated aqueous hydrazine solution into a starting binary solution, distilling the starting binary solution at a pressure where a concentration of hydrazine in the binary solution is greater than a concentration of an azeotrope at the distillation pressure, and recovering the anhydrous hydrazine. In addition, the nematic liquid crystal composition has an augmented birefringence and a dielectric anisotropy. The flash unit further includes a support stand mounting bracket that is adjustable relative to the base of the housing.

1459827111-b593721f-3a96-42ad-9c8c-847689f51071

Methods for floorplanning a hierarchical physical design to improve placement and routing are provided and described. The method enhances illumination on micromirror array devices by applying a selected optical material between a package lid and glass substrate of the micromirror array device, the selected optical material having a refraction index that matches the refraction indices of the package lid and the glass substrate. Then, peripheral driving circuits are provided in regions where the interference fringes exist and a pixel matrix circuit is disposed in a region where no interference fringe exists.

1459827111-f314909c-1dce-403d-b334-e18fab17a8db

A method comprises gathering intravascular photoacoustic data using a transducer inserted into a vessel of a patient. An application developer can define security settings declaratively at the object, interface, and method level using a graphical interface. At least one fiber web is corrugated to form the gas channels and rolled up to form the filter body, and the cross section of at least a portion of the gas channels changes from an inlet end to a discharge end. Further, the method comprises simulating a first simulateable partition in the given group responsive to one or more input stimuli to the first simulateable partition.

1459827112-589e9aa2-e226-4f53-9838-79aebdc3feed

An amplification circuit comprising a first filter and an LNA. There were at least a few hundred entries. Further a holder supports the aiming indicia and is attachable to the archery bow.

1459827112-6a290de1-ce7c-4bd8-9d2f-3805fe15f7b2

An electrochemical sensor is provided that includes a housing having an outer wall, a plurality of longitudinal walls disposed within the outer wall, and a reference chamber housing a reference electrode. Firstly, a mask having an opening is placed above the display panel and the opening corresponds to the location of the cracks of the circuits on the display panel. The error estimation unit of the time-interleaved ADC system includes a counting unit, a subtractor and an integrator. Each imaging unit further includes a controller adapted to select a mapping table corresponding to the focal distance, and a mapping unit adapted to map the image into the particular coordinate system according to the selected mapping table.

1459827112-8dedd739-d18a-4cae-9394-8ec94d21a30f

An apparatus for generating copyright information for a secondarily processed content obtained by performing secondary processing on an original content, includes a secondary processed substance acquiring unit, a default license information generating unit, and a license information editing unit. The pipeline A-D conversion circuit is connected in series with an input terminal to which an analog signal to be converted is inputted and has a plurality of stages. The grounding metal member is located in the depressed section and includes a first

conduction portion. Each of the first and second printing sections represents a module detachable from the central control section and can be replaced with another module providing a printing section capable of accommodating printing on different type of paper.

1459827112-9a761acd-39f8-4d28-b376-4ca0b3a071d7

Disclosed is a strength-enhancing apparatus for a metal part comprising a recovery mechanism for sucking powder flow dust generated from glass beads crushed on a surface of a gear in a chamber to recover it together with drainage, wherein the recovery mechanism includes a liquid-spouting means arranged on a ceiling in the chamber, for effecting showering for the whole interior of the chamber. The apparatus is comprised of a clamping plate upon which is mounted a frame clamp and a frame deflector assembly. The thickness of the layer is determined using a plurality of measuring and evaluation steps in which the coil is acted upon with a first alternating current frequency  $f_1$  and a second alternating current frequency  $f_2$ , and its change in inductance is evaluated.

1459827112-bcf15bc3-f6dd-417d-8d96-1104a51c7951

In one embodiment is provided a polymer blend of poly and poly, wherein the poly is present in an amount ranging between about 20 wt % and about 80 wt %, and poly is present in an amount ranging between about 80 wt % and about 20 wt %, based on the total weight of the blend. The apparatus is adapted to uniquely identifying a user and includes an interface for electronically entering into a memory a chess move made by the user. Furthermore, alternating layers that consist of transparent fine particles each coated with a film composed of a film compound reactive with the first coupling reactive group and the reactive transparent fine particles may be bound and fixed thereonto. The elastic material constituting the second adhesive layer is arranged so that the elastic material is in a bonded state with respect to at least a part of the surface of the heat storage layer opposed to the cavity portion. A communications load of the network team is distributed between each one of the plurality of communication ports in accordance with its corresponding priority. These image features are compared using a tolerance based method to determine whether the symbol matches the template.

1459827112-bd60131c-3b68-4ad5-9bc1-cbca105630ea

A flash memory storage system has a plurality of flash memory devices comprising a plurality of flash memories, and a controller having an IO processing control unit for accessing a flash memory device specified by a designated access destination in an IO request received from an external device from among the plurality of flash memory devices. The bottom warp yarns are interwoven with the bottom weft yarns. A first high speed network is coupled to the sensor array and receives and communicates the image data. The housing arrangement encloses a plurality of accessible, watertight sub enclosures disposed within the left and the right half housings for safe containment of emergency gear therewithin, to provide floatation and safety to mariners even when the housing is removed from the motor. In one embodiment, an optical amplifier is provided using optical coatings at the facet ends of a waveguide formed of erbium-doped III-nitride semiconductor materials. The memory array has floating gate transistors disposed in a triple well structure with a raised drain bit line 13 substantially vertically aligned with a buried source bit line 14.

1459827113-013895f6-9482-442a-bf2f-855a05c01250

A technique is provided for automatically adjusting the volume, or magnitude, of an audio signal. One or more locked cells of a group of cells do not scroll out of view at least while a portion of the group of cells is viewable in a given display view. Preferably, the joint includes an interlayer of a ductile material, for example, a nickel, copper, silver or gold layer, which helps to relieve thermal stress between the frame and the central portion. subthreshold, linear, and saturation. The plug is fit in the first open end of the cylinder. The deenergizing

coil is included in series with the motor for bringing the relay switch element in a non-conductive position when a current through the deenergizing coil and the motor exceeds a threshold value.

1459827113-57bf56f0-e0d0-422c-b31a-dce7cb3ba087

An integrated infusion management system provides for stable support of components attached to the system, even when the system is mobile. The present invention is further directed to methods of forming multilayer circuits utilizing the above composition and the use of the composition in high frequency applications. The recess has a center point and may be employed for mounting and centering the blade on a slicing device. The water from the charged syringe piston discharges into the reaction vessel that has been filled with a preselected amount of reactants to initiate the carbonation reaction.

1459827113-60c3dc2f-efdb-428f-a96d-a25a8f7c1257

A phased array antenna includes a plurality of subarrays, and each subarray includes a panel, a plurality of primary antenna elements positioned on the panel, and at least one pair of sensor antenna elements positioned along a perimeter of the panel. It uses the axial section of the top wall of the main body to further press and limit the pressing member and enhance the engagement between the first teeth portion and the second teeth portion to prevent the second teeth portion from being damaged and increase its life time. The method involves hybridizing to the nucleic acid sequence of interest a first hybridizing nucleotide sequence and a second hybridizing nucleotide sequence, each comprising a sequence complementary, or complementary except at a position of interest or variable position, to a nucleic acid sequence of interest, and analyzing the whether some, all or none of the probes or tags hybridize.

1459827114-9b3d6565-7dc3-4b09-a33c-bb101989679d

Methods, apparatus, and computer-accessible storage media for shadowing data stored on a local store to a remote store provided by a service provider. The meter comprises a processing system for selecting one of the multiple types of power and defining the same as the selected type of power. The platen includes a second rib disposed between one first rib of the pair of first ribs and the contact portion with respect to the scanning direction, and an upper end of the second rib is located lower than the upper end of the one first rib of the pair of first ribs and higher than the lower end of the contact portion.

1459827114-b5a49293-d79d-4999-8119-339b9fab5b89

The present invention provides a correction system and method for a Successive Approximation AD Converter of the prior art. From the comparison source image, a plurality of partial regions are extracted. A mounting may be provided for mounting the switch using a fastener, a tie member or an adhesive member. Each predetermined harmonic response is associated with a severing of the sensor at a corresponding known location thereof so that a match between the actual harmonic response and one of the predetermined harmonic responses defines the known location of the severing that is associated therewith. Compound then reacts with an amine to form compound, which is optionally converted to its salts of formula. In order to ensure a variable film transfer in different printing units of the printing press, up to now the transfer film supply roller is moved with a film module into the region of the desired printing unit.

1459827114-d63d922f-a726-48dc-8ccc-1908071fff733

A method and communication system system) that uses adaptive antennas at the base stations to monitor metrics associated with the quality of one or more common physical channel timeslots, so as to determine whether to reuse some or all of the CPCH timeslots to transmit a dedicated physical channel. The instruction compressing apparatus includes a bundle code generating unit, an instruction compressing unit, and an instruction converting unit. The barrier is formed on the

support member after electrically connecting the circuitry of the dies to the contacts of the support member. The generated weight data is used to weight each of the antenna elements A-1\U2013A-4. An adhesive tape-like gasket is interposed between an outer periphery of the end plate and an inner surface of a sleeve so as to cover an outer end portion of the slit. The fruit firmness renders the fruit well amenable for handling, shipping, and storage.

1459827115-03291b94-d989-4fc7-b864-20c708686b45

A sensor wire system with an integrated power source and wireless transmission is provided. A driven-side outer gear and a driving-side outer gear of a planet gear are meshed with and are driven together with the driven-side inner gear and the driving-side inner gear, so that the planet gear changes a relative rotational phase between the driven-side rotatable body and the driving-side rotatable body. The decoding unit decodes a compressed video to generate video header, a motion vector, and a DCT coefficient for each frame. A plurality of mounting features are provided along a carrier engaging surface of the ring. The rim liner splines mate with the hub splines.

1459827115-7a2ebdf1-d81d-467d-a3de-fead310489bf

The present embodiments relate to a system and method of measuring the methylation level of DNA. The first end is adapted to engage and stabilize the connector. Each depression of the first mold cavity has a depth equal to a desired wall thickness of a corresponding portion of the club head.

1459827115-86f77323-d547-4d97-881b-5ced730d64de

A method to build, manage and analyze a gap analysis model in software of safety instrumented system architecture for a safety instrumented systems in a facility. These are suitable for stimulating chondrogenesis and/or producing cartilage regeneration. The generator includes a power supply terminal, a grounding terminal, and an internal output terminal. Advantageously, the auxiliary tray can have substantially the same structure as the first carrier unit, except it has no beverage-receiving holes.

1459827115-a903d537-01ab-4ad1-ac1e-021b9413eab4

A strictly increasing function is implemented to generate a plurality of unique creation stamps, each of the plurality of unique creation stamps increasing over time pursuant to the strictly increasing function. According to the invention, the pre-amplifier is operated such that its amplification during a rise phase within the amplification phase rises gradually and uniformly from the minimum value to a maximum value. The embodiments provide a way of allocating beacon slots, such that one of the beacon slots is synchronized to the alternating current line cycle and thus functions as a master timing sequence. A refrigerating part uses a refrigerant other than air in order to remove the heat generated from the power supply line. The FOFP block is used to transfer the visible light from the scintillating layer onto the image sensor array, which in turn converts the visible light into electrical video signals.

1459827115-e5f97af2-df84-4f66-a3fa-81a5e7715b8b

The present disclosure provides an electronic device having a USB interface and a method for starting USB communication with such an electronic device, so as to solve the problem of a risk of damaging a mobile phone terminal device arising from sharing of an interface by a charger and a USB communication cable in the related art. Parts to be riveted together are aligned with each other, and a rivet is placed into aligned holes. When the door is in a first position, the compartment is closed, and when the door is in a second position, the compartment is opened. The ring cases may be stacked in series, and may be clamped together by a tie-bolt case. An encapsulation material covers the first die and the first bond wires, while a gel material and a lid cover the sensor die and the sensor bond wires.

1459827116-11ce2be7-9ac9-414a-8da5-0586e2aba9c3

An apparatus including at least one LED mounted to a printed circuit board, a reflector including at least one heat stake, and a mounting plate comprising at least one aperture for receiving the at least one heat stake. The system can comprise tail-end portions of projectiles that add structure to a cartridge, provide for efficient combustion, allow projectiles to transition from a straight configuration in the cartridge to a splayed configuration in a chamber, and ensure complete evacuation of the chamber. Each EMI protection module includes two inductors respectively installed in the two wires of the respective two-wire channel and two capacitors connected in series between the two wires of the respective two-wire channel and grounded for filtering resonant waves in low frequency as well as high frequency to prevent electromagnetic interference and to enhance signal transmission stability. The metal layer may be a flat sheet, a lattice or a comb-like structure.

1459827116-336dcebd-bcba-4de4-8c75-b5d724d1a4c5

A system is provided that monitors at the wellsite injection of additives into formation fluids recovered through wellbores and controls the supply of such additives from remote locations. The comparator generates a PWM signal by comparing a reference signal and an amplified audio signal. The ion exchange agent attaches to surfaces of the corrugated cardboard which serves as a carrier to sanitize and deodorize a stall. Accordingly, flux leakage may be reduced and the bottom case may be secured to the top case.

1459827116-85f8d678-3610-458a-8ae5-ddbebd5b5094

A method for supporting the urethra of a patient to treat urinary incontinence includes introducing a surgical implant through an incision in an upper wall of the patient's vagina. Particles sputtered from the target are deposited on a deposition substrate separate from both the ion source and the sputter target. The housing component is of particularly compact design.

1459827116-8bd6e460-ad2f-4960-baa5-8e12e4bd63a2

A wireless communication circuit is disclosed including: a transceiver for transmitting and receiving signals; and a control circuit coupled with the transceiver for controlling a switching circuit to switch the transceiver to a first antenna set for a first time period and then to switch the transceiver to a second antenna set for a second time period in a test period. The characterization of requests for items of information is applied to select one of a plurality of communication channels for servicing the request. A press is coupled with respect to the housing. This stored data enables the cache controller to proceed to servicing other access requests while waiting for response from the external memory. In addition, the disclosed systems and methods may include receiving calendar data. The transmitted information is used in settlement of the sales amount.

1459827116-8e821768-7d6f-4754-8cb1-e034200c1295

A protective garment, such as a surgical gown, includes a front portion, a back portion, and sleeves. The method estimates the covariance matrix of the signals received by the antennas of the array and derives therefrom a direction of arrival. Further, the inflatable bladder has an instant release valve which, when pressed, will instantly release the pressure within the bladder. The measuring body includes at least one set of indicia linear measurement lines that allows a user to evaluate changes in dimensions of areas in the horse's hoof. An engaging piece which is movably disposed on the seat carrier or on the underframe, is provided with teeth devised for engagement with the sector gear and is disengaged from the sector gear as long as the vehicle seat is subjected to normal load.

1459827116-e343560d-b9de-41de-81e6-7dae253e9a63

A method for preparing a functionalized polymer, the method comprising providing a

reactive polymer, where the reactive polymer includes an oxygen anion, a sulfur anion, or a nitrogen anion, reacting the reactive polymer with carbon disulfide to form a polymer including a dithio carboxyl group, and reacting the polymer including the dithio carboxyl group with a blocking agent. A bilayer reactive barrier is formed on a titanium aluminide substrate. A pair of lead wires extending from the voice coil are passed between the yoke and the diaphragm, and led out of the frame.

1459827117-895115ee-d8f8-4345-8a97-8a20d498aefe

A signal interface includes a support structure having a pivotally supported cover and side wings. The first member and the second member constitute a housing of the compressor. The method can be implemented utilizing a reader including an RF transmitter and one or more acoustic receivers along with typically a substantial plurality of transponders each containing an RF receiver and an acoustic transmitter. Thus, the stator structure is located between the cover and the base.

1459827117-aa3f7546-f399-4c8e-a62a-2a9ebf274852

A turbine bucket dovetail secures buckets in a turbine rotor. The shutter section has a shutter blade that opens and closes an optical path of an image pickup optical system, an actuator that drives the shutter blade, and a case that accommodates the shutter blade and the actuator and that is provided with an opening for the optical path. Once inserted into the cradle, the adapter module makes electrical contact with the connector in the cradle with a matching connector on one side of the adapter module. Monitoring a sample for a target chemical and/or composition can be carried out with the sensor switch. 6 to 10 weight percent of the base film, has a median particle size from 1. The temperature measurement data transmitted from twelve temperature sensing units can be received by one receiving station.

1459827117-eda5ea5b-6775-4e3b-8e8e-9cda53486829

A tarpaulin for a quick and safe covering of a load on a truck or trailer bed is provided having a post positioned at each corner of the bed including a pulley mounted on top of each post at the front of the bed. A similar user is a user that has a correlation to another user based on their preferences and behaviors. A capacitor line low select signal VSL or a capacitor line non-select signal VSC having a higher electric potential than an electric potential of the capacitor line low select signal VSL is supplied to the storage capacitor line. A stabilizer operationally coupled to the bag so the stabilizer to stabilize the bag.

1459827118-20f38c3d-fdae-4146-aca2-97fe63c5baba

An inkjet printhead with an array of nozzles 26 and corresponding heaters 10 configured for heating printing fluid 20 to nucleate a vapor bubble 12 that ejects a drop 24 of the printing fluid through the nozzle. The invention also includes derivatives of these complexes including aptamers, and analytical methods and devices using same. The photosensors in the two rows may have different light collecting areas. This cavity is then filled with an environment-sensitive dielectric material to form a sensing capacitor between plates formed by the metal adhesion layers or an array of contacts from other metal layers of the CMOS structure.

1459827118-23d46bbe-6dcc-445c-9b92-5149774c7a40

Devices and methods provide for enabling a user to use a single user authentication device such as smart-card reader, such that the user is capable of securely interfacing with two or more isolated computers and enabling the user to authenticate and remain authenticated at multiple computers at the same time. The method records user preference information, prestored in the optical disc player, which is associated with a first recording medium, onto a second recording medium, when copying data recorded on the first recording medium, such as a DVD-ROM, onto the second recording medium such as a DVD-RW. Each buffer on the chip is configured

to buffer the header of the packets in a preselected order before execution in the processor, and the remainder of the packet is stored in an external buffer apart from the chip. An interlayer dielectric layer is formed on the substrate where the contact pads are formed and is then partially etched to form contact holes exposing the contact pads. The prohibiting device prohibits the volume level from being adjusted under the state that the movable member is located in the prohibition range. After a difference between the partial pressure of the impurity gas in the anode and the partial pressure of the impurity gas in the cathode becomes less than a predetermined value, the restriction of the output of the fuel cell is lifted, and the output of the fuel cell is controlled according to the requested output.

1459827118-49f902a5-1111-429c-b2dc-3621242791d7

A non-volatile semiconductor memory EEPROM is usually deteriorated depending on the number of times of program and erase operations and application years thereof. In one embodiment, a method includes but is not limited to monitoring for a presence of a first general conference controller having top provider status, and promoting at least a second general conference controller one level in status hierarchy in response to the monitoring indicating that the first general conference controller is no longer viable. A hooking head slides along the elongated member.

1459827118-5fd20002-a157-47f5-8726-7c91bf08ea9b

A mud flap mounting system for connection to a mud flap mounting bracket of a vehicle that allows release and reinstallation of mud flap when it is pinched between a rotating tire and an obstruction. The vise has a threaded rod, a fixed jaw, and a movable jaw as is known in the art. The source code of to user-selected language is stored in objects of the existing application and, if the language is a compiler language, the compiled code and the compiler itself are stored.

1459827118-fc00994d-8989-4e5e-94bd-48b0175a115e

A method of inputting an electronic address into an address field on a communications device, the electronic address including a plurality of text characters and non-text symbol characters. The main body surrounds the edge of the solar cell. The flows, initiated by a central processing unit, may proceed independently and substantially at their own pace. In addition, the invention relates to a device for remote control of a vibrator, comprising a vibrator, which is provided with a Bluetooth interface, and a second Bluetooth apparatus, wherein the second Bluetooth apparatus is provided for generating remote control signals and/or remote programming signals for the vibrator.

1459827119-274ac65f-8116-4bfd-89b4-2ae683e29585

A method and apparatus for red blood collection and filtration is provided wherein a red blood cell collection assembly provides for leukoreduction filtration concurrent with or soon after the red blood cell separation and collection procedure. A system pushbutton is coupled with a motor control. The operator arm may define a gear. The card authenticates the message by means of the allocation algorithm as a function of the allocation key and the allocation signature, and determines the final authentication key as a function of the intermediate key and the random number.

1459827119-67db20bf-7fd5-41c9-a385-ff40c4143aab

The system and method for detecting disconnection and occlusion of a tubing system of a patient ventilator detects disconnection of the tubing system, opens the exhalation valve, delivers an idle flow of breathing gas to the tubing system, disables breath triggering, and generates an alarm. The composition dries rapidly, permits further texturing before it dries if desired, is esthetically superior to faux finish top coats made by methods in the prior art, and when dry provides a top coat that is mechanically tough. The inventive method may be modified to include an additional process of weighing the equipment before lowering the equipment by measuring the amount of force required to hold the equipment in an elevated

position. The electronic document and the signature document together comprise a signed electronic document.

1459827119-8849d24b-eec2-4559-9d8d-0887730c76c2

A device driver for an image capturing device. After that, the slurry after sieving is dried by means of the spray drying to obtain dry powders, and the batch for forming is obtained by using the dry powders. The frame buffer may be implemented within the array controller and may be configured to perform a first data integrity check to determine a first type of data error and a second data integrity check to determine a second type of data error. The rotor blade or bolt-and-washer distribution provides locations for placement of the rotor blades or bolts-and-washers so as to offset the centerline deviations and thus correct imbalance of the rotor assembly. A limit member and a turning wheel are embedded on the internal rail and the bottom rail opposite to the latch member. Below the bubble support platform is at least one light source.

1459827119-95d607ee-8de2-483a-a9ca-8ef47391a088

Optimization of the usage of radio resources in mobile telecommunication systems, particularly during the call set up stage, is accomplished by using a bearer allocation method, which allows late allocation of resources without increasing the risk of not obtaining the desired resources. A set of predetermined playing cards is used to determine values that determine the outcome of bets. The system then looks for groups of these likely fraudsters who are interconnected. The pin base is mounted in the chamber and corresponds to HDMI and Displayport plugs.

1459827120-4d83d156-8023-45db-8f61-d46372e9a153

An orthopedic retaining system comprising at least one bone screw which has a head part and a threaded shaft pivotally mounted thereon is disclosed. The energy object includes an identifier associated with an energy resource that is associated with a manufacturing automation application and an energy type associated with the energy resource. The motor rotates the motor driven shaft which drives translational movement of the screw block which drives rotatable movement of the valve driving linkage arm which drives translational movement of the valve stem.

1459827120-f7c1dbac-c807-40c9-a4a2-e87323f3687f

A tuning element tunes an optical component by adjusting the length of an optical fiber used within the optical component. The blade has an elastic body and a leading edge which contacts the surface of the photoreceptor downstream from the cleaning roller. The non-slip surface exposed surfaces having an increased coefficient of friction to inhibit the movement of items present on the non-slip surface. In one embodiment the sensor may be arrayed to achieve larger area coverage. The first connecting tab is electrically connected with the threaded hole via a screw. In this disclosure a layer-2 hand-off mechanism for cellular systems designed to operate in unlicensed spectrum is described.

1459827121-26fdde9d-625e-488a-9daa-28b97c648a97

A feminine hygiene pad has a wider absorbent forward pad portion and a relatively narrow rear portion. In particular, the feeding unit includes a feeding member that is adapted for moving frozen block for a desired predetermined grinding stroke against grinding unit such that a grinding length of block is ground. A central conical bearing may be provided, having a fluid dynamic bearing around its conical surface, and being connected to an axially parallel but radially displaced axially oriented journal style bearing.  $0:Mg2u2212nnu2003u2003$  where  $n$  is a numerical value satisfying  $0 \leq n \leq 0$ . And, select locations in the document and, using the toolbar, add commentary and scores to the document. Also included are methods of making and using these co-stimulatory polypeptides.

1459827121-2c5f6dcd-87bc-4861-a837-9dfa686aaa96

A system for protecting an internal combustion engine employing cooled recirculated

exhaust gas from excessive condensation includes an auxiliary emission control device operable to determine when engine operating conditions correspond to a condensing condition resulting in condensation of water at the outlet of the EGR cooler and/or within the intake manifold or intake conduit of the engine. In particular, the systems and methods for providing remote access to interactive media guidance applications provided herein generally relate to enhancing remote access capabilities by providing algorithms and techniques for managing and correcting disparities that may be found between program listings data used by the interactive media guidance application and the remote access server. Responsive to the first network interface card determining that a first threshold has been met indicating that an overload condition is imminent in the first network interface card, the first network interface card sends a resume signal to a second network interface card in the set of network interface cards.

1459827121-2d832c1c-2c3f-4a10-98d7-3c1107ce024d

An oil film bearing is seated on the tapered neck of a rolling mill roll by a hydraulically actuated piston/cylinder unit. Disclosed features and specifications may be variously controlled, adapted or otherwise optionally modified to improve release and/or re-establishment of a vacuum seal for any application or operating environment. The second pulley can be rotated in a second direction of rotation, starting from the second reference position. The second interface controller is configurable to function as a host or a device. Further, the motor has a rotor rotating centering around the shaft and having rotor magnets made up of permanent magnets disposed in a confronting relationship with salient poles of the stator magnetic poles.

1459827121-c4deab0f-d992-4d2c-a134-587a94900e01

A sensor apparatus has a coil for receiving an electromagnetic wave energy applied from outside, a power supply section for generating an internal power supply from the electromagnetic wave energy, and a sensing circuit having a sensor device mounted thereon. A liquid pressure in the pressure chamber is configured to be changed to discharge liquid from the nozzle. The pressure sensitive adhesive layer can be a permanently grown pressure sensitive adhesive that has an adhesion force to the breast forms that is greater than a cohesion force to the user's breasts. The collimator lens arranges the entrance pupil of the reduction projection optical system at a finite position from the image plane on the downstream side of the image plane of the reduction projection optical system. The driven shaft is provided at an upper end with a surface aerator and at a lower end with a horizontal impeller. The method then includes filling the passage with a conductive material.

1459827122-80129622-d6f1-4969-a5e5-8e858e6baea6

A pad area and a method of fabricating the same, wherein the pad area is formed on a substrate to contact a chip on glass or a chip on flexible printed circuit with the substrate. The antenna aperture is designed to withstand hydrostatic pressure cycles as would be experienced by a submarine. The invention may rotate in a positive or inverse direction to meet different requirements without loosening off.

1459827122-9673091e-e602-47cb-b9ef-d8121d8eadcc

An article attachment system for a vehicle includes an elongated rail attached to the interior of the vehicle. The exhaust valve is completely independent of the bolt movement. This process provides a veil with a very high tensile strength for low proportions of binder.

1459827122-b8cf6bb5-6895-484a-a20d-49abcbfe2d14

Software for dynamically previewing changes to hardware driver settings for a graphics adapter is disclosed. An exemplary method for fabricating an integrated circuit includes forming a channel region and a body contact overlying and/or in an SOI substrate. The null subspace is similar to the channel subspace except that the

null subspace information directs a base station to the matrix in a predefined codebook that results in minimum power being received at the node. The electrical connection system further includes a plurality of inductive traces mounted on the circuit board, each of which is connected to a respective contact pad, and is associated with a compensating series inductance.

1459827122-e6bf9127-cc1a-4b79-81da-52a6e0768945

A toner conveying device includes a pipe body having an inside diameter thereof that is modified in a pipe-axis direction and a screw member coaxially located in the pipe body for feeding the toner. The ionic bonds can be produced by introducing cationic or anionic groups into the cyclodextrins, and where appropriate, by introducing oppositely charged groups in the carrier material. In some embodiments, the membrane contains trace amounts of carbon, silicon, and/or oxygen. The magnification of the condenser is chosen so the image of the source is essentially the same size as the pixelated panel. The compartments may be of different shapes and sizes and may include electrical circuitry to modulate the voltage and current from the vehicular electrical system.

1459827123-07b82d8f-ccee-4245-9b0d-710eacc54ff7

A communication system for propagating time division multiplexing fault notifications has a first interworking function of a packet network and a second IWF of the packet network. The MEMS switch includes a substrate having an electrical contact and a hexsil beam coupled to the substrate in order to transfer electric signals between the beam and the contact when an actuating voltage is applied to the switch. The system also includes a control input device having a plurality of selectable controls to select the mirror assembly, the first mirror, the second mirror, and/or the heating element.

1459827123-289f9813-ae16-4ef2-8f01-783b39121e15

A method of loading cutting tool inserts in a PVD coating equipment consists in using a tube manufactured of a non-magnetic metallic material surrounding a stack of alternating discs of a magnetic material and iron. It employs a combination of electronically controlled process steps and specific systems configurations to duplicate the effects of moving resin beds from one operating position to another as is required in moving bed ion exchange water purification systems. The impedance of the wired connection is changed based on data to be provided by the slave modem. As a result, deflection electrodes can have an angle of  $120^\circ$  to minimize aberrations and simultaneously achieve vertical incidence of the electron beam on a target to avoid distortions or changes in magnification with height variations of the target or focus variations. The barrel portion 157a of the busbar 157 is welded to the sealing plate 41, and the length of the projecting part 257b is minimized. The portion 14 is held in a portion indexing area, or corral 20 on an upper surface 22 of the scale 10.

1459827123-9286af97-898b-4a90-9434-97d80d3e3b49

A measurement technique that provides a full solution to the gated local oscillator sweep measurement and improves the accuracy of signal analyzers in gated sweep mode by pre-sweeping the local oscillator at the beginning of a gate pulse and over-sweeping the local oscillator at the end of each gate pulse. The assist roller receives and guides media through a gap between the assist roller and the optical window. Such low latency applications may include voice over IP, video, interactive whiteboard, or video teleconferencing. The stiffeners and the liner panel are preferably made of steel and the stiffeners are welded to the liner panel. The use of thin conformal low dielectric constant insulating layers ensures a low parasitic gate capacitance, and reduces the risk of shorting gate and source metallurgy when source-to-gate spacings are reduced to smaller dimensions.

1459827123-ceed279b-7675-4b09-abe7-055e417ee1ae

Provided herein is a biocompatible implant for meniscus tissue engineering. The

present invention can provide a semiconductor device in which a reduced number of sector select circuits is used so that the area of memory cell array can be reduced and provide a method of controlling the semiconductor device. At least one bond pad is positioned on an active surface of the die, and a gold bump is provided on the bond pad; furthermore, a ball bond can be positioned upon the gold bump.

1459827123-efd1aa6f-b265-4979-8934-16bdb65654ed

The method executes the application and if there are no errors from the execution of the application, the method ends. The imaging device can be used as part of a catheter, and can include a lens, an SSID including an imaging array optically coupled to the lens; an umbilical including a conductive line; and an adaptor configured to support the lens and provide electrical communication between the SSID and conductive line. Repositioning of the drivepositioning wheel assemblies is controlled by a computer numerical control controller, based on information describing one or more radiuses of curvature for sections of the mandrel and a current position of the mandrel relative to the drivepositioning wheel assemblies. The first end portion is transparent to light.

1459827124-091ea098-1854-4bc5-ba92-b9d5a21e7edc

The present invention relates to device for driving liquid crystal display and method for driving the same. The method provides for a lower complexity in parameter configuration and greater ease of configuration over a wide range of network conditions. A first partial structure can be expanded at least in the radial direction and has at least one radial-expansion component. The elastic device is preferably hollow and controllably expandable and contractible by injecting and removing a fluid through a conduit system with a selectively switchable valve device. The undergarments are configured with standard leg openings.

1459827124-1c19c3d1-7180-47c6-8fe7-f51e0f5f34a7

A dual-wheel remotely controlled skateboard with two independently-controlled detachably attachable wheels is described. Based on output signals from the first light receiving element and the second light receiving element, a focus error signal FE1 and a focus error signal FE2 are prepared respectively. Moreover, a field component further enables a caller to identify characteristics of the voice mail. The has a lower surface contacting the convex surface of the movable contact, an upper surface opposite to the lower surface, and an outer edge held between the upper case and the lower case while being compressed. After fueling is complete, the fuel purchasing account is debited by the amount of the fuel purchase.

1459827124-29f48121-b6ef-46a8-8770-9983b6afd89a

The present document relates to a method and system for dimming low power illumination devices, such as LED assemblies. The load forecasting application may include a database for storing information and a report module for generating energy usage load forecast profiles. The rear half of the fuel tank has a tapered shape toward rearward as viewed from the side.

1459827124-59d42ac9-bab6-48a4-88a4-a52674ee62ff

High fence supports can be expensive, difficult to ship, and awkward to install. An outer surface of the first vertical wall portion is an inclined surface that is inclined to the second vertical wall portion, and one of an outer surface of the first vertical wall portion and an inner surface of the second vertical wall portion includes a protrusion portion that protrudes toward the other. The microelectric package may further include a metallization seed layer on at least a portion of the stress relief layer and a conductor on at least a portion of the metallization seed layer.

1459827124-9d55d68f-22f1-4e25-a32f-19ead715610e

The invention concerns granules consisting of lactose and starch having a

friability of less than or equal to 80%, preferably to 60%, according to a test A. The fingers of each grab are vertically offset from one another. The value indicative of the precedence information could include a priority and/or a virtual LAN identifier.

1459827124-d6a4b4e7-b252-4fa5-89f4-670cac062535

The present disclosure describes a method and apparatus for network traffic processing in a non-uniform memory access architecture system. The circuit is classified based on its topology and measured circuit parameters. The magnetic activated carbon may be used to remove contaminants such as mercury from fluid streams including flue gases from a combustion plant. The apparatus includes a supply part for supplying the molten metal, a nozzle provided below the supply part, a tubular member provided between the supply part and the nozzle. The IS-OFDM transmitted signal is at a data rate that is equal to the data rate of the input data stream via the use of PS converters. The elongate section may be configured to be inserted into a body cavity.

1459827125-9bc626ff-68fa-4e52-bcac-e05041e46ecd

The handcuff assembly includes a bow pivotally connected to a cheek plate frame assembly which includes a unitized frame that is die stamped from a metal plate and which is overmolded with a polymer overmold. A tool comprising the body and a tool head is a hammer action tool. The bond directly resulting from the coupling reaction can be optionally modified by a further reaction to the aforementioned covalent bond. Embodiments may also include determining whether the process rule is satisfied based on the current status of the process and using the determined evaluation method. The optical recycling device spatially recycles a portion of rays of light emitted by the LED back to the light source using a reflector or mirror and/or angularly recycles high angle rays of light and transmits small angle rays of light, thereby increasing the brightness of the light source's output.

1459827125-b6bc17d8-8556-4272-9382-ce3d78ac9963

A digital television transmitter and a method of coding main and enhanced data in the digital television transmitter are disclosed. The provided operation-state data is input into the remote supervisory unit through the communication apparatus as well as the identical operation-state data is displayed at the data display unit at the uninterruptible power supply unit. Then, a back reaming tool is connected to the end of the boring tool, and the pipe is connected to the reaming tool, such that the reaming tool reams the pilot hole to a larger diameter ahead of the pipe, which is pulled through the hole with the reaming tool.

1459827125-d48852eb-ab33-4d44-893f-0a7b83a1bc0f

An exemplary method of facilitating communication includes determining a position of a portable communication device that generates a video output. The optimum AP location is selected on the basis of the location-to-signal strength correlations. The planarization material is selected to exhibit a material removal rate approximating the removal rate of the wafer material for a given removal technique such as etching, mechanical abrasion or chemical-mechanical planarization. The holder includes a peripheral holder wall. Alternatively, by intensity-modulating the first signal containing the distortions by a combined signal of the correction signal and the second signal, the distortions of the first signal against the second signal can be cancelled out. The rotor comprises a first pole core 12, a second pole core 14, a field coil 13, and holders 15 each containing a magnet 16 and disposed between a first claw 123 and a second claw 143.

1459827126-2a9a46f1-c4af-40f6-9adf-25c5cc390df0

Retrofit connectors that secure together the outside sheathing and underlying structural members of wood-frame or masonry houses, preventing damage when subjected to lateral stresses from a hurricane, or transverse loads from an earthquake. The method comprises: receiving a logged measurement setting; logging

an MDT measurement and a measurement result on the basis of the logged measurement setting; and reporting the whole or a part of the logged measurement result to a network. The first location corresponds to a respective map object. The data storage system maintains a data log that may be activated when the destination volume is inaccessible due to, for example, a malfunction in the destination storage system or in the communication link between the source system and the destination system. A branch based on the error signal can restart a section of the test program, but it is likely only a template needing further test algorithm control information that varies dynamically as the test program executes.

1459827126-341ef706-34eb-4e82-a6ec-761b275f5ba4

A base station for controlling transmission power during the establishment of a communication channel utilizes the reception of a short code during initial power ramp-up. Each of the challenge-reply sets includes at least a challenge-reply pair for use in off-line authentication of the user for a particular resource available through the recipient unit. Upon receiving a request for a connection, the ISP extracts the caller-ID included in the request to connect, finds the corresponding user identification and password stored in the caller-ID map and retrieves the number of new messages in the caller's mailbox.

1459827126-48890b2d-5e21-4e2d-9a14-58c0b193f120

An MB810 encoder and/or decoder, dual mode encoder and/or decoder, and a method for generating MB810 codes are provided. A tray is arranged horizontally between the guides, and is progressively lifted to approach to the cylindrical surface of the roller. Trophies are awarded in recognition of the top rated vehicles and manufacturers in regard to environmental sensitivity. The tube may also include a variable outer diameter. The vertical fabrication of the radiation sensor allows for sensor arrays with a good fill factor, permitting the creation of sensor arrays with high resolution while maintaining low costs.

1459827126-51e03888-f743-47a9-97c5-9c5ed4da99b8

A module for a tape head assembly includes a first substrate having active elements and a second substrate having active elements. For the adjustment of characteristic damper values, the flow of a damper fluid can be controlled via control mechanism disposed inside the damper cylinder, which controls the flow of the damper fluid in a first flow direction using a first adjusting element and in a second flow direction using a second adjusting element. The insertion member has an insertion end, a fixed end connected with the bottom side, two lateral sides, and two abutment surfaces connected with the two lateral sides. The device then obtains and prints the at least one job associated with the user identification code from the print queue. The process may comprise the steps of introducing a metal-based catalyst into a hydrocarbon-containing zone in said reservoir, raising the temperature in said zone to a temperature at which catalyzed conversion of hydrocarbon to hydrogen occurs, and, optionally but preferably, recovering hydrogen from an extraction section of a production well located above said zone. These include, in some embodiments, generating a first data set based on input data obtained of a physical reference structure having a defined fixed relation to a bone structure of said subject and generating a second data set based on input data obtained of a master structure for a surgical template, where the master structure has a defined relation to said physical reference structure.

1459827127-407b523b-d27a-4f48-bb4a-4cf07188634c

A method for exchanging coins, the method including the acts of receiving in a self-service coin exchange machine a plurality of coins, processing the plurality of coins to determine a total value of the plurality of coins, and dispensing currency to the patron from a currency dispenser, the currency having a value related to the total value. A server as a map display device of the present invention has a control section. A pair of gate spacers are formed on sidewalls of the gate structure by accumulation of the deposited dielectric material from the

angled directional ion beams and without use of an anisotropic etch, while the sidewalls of the semiconductor fins parallel to the directional ion beams remain physically exposed. A first sidewall makes an angle with respect to the plane of the surface of greater than about 0° and less than 90° and a second sidewall makes an angle with respect to the plane of the surface of greater than 0° and less than about 90°. The second end of the connector is configured to be inserted in the port other aperture and attached to the moveable element without disassembly of the external device. An oxide layer underlying the organic film layer is substantially undamaged after contact with the etchant.

1459827127-541a1e57-8a88-4fd2-a2b5-fba6e67b4f99

A cable pair shifting system for shifting a cable pair from an old cable pair location to a new cable pair location includes a quick shift jack panel. The endpoint is interfaced to a utility meter and the fixed or mobile reader is capable of communicating with the endpoint via RF communication. The helical antenna is impedance-matched by a matching circuit in a range of the order from 470 MHz to 700 MHz which is the television broadcast frequency. A positive voltage is also applied to a third bit line that is adjacent to the second bit line and removed from the bit line associated with the selected bit by the second bit line. A shield may at least substantially surround a top and the other three sides of the housing. The system may include: a crankshaft sprocket; a camshaft sprocket controlling exhaust or intake timing of the engine; a timing chain operably connecting the crankshaft and camshaft sprockets; a chain guide for the timing chain; a chain tensioner pushing the chain guide inward; and an oil supply unit for the chain tensioner.

1459827127-bc9db668-fd46-4933-850a-98143d943a05

A distributed multiresolution modeling system has a database management system on a first server. The sealed power connection may be used with an electric machine or any device that may require electrical and/or mechanical connection for power. The system may determine the associations through implementation of a posture search timer and a posture stability timer. The leadframe can be either the type having die pad or the type having no die pad. The resistive element can be a set of parallel resistors in the transceiver, with the set of parallel resistors being specifically selected from a larger population of resistors to provide the specified resistance in the USB transceiver. The first space and the second space are separated by a ceiling that permits thermal energy to pass between the first space and the second space.

1459827127-c1d29a1d-15f6-444b-bd30-e86364c12cb3

The present invention relates to an electronic device, which can be triggered by the proximity of bioelectric fields, or by the motion of charges and ions. Specifically, memory chips are coupled to a preformed packages which have alignment features to allow for the stacking of the ball grid arrays. The group IV substrate contains a p-n junction whose change of characteristics during epitaxial growth of As-containing layers is minimized by the AIs nucleating layer. This increase in exchange removes those materials and conditions whose presence causes ophthalmological and retinal damage.

1459827127-c8e337ad-0970-400f-8ad1-7faff255ee9c

A patient lifting device designed to impart a vertical and corresponding horizontal force component upon a load, namely an ill or incapacitated person in a bed. The body has side flanges with longitudinal grooves for receiving coupler lateral flanges and a transverse strap joined to the side flanges to retain the body on the coupler and prevent removal of the bumper when the coupler is attached to the ball-type hitch. The cover may be manually shifted to the remote knotter access position through an arc of at least 45°.

1459827128-12eeaeec-f41b-4c6b-8ff7-25878c776bdf

The present invention is a dark field illumination system including a light source

which is fixed on an entrance slit of a condenser and an objective aligned with the condenser such that the objective and the condenser are adjusted to find a focus spot on a sample. The collet has a plurality of pawl structures with a plurality of elastic slots formed thereon. The controller is operative to detect a light adjusting trigger event, select a random delay time, and adjust the light, wherein the light adjustment occurs the random delay time after detecting the light adjusting trigger event. The body member has a plurality of ventilating bores extending through the body member. In a first position, the projection may extend substantially perpendicularly away from the first edge towards the second edge so that a free end of the projection is positioned proximate the second edge.

1459827128-1abb6719-d852-4597-8e32-5f7ea81d3839

A cavitation cleaning system and method for using the same to remove particulate contamination from a substrate including providing at least one substrate immersed in a cleaning solution said cleaning solution contained in a cleaning solution container. The PMD of an optical fiber is measured over a first optical spectrum. A pulley is coupled to one limb and a cam is coupled to the other at a first journal point and second journal point respectively. Between node N1 and the ground, a switch SW4 is connected. A brake plate control assembly is connected to the brake plate. Half sample interpolation filtering and delay can be performed, and the results can be combined in a quarter-rate upconverter.

1459827128-50f6a690-0f13-4958-9a98-f957601d4c41

A data processing system and method are disclosed for simulating a hardware fault occurring on an expansion card coupled to the system utilizing a bus. The radiation attenuation system may be positioned over, under, near, or otherwise about the article. Optionally, air is also included within porosities in the via level dielectric. The method may further include receiving, in the software design tool, one or more bindings between software and hardware, wherein the one or more bindings form a set of bindings, and storing the set of bindings for use in one or more software designs.

1459827128-6d382245-76cd-40e1-aa76-03eef01d64a6

Cracks are conventionally difficult to clean which often leads to damage to other regions of the component for cleaning. Exemplary methods assign servers to clients in wireless and wireline networks based on server load. Generally, a plurality of blades rotate within a duct and some noise propagates forwards of the blade assembly.

1459827128-cd9d8e64-a2a9-49b6-802a-b69f49c7c603

A polarization-combining fused-fiber optical coupler is made of polarization maintaining fibers spliced to non-birefringent single mode fibers which are fused and drawn near the splicing to form a coupler with an adiabatic tapered profile. The bottom hole assembly moves upward in the casing string in response to an upward force due to the different densities of fluid in the casing string and in the annulus. The aftertreatment module may also have a second chamber with at least one outlet in general alignment with the flow direction through the inlet. These methods have been successfully used to produce high quality coatings and defect free composite membranes, which are independent of chemical composition and physical structure of said support. The signature is verified before the introduction of the test data word by an appropriate detection circuit.

1459827129-13847f53-55f8-4963-bad2-fa6ff54928d6

A midsole structure of a sole assembly for a shoe improves a ride feeling and stability of the midfoot portion of the sole assembly during running. Based on a location of a defect in the image reading section or in the density reference member, the image processing section determines whether or not to at least partially restrict either a read range of the image reading section when the image reading section reads an original document or usage of a result obtained by reading

the original document by the image reading section. An estimated web position is provided by one or more encoder signals.

1459827129-69d9c71b-3299-43b9-b7e0-1a9363dfa615

A firearm suppressor is provided. The phosphor-converted single-color LED includes a long-wavelength pass filter having a special construction. The driver may transmit the outbound packet to a client application, responsive to the filtering table. The information handling system further includes a plurality of local network address resolution mediators, with each local network address resolution mediator running on one of the plurality of servers and receiving packets from VMs running thereon, and a global network address resolution mediator running on one of the plurality of core devices.

1459827129-b089180c-be91-4ea9-9cf4-bd04c4b8db84

A sheath for organizing soft tissue includes a first tube having a flexible body sized and shaped to receive a fixation device, and a second tube coupled to the first tube having a flexible body sized and shaped to receive a soft tissue graft. In the image forming apparatus, the image forming apparatus starts to form a latent image by the exposing device based on the detection of the sheet by the sheet detecting device. A shank assembly is slidably disposed through the body. Before assembly, an upper surface of the metalized layer forms a well.

1459827129-d3fa3d2d-4699-42e4-9ef2-15f020128bad

A system and method for operating a server on a communication network. The contact pad supporting structure includes an underlying first conductive plate and an overlying second conductive plate, wherein the first and second conductive plates are separated by a first dielectric layer. The transmitting node is periodically placed in a forced idle state, thereby being prevented from transmitting data packets, but being able to receive and respond to data packets from other nodes.

1459827129-edc98154-be58-445a-a598-1fdd16745df7

An input shaft with plural drive gears and an output shaft with plural driven gears engaging the drive gears forms transmission gear trains. The device comprises a substrate having a trench therein. The names are of solutions, technologies, products, services and activities, or any other information associated with the entity.

1459827130-25366d5d-5a15-4b07-be6b-a18975b75fd3

Stoneley-wave data acquired in the LWD environment are used to characterize estimate formation permeability. The chips are formed by sheeting into an initial flat shape. The operational amplifier operates in a closed-loop configuration to draw current through a common mode bias resistor in the first differential drive circuit in order to force the common mode voltage of the second differential drive circuit to a desired value determined by the reference voltage. A plurality of output amplifiers are connected in parallel to one of the signal outputs each of the individual image cell columns and amplify the signal charge carriers. The extinguishing devices may be stacked upon the wick to provide for multiple successive extinguishments and relightings.

1459827130-295a991b-57ce-4365-9ae7-8116c758db3b

A system and method for sharing digital images over a network, such as the Internet, wherein the first person desires to send images from a first computer to a second person having a second computer that includes a standard email program. A first steering wheel segment is spaced from and rotatably fixed to the hub. Once the electrodes have been inserted into the slots a thermoset resin is poured into the housing and cured. The gastrointestinal device includes an anchor for anchoring the device to the stomach and a flexible sleeve to limit absorption of nutrients in the duodenum. The device further comprises an expandable member formed helically about the elongated shaft. In the closed position, the outer surface of the dive

door is matches the profile of the gunwale, providing a sleek integrated look.

1459827130-a032bbc1-091c-4c34-909a-fe9d359251ff

An orthopaedic prosthesis includes a tibial bearing, a femoral component, and a hinge post coupled to the tibial bearing and the femoral component. The light emitting device includes a plurality of pixels and a scan driving circuit. These preforms form a stress-induced birefringent optical core when drawn to fiber.

1459827131-00ba5429-6e3d-4683-a0c9-01f402a26ffb

A method for machining components which do not contain magnetic material is provided. A central authority having a central authority private key K<sub>sca</sub> assigns a customer account to the customer and a merchant account to the merchant. To load the porous surface with a biologically active agent or drug, an electrophoresis method is employed. In yet another embodiment, capture phases for LBIST testing may be made to be asynchronous within each capture phase, such that data capture for one LBIST partition may be timed different from other capture phases for other LBIST partitions. An assurance tool of migration strategies is provided for tracking changes and avoiding conflicts between the enhancement and the model and production software systems. The programmable logic device receives temperature data from the temperature sensing array and structure-borne noise data from the vibration sensing array.

1459827131-1086ce90-a06f-469e-a5be-1d8ef2926262

Isopipes for use in making sheet glass by a fusion process are provided which exhibit reduced sag. The processing apparatus has a screen memory for the display device and a processing unit for outputting image data of the specific window of the screen memory to an external monitor. Indirect addressing instructions also provide a higher-level abstraction of memory accesses, and are likely to be more indicative of relationships among data items, as compared to the absolute address of the data items. Once the information has been returned, the information is unblinded, leaving an encrypted or decrypted message respectively. The apparatus includes a tubing locating surface for mounting the tubing and sealing means cooperatively associated with the tubing locating surface. The characteristic of the specific path traversed by the logical LSP can thus be determined by when, how, and if the specialized DTU is received by the destination node.

1459827131-681c6d43-aff7-42dc-a294-074fea13e2c2

According to one embodiment, an integrated patch antenna may comprise a radome layer, having an outside surface and an inside surface, and a radiating layer. The invention proposes to form the expansible anchor with a locking connection which locks the expander body on the expansible anchor in a position in which the expander body is drawn in between the expansion tongues and holds the expansion tongues in a spread-open position. A magnitude difference between the third echo and the first echo is measured and correlated to a temperature shift for fat tissue, and a phase difference between the fourth echo and the second echo is measured and correlated to a temperature shift for water-based tissue. The method computes the normalization array through several steps which evaluate the geometric profile, the axial profile, and the correction factor. Based on the candidate score of each identified candidate, the facility selects a number of the identified candidates for display. The invention provides a lens that makes use of the differences in the index of refraction of ZnSe and ZnS in the mm-wave and IR wavebands to minimize the differences in focal position between the two wavebands.

1459827131-6eb9326e-d860-4a3e-892c-ee20109e7662

A method for controlling speakers in a mobile station comprises detecting a movement of the mobile station. The input of the control device is arranged to input a predefined number of samples per one cycle; and the computing device is arranged to compute the parameter with a discrete Fourier transform algorithm optimized based on fixed coefficients related to the predefined number of samples

per cycle. The first wiring layer extends in a first direction and generates a magnetic field for recording data in the magnetoresistive element.

1459827131-7a6849ae-9435-4e1f-8f0f-70535be22f16

A control apparatus simultaneously controls flow rates of a first fluid and a second fluid. An immobilizer CPU is installed in a vehicle to receive commands from the RF breathalyzer and to control a horn and lights of a vehicle, to immobilize the engine, and is connected to a GPS antenna driver through a mobile phone pager unit to communicate with a monitoring station. An opaque can be applied to the exterior surface of the abutment. Together with the utilization of Peak, Average or Quasi-Peak method of measurement, the dynamic modulator can reduce the spectral amplitude of EMI components, in particular the lower harmonics, to effectively pass regulatory requirements. The threshold corresponds to the number of remaining bags or the number of bags removed depending upon the direction of the counting.

1459827132-177b294b-1e72-49c4-be71-0ae7f445bd2e

Methods, systems, and apparatus, including computer programs encoded on a computer storage medium, for enhancing selecting relevant and diverse advertisements. The method and apparatus include a wash station that washes the engine component after being machined, and a buffer that heats the engine component to a first temperature. 06 and secured on a surface facing the cavity, the volume S2 of the noise damper is in a range of from 0. The position of each data block in the data packet identifies the remote station to which the data block is directed. The keys may be compared at the program guide to determine which program listings correspond to which items of real-time data.

1459827132-684bda0a-89c4-41de-8793-cd6d319260b0

A new and distinct cultivar of Physocarpus plant named \u2018Mindia\u2019, characterized by its upright, mounding and compact plant habit; freely branching growth habit; copper-colored leaves with deep lobes and serration; and resistance to Powdery Mildew. The installer initializes a provisioning event of an application on a computing device, presents an application configuration option for the application, receives a decision corresponding to the application configuration option, provisions the application based upon the decision, and updates an answer file with the decision. The method includes the following steps. The ethylene portion of the copolymer provides for adhesion to the polymer of the first layer, whereas the acrylate portion of the copolymer provides for adhesion to commonly utilized bone cements. Ideally, the second lifting mechanism is mounted on a portion of the first lifting mechanism that is relatively free from relative movement with respect to the transfer cask during operation. Fresnel lenses are affixed to the apparatus on mountings for concentrating the solar energy on to the photovoltaic grid and functioning as a passive solar tracker.

1459827132-c99a49da-14cc-4697-9347-ac5667c98d8f

A method for in vivo electrotherapy, or electroporation-mediated therapy, using a needle array apparatus is provided. Each of the angle adjusting devices includes a connecting member formed with a locking pawl, and a pivot member pivotally mounted on the connecting member and formed with locking grooves. The jurors view and judge the activity in the virtual world environment; and on the basis of this judging, defined benefits in the virtual world environment are awarded to the witness, monitor and jurors. The plurality of air openings are provided on one end of each of the plurality of nozzles. A right-angled bend is also formed at the ends of the fluorescent lamp.

1459827133-04951401-724a-44a1-b8d1-dee26c5a684f

This invention relates to an accessory for attaching to a needle to prevent needle stick injuries. The method may include obtaining a flow rate measurement in a measuring section, and calculating a total flow rate based on a correlation between the obtained flow rate measurement and the total flow rate. Particularly, the

optical resolver comprises optically active tris-isocyanurate or its derivative, or an optically active derivative of tris-isocyanurate.

1459827133-20b89432-4f5c-49c8-bf83-bdd235ff5e97

A mask having a pattern to modify a circuitry feature that has been exposed in a radiation sensitive layer by transmitting modifying radiation to a region of the radiation sensitive layer containing the exposed circuitry feature is described. The active steel repassivator is comprised of a continuous phase, a distributed phase, and/or an aqueous solution of an amine. If there is another gateway apparatus that is administering the same address, the IP address is prevented from being registered in the translation table. The accessory module is configured so that, when mounted to the mounting element at the windshield, the lens has a field of view through the windshield. A forced vibration device can also be operated by piezo driving and electrostatic driving from the outside without generating noise.

1459827133-5c100fd6-7bc7-4d49-95b8-ce851aeb9326

According to one embodiment, a method is disclosed for manufacturing a reflective mask. A passage through the follower body in the direction of actuation by an engine cam lobe is slidably receivable of a slider member for variably engaging a central cam lobe, preferably a high-lift lobe. This system polls a user with a variety of questions. The first and second regions are non-congruent to one another. A plurality of characters is recognized from the binarized character images.

1459827134-4ba8e743-c320-431c-9118-73d7b79ca627

An apparatus converts a screen with an aspect ratio of 4:3 to a screen with an aspect ratio of 16:9. First, a program is executed on a high level simulator of the processor. Each configuration tree is associated with one of the plurality of product trees.

1459827134-8d917323-0c48-4763-aef3-e742fdd77f41

Methods and/or systems using magnetically assisted pressurization of a gas for the generation of useful power from heat transfer using heat sources at lower temperatures in a manner that does not require the emission of CO<sub>2</sub>. One or more connectors extend from the rear end for mounting the bracket to a support. An applied voltage to program selected eFuses on the chip is selected responsive to an identified eFuse voltage value. Fuel cell technology is also implemented. The devices may be packaged in plastic packages with wire bond technology or may be solder connected to an area array solder connected package.

1459827134-c3c00272-0780-4694-bcc8-cfb63fe19e6d

An active wheel desiccant dehumidifier is controlled for improved energy savings by modulating operation characteristics including process air flow, reactivation air flow, temperatures, and wheel rotation in response to changing conditions. When the weight of the particulate matter exceeds the effect of the counterweight and the effect of any air-pressure differential across the flap, the flap opens and voids particulate matter from within the vacuum cleaner. The improvement embodied in the current invention is the ability to retain sensitivity to a wide range of particle sizes and also to discriminate between different kinds of smoke or dust according to particle size, whilst also achieving relatively long service life, small size, light weight and low cost. A decision circuit compares an output signal not selected with a reference signal to adjust the gain of the output circuits to thereby cancel the offset of the operational amplifier.

1459827134-c8e89b11-9735-422c-bc62-8c3318118b19

A composite electrolyte membrane for decreasing the crossover of polar organic fuel and a fuel cell employing the membrane are provided. The composition has been found particularly useful for forming a protective coating upon components of automotive vehicles, such as a bedliner for a pick-up truck. Such antagonists serve to block,

inhibit, reduce, antagonize or neutralize the activity of IL-17F, IL-17A, or both IL-17A and IL-17F. The compositions are useful in hair care, skin care, odour control, wound care, blood management, sanitary compositions, oral care, film formation, hard surface treatment, fabric treatment, release of hydrophobic or hydrophilic materials, plant care, water purification and drug delivery.

1459827135-07f5cd1a-f68c-465f-bca7-dbb03d8475e0

A multi-spot multi-fiber laser probe is provided that includes a first adapter; a GRIN lens within the first adapter, the GRIN lens configured to receive a laser beam from a laser source at a proximal end of the GRIN lens and to relay the received laser beam towards a distal end of the GRIN lens; and a multi-fiber array having a proximal end configured to receive the relayed laser light. The diode structure includes a substrate having edges, and a sealing layer formed on the edges thereof, wherein at least a breach is formed at a corner of the sealing layer. Methods of securing the surgical fastener to an anatomical structure are disclosed herein. An extension is disposed on a second end of the mid bar, wherein the extension provides a visual indication of both a locked state and an unlocked state.

1459827135-5b0b4cd5-92e0-4bca-a2f9-8c02d072e4b7

A crop sprayer comprises a cab having i) a left lateral wall structure including a first door, and ii) a right lateral wall structure including a second door. In a closed crankcase ventilation system, crankcase gases are caused to flow through a venturi which includes high pressure and low pressure taps. The presence of said reinforcing element allows a precise control over the excess fiber length within the buffer tube. A bottom side wall projects downwardly from the bottom edge of the covering panel and two lateral side walls respectively extend downwardly from the opposite side edges of the covering panel and sidewardly from the bottom side wall in a tapering fashion. The recesses further contain carrier stubs that run in an axis-parallel manner and on which the coils of the spring arms are positioned. The reinforcing member has a plurality of structural pieces separated by slits extending from an inner circumferential surface to an outer circumferential surface of the reinforcing member.

1459827136-065517f6-5587-4e91-b651-6b5a0286b6b0

The array substrate includes a substrate, a thin film transistor and a pixel electrode. A stepped top portion is received into an upper bore of a piston bore and a shoulder is received into a lower bore. The timing correction controls the timing of the read data or other signals by adjusting the timing of respective strobe signals, such as read strobe signals, that are applied to each of the memory device dice.

1459827136-2b89fc93-7a82-421c-a119-18f0d8478823

A bar code scanning system and method for reading and processing bar code symbology uses a scanning station installed above the check-out stand and a receiving station at some distance away from the scanning station. The modulation domain trigger generator may be combined with a plurality of different types of trigger generators, including frequency domain and time domain trigger generators, to process the input signal in response to different trigger criteria to produce more than one trigger. The focusing barrel is installed in the zooming barrel. The controller may be coupled to the second port so as to communicate with one or more communicating thermostats via a second network. The server delivers the device-type-specific URI to the mobile device to invoke a non-web-browser application for handling the data payload.

1459827136-3e2e2194-eb86-45f9-925a-b650ab899fd1

Methods and systems for using binary searches for variable length network address prefix lookups are disclosed. An apparatus for an announcement for a session includes a playing termination setting unit, a topology descriptor setting unit and

an announcement-playing unit. A Body Control Module receives a signal from the contact type sensor and transmitting the signal to a cluster. The method may also comprise searching at least one recorded source address based on the at least part of the source address, the at least one recorded source address being organized into at least one cluster. An automatic mounting range 3, including the two automatic mounting areas 1 and 2, is set in a predetermined range of the original board 5 in such a manner as to correspond to the range where the chip parts mounter carries out the work of mounting the chip parts. In addition, a timing signal based on this execution is transmitted from the head unit to a component feed unit, a recipe for the component feed operation for executing the component feed operation is received in the component feed unit, and the component feed operation is completed on the basis of this recipe and the timing signal transmitted from the head unit.

1459827136-ac478a1d-33fe-4c0f-89ca-c3854af3782d

A fan module includes a fan, a bracket, and a locking member. One embodiment comprises an interactive system for scheduling circuit assemblies for inspection. The main body supports a driving mechanism, a vacuum source, a vacuum sensor, and a control unit. The staves have transverse grooves provided therein. The APC adjustment module selectively adjusts the base APC based on the catalyst temperature adjustment and the ambient temperature adjustment and controls at least one of the engine airflow actuators based on the adjusted base APC during the first DFCO event. The functional gastrointestinal disorder includes a functional esophageal disorder, a functional gastroduodenal disorder, a functional bowel disorder, a functional abdominal pain syndrome, a functional gallbladder and Sphincter of Oddi disorder, a functional anorectal disorder, a functional disorder in neonates and toddlers, a functional disorder in children and adolescents, and other diseases.

1459827137-158e89e9-93ff-4bbc-8000-0344b3ea6f95

A reactor including an assembly of a coil, a magnetic core on which the coil is disposed, and a case that houses the assembly. The pressure sensitive chambers may be filled with air, liquid, semi-liquid, or particulate material. Structure types are related to the fabrication process and for a CMOS process include, but are not limited to n-diffusion, p-diffusion, n-well, p-well, pinched n-well, pinched p-well, poly-silicon and metal. If so, the normalized query is sent to the target database for execution, in accordance with an additional embodiment of the present invention. A method of making a high-refractive index material includes incorporating, at least one semiconductor nanocrystal composition in a matrix material.

1459827137-1f41b542-be3e-4f5d-bb53-42324f9f640c

An embedded device including a random access memory and a processor is provided. The structural component can include a group of carbon nanotubes. It possesses a receive device for receiving at least one control signal and a switching device for switching the radio transmission apparatus on and/or off depending on the received control signal. The pigments may be used in a charge generating layer of an imaging member having a substrate, the charge generating layer, and a charge transfer layer. Therefore, a sufficient thickness of the section corresponding to the valve seats of intake and exhaust valves are easily ensured.

1459827137-376688a1-f0e0-4443-a259-d41b44d6a59a

A plasma array apparatus for processing starting materials is described and taught. The fan broadly includes a rotatable propeller, a motor, a pump, and a nozzle assembly. A data receiving side performs processing by referring to the priority-level information.

1459827138-44919151-8829-404d-b613-3a74df3ded80

Reinforcement structures and processes for forming same are provided, wherein the

reinforcement structures are adapted for use in forming composite parts. Embodiments receive some authentication credentials, such as username and password, and obtain and parse reply data containing additional authentication credentials, such as domain name or context associated with the user, from a network directory server. Between the first and second time periods, at least one operating parameter of the second plurality of vehicles is modified such that the baseline fuel consumption data and the test fuel consumption data can be analyzed to determine any fuel efficiency improvements caused by the modified operating parameter. The moving member is attached to the attachment member, and configured and arranged to move according to pressure changes in the inner portion flow path.

1459827138-55fadd8-7a2e-4461-8931-6ec030178230

Methods and apparatus for detecting a composition of an audience of an information presenting device are disclosed. The device can include a group III nitride compound semiconductor laminate structure including an n-type GaN compound semiconductor layer and a p-type GaN compound semiconductor layer. A distance between the lensed fibers is two times of a working distance of the lensed fibers. Therefore, when an impact force is applied at the golf tee, the golf tee is forced to slide from the holding channel through the sliding slot so as to distribute the impact force at the golf tee to prevent the golf tee from being broken. A lower radial bearing assembly provides radial rotation support to a lower turret structure. The apparatus may also have an anvil coupled to the diaphragm.

1459827138-cf2b3a1f-be49-4b22-914e-a0844edd8c11

An HVAC controller includes a controller housing having an aperture and a battery tray removably disposed within the aperture. There is a first cogeneration loop to recover heat from a fuel cell power module, thereby producing a heat to electricity ratio between 0 and approximately 1. The hybrid net model preferably uses a clique model for two-pin and three-pin nets and a star model for nets having at least four pins. According to the method, it is possible to remarkably reduce notching without depositing a metal layer, when a multi-layered structure including a silicon layer which is etched to be passed through during RIE is fabricated. The outer support can be in the shape of an open boot.

1459827139-2cf182cf-65cf-442a-8f85-2c989fea1261

An image processing apparatus and method capable of decoding and varying at high speed encoded image data having an arbitrary image size by using a memory of a small capacity, and a recording medium storing programs executing such a method are provided. The net retardance of the system is reduced by the cancellation of retardance contributions from the multiple cubic crystalline optical elements and the uniaxial birefringent element. It also facilitates an understanding of the sometimes complex interrelationships between design targets, design tolerances, process inputs, process control variables, average process output and variation in the process output.

1459827139-62cf485d-3d80-45bb-8daf-604d7d81cd71

A connector connected with a complementary component inserted therein from a front direction includes an insulating housing and a shield coupled with the insulating housing comprising an upper shell and a lower shell. The method utilizes an organic compound including an oligonucleotide, and electrophilic active site, an active complex, and a phosphate binding site. A select vector is employed to select a delayed version of the reference clock that lags the reference clock by a second time period, which is slightly less than a number of reference clock cycles. The handgrip exerciser generally includes one or more springs and a handlebar for interposing a desired resistance or compressible tension between the handle and the handlebar for exercising hands, wrists and arms.

1459827139-b0222763-5414-4773-96fc-8339c381b92f

A method of determining a rotor angle in a drive control for a motor, comprising

the steps of determining a rotor magnetic flux in the motor; estimating the rotor angle on the basis of the rotor magnetic flux; and correcting the estimated rotor angle on the basis of reactive power input to the motor. These parameters include detector quantum efficiency, channel transmittance and pulse spacing. Preferably, the pallet is delivered to the ocean floor in advance by crane with the reel-mounted sensor array cables being deployed later by ROV. The arrival determining unit determines whether the capsule endoscope has reached the stomach or not. Expression of GrB-NIC is also observed in malignant cells of other types as well as in normal non-immune cells upon cell differentiation, especially in differentiating and differentiated neural cells.

1459827141-0dd47865-b8dc-4127-989f-dad99c011453

A method for reducing vibration levels in a turbomachine including at least a first and a second bladed wheel, due to aerodynamic perturbations that are produced by the second bladed wheel or an obstacle on the first bladed wheel is disclosed. Each differential transistor pair has a first transistor and a second transistor and an output node for each. The application programming interface of the invention includes a host interface, an ISDN interface and a modem interface. An outer surface of the subsequent layer influences a shape of the outer surface of the substrate by defining protuberances 24 on the outer surface of the substrate where respective cavities 26 are formed beneath respective protuberances upon dissipation of the fugitives. Further, circuit pattern width erosion and undercut of the circuit pattern associated with a chemical etching process are avoided. In one aspect of the invention, the assembly includes a faceplate assembly having flanges and keys for mounting and preventing rotation of the door keeper assembly.

1459827141-bcd9f4d1-5a0e-407b-9a9d-0a84d120b3a1

A mobile user terminal includes a receiver which receives a signal, and a processor which measures downlink channel quality based on the signal and does not transmit downlink channel quality information and an uplink pilot signal simultaneously at a period which the mobile user terminal is a state of transmission off in an intermittent fashion. The present invention provides therapeutic methods involving administering a subject compound, or a subject pharmaceutical composition. The first sequence which comprises multiple copies of a time domain code sequence can allow easy detection of the preamble while the second sequence comprises multiple copies of a frequency domain code sequence and allows easy determination of the frequency response of the communications channel. The metrology tool is adapted to measure a characteristic of a wafer processed in a first chamber of the processing tool. The apparatus further includes an air filter provided at a position in a space higher than the water surface of the grinding water in the tank, and a suction unit for drawing bubbles developing in the tank by way of the air filter. The phenolic resin composite material is improved in terms of the heat resistance as well as the mechanical strengths.

1459827142-08650b4a-b34d-49af-bd43-776b4be97e85

The present invention provides a handover method, a base station and a system. A query image of the retina of a patient is obtained. The strand profile of the micromodules is tight, having an average lay length of less than 250 mm, and the sheathing is thin-walled, having an average thickness of less than about 200 micrometers.

1459827142-9d180af3-9f4d-42a0-abd2-d777d9077b96

A color filter for a transfective liquid crystal display includes a transparent substrate, a color filter layer covering the transparent substrate, a transparent electrode covering the color filter layer, and a transparent layer. When the AMC is applied to the MIMO system, the optimal scheme is different depending on the MIMO channel situation, the maximum transmission power, and the maximum modulation order. The first time window is smaller or equal to the minimum triggering time for triggering the safety device, and the second time window is significantly larger

than the first window. The saved mask may be recalled and reapplied to the motion detector whenever the PTZ camera is repositioned to the field of view corresponding to the saved mask.

1459827142-d220d3e3-32a8-4301-80c2-ae19f8c58d3a

A method of manufacturing tires includes the steps of making structural components for tires, assembling the structural components of each tire following a pre-established sequence at respective work stations disposed along a manufacturing line, transferring the tires to a curing line, and curing the tires in respective vulcanization molds. The communication station includes a transceiver for transmitting and receiving data with user equipments, multiple backhaul interface modules, and a backhaul distribution module arranged for monitoring demand for backhaul bandwidth and distributing data over the backhauls based on the demand for backhaul bandwidth. Access to the water supply should be restricted for purposes of security.

1459827143-5b78ce0f-fc1a-4b5a-acbc-0819e54f0fea

An image forming apparatus that adjusts an inclination angle of a supporting roller for regulating pulling of a belt member serving as an intermediate transfer belt or a recording-material supporting belt. The LANUSB bridge apparatus includes a wireless LANUSB signal processor and a controller. The rotor assembly comprises an annular array of rotor blades, and each stator assembly comprises an annular array of stator vanes.

1459827143-9e50d5dc-b336-48f4-a9fb-59d052d17aef

A syndrome calculator receives an input codeword and calculates a first set of syndromes. Such device may include a housing substantially surrounding a heat exchange assembly. The method may involve displaying artwork comprising a list representation comprising a plurality of list item representations and identifying each list item representation as a group of one or more subitem representations. The printhead includes a structure which is less than 10 microns thick, on which the nozzles are incorporated.

1459827143-dc70e974-19b4-4279-86cd-0574ac9d90d8

A light source provided with a laser element that emits a laser beam emits a laser beam for synchronization control. The invention is also a toughened dielectric polymer comprising benzocyclobutene-based monomers or oligomers, ethylenically unsaturated polymer additive, and, optionally, a photoactive compound. In addition the amplifier is provided with a transconductance gain. for a time period of between 30 minutes and 1 hour to consolidate the defects; applying a second defect enlargement heat treatment to the substrate at a temperature of between 900\xb0 C. This arrangement minimises delay before retransmission of data, and improves the robustness of the system.

1459827143-f19def21-7fd5-4f94-9780-b943a6c15d7b

A hybrid electric vehicle 10 having a propulsion system 12 which integrates a motor-generator 14 and a variable displacement internal combustion engine 16. CKB3 is a structural and functional homologue of the regulatory subunit of protein kinase CK2 in Arabidopsis. A receiver receives signals from the electronic price label. Repeating programs may be divided into segments and an overlay may be used to allow a viewer to quickly and easily view a segment of interest. Therefore it can manage time limits regarding a received mail more certainly. One of two printing regions corresponding to two image regions partially overlaps with each other is assigned with the gluing region.

1459827144-334501c5-9b3e-48f5-801f-c2aa5a274be9

Waveform segment of interest in the displayed logic analyzer trace can create the desire in an operator to re-define the trigger specification to be those segments. The apparatus includes a housing having a selectively inflatable member stored

therein. If the MIP bit indicates a migration of the physical page is in progress, the DMA from the IO adapter is temporarily stalled while other DMA operations from other IO adapters to other physical pages in system memory are allowed to continue. A template used for generating a photo album is added with composition information representing composition of images to be inserted in image insertion areas therein. As the heating takes place, maximum energy is delivered to the food product using automatic impedance matching to adjust the rate of the process.

1459827144-5b17a90a-3676-4d67-af16-b78f3c675788

A hydraulic fluid container for a vehicle hydraulic brake system comprises at least one connecting sleeve, in which a valve member is displaceably guided. 7 GPa and about 5 GPa, where said polyethylene has an intrinsic viscosity of from between about 5 and about 50 dl/g and wherein said resultant micromesh tape is coated with an oral care substance at from between about 10 and about 120 mg/yd. A control circuit generates a reference voltage that corresponds to the detection signal. A method includes a first mask design processing and a second mask design processing. Moreover, mark-ups, such as build instructions or modifications, can be electronically overlaid on the drawing without modifying the original assembly drawing.

1459827144-d5036cde-6104-4b91-a0bc-908974a39554

A system for visually representing call events in calls handled by an automated response system of a call processing center uses a recording of calls recorded from end to end. The cloud object provides information about the clouds that are available. A method according to the technique may include, for example, identifying a device in association with a user profile; providing an online platform that receives messages from and sends messages to the device; and creating an aggregated log from messages sent to and from the device. A cutting sheath is slidably disposed over said cannula. The pin moves in the slot as the trigger is moved.

1459827145-79a630ff-1a7d-4264-8c91-ca7517302cbd

Method and apparatus for updating roaming lists. The access by the first buss is clocked by a first clock signal and the access by the second buss is clocked by a second clock signal. An alternative connector box accommodates one or more batteries while affording connections through the common connector and the plural first connectors to peripheral units and yet another alternative connector box houses only batteries and is connectable through a mating connector to the common connector of the personal computer to afford extended operating time.

1459827145-c24dbbc7-b5fc-44db-ab78-8b752b049993

An electronic component has an electronic circuit and a rubber-elastic elevation. One or more microstructures comprising therapeutic agents and pharmaceutically acceptable carriers are implanted, for example, through a cannula. The adhesive layer may include a composition of a copolymer of ethylene and glycidyl methacrylate and a phenol based curing agent. The apparatus may also include a light coupled with the body of the guitar, the light disposed underneath the decoration, the light to transmit visible light through the decoration. The first server uses the hardware identifier to retrieve boot configuration information for the network device that is transferred to the network device and that includes a location in the storage network of a disk device containing an operating system image and the second server address. The diagnostic systems may include imaging systems, data management systems, monitors, and so forth, connected to an internal network of the institution.

1459827145-dd809217-a74d-4d6c-9147-48d348d8510c

A harness with a retractable leash secured on the harness so that it remains in a fixed location on an animal's back, making it comfortable for the animal, yet always accessible for a user. The color-tunable illumination system comprises a

light source emitting light of a first predefined color, and comprises a luminescent material for converting light of the first predefined color into light of a second predefined color. A positive flow of air into the socket reduces the friction, allowing the workpiece to be more easily rotated during repositioning, whereas drawing air away from the socket produces a partial vacuum which increases the friction, causing the socket body to be locked in a single position on the ball. The positioning step may be performed prior to or subsequent to the arc generating step. The interface device separates sample solutions from the instrument interface by gas or liquid in the fluid channel, thus to avoid direct contacts between sample solutions and instrument interface which will cause pollution, and omitting cleaning processes after using instruments.

1459827146-c9c61093-1f92-49db-ba97-dce58e9d8c02

In an information retrieval system, a system and method for presentation of information and/or resources that are pertinent to an individual's interests or task. The defibrillator includes a door which conceals manual mode commands, such that opening of the door puts the defibrillator in the manual mode and simultaneously reveals the manual mode command buttons. To compensate changes caused by the expansion of the winding support, a connection device should have at least one connection element that extends axially with one end of the element connected to the winding support in a fixed manner, and the opposite free end connected to a centering retaining element of the rotor eternal housing in a non-positive radial fit, so it can be displaced axially. The flap shaft may be mounted such that the flap rotates about a flap rotation axis.

1459827146-d571c7c9-bfe9-45a6-abc7-3796db2462d9

Disclosed herein is an ink comprising. Also provided are the dosage sized containers for the above, along with the dosage size containers having gypsum enhancers. The emissive keypad has a light-emitting source and a plurality of electrodes, operatively connected to a power source, to activate the light-emitting source in order to illuminate the keypads, wherein the connection of the electrodes is controllable so that one or more keypads can be illuminated causing the key indicating marks on said one or more keypads to become more visible. A logic block is provided for determining the propensity for the impulse force on the wheel, which results in control of the proportional control signal or other signal to regulate the control input that is sent to the braking or steering control system.

1459827146-e6b8273d-3580-4a70-9779-057ed0816116

A high resolution measurement method and apparatus for tracking wavelength transients in tunable lasers. Each sequential reset pulse is output to a corresponding one of a plurality of reset lines. From the initial juice flow, a first portion of the juice is diverted from a second portion of the juice. The interposer includes an ESD bus electrically connected to the ESD busses of the first and second integrated circuit devices for providing cross-device ESD protection for the integrated circuit devices. An upper brace has flanges for engaging upper edge surfaces of adjacent ones of the panels.

1459827147-23c54315-a83e-445a-bda6-8563e2cdbaeb

A semiconductor package with a die pad having a recessed portion is proposed, wherein a lead frame is used, having a die pad formed with at least a through hole, and a plurality of leads. Said ink jet inks demonstrate improved adhesion to print substrates. The key may also be derived at least in part from user input to the computer. As a result, each communication station can perform relayed communication using the time slot that is allocated thereto. The aligning body is swivable to vary the distance of the two opposite sides of the top portion from the cover along the sway directions that are inclined towards the two opposite sides of the top portion. The radial separation distance is preferably used to authenticate the medium.

1459827147-3858cc37-0f20-4b18-9056-4bea846a7103

A method is provided for detecting and tracking piracy of proprietary materials marketed and distributed on various types of media and multi-media products. The water swelling mineral is preferably water swelling mica. The termination indication may have been provided by an application running on the server, or alternatively, the termination indication may be provided by the authentication component. Each of the one or more source or drain regions includes an N+ polysilicon layer on a diffusion barrier layer which is on a conductive layer. The shared memory has capacity for the internal dictionary area and capacity for the line data area set based on analysis result analyzing input data. The method includes sequentially depositing a first conductive material, a gate insulating layer, a semiconductor layer, and a second conductive material on a substrate, and forming a first resist pattern having three height levels on the second conductive material.

1459827147-6d7f6e0e-60d2-4235-9439-182c5417ceed

In accordance with embodiments of the invention, a method is provided for performing a storage operation in a pipeline storage system in which one or more data streams containing data to be stored are written into data chunks. A network architecture of the invention is structured to provide highly effective and flexible security features while greatly simplifying the user experience. Clients may use the systems for educational and planning purposes and/or may authorize automated triggering of contributions with scheduled increases and/or decreases as specified by the selected plan.

1459827148-2af45295-7458-42a5-80a5-e7cb1a0ebb89

A ball joint restriction system provides a cylindrical extension in the end of the ball, and also provides an oblong housing in the closing cover of the ball joint to restrict movement of the extension. One embodiment also automatically alters the configuration of mobile devices, which is particularly useful in movie theaters. They have a special effect with regard to inhibiting tubulin polymerization and can be used, for example, for the treatment of prostate cancers. The clamping device includes a clamping assembly which is useable to hold the register elements in place.

1459827148-442752c1-9adf-481f-ab8d-f7a36731ea15

Systems and methods presented herein construct groups and determine the presence for the groups. Since it is possible to efficiently discharge overvoltage or overcurrent applied to an electronic component, it is possible to improve reliability of various electronic devices to which the electronic component in accordance with an embodiment of the present invention is applied as well as to extend lifespan of the electronic component itself. The holder has a cylindrical shape and has a second hole penetrating through a center portion of at least one of the top surface and the bottom surface thereof.

1459827148-47e8a1c6-3d14-44df-a65c-2179dd7c2691

The present invention provides a method and a terminal for loading picture resources by a JAVA virtual machine. The system monitors community selections, queries, preferences and profiles to determine popular content authors, categories, etc. The insulating layer is patterned with a MIM capacitor top plate pattern, and a MIM dielectric material is deposited over the patterned insulating layer. ABPT has entries for the memory modules. The flexible conductors are configured to withstand a current on the order of 300 amps and a minimum temperature of 170° F. The ganged cord retractors contribute to preventing cord entanglement while increasing the safety of the cords in a mini blind application.

1459827149-304aec00-01b6-4920-aa58-466fc7041879

A method and apparatus for continuously seaming cured EPDM membrane to form a composite sheet of predetermined width and indefinite length. The present invention

also provides a dye-based polarizing film comprising a base material and the disazo compound of the formula or the salt thereof contained in the base material. Each of the user device, user credentials, and the physical identifier is associated with a user and identification of each is required to grant access to the virtual application. The camera lens extends through a wide opening at one end of the adaptor. The present invention permits phase displacement of POL regulators without limitation to the input and output voltages of each of the regulators in the array.

1459827149-7e22a700-f0a7-4bad-98e5-5a8f8aa49a4d

A generator housing includes a top portion, a plurality of side portions, and a base portion. In the interpolation method, the ambiguity between the interpolation value and the threshold value is removed by using the context, thereby reducing the blocking and smoothing phenomena in the restored binary image. Furthermore, in a gaming environment, the play personality of the usersubject may be represented by an avatar, doppelganger, narrative, graphic or iconic depiction. A pair of voltage multiplexers provides for compensation currents to correct offsets of either polarity.

1459827149-e60d35e8-c102-4485-8e25-153548b22967

The object of the invention is to reduce the amount of investment required for the usage-optimized configuration and installation of large cranes. The apparatus includes a conveyor for moving upper and lower chords thru a series of assembly stations of the apparatus. The device performance is not harmed, even if misalignments in consecutive semiconductor processing steps occur. In process flow continuity embodying volumetric displacement and replacement of distinct materials of distinct origin interposing manifolds comprising materials having rigid, and/or, semi-rigid, and/or, semi-flexible, and/or flexible characteristics are disclosed for ingressing and egressing fluent materials along gradient flow matrix patterns.

1459827149-e7f372c7-0ece-4418-a735-6aab6d6ad084

Compositions and methods for inducing cell membrane wounding, cell permeabilization and cell killing are provided. The construction of the cup provides sealing surfaces to allow the controlled flow of the liquids into the nose through either nostril without spillage. The invention provides a combination of dispersion compensation and definition of the linear polarization state in a dispersion compensation fiber which is birefringent at such a high level that only the two orthogonal linear polarization states can be diffused therein. In the ionization chamber, the hydronium clusters can be heated and reduced in size by means of electrical acceleration and gas collisions, and thus made more reactive in order that analyte molecules of low proton affinity can also be ionized. The ice bank includes an ice accommodation chamber storing ice pieces made by an ice maker, and an ice pressing unit circulating the ice pieces by pressing the ice pieces for preventing sticking of the ice pieces in the ice accommodation chamber.

1459827150-19c562c9-39b2-4e55-8fb0-4ef30da7cdc1

Engine accessory drive belt tension is maintained by a spring loaded roller positioned to impinge against the belt. One side is covered with peel-off wax paper which is removed to adhere the welting material flush against the edge of the carpet's pile. Another approach provides methods and systems in which the secure data parser is used to disperse packets of data into shares.

1459827150-3f1955e6-6a0c-4ab7-9ce5-a59e7cdac549

A control system for a maneuverable kill vehicle is provided. An apparatus includes a voltage metering circuit and a transformer having a first winding coupled to the voltage metering circuit and a second winding for coupling to a power source. The yoke housing has an open end in an axial direction.

1459827150-634b8180-c0c6-4c8b-a20b-b4be4264115f

The invention concerns the preparation of halogenated monoorganoxysilanes, of

formula, said compounds being useful as synthesis intermediate in organic chemistry. The plurality of LC series resonant circuits are used to radiate radio waves and are used as inductances of a matching circuit that matches an impedance when a power supply side is viewed from power supply terminals and a radiation impedance of free space. In the single bundle embodiment, the differences in optical lengths between different fibers of the bundle is preferably made to be equal to even less than the coherence length of the source illumination. The transformer functions to isolate the bias current from fluctuations in the output signal, whereby the output signal and bias current are provided to the associated laser diode device.

1459827150-7b0790c6-f0a3-4efd-ac5a-c52de0903c1e

In this parity data generating circuit, a Galois field multiplying calculation is realized by performing data conversion by index table information generated from a Galois field multiplying table so that data for RAID6 are generated. The driving apparatus includes an LCD panel for displaying an image corresponding to a data signal. Noise on the system platform may be estimated based on the received pseudo noise sequence. Further actions include providing the verification phrase as a response to the request for the verification phrase for verifying the identity of the user. The flexible web material can be coupled to a second web material. Methods of use are also disclosed.

1459827150-b404fcdb-b8bd-4340-88b4-9af979a23d77

A wireless station user is provided with a unified messaging protocol that enhances the currently available messaging capabilities of SMS. Each of the elongated handle bamboo layers has an average thickness of 1. , an alkyl group of 1 to 4 carbon atoms or an aryl group ; \u201ck\u201d is 1 or 2; \u201cm\u201d is 0 or 1; and \u201cm+k\u201d is 1 or 2), and further subjecting the resultant product to hydrosilylation reaction with a hydrosilylation agent. The zoom lens satisfies the following conditions:\u22121.

1459827151-49646e4e-d149-4cf7-92a6-dc7e110794c2

A plastic container is constituted by upper and lower tank members and a filter. The forceps includes a shaft member having an end effector assembly disposed at a distal end thereof. Particularly, the porosity of the positive electrode mixture is 20% to 50%, the porosity of the negative electrode mixture is 20% to 50%, and the porosity of the separator is 20% to 60%. The latter is adapted so that a spacer element can be removed or a spacer element can be added while the coupling of the first coupling end to the carrying structure and the coupling of the second coupling end to the optical element are maintained. The compounds are useful for treating coronary artery disease. The residential Ethernet stream transmitting method includes transmitting a data frame comprising multi-cycle traffic information and receiving the data frame within an admission control condition based on the multi-cycle traffic information.

1459827151-7dd49e9e-7060-49ea-bb1c-8454e6acd48c

A limit-level sensor for measuring level of a liquid has a resistance element which has an electric resistance which suddenly varies a transition temperature which lies above the maximum liquid temperature. A deposit of the assets withdrawn from the first account is initiated to a second account at a second financial institution. This is accomplished by the use of new transposition methods, in combination with spectral envelope adjustments. The label is attached in a manner to enable a user of the fishing rod and reel assembly to view the indicia while the user is fishing with the fishing rod and reel assembly.

1459827151-e80a81a7-9be6-4625-8810-6bf5579c880f

A battery pack and a method of controlling the battery pack. The caps have a circumference shoulder with O-rings. The most appropriately sized one of the garments for long-term wear may be selected by gauging which of the body sizers is

the best match to the actual size of at least part of a person's body. Range residuals from the ATC filters are used to correct the computed receiver offset and thus allow acquisition in the presence of relatively high interference. The second openingclosing mechanism is arranged to openclose a second portion of the bypass passageway that connects an upper part of the vessel to the low pressure piping. One of the basins, the intermediate basin, can be designed to have a volume greater than either of the first or second outer basins.

1459827152-2149289d-bc18-40e0-9536-c824886adfb8

A user interface for a portable computing device provides two modes of operation. The apparatus is deployed in the raised tower configuration by tipping the main member up, so that the base members, attached to one end thereof, rest on the ground, attaching the platform to the other end of the main member, and attaching the brace, which is also a ladder, to the platform. A determination is made as to whether other hosts have access to the data store.

1459827152-963370d4-e5ae-4ecc-b0b7-86ac51421e30

An apparatus and method for quickly drying solutions in one or more arrays of vessels includes a manifold that receives gas and a base plate that receives the one or more arrays of vessels. These multiple soft buses are stacked side by side each other. A further disadvantage is that the connection elements protrude into the cabin chamber and form edges over which one may stumble there. The system further includes a pressure differential system configured to control a flow rate of the buffer gas and maintain a positive differential in pressure between the buffer gas and the process gas.

1459827152-aabb5aad-8f7a-4bd4-a20c-31b072b54372

A method and system for performing garbage collection involving sensitive information on a mobile device. The tokens are tightly encoded into the content and a registry controls the linking of the television content to specific Internet-based content. A second image frame including one or more image patches corresponding to the image patches in the first image frame is received. The opposite end of the suture is tensioned and held in place by a suture clamp and a pledget routed over the stent and placed against the neck.

1459827152-d4a1fd52-45e0-4e9f-a48a-497f6a631304

To provide a disc drive device which does not spend a lot of money on components and requires the less number of components than the conventional technology and has a function to correctly dispose an inserted disc by a slot-in method at a place where the disc can be driven according to the size of the disc. A signal portion of traffic en route from a source in a virtual private network to a destination is received. In operation, the dipole radiator portion operates in the lower end of the bandwidth and the Vivaldi radiator portion operates in the upper end of the bandwidth. The heat sink element may be produced by an additive manufacturing technology. The reader may also be equipped to read an MSR-type device.

1459827153-58c123a5-3a56-4585-ada7-fa1144667c39

A concealed spoon in milk powder container is disclosed. The symmetric message keys may be derived from a master key using a key generator at an organization. Likewise, a voice mail deposit number reset request can be in the form of a MAP-USSD message. A dispensing nozzle is affixed to the other free end of the elongated tube. A protective structure comprising a layer of boron oxide and an inorganic barrier layer cooperates with the substrate to encapsulate the first electrode, the second electrode, and the light-emitting structure.

1459827153-8c699caa-b71e-49bb-bd2e-11d9979113e4

A valve body for a valve includes a body having an internal cavity formed therein. More particularly, information is identified which defines a particular communications network, e. Based on the detected and monitored characteristics, the

device driver coordinates image processing on the host machine by configuring on-the-fly a plurality of functional modules supported by the host machine for performing various image processing tasks. The extension rail assembly is coupled to the support rail assembly by a pivotal mounting that extends through the mounting slot.

1459827153-d0578d49-5c55-4317-90a9-97acd1af690c

A multi-functional PH meter and the fabrication thereof are disclosed. By converting the bitmap image into vector data the edge coordinates information so extracted reduces the time required for raster-vector conversion. An agent software component running preferably on the network device providing the managed service has access to the configuration in the native language of the network service. The position of the segment to be used is determined such that when the erasure continues over units of processing, the position sequentially varies gradually for each processing units.

1459827154-243bc4c3-bf6e-4270-96d7-b73e50a81e58

MnOx-containing, base-metal oxide mixtures are useful NOx oxidation catalyst materials and NOx storage materials in lean-burn engine exhaust gas treatments using Lean NOx Trap systems. The plurality of reservoirs of conductive gel are disposed on sections of the electrode assembly that are at least partially physically separated and may move at least partially independently of one another to conform to contours of a body of a patient. The photoresist is exposed to radiation.

1459827154-45512026-166f-456a-b65c-77fa8869d71a

A method for controlling a polishing characteristic of a polishing pad used in the planarization of a substrate is disclosed. In accordance with the system of the present invention, the protocol engine includes a plurality of processing units such as an identification unit, a lookup unit, a traffic management and congestion unit, an enqueue unit, a dequeue unit, a traffic management scheduling unit, a frame transmission unit, a control unit, and a control block unit. The carrier sub-assembly is moveable parallel to a longitudinal axis of the cylinder body between a first position and a second position. The court rules further include instructions for generating a Jurisdiction Selection Expert and an Event Selection Expert that enable a user to quickly select a jurisdiction and an event using hierarchal data structures.

1459827154-6a618f9d-3115-408e-93d6-7f69206eb7ae

In a hydraulic shock absorber structured such that a vehicle body side tube and an axle side tube are slidably fitted, and a plurality of adjusting portions are provided in a cap sealed to an upper end opening portion of the vehicle body side tube, a plurality of adjusting portions are arranged side by side in a plan view of the cap. An upper switch point of the two-point controller is allocated to one maximum power value and a lower switch point of the two-point controller is allocated to one minimum power value. The graphics geometry cache is a relatively small cache used for storing and maintaining vertex data. In one embodiment, removable blocking elements are disposed upstream of some of the binding sites, for example formed from photoresist. The device further transforms at least the test signal into a representation of the test signal for example in numerical format where the sample values of the test signal take the form of integers. The present invention also discloses a liquid crystal module including a backlight module and a liquid crystal panel.

1459827154-94a423c8-0e78-4a5b-920f-6e1bfe5cc7e9

A gift box for gift cards provides a presentation appearing like a gift box for other products, such as jewelry, having strength, three full dimensions, color, quality, and design options. The disclosure also generally relates to projection exposure installations that include such imaging optical systems, methods of using

such projection exposure installations, and components made by such methods. A plurality of interactions are received from a plurality of submitters included within the plurality of viewers. The use of carbon nanotube fibers allows the fabrics to insulate, semi-conduct or super-conduct electrical charges.

1459827154-b8869b78-c911-4fbd-861c-1ed051f4a6d1

A method of applying an adhesive to a substrate is disclosed which utilizes a hydrophilic, high molecular weight, nonionic polyurethane adhesive. A knowledge automation engine may evaluate a check against one or more facts to detect a product issue. Consequently, the storage capacitor is unnecessary, so that the aperture ratio of the liquid crystal panel can be increased.

1459827155-15a8a284-0498-49b8-9400-926bff39f074

A disposable cutting sheet for cutting and preparation of food items thereon includes a first section having a plurality of apertures therethrough and a cut resistant surface, a second liquid impermeable section disposed adjacent the first section, and a fold line disposed between the first section and the second section, wherein folding along the fold line forms the cutting sheet. The method is performed in a UE and/or a RN node of a wireless communication network deploying two frequency layers. A liquid sterilant is generated by mixing the water with dry chemical reagents. The necessity of a re-design and re-fabrication of the programmable media access controller and the control processor, and the interface between them is completely obviated by the present invention. When the last sheet of a set is dropped, the mechanism changes to a buffering mode and the arms collect and hold the first few sheets of the next set. An apparatus and method of using the apparatus is provided by which adhesive is applied to the end regions of the insulating glass unit with one or more nozzles while a separate side arm extends from the device and alongside the insulating glass unit having a nozzle that delivers adhesive bead to the side of the pane to be adhered to the frame or sash.

1459827155-8fce55b2-f830-4aef-82cf-b3277576c3aa

A delay locked loop can remove a jitter component that inevitably occurs due to feedback latency in the conventional DLL. The method receives the new print product class from a user and maps the representation of new print product class conditions to be semantically consistent with the representation of existing class conditions. The test plate is coupled to a test receiver circuit to receive and output the data signal detected at the test plate capacitively coupled to the signal terminals. Resistance bands may be attached to the arms. The APB generator allows messages to be sent wireless mobile communication devices through direct wireless messages instead of through email messages.

1459827155-ba3e4295-c367-4c4b-af01-cb7a04312e00

A method and apparatus for detecting magnetic fields in which a string carries an alternating current. The apparatus includes a catalytic solids container with a mouth and fluid egress opening and a trigger device or mechanism that allows for the controlled release of a catalytic solid into an eruptible fluid. A comparator receives the output of the filter and compares the filtered microphone output with a threshold to determine if the filtered microphone output signifies ice crystal formation on the heat exchange surface. The top includes pliable inner soft top, side windows, and rear window, each of which may be rolled into a stored position within the frame using electric motors for open air use of the vehicle.

1459827155-bb169c1c-33ad-45d6-86b1-6de2af837b35

A computerized method provides unshared local storage space to a process distributed by a trusted source through the use of an identity associated with the process that specifies local capabilities for the identity on a computer. The LGA socket is mounted to the power converter in a single direction of assembly. The two windings have a width in a radial direction and a thickness in a direction perpendicular to the radial direction. A server located remotely from the database

sends a query to the database for a real time call trace. The delay of the phase interpolator is adjusted so that the signals are coupled to the output terminals of the latches with a predetermined timing relationship relative to signals coupled to output terminals of a second signal distribution tree.

1459827155-d77896a0-124f-4171-a3ca-001962a7fc90

An air intake includes an air channel for an air stream passing through the air intake into the plant, and a particle filter assembly arranged in the air channel for removing particles from an air stream passing through the air channel, the particle filter assembly including a front and a back filter unit. The resource control system is designed for a plurality of clients connected to the system and is used to maintain consistency of the data. At least one of the mounting edges of the removable mounting assembly has an opening to receive a cooling air flow into an interior cavity of the main body of the removable module. The compressor compresses refrigerant gas introduced into a suction chamber from an external refrigerant circuit. In one embodiment, the launcher simultaneously launches confetti into the air so as to create an effect of both sight and sound.

1459827156-1e35fa33-388d-4106-aea0-8a27f2566602

A hydraulic power steering system for a vehicle includes a first, hydraulic actuator for making available steering power or auxiliary steering power for adjusting the steering angle of one or more steered wheels of the vehicle, and with a second electric actuator for making available a steering power or auxiliary steering power for adjusting the steering angle of the steered wheel. The provisioning system provisions unprovisioned mobile stations and prevents unprovisioned mobile stations from accessing an Internet protocol data network through the wireless network. Additionally, the gas cylinder component includes a torque-proof fixture that is under pre-stressing, wherein the torque-proof fixture comprises one or more bores tangential to the barrel further including a pin to create spring pinning action. Each of the pixels causes rotation of a direction of polarization of incident light depending on its direction of magnetization due to a magneto-optic effect. A1A0 and a second binary data Bn\u22121Bn\u22122.

1459827156-23c234bd-a2a2-4873-a733-c26a9c43c93b

An electronic circuit for a switching power amplifier is shown where in order to reduce problems during the transition stage when switching an output stage of the amplifier, the circuit comprises an output stage formed by at least two switching stages 54,55. The method facilitates the formation of a query to the UDDI registry for the wireless device user. The power device temperature monitor includes an inductor coupled to the output terminal of the power device and an amplifier coupled to the inductor.

1459827156-c3a05738-d8c3-4c4c-b1ce-e38042759348

A method of maximum likelihood decoding for detecting the signals transmitted over a Multiple-Input-Multiple-Output channel of a communication system in which there are N co-channel transmit antennas and M co-channel receive antennas. In one embodiment, the voltage reference generator has a power supply rejection ratio of at least 60 dB and has improved noise performance as compared to traditional bandgap circuits. The first cover is disposed about the rotor and comprises a forward end and an opposed aft end. In one embodiment, the MEMS device is a substantially planar device, designed such that, when the inertial force is parallel to the device plane, the displacement amplitude of the movable electrode from an initial position is substantially the same for all force directions.

1459827156-f0b720b6-a09e-4d9f-bcd0-e2b636f2ae28

An LED wedge-based lamp and method of making the lamp, where the lamp has a generally planar circuit board having one end that has electrical connections exposed thereon and a connecting part that is adapted to mechanically couple the lamp to a wedge-based lamp socket. The delay cells respectively include a first to

a third logic gate. Notably, the message server can be Java message service compliant. Additionally, the method includes forming a third well in the substrate, implanting a first plurality of ions to form a first lightly doped source region and a first lightly doped drain region in the first well, implanting a second plurality of ions to form at least a second lightly doped drain region in the second well, and implanting a third plurality of ions to form a source in the second well. A clamp arm has a roller and an extended portion and can be freely rotated around a rotation shaft.

1459827156-f4e78656-b7b2-432f-8fb2-1dfa36926b5b

A maximum power point tracking charge controller for photovoltaic systems includes a buck converter for receiving the maximum power voltage from a PV array as input and for supplying voltage output to charge a battery bank while converting the voltage input to a voltage output that matches the voltage required by the battery bank for charging. One embodiment includes a method for forming a branched, nanocrystal particle. A support device connected between the machine frame and at least one of the ground engaging units has a lifting column adapted to controllably raise and lower the ground engaging unit relative to the frame. In other embodiments, the floating point format can be defined in the manner preferred in order to achieve a desired range and precision of the data stored in the frame buffer. A method of securing a solar panel is additionally provided.

1459827157-4514e869-4a23-4843-9a78-aaca6105fede

A hot plate unit having a reduced heater temperature rise time and not generating dusts. When the speed of communication between the remote device and machine is not urgent, a connectionless mode of communication may be used. Methods of detecting contact are also part of this invention. A pivot hole is formed on the first supporting portion. The closing contact of the crossover switch is obtained by means of soldering, being equipped with a separator as protection against arcing. The polysilicon layer and the high-k metal layer are recessed below a top surface of the insulator layer.

1459827157-5a284832-40a7-4b2f-a376-4458fbf75a99

A reflector for projection systems and spot luminaires is molded in separate sections and then assembled into a unitary reflector. The local server may include a security device in charge of acquiring a first right of use of the data. At least two or more of the film-formation regions include a portion in which a total number of the landing positions in the at least two or more of the film-formation regions that simultaneously face the nozzles is the same in the primary scanning direction.

1459827157-9cb7ed77-c3d4-4a91-afb2-cd801d68a0a7

A domestic refrigerator or freezer has a food storage compartment delimited by insulated walls and by one or more access doors to the compartment. The backflow prevention adds sufficient minimum flow resistance, thereby enhancing the performance of the pulse dampening over a wider range of flow rates resulting in consistent gradient performance. The present teachings also relate to operating methods of the electrochemical system described.

1459827157-ba2c4204-ee97-4dac-a912-2dc3cc1ac3a8

Lactam polymers has been modified with sodium borohydride to yield lactam polymers bearing hydroxyl functional groups. At least one drive output element is arranged on the driveshaft, a shifting element is arranged to move axially within the hollow shaft, and coupling elements, in the form of balls, move radially within the radial bores. Each electric motor is associated with a converter in order to control the rotational speed and/or the rotational direction of the electric motor. At least some of the content is stored on the electronic device prior to display, and at least some of the logging and status data is stored on the electronic device prior to being transferred to the content management system. The apparatus includes a rotary kiln with internal walls for delaying progress of the polymer to the exit of

the kiln to be subject to sufficient processing to obtain desirable intrinsic viscosity.

1459827158-2d6232a7-c17a-4349-ae2a-c125a2bee0f7

A sealing configuration is provided for sealing off a first region from a second region through which a fluid can flow and which can be kept at different pressures. The rotordynamic device is a centrifugal pump or compressor operated by the motor to drive a fluid from the input to the output. The localized masking is accomplished through differential exposure of a resist layer to electromagnetic or thermal energy.

1459827158-337b1d4e-7b1d-4319-b9cb-38f5312136a3

The present invention is related to sublimation transfer paper for cotton fabrics comprising sheet, printing layer and mixture resin layer containing polyethylenevinyl acetate, stearic acid and wax as a lubricant. A control circuit is interconnected to a gated switch on at least one side of the load, and the switch is controlled to shunt back-EMF from the load. A piston rod passes through the second working chamber and is guided to the outside through a seal at the end of the cylinder and then hinged to the hatch, whereas the other end of the cylinder is hinged to a stationary component.

1459827158-462c0327-a15e-4df0-818e-6aba7a2503a3

The present invention relates to a diamond tool and a method of manufacturing the same, wherein multiple abrasive layers are formed through a brazing or electroplating method, thereby improving the performance and service life of the tool. The present invention provides a three-dimensional display device in which at least one of a plurality of display panels is formed of a display panel having pixels each of which includes color filters having the higher transmissivity than color filters which express colors of an image or transparent windows. A diffraction image is hereby created of the illuminating light scattered on the arrangement of elastic elements, and at least a portion of the diffraction image is detected by an optical sensor directly or after interaction with further optical components.

1459827158-878b7496-f498-4751-aaa8-d726a6847b83

Arrangement for taking a CT scan and a SPECT scan of a patient in a single-pass diagnostic procedure. Also provided is a method of soldering an electrical contact using the polyamine flux composition. Accordingly, the eddy current devices apply a retarding torque on the wheels of the vehicle.

1459827158-e7bf29a6-cee6-44c7-a952-ba191ecc3684

Delivery of bioactive molecules such as nucleic acid molecules encoding a protein can be significantly enhanced by immobilization of the bioactive molecule in a polymeric material adjacent to the cells where delivery is desired, where the bioactive molecule is encapsulated in a vehicle such as liposomes which facilitates transfer of the bioactive molecules into the targeted tissue. The toothbrush disclosed herein incorporates the use of disposable desensitizing agent cartridges thru a pump mechanism. Yet another object of the present invention is to provide a bonding material for an electronic component, which has a low linear expansion coefficient and a low elastic modulus after being cured in the temperature range equal to or less than the glass transition temperature, so that a joined body with high reliability can be produced. Accordingly, a difference in enthalpy between the refrigerant at the inlet and the refrigerant at the outlet of the evaporator 6 can be made large, and the heat absorbing capacity of the evaporator 6 can be enhanced, and further it becomes possible to give the degree of superheat to the refrigerant sucked into the compressor 1. The anvil member has a tissue contacting surface that includes a number of pockets arranged for substantially aligning with the retention slots.

1459827158-f9bcd98f-ea1c-4986-8d76-3a821997aee8

A sliding roof system for a motor vehicle includes at least one guide rail, at least one guide carriage movably received in the guide rail, and a cover support that can be shifted relative to the guide rail. The control system includes a determining unit that determines, based on the ID information of the device, whether the user can enter or exit the area, and a transmitting unit that transmits, based on the result of the determination by the determining unit, setting information of an apparatus located in the area to the device. The components are designed such that a surgeon can accurately manipulate and align vertebral bodies using the removable alignment rods attached to the cannulated pedicle screws and to enable the installation of fixation system hardware while the alignment rods are still in place. The substrate to be processed is maintained in a state of not contacting water until it is dried after being hydrophobized. The second capacitor electrode layer includes a second capacitor electrode section that at least partially covers the first capacitor electrode section, and which has an edge portion that extends beyond the underlying first capacitor electrode section. A branch tube is communicating with the nasal tubes and adapted to lead pressure generated by the nasal expiration gas to an external pressure sensor.

1459827159-2d04b8ac-d467-4913-b359-2fffc89567e00

A system for enabling user interaction with computer software is provided which has a printer. This is accomplished by rotating two handles relative to each other so that movable blades, via cams, are forced into the fruit/vegetable. The channel circuit measures information which is related to a read error and updates the information in the table. Placing step places the plate-like-shaped thin film member on the supporting member so that an opposite surface thereof faces the electrodes. An image compression unit performs a compression encoding of the image data based on a result of the determination of the document type judgment unit. A structure and method of forming a MLC having layers with staggered, or offset, pairs of lines formed directly on one another are disclosed.

1459827159-3930cd0b-9355-4736-8677-4b60c0f1cbfa

A device for use in tissue repair, a method of using the device in a surgical procedure and a method of making the device. In another embodiment, the film structure comprises a second skin layer comprising a thermoplastic polymeric material and an effective amount of a high-melting incompatible additive to suppress cavitation in said second skin layer, wherein the second skin layer is exterior to the second side of the core layer. Protective sheets or a rigid tray may be variously included for protecting materials forming the billiard table. A regulator circuit is included and is coupled to control a switching of a switch to regulate a transfer of energy from the ac input signal to a LED load to be coupled to an output of the LED driver.

1459827159-67762fee-7090-4fb1-80b2-e8c9b6b60f3a

Various system embodiments comprise an implantable lead, an implantable housing, a neural stimulation circuit in the housing, and a controller in the housing and connected to the neural stimulation circuit. The training aid has a frame that is attached to the golfer's putter club. The sensor is operatively connected to a software routine, as well as to a conventional indicator light that illuminates to alert a vehicle operator that water must be purged from the fuel filtration system. Each RL circuit is constituted by the parallel coupling of a resistor and a coil. A pair of temporary shelves for supporting the LCD substrate are disposed to sandwich the support member when the articulated arm unit and support member retract.

1459827159-9a8648ac-0b08-4453-83d4-50fbe9abc8c8

Provided a light guide including side surfaces on which light is incident, a reflection prism surface having plural prisms on which light is reflected, and a light emitting surface from which the light is emitted, in which the reflection prism surface includes a first region in which a pitch of the prisms varies and a

second region in which a depth of the prisms varies. In one embodiment, a system may comprise a networked device, a relevancy-matching server, and a client device. Other embodiments are described.

1459827159-f5bfef13-faf7-4958-bd47-99cfed15f0e8

Method and apparatus for handling calls from relocated instrumented functions to functions that expect a return pointer value in an original address space. A portion of the shaft of the drill bits located adjacent and proximal to the cutting head has a reduced diameter relative to the remainder of the shaft. A telephony-Internet interface converts spoken queries into electronic commands for transmission to an online shop or database.

1459827160-4573f24f-e4ee-4500-83c4-bbb03fd542c7

It is an object to obtain a light source device and a projection type display device in which a fragment can be completely enclosed therein even if a discharge lamp bursts during lighting. The present invention is also directed to stable orally disintegrating compositions comprising taste-masked microparticles of a substituted benzhydrylpiperazine and rapidly dispersing granules, and methods of making such orally disintegrating compositions. The amplifier power supply may be referenced to ground. Hybrid maize seed, plant or plant part produced by crossing the variety PH18MB or a locus conversion of PH18MB with another maize variety. A charge pump is connected to the output of the current source, the charge pump generating from the voltage appearing at the output of the current source all the operating voltage needed for operating the sensor and a signal processing circuit connected thereto. The method reads a bar-code indicating the volume from a tape cartridge, attaches the tape cartridge to a tape drive, and detects the current track position on the basis of a longitudinal track.

1459827161-20a2be9a-2c93-48b8-9056-b943a2f1d3a6

A garbage container includes a base section for collecting garbage and a lid section attachable to the base section. The valve structures allow for removal of selected portions of the sample material located within the process chamber. The present invention also provides a method of coating a workpiece with the truck trailer manufacturing facility. The method also includes selecting an assignment of at least one current echo to the at least one past echo of the at least one past echo function such that a predeterminable selection criterion is fulfilled. A data display displays the object data associated with the plurality of load objects.

1459827161-864c9d42-955b-41cd-9a52-9828d72db5d4

The object of the present invention is to provide an image encoding device and decoding device which allows the maximum compression rate to be achieved with a visually uniform level of picture quality. A first network node comprising a network interface controller coupleable to an external network operates as the primary network node for the set. The plurality of transistors includes a plurality of gate regions, a plurality of source regions, and a plurality of drain regions.

1459827161-d86f5441-8e36-49d4-a10e-cb38e975ca1d

In the present invention, a part of the recording elements in accordance with a position of a print medium with respect to a printing head when printing is performed after the detection is performed among the plurality of recording elements arranged in a conveyance direction during conveyance of the print medium are used for printing if the width of the print medium is detected by the sensor. The preamble sequence may be selected from one of a set of Constant Amplitude and Zero Auto Correlation sequences corresponding to all of the supported number of transmit antennas. Further, the lower shell is formed as a hull, having a floor surrounded by exterior sidewalls to define an interior well within the lower shell. The heating module includes a heater and a second switch.

1459827161-f6dc4f8c-b5ef-403c-895d-a163efcb27c9

A glass composition which is reduced in the amount of residual bubbles and is produced using smaller amounts of an environmentally unfriendly component such as arsenic oxide and antimony oxide. When machining holes in cast aluminum alloy workpieces it is found that aluminum machining chips adhere to guide surfaces and chip evacuation surfaces and mar the machined surface. A statistical analysis is used to determine the optimal routing map from hosts to storage entity. Additionally, each projecting pole is shaped asymmetrical to a line connecting a center of the projecting pole in the rotational direction of the rotor core and an axis center of the rotor core.

1459827162-4d73ea4b-ce1d-4c1f-a713-1e0386566c0a

A method of decorating items of jewelry. The set of characters is selected only from vowels and the space character. Since the identification mark 50 is formed within the pixel region 41, a transistor to be repaired can be surely identified, for example, by detecting the identification mark in a repair processing of the TFT array substrate. The RF bandpass filter is configured to separately control a bandwidth and center frequency of output RF energy. Compared with conventional lamp apparatuses utilizing DC LEDs, heat generated thereby is distributed on chips and outer rectifier. At least the sliding surface of the first sliding member is made of a diamond-like carbon material, and at least the sliding surface of the second sliding member is made of either an aluminum-based alloy material, a magnesium-based alloy material or a diamond-like carbon material.

1459827162-4de5a76c-0542-41e3-bdbf-649f48d74963

A driving circuit and a common electrode are located within a sealant region of the first substrate, wherein the driving circuit includes switch devices and turn-line structures. A method includes a step of locating a frequency coefficient within a transform array. According to the present invention all cation-forming elements are present in the scintillation material in an amount, which is higher than stoichiometric with respect to the anion-forming elements. In addition, the activating unit has an element that extends through the mold unit to engage the valve pin, so as to control the molten plastic flow from a runner system to an injection chamber. Each of the sub-fins is defined by a combination of a protrusion and a recess.

1459827162-4e676ff0-ac75-42fa-a99a-135bb81a7c10

Anti-theft security devices for a motor vehicle, comprise portable transmitting elements, of a receiving module on board the vehicle and of elements controlling a system for interrupting at least one circuit required for operating the vehicle when the distance between the transmitting elements and the receiving elements exceeds a certain value. The switch circuit can provide a number of switch settings. The present invention can provide multiple-layered buried wiring in which a high reliable via connection and a reduced parasitic capacitance due to the air-gap are achieved. The device comprises at least one device contact located at the third surface and adapted to be electrically linked with at least one corresponding enclosure contact located at the first surface. The method comprises the steps: frames are extracted from a video sequence inputted. A drive mechanism for operating the clutch includes an interlocking device operative in association with the movement of the tool rest body on the tool slide so that when the engaging unit is disengaged, the clutch is engaged and the turret is rotatably indexed by the servomotor.

1459827162-945df2b0-7975-4e0d-ba20-b23937aec059

A time-of-flight flow meter that is particularly useful for measuring the flow of gases, such as steam, uses a spark gap periodically energized with an electrical pulse to generate an acoustic pulse. At least the multiplexer of the first latch stage on the output side is associated with a feedback loop of the latch device of this latch stage. The processing system logs changes to a data portion and defines modified data fields and unmodified data fields. The mucus clearance portion may be

separable from or separate from the ventilation portion such that the medical device is capable of maintaining lung ventilation with the mouth interface removed from the patient.

1459827163-5ab32106-7907-427d-aa32-4b26d04ef3ca

Improved drying, binder evaporation, and sintering processes which may be used in conjunction with specialized sintering tools to provide for the geometrically stable sintering of large, complex, metal injection molded preform parts or flowbodies. An alignment end of the optical fiber is first positioned so that the optical fiber axis is coincident with the optical axis, and visible light passing through the optical fiber is focused upon an imaging light detector, without the optical component present on the optical axis. Also, the intercord distances  $T_1$  to  $T_k$  have a relationship such that  $T_1 \leq T_2 \leq T_3 \leq \dots \leq T_k$ . The strong influent jet due to the small influent area in a center-feed clarifier continuously impinges with the multilayer perforated columns one after another one.

1459827163-7a09ceff-ce91-48ad-96ca-54cc1f8c3038

The present application provides novel compounds according to Formula :including all stereoisomers, solvates, prodrug esters and pharmaceutically acceptable salt forms thereof, wherein  $R_1$ ,  $R_4a$ ,  $R_5$ ,  $R_6$ ,  $R_7$ ,  $R_8$ ,  $R_9$ ,  $m$ , and  $X$  are described herein. Biometric information can be identified as trusted by comparing it to other biometric information and/or based on the age of the biometric information and/or receiving correct answers to questions based on personal information. Preferably, the active formulation on the side of the current collector facing the anode is of a lesser percentage of the active material than that on the opposite side of the current collector. Further, the welded panels allow positioning of large rebar configurations, insuring that the spacing of the individual bars exceeds all required tolerances.

1459827163-fc5c6763-d0b9-4b93-87be-69350dd87b11

Methods and apparatus are provided for optimizing a conditional execution on a processor core. The charging station includes an input connector configured for coupling with an alternating current power source and an output connector configured for coupling with an electric vehicle. The cosmetic kits provide increased skin health benefits when both components are applied to the skin simultaneously or successively.

1459827164-702c693c-8d58-4004-8628-325d5bcfe704

A lithographic apparatus includes a radiation system configured to form a projection beam of radiation. One or more mating structures, such as posts and sockets, ridge and groove configurations, or the like, are provided along the mating surfaces of the two mating manifold members. Use of the arch support prevents this undesirable effect.

1459827164-c4854af8-39b0-44f2-8b40-f5c1af23c51f

A blowing agent blend for making thermoplastic polymer foams includes methyl formate. The vent member is broken due to an internal pressure of the secondary battery greater than a predetermined level. The spring connects the weight to the bearing plate. depending on personal preference. A method includes signaling completion of a read process prior to completion of one or more stages of the read process at a memory array.

1459827164-e2b34fed-d378-41f6-a8b3-700575a7d0e0

A protection system for a transformer system that includes three single phase transformers with auxiliary secondary windings, respectively. A CMOS image sensor includes an epitaxial layer having a plurality of photodiodes. The resource configurations use different resources that are available in the cloud computing environment.

1459827164-fb906bc8-086a-4126-9ae1-8b2584d0bcf7

There is a need to provide a computer system capable of preventing a failure from propagating and recovering from the failure. The call is established using a selected network and end device registered to the called user. Subscription response messages may be used to deliver credits to mobile devices which transmit a request for service. The metal containing layer is annealed to drive metal into the substrate to form self-aligned contact regions in a metal alloy formed in the substrate within the dopant regions. The system may also include a cold-plate connected to the cold-rail with the circuit board between the cold-plate and the cold-rail, the cold-plate to remove heat from the circuit board.

1459827165-ba32c2be-ba3b-481d-a44e-2837413a5f67

To obtain a micromachine for use as a high frequency filter having a high Q value and a higher frequency band. The separator layer is removed, the composition layer is adhered to a stain on clothing, and the clothing is laundered to treat the stain. In response to the enable bit and the at least one sub-channel select bit, the control logic selects one or more of the address signal lines to capture independent address information to support independent sub-channel memory accesses into the memory array.

1459827165-c0399a97-b54a-4952-8597-e12ed32ec62f

A stent is deployed within a body passageway. The wind turbine includes a nacelle that is coupled to a tower and a rotor that is rotatably coupled to the nacelle with a rotor shaft. The use of a Bloom Filter in the analysis allows for a more efficient use of resources to perform the analysis. Also, the computer monitors storing the job and the job ticket into the second folder, and activates a job edit program to have an operator edit the job after the process indicated by the job ticket is performed for the job stored in the second folder.

1459827165-c8734ca6-5341-4182-b9f1-a22e3e65f415

The present invention relates to a pump arrangement having a housing and cover. A target temperature of a fixing device is set on the basis of the thickness of print medium that is used after the predetermined operation and the thicknesses of print media detected at the period of the predetermined number of print pages. The magnetic device comprises a pinned magnetic layer with a fixed magnetization direction, a free magnetic layer with a free magnetization direction, and a read-out magnetic layer with a fixed magnetization direction.

1459827165-f710b176-9c51-468e-a6ef-cca3d76828c8

A spray system and method of using such spray system to fabricate a polymer membrane structure for use as a vascular graft or tissue engineered scaffold is provided. The assembly includes a stator core having a hub, a plurality of teeth extending radially outward from the hub, a root tooth diameter and an outer diameter. Any displacement of each electroactive bending actuator effects displacement of the membrane. The inlet portion of the cannula tip can accept blood flow from either the gaps in the side or from the bottom of the tip. A user interface is provided to enable users to monitor the vulnerabilities of software products or components. The levels of matrix metalloproteinases and/or tissue inhibitor metalloproteinases are analyzed to predict the recurrence of atrial fibrillation, and further to predict whether cardioversion will provide a successful therapy.

1459827165-fb5f9d8f-57fc-429b-b717-9a89a8f2cebd

A golf ball cleaner includes a housing having an open channel into which a golf ball is inserted. The module includes a module housing and a first fluid passageway extending from the module housing. In its idle position the cutting tool is disengaged from, and, in its active position it is engaged in, the workpiece to be processed.

1459827166-3490eb8f-4059-41e1-b582-b3c358fa7e40

A method for forming a multilevel structure on a surface by depositing a curable liquid layer on the surface; pressing a stamp having a multilevel pattern therein into the liquid layer to produce in the liquid layer a multilevel structure defined by the pattern; and, curing the liquid layer to produce a solid layer having the multilevel structure therein. The acid treatment, given certain reaction kinetics, removes a portion of the polyamide element of the conjugate filament. The valve element is disposed toward an inner diameter of the collar. First and second outer pinions are rotatable with the first and second gears, and as the driving pinion moves radially toward the first or second gear in response to gear separation forces, the first or second gear is angularly and rotationally advanced with respect to the other gear accommodating inaccuracies in the teeth of the rack and outer pinions. This technique allows for the proportioned fluids to be provided to the spray gun at high flow rates and consistent spray pressure without interruption. The interpolator is used to receive the combined video data from the mixer and to read previously combined video data from the buffer, and to generate the new video data by performing an interpolation operation according to the aspect ratio, the combined video data, and the previously combined video data.

1459827166-6a8af2b7-6692-4096-a61c-e099acdb139e

A monitoring system for monitoring a test article includes a scanning system and a computer system. The endpoint may receive a generic menu-navigation user input command, such as a navigation command from a simple remote control device. The protective sheet includes a top side having a raised surface design configured for retaining fluid, and a bottom side that is smoother than the top side for added slip resistance. A first portion of the patterning layer is removed to form an opening to expose the substrate and conductive layer. The face cutting is provided with teeth from a material of the coupling element that has been plastically shaped in an at least partially noncutting manner. The compressed air is supplied to a point between a fuel tank and a pump to push fuel back into the tank or through the pump then through an injector and back through a return line to the tank so that the fuel line is completely purged of fuel.

1459827166-d628916e-d1dd-449f-8e68-e29fd04b93a4

A method includes determining one or more potential merges corresponding to a color set  $A_i$  and a color set  $A_j$  of  $N$  color sets, represented by  $A_1$  to  $A_N$ , used in coloring polygons of a layout of an integrated circuit. Couplings are insertable into the open ends and are adaptable along a longitudinal axis of the housing. The data set can then be inserted into an applications program to form the computer executable code. Also disclosed are the use of agents  $a$  for the manufacture of a delivery device for the treatment or prevention of lung inflammation or a respiratory disease, and a delivery device for the treatment or prevention of lung inflammation or a respiratory disease that contains an agent as described herein.

1459827166-f2a2c645-fb4e-432e-b56f-3082cdb2cad2

The edge protector, especially for stair edges, comprises of a step profile and a base profile being fixable on a stair. Further, additional methods are applied to determine anomalous user behaviors and raise security and data leakage related events. A second data structure records selective index locations that map into the first data structure.

1459827166-f9c73a8c-e0d9-4b59-bcb1-ddf3cf671f2f

A belt drive system and toothed idler sprocket having an arcuate pitch to significantly reduce noise. The main body 1 is provided with a socket assembly 6 for the attachment of the fluorescent lamp 4, and an electronic ballast 7 for operating the fluorescent lamp 4 at dimmed levels. An EBC suited for low-efficiency emitters is also disclosed. A plug material is formed over the hard mask pattern to fill the contact hole.

1459827167-ae64bc2e-8b45-4c83-a199-5744a8ac64dc

A washing machine includes a tub disposed inside a cabinet, for storing water; a drum rotatably disposed inside the tub, for washing laundry; and a steam generating apparatus disposed at the cabinet, for generating steam supplied to the inside of the drum, by using high-frequency induction heating. The zoom operates in the range of useful magnification of the microscope with sufficient contrast if the zoom meets the meets specific conditions. The MAC control PDU includes an identifier for indicating a type of a MAC PDU and a sub-identifier for discriminating a type of the corresponding MAC control PDU.

1459827167-b04aa66a-ae64-423c-9d62-f94a3c76a006

This invention concerns a process for recovering and purifying dianhydro sugar alcohols from a vapor stream comprising dianhydro sugar alcohols, such as isosorbide, and water vapor. The method also includes transmitting the determined weight to at least one node adjacent in the network to the network forwarding device, and determining forwarding based on the transmitted weight. In a pick-up moving mechanism, an idler gear, which constantly engages the drive gear, engages a pick-up transmission gear to transmit drive force. Y represents a member selected from:  $\text{C}_m\text{OCH}_2\text{O}$ ,  $\text{C}_m\text{OCH}_2\text{OCH}_2\text{CH}_2\text{O}$ ,  $\text{C}_m\text{OCH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{O}$ ,  $\text{C}_m\text{O}$  where m is an integer between 2-4 and 6-24 inclusive; and R is either hydrogen or a benzyl or an alkyl group, the alkyl group being either straight-chained or branched. It thereto comprises a first active optical indicator that is located at a predefined location with reference to the line of passage, which indicator is detected as part of the image registered by the camera so as to obtain detection data.

1459827167-b0a41ec9-8df7-4e96-ac26-75fc7146dfa6

There is disclosed a method for manufacturing products through the use of waste materials of various kind, such as heterogeneous plastic materials, wood, minerals, etc. For example, the method receives a request from a subscriber of the communications network to subscribe to the virtual individual server service, provides a virtual individual server to the subscriber in response to the request and executes at least one application via the virtual individual server using at least one piece of personal information associated with the subscriber. A speech recognition mechanism processes the caller's voice response so as to produce a data signal representing a recognized voice response. The computation cells of latter stages have the same configurations as the second computation cell. In an embodiment, two corners of the space have a radius of curvature no greater than the width of a transition zone between the space configured to contain liquid and a surrounding configured not to contain liquid.

1459827168-182322b0-f835-4094-b4c7-19f2a9d390a5

A transmission bit rate control mechanism for a packet-based communication system in which sender transmission bit rates can vary over time is provided. The first charge trapping layer includes an insulating film containing Al and O as major elements and having a defect pair formed of a complex of an interstitial O atom and a tetravalent cationic atom substituting for an Al atom, the insulating film also having electron unoccupied levels within the range of 2 eV-6 eV as measured from the valence band maximum of Al<sub>2</sub>O<sub>3</sub>. As such, the cost of manufacturing the device may be reduced, and the overall achievable yield may be increased. The monocrystal grows towards the melt surface in a direction that is perpendicular to the phase boundary. The invention further includes a technique to eliminate dead air spaces in the voice data transmission stream by speeding up or slowing down the data rate in the buffer while maintaining a constant pitch of speech.

1459827168-2b9bf669-8f69-4048-8de4-b7133b2295e6

The invention relates to a microelectromechanical structure, and more particularly, to systems, devices and methods of compensating the effect of the thermo-mechanical

stress by incorporating and adjusting elastic elements that are used to couple a moveable proof mass to anchors. Particularly useful for exercising with a child and allowing her to ride a bike until tired, and then towing the child's bike while she rests in the jogging cart, the apparatus comprises a bracket assembly which is removably mounted on the rear wheel support structure of the towing bicycle. Fruit is large, firm and develops a bright golden-orange color with red blush on exposed fruit.

1459827168-61f9072c-f033-4025-95e9-627e6305fb7d

A computing cloud comprising at least one computing node having a Virtual Machine running on a user level. The side walls of the spacer bar preferably taper towards each other such that the thickness of the spacer bar at the inner wall is less than the thickness of the spacer bar at the outer wall. In one procedure, a shape or profile of a curve of a second-order moment of hydrophobicity is determined. The forcible control device forcibly controls a drive signal such that an electrical angle changes to a stabilizing point. A supplemental storage layer may be disposed over the photovoltaic layer such that a storage portion is in alignment with the hydrogen collection micro-chamber.

1459827168-7b77a233-4ef4-4ad0-a519-70c9628ab421

The circuitry introduced in this invention selectively slows down the functioning of an electronic circuit by maintaining a particular state for a prolonged period of time. Suppliers of goods or services self publish information to the hub. In these regions zero or more devices may be fabricated. Said contact elements penetrate at least one of the sidewalls, so that the contact elements provide an electrical contact from external contact elements to internal contact elements, such as solder tails. The longitudinal body edges increase in width as the body longitudinally merges with the circular shoulder portion, and the circular shoulder portion has a rounded portion transitioning into and merging with the body panels, and a sloping portion of reducing diameter merging with the neck. JAR is received if the communication pattern is allowable, and JAR is not received if the communication pattern is not allowable for security reasons.

1459827168-89985edf-19ad-47dc-a129-35e34408daf0

An extendible height container is provided in which the corner elements telescope to extend the height of the container from standard ISO dimensions. An object of the present invention is to precisely define the exit portion of a deflected connecting element in its rotational position relative to the housing of the booster in order to simplify and improve the assembly. to produce a self-supporting activated carbon structure. Imbalance due to the curve of the instrument is corrected by a non-functional asymmetry proximal to the functional asymmetry. After the two laser transmission devices have been fixed relative to the aperture-processing machine, the common line of intersection formed at the point of intersection of the two light beams mentioned above and the axial line of the main bearing cutter of the aperture-processing machine coincide exactly, thus forming the reference for positioning.

1459827168-d7e6f531-8359-4831-b6b8-d364b3f6659d

A seal assembly is for sealing between a housing and a rotary shaft includes an annular sealing member coupled with the housing and having inner and outer circumferential surfaces and a plurality of projections extending radially from the outer surface and spaced circumferentially about a central axis. The extended object oriented programming environment provides the capability for a client object oriented application to connect to, and communicate with remote server object oriented applications as well as make object references to remote objects and remote object data. There is also provided a method comprising receiving an input signal with a frequency between 2. It uses Internet protocols and technologies to implement these packet transport systems, and thereby re-use much of the existing Internet infrastructure already widely deployed. By utilizing only engine speed,

the noise enhancement system is cost effective and significantly less complex. X and Y are coordinate values defining the airfoil profile at each distance Z.

1459827169-1867aae3-0b7e-4904-a7fa-86034de14a19

A conductivity probe having a modular design. Monitoring another physiological parameter in order to detect a condition indicative of the beginning of a present pathological episode and collecting additional pathological data in response to the condition. In a first embodiment, the n parallel streams of data 30 characterized in that one of streams of data includes a unique characteristic that can be used to distinguish that one from each of the other streams of data. A mean, standard deviation, and weight may be calculated and assigned for each of a plurality of access points as observed within a space. The command signals may be substantially mathematically proportional rate command signals with respect to applied torque.

1459827169-32e67997-c4f3-4b1a-9d67-57f651f9f3f9

A surgical system includes a manipulator, an implantable actuator and a controller. Among the fluid flow problems that may potentially be detected are leaks in the branching catheter systems. Methods for producing a maize plant that comprises crossing hybrid maize variety X05B902 with another maize plant. By sharing input commands rather than pixel array data, system latency may be reduced. The prompt gamma-ray detection apparatus is advantageous because it can non-destructively analyze the elements in a chemical sample using a femtosecond pulse laser-induced neutron generator that solves the problems of an atomic reactor for research or a radioactive isotope as a neutron radiation source.

1459827170-444de359-2bb2-4b94-b206-4f41a3eaadb1

A silica glass crucible used for pulling up a silicon single crystal and made from natural silica a raw material is provided with a region within a certain range from the center of a bottom section of the crucible and up to  $\theta$ . An issuing server generates an eVoucher that a recipient may use to purchase goods and services from a merchant's e-commerce Web site. In this manner it is ensured that the working method of the agricultural working machine or its working attachments is adaptable to the shape of the particular territory to ensure economically efficient use of the agricultural working machine. The at least one electrical wiring device includes at least one user-interface. The probability that the current packet is either dropped or used is determined by using the current data packet service flow rate, the data packet priority, and the current buffer circuit depth. The wireless power transmitter can include a shield residing on a given side of a substrate spaced apart from the transmitting coil.

1459827170-44bd8404-1357-4c7e-856f-8bb27f055807

A system for a user to control a thermostat temperature setting includes a master code by which an operator gains access to the system to set the parameters by which the general user can access the system and change the temperature setting. A heat transfer fluid flows through the fin by way of a conduit which carries the fluid to and from a load. The module can truncate the text string after a particular number of lines at a space and append an ellipsis, or the module can dynamically write code to accommodate the entire text string in a \u201cpage flipper,\u201d where the user sees substrings of the text string on each page and can \u201cpage\u201d forward or backward through the entire text string.

1459827170-462c598f-b4dc-4399-8a23-afdfdf263622d

Electromechanical non-volatile memory devices are provided including a semiconductor substrate having an upper surface including insulation characteristics. In various aspects, the disclosure is directed to integrating a VoIP client for audio conferencing with a web client. An extraction device, such as, for example, a vacuum system, extracts a sample of air, including any dust and other particles, from inside the mail piece.

1459827171-3678ec53-a482-40d3-8bff-f1576ff1dfaa

A bi-directional DC-to-DC power converter is provided. The apparatus includes: an adjusting unit configured to control rotation or movements of the heavy load so that collision or interference of the heavy load with a facility around a road or a peripheral environmental condition is prevented in a process of transporting the heavy load after the heavy load is fixedly mounted to the adjusting unit. The media sheet has two lateral sides, a leading edge, and a trailing edge. A spring is engageable with the lever for urging the lever to move the control structure toward the first position. Clamp member has a bore that adjustably and securely retains a support rod, which has a swivel foot at one end. The method also includes enabling a software entity to request a service represented in the repository, the service representing a first operation on one or more data elements in a first collection from the collections, and executing the first operation on the one or more data elements in the first collection.

1459827171-53b6d042-29c5-4b77-9cae-1251c10a54dc

An amplifying circuit of a semiconductor integrated circuit includes a data amplifier that outputs an up-signal and a down-signal amplified according to a comparison result between an up-data signal and a down-data signal in response to a control signal. The amplifier output stage includes an input, a gate driver circuit, two output transistors, an output, and a current sensing circuit. Accordingly, if the network conditions are not suitable for the service request requiring a data transfer, it is possible to not proceed with the request, such as by delaying it until network conditions become suitable. The slide engages the spacer with a uni-directional ratchet controlling the extension of the spacer from the connection box. The one or more voice recognition algorithms may correlate utterances of the person engaged in a conversation to one or more stored utterances.

1459827171-8043445d-b49e-4c48-b64f-322fc9162a26

Ruthenium compounds, either alone or in combination with other remediating compounds, can be used to oxidize, remove and sequester contaminants in water and soil or sediments. The wireless interface receives user information, including a user speech sample and a user account code, from a wireless communication device over a wireless communication link. State dependent content in the electronic document is identified. Next, a first end of a first piece of adhesive tape is applied to the membrane side of the composite, and the second end of the first piece of adhesive tape is applied to a first rotatable winder. 01-10 parts by mass of an inorganic layer material to 100 parts by mass of said main constituent material, in addition to said main constituent material and said organic binder. The compressor and turbine each produce substantially no axial force, allowing the use of minimal axial thrust bearings.

1459827171-bd24ca75-d821-4474-a39f-da71d15e7b81

When a printing paper to which an IC chip storing secret information is attached is discarded, a shredder applied voltage to the IC chip by a discharging unit to destroy the IC chip and to make it impossible to read the secret information therefrom. The composition is a two-part coating composition having an amine component including one or more aspartic ester amines and optionally one or more amine-functional coreactants, an isocyanate component including one or more polyisocyanates, and material selected from the group of fillers, extenders, pigments, and combinations thereof. The integration valve member is moved by a stepping motor connected to the integration valve member via a shaft. The first high concentration second conductive type region and the first high concentration first conductive type region are connected with a first power supply of a potential.

1459827172-26e50e9c-6769-4d09-8e1d-5d1a21335912

The invention relates to a new device for and a new method of assembling stacking

patterns and simultaneously stacking these stacking patterns by means of a robotic manipulator having at least one translational robotic axis. The tension mask has a pair of mask borders each being fixed to a respective support blade and a plurality of strands extending between the mask borders. The application server receives and converts information of the GUI into one or more web pages and one or more client side scripts. These leads are then deemed relevant to sales and can be input in an organization's customer relationship management tool. The mailing assembly includes a pocket holding the article inside the mailer is offset relative to one edge of the assembly by a distance sufficient to prevent damage when the mailer is oriented and processed by postal equipment.

1459827172-6cf67884-f77b-4ff8-a1d9-75a00ed6d436

The present invention relates to blind decision feedback equalization. A width of at least one fin of the plurality of fins is different from widths of the other fins, and each width of the plurality of fins is individually determined based on the electrical characteristics of the fin transistor. Some embodiments of the devices include audio components that are configured in a manner that distorts direct verbal communication between two parties of a trilateral verbal exchange. The body of the RF conductor is positioned circumferentially around the implantable medical device. The impact of a particular condition notification on one or more entities, which are related to the primary entity, is analyzed to create one or more impact notifications.

1459827172-b87e0239-6237-4bfb-9463-75cbb982396b

An echo canceller circuit and method performs cascaded echo cancellation and noise suppression in a non-interfering manner. The fuel vapor pressure management apparatus performs leak detection on a headspace of the fuel system, performs excess negative pressure relief of the headspace, and performs excess positive pressure relief of the headspace. The second mode uses a hinge to allow the light units to be rotated about the hinge until the left and right light units are pointed in the same direction defining an open position.

1459827173-906f2827-d13c-4a8f-9895-57720884cd15

A side-view type light emitting device includes a package body, a lead frame, and a light emitting diode. When the variable reference sampling current is raised and the step-up device approaches a pulse duty factor value, the intermediate circuit voltage is reduced and the variable reference sampling current is stabilized, said intermediate circuit voltage is re-raised. The support includes a tilt strip and a pressure strip, as well as devices for positioning the tilt strip and the pressure strip at angles relative to the bearing mechanism.

1459827173-9661a19d-a1e4-487a-91fa-f2b58f2672af

The mower housing apparatus provides a three-blade design provides with all blades rotating in the same direction, either clockwise or counterclockwise, at the operator's discretion. The deep trench capacitor structure is constructed from a first capacitor plate that is formed from a doped n-type SOI semiconductor layer. Numerous other aspects are provided. A first, second, and third coaxial RF connectors can be mounted to the switch housing.

1459827173-a8623277-e15f-42f6-b156-aaaadcfd2357

A reconfigurable ADC includes a plurality of reconfigurable blocks for allowing the ADC to provide a plurality of architectures. When data is to be written to cache, each cache level determines whether it is permitted to store the data. The first energy consumption model corresponds to actual energy consumption of the facility. The short-distance linklets attain maximum bandwidth by use of the existing buffer credits of the end nodes. The backing tube and the target material are joined via an electroconductive felt present between the backing tube and the target material.

1459827173-b4c2a9d7-97b5-431f-ab02-2144b758446f

A voltage regulator has a phase compensation circuit which changes consumption current according to load current thereby to reduce consumption current. In one preferred embodiment of the invention, the active ingredient of the insecticide formulation is an amine derivative, having a nitro-methylene group, a nitroamino group or a cyanoamino group, which can be formulated to have low toxicity and excellent insecticidal activity. The second section has an operational amplifier with a summing circuit that sums two input signals, namely a triangular wave signal and the control input signal, and then amplifies the summed signal to produce a trapezoidal waveform output delivered to the second section. Systems and methods of displaying recorded network data utilizing the retrieval systems are also included in the invention. The models may also be tailored to account for geometric considerations of the semiconductor devices thereby allowing for a more flexible model and simulation by providing for geometric scaling capabilities.

1459827173-dd3402d3-11bb-4408-a5a9-1f8bc00b50f2

Specific logic gates for q-gating are selected by determining the minimum leakage state for a circuit design and then selecting logic gates that hold the circuit design in its lowest leakage state. A bypass channel is used to link a first end of the cleaning tube and a second end thereof. Each of the drawer glides has an attached rack gear with at least one tooth having an irregular profile.

1459827174-0769ff64-1049-4d62-9888-c8c30447a358

A method for tracking position of features of a moving organ from at least one sequence of image frames of the moving organ involves identifying at least a first feature and a second feature of the organ in a reference image frame. The standard digital channel processors perform continuous tracking. The rotational control assembly may be installed at any desired position in the drill string. A cover is positionable onto the base for holding the fiber stub and fiber end in the channel.

1459827174-8fc9ecba-31d8-4e23-8448-65b58df91828

A method and device for the quantification of muscle tone, particularly the wrist, wherein non-sinusoidal and non ramp trajectories are used to drive the wrist. The thermal absorption unit further comprises a microchannel system formed by superimposing a cover on a substrate having a plurality of micro-grooves arranged thereon, so that the microchannel system is capable of allowing a fluid with a plurality of magnetic particles to flow in and through. Entertainment content definition files define the rating level and content descriptors for entertainment content. The gaming machines can be oriented in a peer-to-peer configuration, a central storage medium configuration, a stand alone configuration, an autonomous gaming machine configuration, and other network configurations.

1459827174-9e771998-4314-4a65-8e3e-331470866167

At a particular node of a storage service to which connections have been established on behalf of one or more clients, respective workload indicators are collected from a set of peer nodes of the storage service. In some embodiments, two carrier signals are transmitted on different frequencies to one or more user devices that support multi-carrier operation, and different global cell identifiers are broadcast on the two carrier signals. The film has excellent transparency, heat sealing property and tear resistance.

1459827174-c1704dc9-6cac-49dc-a572-ceed8dad45ed

When assembling longitudinal seams, the shells in the region of overlap are moved together over lining-up drill holes, the shells are fastened and subsequently the pilot holes are transferred. Each of the plurality of local performance monitors implemented in each different domain is modelled on a relationship between a level of the supplied voltage supplied to each different domain of a predetermined system and an operating speed or the operating frequency of a predetermined circuit implemented in the interior of the domain. The wiring harness includes a plurality

of flexible electrical conductors, each electrical conductor being electrically isolated within the wiring harness. Both ramp sections and the support leg assembly include manipulating handles to facilitate movement of the ramp between a stored position and a working position.

1459827174-ed60bc61-1c76-484f-a2a2-9d1e7f806c22

As a vehicle runs, current load  $q$  is calculated every given time. A primary mask is obtained from a primary set of granularity masks. Therefore, the processing object data was converted to the data adapted for the output capability of the output device so that the output device can output any processing object data. The filter element has a pleated filter medium, which is sealingly enclosed by a frame, and the frame has seal contours designed to cooperate with the contours of the filter housing. An example pulse width modulation generator includes a ramp generator to generate first and second ramp signals that interact to form a virtual ramp signal; and a comparator module coupled to the ramp generator configured to produce a pulse width modulated signal based on a comparison between the virtual ramp signal and an input signal. The apparatus selects at least two from among them, calculates chaos theoretical indexes such as Lyapunov exponents according to a chaos theoretical technique, detects changes in the chaos theoretical indexes with passage of time, and collectively evaluates and diagnoses the brain function.

1459827175-02c1da8d-d907-4656-8a63-ec2143e61a49

A method for facilitating VoIP communication between VoIP providers. The methods include manufacture of a bioresorbable dressing comprising a casing and bioresorbable microspheres in the form of a rope shape. Each of the MOS transistor devices includes a nitride cap and nitride sidewall spacers. 75 and water corresponding to 48. This arrangement makes it possible to reduce, while ensuring a wide process margin, the fluctuation of the potential of a terminal to be connected to a pixel electrode, to simplify the arrangement of signal lines, and to improve the aperture ratio.

1459827175-3fbc2666-cb6a-4c55-997e-ca0560001092

The device comprises an output gearwheel, a gear cover having a plastic sleeve open toward the output gearwheel and a park position switch having first contacts mounted for rotation and second contacts fixed to the gear cover and a driving means. The control drive comprises an electric actuator that acts on force-transmitting elements. The resulting extrudate features the therapeutic compound in an amorphous state. An optical conduit is arranged in a container for holding fluid. The surgical device's shaft can be configured to receive a flexible surgical instrument therein such that a working end of the surgical instrument can be received within the steering platform, thereby allowing movement of the surgical instrument's working end to be controlled through movement of the steering platform.

1459827175-ddf4dd65-e88f-4c6c-a7ff-784011b7f0ec

A camera module includes a lens holder, a lens module, an image sensor chip, and a printed circuit board. Once a result of the search has been obtained, a score is assigned to the obtained result in accordance with a predefined criterion. Each write buffer portion is dedicated to a predetermined block size category within a plurality of block size categories. Processes embodying aspects of the present invention may be beneficial for recovering a variety of metals such as copper, gold, silver, nickel, cobalt, molybdenum, zinc, rhenium, uranium, rare earth metals, and platinum group metals from any metal-bearing material, such as ores and concentrates. Between the annular region and the second circular blank plate there is formed a circumferential groove in which the first circular blank plate is retained for rotation. The parent proxy provides at least a portion of the results of executing the request to a child proxy, which in turn determines what, if any, content within the results should be sent to the web browser rendering the parent web page.

1459827176-2d243931-cbc9-4f5c-a4d7-4488f0e0d1cb

A data store includes at least one adjustment factor. The moveable trigger rotates about a pivot or hinge point on the body and is biased by engagement with the valve stem or an additional spring return into a neutral unactuated position where the product is not dispensed. Upon interrupt, each processor reads the contents of the register and responds by adjusting its local clock rate synchronously with the other processors. The multi-level data, to which the error correction block is added, are recorded in an information recording medium. Energetic ions are generated by accelerating ions of the plasma toward a substrate in the chamber in response to the amplitude of the DC pulse during the on-time.

1459827176-89560f8f-81a5-4013-93c4-cdb499ba84b6

A method for creating and editing an XML-based speech synthesis document for input to a text-to-speech engine is provided. When a terminal senses that it is located at the boundary of a WCDMA during a WCDMA communication service, it transitions to a first state. A carbide section is fixed to the working face and positioned within a pocket disposed within an inverted cone of the working face.

1459827176-b1d75fd0-d6e7-431d-b98e-f014e6f34e06

A roof rack assembly includes a first roof rail and a second roof rail spaced a first distance from one another on the vehicle roof. According to the invention a vibration behavior of component is determined, wherein to each of the positions having vibration amplitudes, which exceed a preset threshold value, an attenuation element is locally mounted, which is formed as a multilayered adhesive element including a support layer and a self-adhesive damping mass. The gateway software includes device communications software for sending and receiving device messages to and from the one or more embedded devices and gateway communications software for sending and receiving communications to other software.

1459827176-d9142fc4-e609-4b82-8715-60e802886477

A method and architecture for face detection under varying light conditions, tilt levels, different color characteristics of faces in a digital image are disclosed. The resultant fractal element may rely upon an opening angle for performance, and is more compact than non-Euclidean ground counterpoise elements or the like. The protective panel securing hardware secures the protective panel to the adjustable mount and to extend in an upwards direction from the adjustable mount. The multi-container bundle already contains all the individual components which are required for a defined mixed beverage and are present in metered form in the individual containers.

1459827177-5078ed97-8d70-414e-8463-b70f1b7369cc

A method of browsing an ordered set of items on a display device is disclosed. The target device may include processing circuitry to generate a random number, to determine if the random number is in the first set, to generate a random value, and to randomly select a time slot. The card comprises a browser which interacts with the server and which can be triggered by selection in the mobile terminal or remotely by the server. The door is at least partially supporting a predetermined amount of product and is positioned between a movable distance of the plate. Such polycarbonate polyol compositions are useful in thermosetting applications for the production of coatings for consumer products. The detector can detect a parameter of the hot edge ring and can provide a detected signal based on the detected parameter.

1459827177-872f862a-13cf-4d3b-9c46-5eb0cb7c4ce5

A measuring instrument is fed with a video output signal, and performs RGB processing on the video output signal to generate graphic data. A Java module is executed on a server, where the Java module includes at least one original entity bean and at least one original state object in communication with the original

entity bean. The method further includes forming a gate structure in the active channel region formed from the stressed Si layer. The control member has a plurality of arms for pivotally mounting control member.

1459827178-86a5e471-4f26-4b64-911c-919154da052a

A method for controlling a reply signal transmission in a mobile communication system. Information received within a validity window may be treated as correctly received even if the frame fails a subsequent verification process or if reception of the frame is terminated prior to the end of the frame. Furthermore, techniques are disclosed which enable delaying the loading and initialization of components until such time as a class in the component is actually needed, thereby improving overall efficiency of the system. The stapler also includes an actuating assembly adapted for discharging the at least one staple through the exit area and a displacement mechanism in operative association with the staple housing near the exit area. A clock is outputted depending upon a result of comparison by the comparator. The strap-length adjuster includes openings that permit the attachment of a tether to the strap keeper.

1459827178-9c0e6323-9961-4c05-8962-c5bcf248c76b

A method and apparatus is provided for improving integrity in data representing a plurality of condition states of a variable, including the steps of determining which condition states are operationally incompatible with one another, and generating an array of transformed integer values including a separate integer value for each condition state. The towmotor includes a first lever pivotally connected to a rear panel of the towmotor. A first power rail extends along the first boundary. The support plate also includes a deflection plate that is positioned vertically above at least one support plate aperture that extends through the base plate. More particularly, the invention relates to single step procedure involving Corey-Chaykovsky reaction and in-situ CO<sub>2</sub> insertion.

1459827178-f331cd17-1573-4dbe-9d0b-9515147e905f

A display adapter for a digital connector and an analog connector. In the apparatus, an emitter generates a light and radiates the light into a transfer system. Selection of a specific configuration database preferably is based at least in part upon patient-specific information obtained from any location in a distributed hospital network. The gear is rotatable with the first and second position determining portions coupled to each other. In one embodiment, sputter deposition is utilized to produce these coatings.

1459827179-cf3ec3de-03a1-47c6-ad99-b5662cbae3dd

An optical element manufacturing method includes: disposing a light-shielding layer that includes at least an Si layer as an uppermost layer, on a substrate used as a base member, forming an optical aperture at the light-shielding layer and forming a fine recession/projection structure at a surface of the uppermost layer through dry etching. M&N HS-DSCH channelization codes are allocated upon request by a RNC such that a node B can service UE's. When the targeted storage unit is currently available, the method continues with the processing module sending the rebuilt encoded data slice to the targeted storage unit and recording storage of the rebuilt encoded data slice by the targeted storage unit. The conditioned signal is then provided to an input stage of a linearizer that generates a set of exponentially related signals.

1459827180-e3f2186b-2da2-4b80-97e9-8261c5f364c0

The disclosed methods and apparatus relate generally to the electronics media industry, such as cable television, home shopping services, on-line computer services and computer memory applications. One version of the receptacle provides that the receptacle is in the open position as a fastener element is dropped therein. The molten active agent mixture is then suspended and homogenized in a hydrophilic or lipophilic carrier to form microparticles suspended in the

hydrophilic or lipophilic carrier. Between the n-type GaN substrate 1 and the submount 102 is laid a metal film having a thickness of from 1 to 50  $\mu\text{m}$ . The system would be turned to a high flow rate whenever the tanks are receiving product. The OSD system has a video graphics bypass path and graphics bypass switch for directing an analog video channel around the OSD subsystem during time intervals when the OSD subsystem is not required to insert graphics into the source signal.

1459827181-7777712a-4cad-4aba-8bfd-9e59df02659a

An HARQ method for guaranteeing a QoS in a wireless communication system is provided. The racket frame also comprises a self-powered piezoelectric damping system for damping vibrations of the racket during play. Additionally, the protocols enable two or more identical encryptable objects to be processed with different encryption keys, yet be stored in a manner so that the total required storage space is proportional to the space that is required to store a single encryptable object, plus a constant amount for each distinct encryption key. An indicator detects the machine's current work function and updates the data in the database based on the current work function.

1459827181-ebf808d7-24ab-4156-9766-0cd463f0c03b

A soil moisture sensor has a cylindrical body of transparent cyclic olefin polymer. The invention also provides antisense nucleic acid molecules, recombinant expression vectors containing TWIK nucleic acid molecules, host cells into which the expression vectors have been introduced, and nonhuman transgenic animals in which a TWIK gene has been introduced or disrupted. During collapsing, the first lens group and the second lens group adjacent to the object side are transferred to a side of a CCD which is away from the optical axis and a focus driving mechanism drives the third lens group along the optical axis. The differential polarization delay unit includes a polarization beam splitter element and a first and a second birefringent optical waveguide. The service automatically performs unit conversions and selects relevant, previously observed values before evaluating a proposition when new data is available. The PIFA further may have another radiator, which resonates in the upper operation band.

1459827182-0efd60ed-4101-4cb5-b4d1-18fce4c377eb

A digitizing analog front end using mixed technology on a single substrate is described. The socket assembly is comprised of a plurality of two-sided plates joined vertically in a horizontal stack, wherein each plate has a die socket for the removable insertion of a bare semiconductor die. An electronic processing unit receives the signals coming from the camera and processes them according to different processing algorithms for detecting various categories of defects, specifically small defects, medium defects, and large defects. The emitters and the detector are disposed proximate the sensor head.

1459827182-4c137e6a-4cc3-4a7b-819f-727274b0a52e

A hopper car has arcuate side sheets that are bent over the forming members of the structure to give a generally outwardly bulging shape. The movable barrier operator is operable to move a movable barrier from an open to a closed position. The PMOS has a first doped region formed below a P guard ring of the PMOS and a well pick-up of the PMOS. The protection tape is wrapped around the primary winding and the secondary winding.

1459827182-95ec268a-3f11-4831-84a2-4e038accedf1

Configuration information representing the configuration elements of a client PC or the like on a network is compared with initial configuration information. The enclosure includes a bottom wall. Here, time for establishing connection with a new wireless game controller is reserved within each communication cycle, thereby allowing new users to join the game. of about 60,000 cps or less, and a bromine content of at least about 43 wt %.

1459827182-b6963e07-b962-4274-965e-357dd8ac20e8

Perpendicular magnetic recording media and methods of fabricating perpendicular magnetic recording media are described. The transmission includes a plurality of gear sets each having a plurality of nodes, an input member that is continuously connected to the engine and to a node of one of the gear sets, a reverse clutch, a binary clutch assembly, and a controller. Upon firing of the assembled lead frame and electrical components, the electrical components are concurrently terminated, and provided with strongly secured leads. The monomers are selected such that the polyimide backbone includes at least one non-terminal attachment point. The organic polymer is a hydrosoluble polymer that is at least partially cationic. The plug is installed in the \u201cas molded\u201d configuration with the inner wall and diaphragm upward; and upon any expansion of the volume of the water within the globe, the diaphragm flexes and can be inverted downward about the annular base to compensate for the variation in the volume, while the supports remain fixed supporting the ornament within the container.

1459827182-f6297b76-3590-4179-b496-a796777a7aff

A display controller displays an image of a high resolution output from 13-Segment decoder on a main screen area of a display unit and displays an image of the standard resolution output from a single-Segment decoder on a subsidiary screen area of the display unit. In the case of an ultra-dense wavelength division multiplexing device, a wavelength division multiplexing device is used for combining at least one plurality of monochromatic optical beams into a corresponding at least one single, multiplexed, polychromatic optical beam, wherein the wavelength division multiplexing device has an input element and an output element. In low frequency ranges, differential microphone signals directed towards left and right are produced to determine lateral useful and noise sound levels using two directional signals.

1459827183-4322065f-34c4-43f7-a9af-edc32e48e45f

A deburring tool having an indexable cutting insert having four cutting edges. Pharmaceutical compositions are also provided that are useful therapies for the treatment of neurological, immunological, and viral-mediated disorders in warm-blooded mammals. A novel rule update algorithm allows new classifier rules to be added into the data structure incrementally.

1459827183-5f944ec4-e9dc-4ebb-87ac-181b75ebaa24

The invention provides a multi-piece solid golf ball having a rubber-based core encased by, in order, an intermediate layer and a cover. An absorbent body includes a plurality of fingerlings extending outwardly from a front side of the absorbent body. Additionally, post processing may be performed on GDS layers to provide a realistic fill of the empty space so as to resemble structural elements found in a functional circuit. Thereafter, for each entry, the distance DRT between the reception location and the transmitter is estimated, and the distance DRR between the reception location thereof and an adjacent reception location is also estimated.

1459827183-6e7870df-fb2d-407a-a8b1-746815b92fdb

A spin valve type magnetoresistive effect element for vertical electric conduction includes a magnetoresistive effect film in which a resistance adjustment layer made of a material containing conductive carriers not more than  $10^{22}\text{cm}^{-3}$  is inserted. The processing elements 400 are provided in one to one correspondence with the photodetectors 120. A condenser fan is mounted for rotation in an opening in the top wall of the enclosure and is axially aligned along the central axis of the enclosure along with the fan motor which is suspended inside the enclosure beneath the fan. The invention utilizes a list-based processing method of generating and executing diagnostic scripts.

1459827184-4126355a-2c2c-4cfc-a4d7-abd3a7a7091f

A digital camera is constructed with multiple lenses mounted in a pair of tubular elements which are nested together for relative axial movement. The security gateway also receives attributes of the rejected messages that triggered the rules. A teething nipple 38 and 39 with a dispensing cavity 40 governed by an attached baffle 41 which restricts the flow of liquids and said baffle 41 designed to hold a drinking straw if so desired without spilling contents of bottle when inverted. The hollow is formed in an area where the semiconductor element is not formed.

1459827184-b5a381fa-a188-422a-9be4-21b30d7f3f4a

A method for preparing and cutting the radial and carpal bones to receive a prosthetic wrist during a total wrist arthroplasty. The incandescent light sources are located in the container. A controller configures the aforementioned devices of the MPSD to detect communications using different protocols based on a scan Look Up Table. In both instances, the towing vehicle may resume movement clear of the towing vehicle. From a viewpoint that the dimensionless effective thermal diffusivity  $kef^*$  of the COSMOS type heat pipe has a larger range in the modified Womersley number than that of the dream type heat pipe, the modified Womersley number is 0.

1459827184-c4a222c7-d902-49cf-bed0-2301c947f0e0

A family of semiconductor devices is formed in a substrate that contains no epitaxial layer. The audio output unit is fixed to the cylindrical portion such that another face is in contact with an end face of the one end of the cylindrical portion. The number of texture samples is reduced based on the mip map level weight. An alarm of any type can be used with the vent mechanism for indicating when the skimmer basket is substantially blocked by debris by generating of an alarm condition responsive to airflow through the vent. The comparator compares the first reference voltage with a second reference voltage to generate the enable signal, and can assert the enable signal when the desired output supply voltage exceeds the maximum possible intermediate supply voltage generated by the first stage voltage pump. The radio may also be enclosed in a hut while the cross-connect system is enclosed in a cabinet.

1459827185-13ac1cbf-43d9-493e-98a4-f4baf04e857b

A system for detecting electrolysis in an automobile system includes a probe, a microcontroller electrically coupled to the probe, a power supply configured to supply power to the microcontroller, a ground lead, and an optical indicator operationally coupled to the microcontroller. Wheels are rotatably attached to a lower portion of the body, and a handle is attached to an upper portion of the body. In this embodiment, different types of mail processing devices can use the common sorter application software to communicate with the same or different identification code servers. An elastic body is filled in a recess portion and closely contacted with the weight material, whereby the vibration of the sole portion is absorbed by the elastic body. The ferroelectric liquid crystal layers react to different electric field to conduct an in-plane driving of liquid crystal molecules in the nematic liquid crystal layer. The alignment opening has a width, while the tabs have a thickness that is greater than zero and less than the width.

1459827185-46cdb3eb-0b66-4213-bfdc-b6a747d7b14d

A scanning probe microscopy head may include a base portion, cantilevers coupled to the base portion, and at least one tip coupled to each of the cantilevers. The invention also features methods of producing an active fraction from an extract of *Cimicifuga*. The binding resins are thermoplastic polymeric materials and the step of bringing the binding resins to the fluid phase takes place by melting of the binding resins. When the locking pin is removed, the worm drive controls the swiveling of the horse head member in either direction towards either side of the working beam.

1459827185-52f156af-273a-4804-a18a-0fe5cc41e8c8

A semiconductor device comprises active and termination regions formed in a semiconductor substrate. Hydrocarbons or other substances natural to a hydrocarbonaceous formation may be produced by heating specific chemical compositions with or without the use of a carrier medium. Capsule runtime software manages the dynamic state of the encapsulated application, and re-directs system service requests generated by the application and associated processes from OS-provided system objects to corresponding object libraries provided within the capsule object set, so that any malware induced changes remain local to the capsule. A second air stream is then directed through the air treatment module to a location outside of the inside space.

1459827185-a09e97ee-d92e-4620-addd-378fd92a6665

A three dimensional stacked nonvolatile semiconductor memory according to an example of the present invention includes a memory cell array comprised of first and second blocks. The method includes sliding the zipper into position in a punch housing and punching a guide notch into the zipper. In one embodiment, a configurable parameter storage unit comprising a parameter storage area configurable so as to store a plurality of parameters at least partially defining a desired plurality of waveform hierarchy elements, where the desired plurality of waveform hierarchy elements enable the definition of a waveform.

1459827186-906e2fa9-3e87-4426-bfe1-ffca1ea8554e

An exemplary piezoelectric driving module includes a movable barrel, a fixed barrel receiving the movable barrel, a piezoelectric actuator, and a spring member. The polar expansions are connected through a ferromagnetic circuit and respective cores around which solenoids are arranged. A difference between readings from the first pressure sensor and the remote pressure sensor approximates intraocular pressure. The database of geographic locations may be stored in a central location or, alternatively, may be at least partially located at the web site.

1459827186-a27ef17e-9ffa-44b1-90cf-25d9f638e6b4

An article aligning apparatus for aligning a plurality article tiers to be loaded into a carton. In accordance with one embodiment, low-performing turbines are identified from among pairs of turbines and based upon a comparison of the observed and expected performance of the turbines within each pair. The positioning member includes a sidewall plate having a plurality of holes formed therethrough. The emitter electrode is a flip-chip bump, and the heat sink is a metal layer that sandwiches the HBT with the substrate. An inner knockout tooling is connected to the second ram. The systematic orientation of the bodies relative to the temperature gradient can allow for an average deviation of a measured shape of the ceramic bodies from a predetermined target contour shape to be less than what they would be if the bodies were oriented randomly relative to the temperature gradient.

1459827186-ab5c3ad5-d58a-4c8d-a8fc-60c6f6bd6ff1

A system and method that provides remotely generate facsimile printouts of Web page content, without having to attach a printer or facsimile machine to the device. The locking element is inserted through an anatomic vessel or hollow organ wall and the implant from outside of the vessel or hollow organ. A additive process is also disclosed wherein a thin magnetic seed layer is deposited on the substrate, a portion of which is removed by conventional lithography and replaced with a non-magnetic conducting layer. Apex heat also provides for the rapid release of wipers frozen to a windshield.

1459827186-c87b86cf-c99e-426b-8b1b-b8f3210652bc

When data is encrypted and stored for a long time, encryption key and/or algorithm should be updated so as not to be compromised due to malicious attack. The lock is equipped with an electronic activation device on its exterior housing and a door lever on its internal housing. The implement consists of a rectangular block having

a rubber sheet overlying its bottom surface with the sheet being fastened to the longitudinal side surfaces of the block. The same motor drives a vacuum pump via a second freewheel in the other rotational direction.

1459827187-22ca178c-cc16-48aa-a72a-09832ab3d1df

A white noise generator comprising a MOSFET operated in its linear region and having zero source-drain DC bias current. The hydraulic hose includes a connectable end, a distal end, a center passageway extending between the connectable and distal ends, and an abutment part extending radially from an outer surface of the hydraulic hose adjacent the connectable end of the hydraulic hose. Methods of securing the surgical fastener to an anatomical structure are disclosed herein. The base station and the mobile stations communicate with each other using frames.

1459827187-59584cd1-6c3f-4b96-9e76-c392f0a70553

This invention provides a control device for automobile battery-charging generators, adapted to supply a plurality of sets of specifications in a highly reliable and stable form by simple switching between electrical characteristics assigning and limiting functions so as to meet various needs of users. 3D\_PL\_type indicates the type of a PlayList. Both longitudinal and rotary motions may be imparted to the cables, thereby allowing a wide range of resulting movements of the attached puppet part. That is, there is little deterioration in characteristics caused by a machining error or the like, and hence it becomes possible to effect mass production and cost reductions. The management server is configured to migrate the profile for use by a device in a bay of the second enclosure.

1459827187-59e93df0-fc93-4a6a-8921-1b9c07e96212

An adjustable height housing enables a thermostatic mixing valve with a dial permitting manual control of bathtub shower water temperature to be vertically mounted in a horizontal bathtub deck. A film or sheet comprises or is produced from the PCM composition and the film or sheet can be a single layer or multilayer structure. A source region is formed in the substrate between the pair of source select transistors. The telephone can also present particular transfer rings when transferred indicating that the call being transferred is from a caller belonging to a particular call-in group, or provide unique voice mail rings when a member of a call-in group leaves voice mail. The RF measurement device provides the AC RF electrical signal power required to pass through the at least one AC couple splitter to operate the plurality of RFID devices, and includes means to identify the unique identification numbers associated with the plurality of coaxial cables from the plurality of identification signals received simultaneously. Once the one or more inconsistencies are determined, one or more operations reconciling the inconsistencies are defined in order to stabilize the distributed system.

1459827187-cbd5f721-9145-4895-92aa-bf3bf355dd2b

In an interlayer insulating layer, upper surface portions in edge regions near banks are located higher than an upper surface portion in a central region. These reinforcing bars provide excellent tensile reinforcement, and do not exhibit the corrosion problems of conventional steel reinforcing bars. The method includes positioning a first capacitive coupling a first time delay away from the capacitive coupling of the plug, the first capacitive coupling having a greater magnitude and an opposite polarity as compared to the capacitive coupling of the plug. In the latter case, the respective original correction value is again placed in the table of correction values. The data from the sensors may be fed into a digital processor to process the sensed data and derive a signal indicative of the wearer's head motion or position. The piece of furniture may include an interface for connection to a mobile device, wherein the control unit is adapted to disconnect the power supply to the at least one power consuming device when a mobile device is not connected to the furniture arrangement via the interface.

1459827187-e2f55d85-18d1-4e91-b867-b2eba3c99aeb

A device and method for stretching, toning and strengthening the chest, shoulder, neck and upper back muscles of a patient thereby relieving pain and improving posture. At least selected modular units can have a wireless communication port. In response to receiving the identification of the session, an audio file is created on a storage medium. Further, the cable may have wires that may be configured to electrically connect to electrical terminals of the electrical connector.

1459827188-05b8ba1d-4c66-4d3d-96ce-9912d4f42a8b

An ALC circuit is turned on, a nozzle is shifted to a sampling position, and after the ALC circuit has been turned off, the nozzle is allowed to start discharging air from its tip. Before taking the first network port offline, processing any pending packet tag for the first network port. A logic control block, which is powered by VDD and VSS sources, controls the state of switches used to sample and store differential signals. The pushing device is mounted slidably in the holding device and has a pivoting staple-supporting device.

1459827188-32918b83-f95e-4d7d-86ce-96de9c58196d

A network test instrument for singlemode and multimode OTDR testing employs an optical topology providing for combined singlemode and multimode use of a detector for reduced cost and instrument size. A data processing method for organizing, analyzing, recording, storing, and reporting research results, comprising the steps of: . The system automates process that was previously performed manually by an engineer or technician. The funnel is confined into a relatively small storage space and the funnel is compressed when a cap releasably engages the base. Specifically disclosed is a process for producing nitroisourea derivatives represented by the following general formula, which is characterized in that nitroisourea derivatives represented by the following general formula and amines represented by the following general formula or a salt thereof are reacted in the presence of a catalytic amount of a hydrogen carbonate, . Thereafter, specified water chemistry residual ranges are maintained in the aqueous system to achieve inhibition of scale and corrosion.

1459827188-79f4e7bf-9e37-4eb7-a392-bd662dd7ac57

A panoramic image is generated from a sequence of input frames captured by a camera that translates relative to a scene having at least two points at different distances from the camera. The system can include a buried ground source heat pump, a heat exchanger, and a ground loop circuit buried to a depth below the regional frost line. However, the protocol need not be limited to email, and may be applicable to other electronic message applications. The valve may be constructed to be either slidable or rotatable between the two positions, and is actuated by a gearing arrangement which is operable at the exterior of the nozzle housing.

1459827188-db344bd2-b772-4ca4-bdf9-f90e08c6610d

Methods, systems, and devices are disclosed for reducing bandwidth consumption in a switched broadcast multimedia distribution system. The bracket includes a body having a groove for receiving an archwire, a slide for moving from an open position to a closed position to thereby capture the archwire, and a spring slidably engageable in the slide in either a passive or an active position. The multiservice network may be managed by a configuration manager for Internet telephony. The notification may assist a driver in, for example, learning features of the vehicle, improving efficiency, or in many other ways. The data acquired at the different kVps are then utilized to generate material decomposition images of the cyclically moving body part.

1459827189-6015bcc9-9afa-457c-9b49-1155a05f3899

An apparatus for an improved operational amplifier. The awards are covered, prior to play, with one or more removable cover members such as flaps or scratch off seals. When the U-shaped end portions clear the bottom wall of the tub, they resiliently spring inward into supporting positions under the bottom wall. The base

of the ball-holding fork comprises a single leg with a small swivel ball. The support inhibits relative movement between the carriage and a skateholder in a direction parallel to said path.

1459827189-6efbef1d-5e9f-4f08-b5dc-175ef4ff29b9

A bumper structure for a motor vehicle includes a cross member, and a crash box placed between the cross member and a longitudinal member, with the crash box having an attachment zone. The refractive lens system from its intermediate image side and in the direction of its image plane has a first lens group of positive refractive power, a second lens group of negative refractive power, a third lens group of positive refractive power, a fourth lens group of negative refractive power, and a fifth lens group of positive refractive power. The hydraulic motor, in turn, drives an electric generator that produced electric energy.

1459827190-14b8aa07-a96f-4beb-b3dc-966c861d9ab5

A system, apparatus, and method for providing a soft-start for a toy vehicle configured to be operated by a person. It is used in a process of dimerization, codimerization or oligomerization of olefins. The mapping change at regular intervals, or upon the occurrence of specified events, and with each change, the communicating the remote source is provided with a different mapped address to be used. In particular, provided are methods for the production of copper monoethanolamine aqueous solutions from metallic copper and monoethanolamine. And a cone shaped rubber squeegee will automatically remove oil from the outside of the tubing as the dipstick is withdrawn from the crankcase.

1459827190-3afbdf99-8fdc-4748-b125-91928877ab62

A multi-conductor medical electrical lead comprises a connector located at a proximal end of the lead, one or more electrodes located at a distal end of the lead and a co-radial multi-conductor coil connecting the connector with the electrode, wherein the coil has a lead body region with co-radially wound conductors and has an inductance greater than or equal to approximately 1. The intervertebral implant can include a first component. The current regulation circuit includes a switching device connected in series with the second-secondary winding. In particular, the eyedrop medicament consists of \u03b1-tocopheryl acetate; \u03b1-tocopheryl acetate and about 0. A user shifts the position of the projection lens unit with his or her fingers laid on the pipe-shaped projection and the projection lens unit. The second reflective layer reflects light with a wavelength longer than that of the light reflected by the first reflective layer.

1459827190-4298aaaf-a14b-4cd7-9d67-aa323631fa2d

A method and apparatus is provided for coloring a caulking material to match colored grout, or other construction materials. Sand is pneumatically blown horizontally from sand magazines through opposing ends of the cope and drag flasks toward the matchplate. Each pixel is connected to the individually independent capacitor wiring via a dielectric. The middle portion has a curvature such that an angle is formed between the first end portion and the second end portion, wherein the angle is substantially anatomically correct with respect to the particular joint, such as the proximal interphalangeal joint. When the correlation engine switches from the first candidate to the second one, the stored status is loaded in the code generator, and the small misalignment between the code generator and the desired sequence is corrected, thus setting it at the needed point in phase space.

1459827190-9b03dfe6-4aa3-4785-8238-7a76bbd39405

A transducer package 20 includes a substrate 32 having a first axis of symmetry 36 and a second axis of symmetry 38 arranged orthogonal to the first axis of symmetry 36. In a towing position the tow bar couples the trailer to a moving vehicle such as a bicycle. The apparatus further includes an electrical contact device positioned on the substrate engaging surface, the electrical contact device including a plurality of radially spaced electrically conductive members configured

to electrically communicate with the non-production surface of the substrate positioned on the substrate engaging surface.

1459827190-c554d816-805a-4701-bae9-93703c879d9d

A slide out tray is housed in a rigid sleeve attached to an inside of a purse. Thus, simple and accurate manufacture as well as simple integration of, for example, a driving circuit can be achieved. The porous structure may comprise a first side coupled to the reservoir and a second side to couple to the patient to release the therapeutic agent. The inter-connected pores are disposed throughout the complete radial wall thickness of the screw body from an outer surface of the screw body to an inner surface thereof within the cannula, such as to permit bone in-growth through the complete radial wall thickness of the annular screw body. The invention has the features of approximate ASIC timing by conditional write-back with the compiler support for the conditional write-back, condition resolved just before write-back, software selective conditional issue and conditional write-back modes, and without hardware interlockdependence checking for the VLIW processor.

1459827190-ff6e393b-bffb-4bdb-99de-31aab14866af

A lockable retractable locating frame of a BGA on-top test socket includes a push-and-lock mechanism that further comprises an accommodation room, a slider, and a sliding slot for riding the slider. In order to provide an improved toothbrush which cleans the teeth more effectively and at the same time more gently, it is provided according to the invention that the wings form a wedge, by being connected together at one end and distanced from each other at the other end. Use of their diluted solutions, in particular for the lubrication of bottles on conveyor lines. A third enhancement allows the user to view an manipulate the feed in an independent display window. The first arc discharge heating is performed between discharge electrodes positioned rearward of the end surface of the holey optical fiber. The method includes the steps of sequentially forming a gate dielectric layer, a poly-silicon layer, a titanium layer, and a WNX layer on a semiconductor substrate, carrying out a rapid thermal annealing in a nitrogen ambient, forming a silicon nitride layer on the tungsten layer, and patterning the multilayer thin-film structure into a predetermined configuration.

1459827191-6763ae96-ef81-4aac-8a85-ef16f669ca84

The aim of the invention is to regulate the braking torque in a drive train comprising an internal combustion engine and a gearbox unit which can be coupled to the same, using a regulatable clutch. The boot may be provided with at least two independent lacing zones, the tensions of which are separately adjustable by the wearer. A method of reducing wear on a hold open rod may be provided. Through using elastic extension device to assist steel beads of first plug and second plug to position in or detach from positioning hole, retractable pulling rod is extended or retracted smoothly. A mapping assembly is mounted at the distal end of the catheter body and comprises at least two flexible spines.

1459827191-d1625c17-652f-40f7-8231-8af4feb8c656

A recessed, adjustable, low voltage track light is shown comprising a recess housing made of any suitable material, and having one or more low voltage lighting rails fixed, or adjustably mounted, within the housing. The catheter comprises an elongated tubular catheter body having an outer wall, proximal and distal ends, and at least one lumen extending therethrough. The flash layer and the capping layer can be formed using an atomic layer deposition technique. A time difference corresponding to a difference in critical delay times is then obtained as the memory access time of the semiconductor integrated circuit device 10. The exterior surface of the tubular body may have a texture selected to provide the desired adhesion between the tape and the body surface of the cylindrical body. The circuit is applicable to improving load regulation of a power supply.

1459827191-defe1827-4082-4280-a59d-ff1ea807de56

A system and method for collecting distending medium or other fluids discharged during surgical procedures is shown. Functional groups on the polymer precursor undergo covalent bonding in situ to form a solid and nonbiodegradable material having a swellability less than about 20% vv and a Young's modulus of at least about 100 kPa within about 30 seconds to about 30 minutes of initiating a chemical reaction of the functional groups to form the solid material. A single-pinion differential gear unit within the transfer case provides for unequally dividing drive torque between the front and rear propshafts.

1459827192-67f94de4-ef8e-480d-bb9b-f960c8d1a90a

The invention relates to a control valve for controlling the pressure and flow of hydraulic oil from or to the working connections of a consumer. The first interactive document has a corresponding page description stored in one of a plurality of servers. The RF feed may be coupled to a waveguide cavity having radiation elements coupled to top surface thereof, to thereby feed an antenna array. The heat dissipation layer is connected to the heating layer. Upon activation of an external lever or knob, a dispensing assembly acts to push a pair of dispensing members inwardly to squeeze and push down the lowest object in the stack to be dispensed into a cavity and retrieved through a frontal opening of the base.

1459827192-8b0520ee-394c-42b9-8b39-639b5f5a3f26

The immunoassay element for quantitatively analyzing an antigen by determining the change in enzymatic activity of an enzyme-labelled antigen or antibody caused by an immunological reaction. At least one security administrator CPU is communicably attached to a virtual tape management CPU. A system may include a system board and/or a die package mounted on the system board. A throttling and regulating element can rotate relative to the support plate about the axis and can move in the direction of the axis. Each printhead is oriented obliquely with respect to the longitudinal axis of the chassis.

1459827192-998502ac-ddbe-4221-a6b1-69e15322dd8b

An automatic flow restrictor includes a movement sensor that detects undesired movement of a firefighting apparatus relative to a support surface and automatically reduces the flow of fluid through the apparatus to thereby reduce reaction forces acting upon the apparatus. A device surveys the current location of the device for existing base stations and stores a corresponding network environment profile. The second contact point is provided on the detent. Subsequently, system relevancies of the picture data sets are calculated, based on the decision function  $f$ . Each of the multiple test sequences includes a different set of contextual phones surrounding the particular phone. The image transfer sheet comprises a release layer and a polymer layer.

1459827192-eb02f47d-6cdf-4b7a-87de-734af19782bd

A method, apparatus and system are provided for enhancing port multipliers. Complete encryption of the address book create interference with the send function in that before any E-mail function may be started, the address book must be accessed and decrypted even when the E-mail being sent does involve the address book. The superconducting magnet can be produced by a process comprising the steps of providing the artificial hole in the high-temperature bulk superconductor, disposing the heat conducting metal material in at least the artificial hole, applying a process of impregnating and filling up at least the artificial hole with the low melting metal, and subsequently, executing a process of magnetizing.

1459827193-192325e1-b884-4aba-a0b1-268850c7cf54

An electrical contact device is provided for electrically grounding an uninsulated end-portion of insulated wire stored on a spool driven by a device comprises the following. The skin care composition is readily transferable to the skin via normal contact, wearer motion, and/or body heat. Alternatively, the device stores test data

in addition to or instead of the test key set. The first clock pulse stream is fed to a second mode-locked laser diode to produce a second clock pulse stream of wavelength  $\theta$  which is synchronized to the first clock pulse stream. Jitter is determined by beginning a timer when a first data packet of an RTP data flow is received by the first endpoint; stopping the timer when a second data packet of the RTP data flow is received by the first endpoint; and, adding measured time from the beginning of the timer to the stopping of the timer to an aggregate to obtain the jitter for the RTP data flow. Separate battery packs having external control switches for selecting levels of vibration are installed so as to be on each side of the back of the animal.

1459827193-4d28b3a5-a9e6-4e9f-a851-c88962ab5f90

This invention is directed to EP4 receptor selective prostaglandin agonists of the Formula I, . The limit portion encloses an area with a predetermined figure. The chamber has an annular radiant source disposed between a processing location and a transportation location of the chamber. The OTP device has at least one OTP element coupled to at least one diode in a memory cell. The inner member of the telescoping ventilator may house the exhaust fans and may move up or down without the use of mechanical switches for elevation detection and stopping.

1459827193-5b7ae4bf-e7d9-4e35-a8d2-bcb8d26f4ce5

A method and device for supporting a driver of a motor vehicle during a driving maneuver during which longitudinal guidance and/or lateral guidance is/are performed in an automated manner. The STB demodulates program data from a program signal received over a communication channel and generates a STB graphical user interface. Each phase rectifier may be supplied with n unique sets of phase inputs from a transformer secondary winding. The first operational mode also permits an operator to review the pages with the second cylinder first image and the second cylinder second image at the same time and to alter the registration of the second image cylinder providing the second cylinder first image and second cylinder second image. The stabilizing apparatus includes a stabilizing element and a moving arm attached to the stabilizing element and the mining machine for raising the stabilizing element above and lowering the stabilizing element into contact with a mine floor. An approach is also described for improving cross-references for cross-coupled objects.

1459827193-85254c7a-d48a-4e6f-a1c0-15c80d6c7c8d

A computer having an operating system is connected to a first memory. Such liquid-phase oxidation is carried out in a bubble column reactor that provides for a highly efficient reaction at relatively low temperatures. The lockup link is also provided with a slot having a hook. The method also includes rendering the corrected map data to display the map on a display of the wireless communications device.

1459827193-903d35a0-a134-4fdb-835e-bca006e361e9

A radio-frequency identification tag is provided that comprises an RFID inlay having a read range. The carrier comprises a carrier surface having a protection-layered disposing zone. The reflecting dots are selected from those located closer to the reference angular direction until they reach a predetermined number, thereby forming a target model.

1459827194-20db70f4-5051-4c34-8b98-220a5a45df94

A vibration dampening system for a motor shaft in an electric submersible pump ESP uses axially extending arms in one or opposed directions from a fixed portion of a motor shaft bearing. The optical waveguide, consisting of a core section serving as a transmission medium of an optical signal and a cladding section surrounding the core section, is formed on a semiconductor substrate. Impulse signals from the antennae are measured to determine the time difference of arrival of one such signal received by one antenna compared to that of the other antenna. The jaw

support comprises a base, a jaw mount having spaced apart flanges and a contact arm.

1459827194-de2566fa-6cf9-4c0e-b31f-36ace77230c5

A mobile telephone includes an active-pixel sensor in conjunction with a DSP chipset and a light source allowing the telephone to detect horizontal movement across a flat surface. A switching fabric includes one or more fast paths for handling lightweight, common data operations and at least one control path for handling other data operations. Once analysis is complete, identified source code is vectorized to implement identified saturationclipping operations utilizing single instruction, multiple data saturationclipping instructions.

1459827194-e7fd38a7-2529-447a-b02a-b9c32e99de35

A translation lookaside buffer of a computing device is a cache of virtual to physical memory address translations. The connection devices are arranged in pairs on main sides of the power semiconductor module. The outer section and the inner element are displaced away from one another by action of lost-motion spring elements and can be coupled together in an axially-distant relative position, whereby at least one piston, which is situated in a bore that runs transversally through the inner element, acts as a coupling element. In some examples, the measured statistics comprise measures of an energy from the initial portion of the speech utterance. Then, a usage measurement of the external memory is determined.

1459827194-ef001390-2938-490a-a530-e6355e5b2c28

A merchandise system for disposable absorbent articles is provided. The process comprises controlling a growth velocity,  $v$ , an average axial temperature gradient,  $G_0$ , and a cooling rate of the crystal from solidification to about 750\xb0 C. Onboard global positioning allows for channel updating by location, traffic information, geographic advertising and available similar content.

1459827195-1f99193a-568a-494e-9f7f-f82ada474069

An ink receiving substrate includes a substrate layer and organic modified silica dispensed on at least one surface of the support layer, wherein the organic modified silica includes inorganic particulates and silane coupling agents having guanidine or biguanidine functional groups. For example, a method of fabricating a solar cell includes forming an adhesion layer above an emitter region of a substrate. This can hold shading members to a totally closed position after shutoff of electric current through a coil and can stably achieve an appropriate position of the stator yoke in a rotation direction to eliminate the need for fixing the stator yoke with an adhesive or the like. In such circumstances, drainage of lubricant fluid from other feed pipes for other bearings does not siphon lubricant fluid from the feed pipe which may be subject to potential coking as a result of high temperatures and air. In addition, an advertising apparatus capable of motion sensitive illumination and 180\xb0 viewing includes an illumination source for illuminating the front side pieces, a motion sensor, for detecting motion of a potential customer, and a power source to power the advertising apparatus, wherein the illumination source and the motion sensor are coupled to the power source. The encrypted data is recorded the a recorder, where it is accessible to authorized users within the customer center.

1459827195-43028548-0009-4b66-855d-8e659fd24e51

Disclosed are a method and a system for determining top spreaders in high speed network. The starter includes a starter main body, a main electromagnetic switch, and an auxiliary electromagnetic switch. A fixed charge layer may extend over sourcedrain regions also.

1459827195-7ff19579-08e7-47e5-aa9f-4f3c40615e27

The present invention is a safety system for use in conjunction with a control bar for a kite wherein the two front lines are secured by a front line swivel

positioned between the bar and the kite. The optical scanner translates a beam of radiation to a stationary spot on a traveling sheet of material so that ample integration time within the spectrometer is achieved. The energy storage device further includes a plurality of cathodic materials. The main ashing may be preceded by a short surface treatment by a plasma of a hydrogen-containing reducing gas such as hydrogen and optional nitrogen. The fluid may undergo expansion as it passes through the openings.

1459827195-ac509b57-3d01-485b-a7ad-6d10ba970e31

A device includes a first member extending along an axis. It is possible to induce a magnetic flux efficiently within a magnetic head by using a granular magnetic film that exhibits both soft magnetic properties and a high resistance, which suppresses any shunt of the flow of the sense current into the magnetic yokes, thus preventing any deterioration insensitivity. The body has an inlet portion, an outlet portion, and a passage disposed between the inlet portion and the outlet portion. Consequently, the durability of the piezoelectric actuator is improved.

1459827195-e85ed967-cfc0-4480-aae9-7407f482d418

A warewashing detergent composition is provided according to the invention. The work function metal layer is located on a substrate. Projections are disposed on the branch legs and extend parallel or perpendicular to the cylindrical body.

1459827196-20de287e-ba6b-4fc5-94b0-82cefc61173c

Provided are a gasket, a reactor using the same for sealing a spiral, and a manufacturing method thereof. In the unlocked configuration, the reaming element is freely movable by the actuator between the reaming element inner and outer positions. In one embodiment, different filters or filter parameters are selected to match different signal characteristics of the host signal with the characteristics of the digital signal. Entries include access control values which identify whether the entry is valid and what access type operations may be performed on a corresponding portion of a storage device.

1459827196-31e6a167-39bc-4354-9cd8-c0b3c13b4b7a

The invention is a ventilator whose servo-controller adjusts the degree of support by adjusting the profile of the pressure waveform as well as the pressure modulation amplitude. A liquid crystal display using the polarizing plate shows high display quality without causing light leakage. The communication server comprises a memory, and a processor. A monoclonal antibody, or fragments thereof capable of inhibiting the binding of the cytokines IL-3, GM-CSF and IL-5 to the c receptor, and a hybridoma cell line producing the antibody are also claimed.

1459827196-e1d963c6-f8f5-4de1-910c-979158d83530

An anchor assembly is used with a medical device to engage the medical device against a body wall. The optical transmission line comprises, as a repeated transmission line disposed between stations, a single-mode optical fiber having a zero-dispersion wavelength in a 1. An end surface of the speaker assembly is exposed outwardly through the first opening and the second opening.

1459827196-f08e3b5f-fe7a-4539-9b8f-4ba4282ceb97

A fastener for securing a gas bag module to a steering wheel includes two fastening arms and a fastener part. The protective apparatus includes an outer casing, a fan panel, a connector panel, an internal box including the sensitive components and located within the outer casing, an internal housing contained within the internal box, and shock assemblies suspending the internal housing within the internal box. The single object model can interact with a tag many times, as necessary to complete an operation. This embodiment creates an inexpensive high performance tape ball grid array package for chip-scale devices.

1459827197-c0c700de-1433-4da9-bc2f-fda022c4d818

A dual-output Mach-Zehnder modulator and configurations of optical transmitters based on the MZM2 which obviate the optical splitter that is typically used to provide keep-alive functionality in redundantly-connected, protected optical networks, SONET add-drop multiplexers, and optical IP routers. A display driving circuit applicable to be used by the display unit is also provided. A first sensor is disposed adjacent to the chain to coincide with the position of the first marker. Also, surface roughness degradation in the {110} wafer can be suppressed. Methods of making the reactive tricalcium phosphate nanoparticles, the cement powder, the cement paste, and cured cement are also provided, as are methods and articles for using the cement.

1459827197-d866aaa3-c8e1-4d97-bbc0-862f91a36c95

Systems and methods for script injection are shown and described. The method may include etching a precursor structure formed of materials with differential removal rates for a given removal condition. Suggested operator actions may be displayed that might further enhance the scheduling of the altered aggregated event topology together with an automatic operator need prompt 608 that may inform an operator of a need for a particular action in order to accomplish the desired tasks. The phase detector may be a bang-bang phase detector specially adapted to detect single-bit transitions.

1459827198-212828d6-dc62-4892-a8b3-33ac4600c10f

A light-emitting device includes a plurality of pixels, a temperature-detection pixel, a temperature detector, an applied-current calculator, and a current applying unit disposed on a substrate. The control section supplies a given output for the heating device when the belt is rotated initially, measures an initial temperature distribution of the belt on basis of a signal from the plurality of detection devices, and controls the output to the heating device on the basis of the initial distribution to control the initial distribution of the belt in a given range. A piston coupled to the inner member is slidable and biased to move distally within the cylinder. Due to the photosensitive group of the monomers, the plurality of alignment molecules can be formed with an appropriated rate, and the alignment film formed thereby has homogeneity. The forecasts are compared to the target value of interest in each period.

1459827199-1c8acba6-ccba-438f-8160-0250f5f9f030

A composition for a removable top coating for protecting the exposed face of a temporary removable graphic is provided. Ducts are arranged at machine tool regions to be thermally conditioned. The solid state light source end-of-life indicator emits light at the end of the life of the lamp. The sales agents may then input past sales into the database and may input, qualify, modify and/or store future sales opportunities into the database.

1459827199-2a456068-39f9-405c-8d9e-9839270f73c7

A magnetic encoder for detecting for example movement of a continuous pipe, wire line, pipe joints, rod, etc. The MAC control layer of an EPON device is expanded, and additional messaging control is added via the transmission of Ethernet frames. Some sensing elements may further include an electrode made of LaO. The technique exploits the fact that many episodes of hypopnea begin with a sharp drop in respiration and many episodes of apnea are preceded by a sharp drop in respiration. A control device operates the transport device for ejecting the original and outputting the image data read in the first reading mode when the image data is the first kind, and operates the transport device to return the original to the platen and actuates the reading device to read in the second reading mode when the image data is the second kind.

1459827199-8ce56641-610f-4dbc-87b1-02fa007a31ea

The invention relates to a multilayer composite film which is substantially free from polyvinyl chloride and polyolefins. Each end effector including optical force

sensors for detecting forces applied to the tool by engagement with the part of the patient. After definition of the write pole surfaces, a layer of dielectric material is deposited. The electronic control system further includes a program memory with firmware configured in a state machine system architecture for controlling the microcontroller.

1459827200-406e48b4-c024-46d9-9e8c-3581d084c7f8

A dielectric material formed by contacting a low dielectric constant polymer with liquid or supercritical carbon dioxide, under thermodynamic conditions which maintain the carbon dioxide in the liquid or supercritical state, wherein a porous product is formed. The physical representation may be dynamic, for moving objects, or permanent. An availability state for each content distribution node in a group of content distribution nodes is tracked. A motion of an image on the light detection elements of the light detection unit is detected. This disclosure also provides compositions comprising a compound of this disclosure and the use of such compositions in methods of treating diseases and conditions that are beneficially treated by administering a dual melatoninerbic agonist and serotoninergic antagonist. Under this extreme pressure differential hydrogen gas permeates from the second area back into the first area at a maximum reverse flow rate.

1459827200-8f5c5ee5-e1b4-4cef-8b9d-f649c63b04aa

A technique of sampling, sensing, reading and/or determining the data state of a memory cell including an electrically floating body transistor. The methods involve introducing at least one DNA construct, encoding at least one untranslatable sense-strand RNA and/or double-stranded RNA, into a plant cell. The circular-shaped ring is subjected to a swaging process that produces a rectangular-shaped ring with rounded corners. A plurality of sub word line driving units are each configured to activate one of the sub word lines according to the word line driving signal.

1459827200-9d353a1b-6447-4546-993e-f4bfd8bd1e22

A computer program communicates with a partition manager in the logical partition where the computer program is run. The phase detector asserts the third signal in response to the assertion of the first signal and unasserts the third signal in response to the assertion of the second signal. A flexible membrane comprising a heating structure extends into the space in order to define, in the space, an inner cavity and an outer cavity.

1459827200-ab5b1265-43cc-4266-9ae6-89bc95185244

Methods of changing a centerline voltage of a data signal are described, along with apparatuses to change the centerline voltage. Spaced hard points are attached to the net, the hard points including a base portion with a cavity therein and a plug received in said cavity locking each hard point to the flexible net. These movable electric switches are made to blend in with the surrounding decor, preferably by having a decorative plate as the predominate artifact that is seen.

1459827200-f1844331-7226-40ba-975b-bfa88aebe7b3

Laminates of having a first outer layer of weatherable film, at least one mid layer, and a second outer layer containing an opacifying quantity of white pigment. The metallic housing has two legs each located in front of a respective one of the plates, each leg being integrally formed by cutting a portion of the metallic housing and bending the portion downward. The power savings manager may also be configured to determine whether physical memory blocks should be active or inactive. The RSS data sent from one device to another may include enclosures, such as video, audio or text files, or may include references such as hyperlinks to other sources of information stored on the receiving device or on a further device that may be accessed and used to understand or process the RSS data. Methods for discharging elongated product, such as encased meats, so that they loop directly onto the stick, bar or other desired food support is also described.

1459827200-f619f2b8-dcce-4104-a26e-11d630a555a0

The invention relates to an automatic decoding method for mapping and selecting a non-volatile memory device having a LPC serial communication interface in the available addressing area on motherboards. Each column has an output circuit for reading out pixel image signals. A lock housing cover can be provided that is non-movably secured to the lock housing and can include a cover abutment surface adjacent to and blocking a lock body opening in the housing. The stacked resistor structure, when subjected to a current flowing generally along a first axis, is characterized by a temperature profile that has first and second peaks on either side of the bond pad. In another aspect of certain embodiments, the shape memory material structure is positioned to extend around a periphery of the electronic component.

1459827200-fdf45df4-bdd6-4363-a142-b6fa9f6ede97

A magazine for a firearm is formed by a plurality of sidewalls that define a space for holding ammunition cartridges. The spread spectrum signals encompass a selected frequency spectrum. A separating unit for changing at least a part of the closing portion from a closed state to an open state. The first beacon begins its transmission at a target beacon transmission time and the second beacon begins its transmission in a sequential period defined by an antenna switching time after the transmission of the first beacon. Thus, accurate fault diagnosis of the apparatus can be achieved.

1459827201-13f2533a-2012-4823-861a-388a798d5399

A novel maize variety designated PH1M77 and seed, plants and plant parts thereof. The fiber optic face plate translates the image from the media to the scanner focal plane. The capacitor is fabricated in microelectronic fashion consistent with a dense DRAM array. The motor assistance profile upon which the assistance is determined is selected from among the plurality of motor assistance profiles based on an expected driving range provided by a user of the vehicle.

1459827201-6622f835-055d-41ef-9358-2c068d9644cb

The present invention provides novel lettuce cultivar Winter Heart and plant parts, seed, and tissue culture therefrom. An aspect of the invention includes detecting a light signal that is attenuated, reflected or scattered by the matrix layer, and using the light signal to examine the matrix layer or to regulate the preparation of the matrix layer. The device includes an abnormality determination device for determining whether the valve is in an abnormal opening state based on a heat amount transmitted from exhaust heat to coolant through the equipment, when coolant temperature is the preset temperature or above and thereby the valve is closed if the valve is normal. With this method, tinted ophthalmic moldings, particularly edge-to-edge soft, tinted contact lenses having improved properties, are prepared with an improved efficiency. Symmetrically-spaced gliding masses can be arranged on the arms as well.

1459827202-910da3c8-e4e5-4ad1-bbf8-bd4632ba32f8

A method for forming a tungsten layer on a substrate surface is provided. A system can be configured to receive a request for data that is contained in tables and to use one or more row-level security policies to augment the received request with one or more row-level security query-related clauses. Visually smooth is defined using tangents. The distal end portion includes a protrusion and an engagement surface. Two on-chip synthesizers that each include a voltage-controlled oscillator and phase-locked loop can be operated independently for each conversion stage, or operated in offset mode.

1459827202-aebf7e5c-1f86-4737-ad62-26be27e2d446

A method for operating a power controller is provided. The contacting tip has a certain width and the blunt skate is narrower than the tip width. In addition, restrictions on phone use may be provided based upon total phone usage within a

specified control period, time periods, dates or days of the week during which phone use is restricted or permitted. Methods of determining other exercise parameters, such as workload are also disclosed. The musical drawing assembly also includes a device for selecting one of the accompaniment melodies, and a device for selecting a musical instrument that corresponds to one of the different musical instruments. The detection circuit is electrically connected to the fourth electrical contact point, for determining whether the fourth electrical contact point is electrically connected to the third electrical contact point.

1459827202-af57f737-ccd8-4b32-9b17-4a5c6a6577c7

An antenna apparatus capable of main beam direction switching is provided that achieves high gain with a small, planar configuration. The exemplary embodiment of the invention provides a system and method that perform what may be characterized as a digital zoom. The computer systems may associate electronic coupons with the user such that the user may redeem the electronic coupons at a retail store upon presentation of a user identifier. The application program 11 initially analysis the displayable content of the photograph and identifies characteristics, such as regions of interest or dominant lines, curves or edges, and depending on the characteristics, identifies the photograph as belonging to a particular image class.

1459827204-10ccdb3c-d3d6-4c8e-b669-b45df8c36120

A method of converting audio data encrypted for anti-piracy and copyright protection to a suitable format so that the data can be played in a portable device. A plurality of surface connection terminals to which terminals of a chip component are to be surface-connected are formed on a main face of the laminated structure. For example, in some embodiments, the media data is a movie with video and audio components. A driving speed at which a pair of rotary members are driven by the chain driving mechanism is corrected in accordance with the elongated condition of the chain, based on a count of driving pulses in the chain driving mechanism during the passage of the coupling pin through the second transport section. 45 GHz microwave energy fast and efficiently.

1459827204-2bcd8102-d624-4be4-b5c3-2be991111261

An optical transmitter for use in an optical transmitting system based on PDS technology, does not erroneously output an optical signal when the optical transmitter is powered on/off. The test device includes a housing defining a sample port, a test well containing a stirrer and a conjugate, and a test strip disposed within the housing. An ESD discharge control circuit in electrical connection with the ESD discharge circuit that controls the activation of the ESD discharge circuit and including an NMOS transistor and an electrical node.

1459827204-6a56efc6-958e-4bc4-8dfd-2131a5243916

A novel-structure laundry machine that is capable of washing laundry using steam is disclosed. The optical apparatus comprises a first memory storing a default setting data set for controlling functions of the apparatus and a second memory storing a user setting data set for controlling the functions. The adjacent optical fibers at a forward end portion of the extension portion are fixed to one another integrally. At least part of the resistance-changing material is disposed between the reactive layer and the electrode. The logical OR circuit generates a tag error signal that is asserted if at least one of the plurality of way error signals is asserted.

1459827204-84ea5db9-1772-4aac-b8f0-e602f80aa746

The present invention relates to template-free clathrasils whose framework comprises essentially SiO<sub>2</sub>, wherein the crystals of the clathrasils have the platelet-like morphology of a sheet silicate. The steps include forming a golf ball core; forming an inner cover layer around golf ball core with a material having a first shore D hardness; and casting an outer cover layer around inner cover layer and golf ball core with a thermoset material having a second shore D hardness less

than the first. A reservoir is included that contains an ionic solution of particles. The EPG information can be displayed in a window within a television screen while a program is being shown on the remainder of the screen. The joint covering member is attached to the constrained portions acting elastic force between the constrained portions. The novel neural network provided in the current invention is trained with the bioactivity of known compounds and then used to predict the bioactivity of unknown compounds.

1459827204-910a1d32-470f-4b88-adfa-9f51c368b92e

A method for accessing IO devices in embedded control environments is provided, wherein said IO devices are remotely attached to an embedded microprocessor. A transmitter generates encoded signals using, according to one embodiment, a structured parity check matrix of a Low Density Parity Check code. The device 1 and 2 detects, from respective reception results, transmitting-antenna-setting candidates of the device 1 and receiving-antenna-setting candidates of the device 2, and determines antenna-setting pairs.

1459827204-b7ca8c37-50a2-4d05-a8ed-6cf1eec6f94e

Methods, systems, and computer program products are provided for machine-specific instruction set translation. The detected tachycardia is classified as ventricular tachycardia if the average ventricular rate is substantially higher than the average atrial rate. The valve is operable upon a predetermined suction in the first reservoir to open to permit expulsion of liquid from the second reservoir into the first reservoir after the liquid in the first reservoir has been consumed. As part of the transformation equation, the Gibbs' free energies of the phases of the metal are determined, a transformation rate of the metal from the first phase to the second phase is determined therefrom, and the expected proportions are determined from the latter.

1459827205-a412be5e-afb5-4b9b-9833-d0f2fa821e6a

A pin electronics circuit for use in automatic test equipment is disclosed. The brace comprises upper and lower supports rotatably connected by a hinge. Cement is fed to a rotatable spray disc or arms of the spray head, which is arranged to distribute the cement substantially evenly over the internal surface of the borehole created by the reamer head. A mechanical oscillator system comprising a non-magnetic ceramic or continuous fiber balance spring and a non-magnetic balance wheel formed of a material having a coefficient of thermal expansion of less than  $6 \times 10^{-6} \text{K}^{-1}$  and having a plurality of non-magnetic poising or timing appendages is also disclosed. The resin material is prevented from leaking out of the LED package.

1459827206-1eb27c2b-b7f8-4a63-a8ee-8997c1f363d6

Mechanical face seal rings having a metallurgically bonded wear-resistant coating on the wear surfaces thereof and methods for forming such coated components is taught herein. The power adaptor includes a connector, a rectifier, a filter, a regulator and a switching unit coupled between the rectifier and the filter. With such method for manufacturing, it becomes possible to make the side edges rounded whose curvature changes continuously. A security seal is disclosed which comprises a small, adhesive coated patch of laminate for sealing the joinder of the wristband ends and which has points of weakness such as X's die cut therein so that it separates or destructs upon removal to provide an indication of tampering with the wristband. For this, latent or thermochemical heat storage units are used which are fully integrated into the structural elements of the heating appliance in question and heats the product in such a way that there is sufficient heat output, while at the same time, the absolute temperature is limited by means of an appropriate choice of heat storage material for product enhancement. A cover releasably mounted on the member enclosed fasteners attaching the member to the framework.

1459827206-b4d14fd7-0428-4e08-9268-f009ba63b252

A method and an apparatus for the refreshment and reuse of loaded developers used in lithographic printing are disclosed. The method includes the steps of providing the identification of the existing emblem. The circulation motor communicates with a lower side of a tub of a washing machine to pump water in the tub. In different aspects, the apparatus systems may be configured to generate white light and/or multicolor light, may be formed to resemble conventional light bulbs, and may be arranged as a linear chain of nodes.

1459827206-eb42ef91-fbe0-400d-b57d-2008d00e5c9a

A sample introduction system providing variable online dilution of a sample is described. When switched by a controller, the first switch couples a high voltage source to charge a capacitor. The base being separable and having a female portion and a male portion for receiving a post of a chair therebetween the base portions and the portions each having a baffle therein. The tuning value is configured to adjust how the image data is to be measured to compute an image compensation value. The side wall has an inwardly inclined, planar outer side wall panel, and a plurality of flat pads are on the outer side wall panel for cooperation with automated machinery used in the handling of the tray. In one advantageous embodiment, the semiconductor device includes a doped layer located over a semiconductor substrate, and an isolation trench located in the doped layer and having a dielectric layer located on a sidewall thereof.

1459827207-0006ed8f-dcd0-43c7-9241-13e048fbaf98

A data encoding apparatus is provided wherein, in one aspect, bit data are encoded by using at least one kind of error-correcting code out of two kinds of error-correcting modes: random error-correcting code mode and burst error correcting code mode. An exemplary system configured to practice the method receives a sequence of words and external data associated with the sequence of words and maps the sequence of words to an X-dimensional vector, corresponding to a vocabulary size. Upon the parameter indicative of elapsed time of channel activity reaching a respective target value, the method allows determining whether there is another radio frequency in the plurality of radio frequencies assigned to the radio system available for carrying the channel activity presently being carried by the one radio frequency. The second clock frequency is lower than the first clock frequency and is used to extend a wireless communication range of the wireless channel. The slots in the raised portions allow the raised portions to move with respect to the base portions. Each bookmark is capable of sliding independently along a pin and is designed to fit between two pages of a book.

1459827207-5cfa756f-35c9-4079-8803-506ca1241413

An AlGaAs cladding layer is formed on a GaAs semiconductor substrate, and then an i-type GaAs layer is formed thereon. The present invention relates to a grain-oriented electrical steel sheet containing Si: 1. The light-absorbing structure can be a continuous polysilicon or amorphous silicon layer.

1459827207-ac5252fc-8108-41e9-930c-9dd551554127

A damping element includes: two spring elements which are coaxial with or parallel to a longitudinal axis and two axially end-side connectors, where the first spring element exhibits a spring rate F, the second spring element exhibits a spring rate f, and the spring rates F and f are different. When the plug is coupled to a receptacle, the inner shell is rotated with respect to the housing and the connecting end of the inner shell hits the abutment surface of the enclosure shell and, when the outer shell is screwed onto the enclosure shell, the step portion hits the rear wall portion. The passageways are filled with ion-conducting material and may be surrounded by non-ion conducting material. \u2018MSA-31\u2019 is also distinguished by its genetic color and fall and winter color characteristics. The desired changeover point from fully-synchronous mode to the partially synchronous mode is set to a predetermined level of output current for the converter. The unitary dielectric member affords an easily manufactured connector that maintains

the contacts and wires within a predefined geometry with respect to the axis of the connector and at a predefined position along the length of the connector.

1459827207-ebe9752d-4848-4eb6-a6e4-2f26368ec5fc

A simple and cost effective method of forming a fully silicided gate of a MOS transistor is disclosed. The electronic device includes a housing having an interior space, a dielectric cooling liquid in the interior space, a heat-generating electronic component disposed within the space and submerged in the dielectric cooling liquid, and a pump for pumping the liquid into and out of the space, to and from a heat exchanger that is fixed to the housing outside the interior space. The cover includes guide slots for slidably receiving side portions of the anchor and a ramped surface automatically moves the lid from the closed position to the fully open position in response to the housing moving relative to the anchor. The deck is positioned at an acute angle relative to the interior surface such that a first portion of the deck is disposed closer to the interior surface than a second portion of the deck. The 4-HMTHP is then dehydrated by contacting it with a solid acid catalyst to yield parasorbic acid. Thereby, the panels are conveniently mounted on the foldable frame without using any tools.

1459827208-3c905268-e893-40b9-a6a8-68bc8066c191

A mobile wireless device adapts roaming parameters used to determine searching for and switching among access points. The system includes a main database and a routing mechanism. Consequently, the host system has a predictive tool that is able identify substandard lasers so that such lasers can be replaced before serious, and potentially costly, data disruptions occur. The material is modified to have a higher conductivity than regular conductive polymer materials so that a suitable antenna may be formed. The leakage monitor enables high resolution on-chip leakage measurements in multiple locations on a die, thereby saving test time and enabling both die to die and within die process compensation.

1459827208-739cc95e-1146-4e2f-9fa6-fe352debc0d5

A process for preparing pliable soft tissue specimen which are resistant to cracking and devoid of viable cells includes the steps of treating native soft tissue obtained from a donor by a gradually increasing gradient of aliphatic alcohol or other suitable water miscible polar organic solvent until the last alcohol solution has at least 25% by volume of the organic liquid. Each pixel includes a light emitting device; a drive transistor that has a gate electrode, a source electrode, and a drain electrode. A RCWA based scatterometry model is used to model absorption and the absorption is correlated to line edge roughness, which allows RCWA to be used in effect to model LER. The image transfer medium can be configured as a k-space filter that correlates a pitch associated with the receptors to a diffraction-limited spot associated with the image transfer medium, wherein the pitch can be unit-mapped to about the size of the diffraction-limited spot. Each mapping is converted to a port-based configuration digest, which is entered into Spanning Tree Protocol control messages sent from the respective port. The request is translated into a database query.

1459827208-b202cef7-306a-49f7-9b0b-6cccf2ceae1f

A multimodal fiducial marker for registration of data is disclosed. The environment of the cab may be maintained by a heating, ventilation, and air-conditioning system that will provide cool air to the cab in hot weather and warm air to the cab in colder weather. In response to identifying a request to establish a communication session, the mobile device reassociates with the first wireless AP using a second ESSID, for accessing the VLAN to establish and maintain the communication session. 5, wherein C is a diameter of the post and 2A is a width of an overlapping region of the stress-relaxing layer with the post.

1459827209-0958540f-d31d-4635-8086-e8471f17e2fc

It is a purpose to provide a medicinal-liquid injection apparatus in which a

needle-like tubular member is smoothly movable in a lumen without damaging an inner circumferential surface of the lumen. The folding portion and the opposite folding portion of said leather panels have the good engaging property and difficult to separate with each other during usage because they are made of the same material. The sensor has a source and associated detector on each side of the moving sheet and each source provides energy at a different modulation frequency and the associated detector is responsive only to that frequency. A server is selected to receive the request. The magnetic flux lines can be oriented longitudinally and/or transversely with respect to the device. The piezoelectric-driving layer includes a first electrode layer on the arm, a piezoelectric layer on the first electrode layer, and a second electrode layer on the piezoelectric layer.

1459827209-58671ca6-e559-4d96-833b-10c405b195bf

A system and method for estimating lens temperature is disclosed. The inertial sensor is configured to monitor the motion of the body and generate a movement signal representative of the body motion. The safety controller is operable to receive the ready message, place the machine into a safe state responsive to receiving the ready message, and provide a human interaction indication responsive to placing the machine into the safe state. The method of the invention is also suitable for the prevention or amelioration of diseases characterized by excessive apoptosis.

1459827209-8379fb1d-cacb-4520-bfc9-df5a1e4d7234

A thin-profile organic EL device with a high degree of reliability is provided. Furthermore, an encoding apparatus is also disclosed which downmixes the multi-channel audio signals, encodes the downmixed audio signals, and generates the encoded, downmixed audio signals. and a relative humidity of 80%, and a production process of the bottle by biaxial stretch blow molding at a low stretching temperature and high draw ratios. For example, data detected by a frequently-calibrated integrated accelerometer may be used to determine a tilt of the device. In one embodiment of a court date server, the court date server is coupled to a user database.

1459827209-8f862b29-a69a-40cb-a5b2-2cb90cca0cd2

An application-switching program displays representations of applications, for example icons, on a screen of a device. The lock can be configured to permit or to prevent use of the user key to program or reconfigure the lock. For a long-time adaptation, a long-time adaptation value is formed for the position of the actuating member in dependence upon a minimum short-time adaptation value for the position of the actuating member which was formed during the short-time adaptation. Ultimately, all items in the customer order are assigned a pod.

1459827210-7d759fc0-fe93-405d-88bb-7537727b81e2

Partial waveform data representative of a waveform shape variation are extracted from supplied waveform data, and the extracted partial waveform data are stored along with time position information indicative of their respective time positions. The process includes passing the fresh feed and a process stream containing a first component selected from hydrogen, nitrogen and methane and a second component which is a monomer to a separator at a pressure of 0. Also provided is a method for assembling the fuel cell system.

1459827210-d7af33bd-e9d9-4bf8-95a4-6538e9c38975

An interpreter invocation mechanism for switching between execution of native instruction words to interpreted instruction words uses a subroutine call instruction to start execution of the interpreter. The feed roller assembly feeds the paper into the print device when receiving a printing task. A chamber may be provided for holding the tubing in flat coiled condition. The alkylation conditions produce predominately mono-substituted para alkyl salicylic acids that are oil soluble. The encryption device encrypts the calculated eigenvalue. A start-up time

of the second mode is shorter than the duration of the first state.

1459827210-d9c0550c-7627-41f9-8364-fef5c2d13628

A vein removal device includes a housing, a blade element disposed at least partially within the housing, and a hook element disposed at least partially within the housing. A film free from primer coating and its preparing method are also provided. The lens support is disposed on the zoom lens base, with one end rotatably disposed on the zoom lens base, and the other end with a second lens set. In each pulse repetition period, an output signal can be a positive-polarity pulse, or a negative-polarity pulse, or an empty signal without any change. The compositions find particular applicability to immersion lithography processing.

1459827210-da1f6859-aa24-47dc-ad99-cfb553fb4968

An apparatus for removal of a windshield wiper arm or bracket and blade assembly from a threaded stud or shaft includes gripping jaws which are held in position by a cam that engages and pivots the arms into a desired gripping position. The steady-state boost is adjusted for at least one of current transient speed conditions and current transient load conditions of the internal combustion engine, yielding an adjusted boost signal. The plurality of roller pairs nip and convey the photosensitive material, ensuring flatness of the material at an exposure position. The present invention reduced the kinetic energy of the ions prior to mass analysis and hence improves the resolution of the mass analyzer.

1459827211-1585aa2f-7983-4bfe-8daa-eeefed963de67

Meanderline loaded antennas having a wide bandwidth available for simultaneous or instantaneous use are disclosed. The low volume solvent composition is subsequently pressurized and expelled at high pressure into a receiving device such as a column. The snap connector may include a flexible detent element that may distend over the edge flange during an installation of the snap connector over the edge flange, and upon installation, may extend over the flange to removably adjoin the snap connector to the edge flange. According to another embodiment, the aqueous liquid composition contains Ag ions and the at least one reducing agent is omitted. The device further comprises a metering device interposed between the tank and the print head and provided with an inner space having a planar major extension to keep the pressure of the ink feeding the print head substantially constant and to improve the print quality.

1459827211-1a2fea43-efd1-4929-b24f-224e7cb3929e

The present invention is related to telecommunications, and in particular, to methods and systems for call processing. The printed circuit board is positioned on a bottom of the housing. The outermost layer of the resin layer may be an adhesive layer composed of a phenol resin based composition. Driving force of the motor can be transmitted to the plurality of leaf plates at the same time through a pinion gear, upper and lower air cylinders, and upper and lower guides. The system includes: general purpose-type computing device to perform the case-based logic having branches and inter-dependency in the data handling and accelerator subsystems to perform a majority of the computation intensive tasks. The first fluid flow resistance is greater than the second fluid flow resistance, such that the actuator moves substantially symmetrically in the first direction and the second direction.

1459827211-7fbb35f0-60c8-44e3-a671-bf03242c1276

A charged particle filter provides a curved through path and has both magnetic poles for applying a magnetic field normal to the plane of curvature of the path and electrodes for applying a radial electric field. The first layer has a first and second surface. Methods for operating embodiments of the passenger inspection system are also disclosed.

1459827211-fd02b45d-845d-4202-a7a3-57884454360b

An ink supplying and collecting apparatus includes a case, ink cartridges detachably attached to the case, and a collecting container detachably attached to the case. For purposes of enforcing the quotas, tombstones generated for deleted objects are taken into account in the calculation of a weighted total number of objects owned by an entity, with each tombstone counted as a configurable fraction of a regular object. The terminal's geographical position can either be determined locally or by network triangulation. The protective coating includes a major proportion of at least one methacrylate compound and a minor proportion of an activator compound which initiates the curing process of the monomeric anaerobic mixture in the absence of oxygen or air.

1459827212-68242295-7f33-4865-ad56-66d2bf44084b

Embodiments of the invention provide for a wireless computing device that comprises a set of one or more radio components to transmit and receive wireless communications on the device. The computing unit is in a power saving mode. An acceleration profile is determined, based on the current vehicle speed, and desired speed profile. Inherent circuit mismatch generate gain and/or phase errors that result in mismatch in the I and Q output signals.

1459827212-88cf7649-1d2c-490c-a08a-c08906727569

A method is provided for using a single-pixel imager in order to spatially reconstruct an image of a scene. The apparatus comprising a cover portion for covering and forming a seal around an aperture, and location means for engaging with a component associated with the aperture to retain the cover portion in place. The optical sensing elements in a first direction are connected electrically to different scanning signal lines, and are configured to respectively receive a control signal. During the depressurization of the vacuum chamber, the pressure for attracting each substrate to the associated chuck unit is controlled to be equal to the pressure in the vacuum chamber. In a specifically preferred system, the air tank fixing structure includes a first air tank fixing member fixed onto a body frame at one side thereof, and formed with at least one first fixing element in which at least one air tank for the vehicle is fixed at the other side; a second air tank fixing member formed with at least one second fixing element and placed on the air tank.

1459827212-cb796a0b-c26f-4be3-a16d-ee556a2b4695

Herein is disclosed a method for modifying raw material milk, wherein a reducing agent such as a thiol compound is added when transglutaminase is caused to act upon raw material milk for a dairy product, whereby the reactivity of the transglutaminase to the raw material milk such as raw cow milk, can be improved and the milk protein can, in turn, be modified effectively. The laser may be adapted for multi-mode or single-mode operation. Each LED module is configured with a reflector or over-optic to control the angle of the light emitted toward the sign. According to the present invention, the number of elements for estimation is substantially reduced, resulting in considerable computational savings and very fast convergence performance for tracking dynamic signals. At the top of the QWIP-LED wafer an optical coupler such as a diffraction grating for coupling at least a portion of incident MFIR light into modes having an electric field component perpendicular to quantum wells of the QWIP is provided. Also disclosed are methods of using such compounds as selective agonists for G protein-coupled receptor S1P1, and pharmaceutical compositions comprising such compounds.

1459827213-2dcbe839-447b-4eab-a531-221e3a2f4b60

Multi-stage electric filters with improved intermodulation-distortion characteristics and a method for designing such electric filters is provided. Tasks may be written as procedures in general-purpose programming languages that directly manipulate resources via control interfaces. The buyer places an order at the offshore merchant website, which sends an order request to the intermediary platform. A plurality of subsystems located on the server system side of the on-

line VBI system provide services related to purchasing, accounting, and printing of VBI.

1459827213-784d7df3-139e-4634-a763-ce3e7d8c5903

The present invention provides, for musical instruments such as organs, action-magnets and action-magnet drivers that facilitate reduction of wiring, connections, and logic circuitry. Said channels are supplied with a lubricant independently from each other, by means of either jointly drives or separately drives lubricating pumps. The local intent may be determined using probabilistic models that analyze historical searches to determine which search terms tend to have local intent.

1459827213-e58618da-3ddd-48b5-aa26-200a9d334ec1

A circuit and method has a processing unit, a master clock generator for providing a master clock and a plurality of phase-locked loops, each providing a respective clock signal. A pattern detection unit detects color registration patterns on the image bearing member. The strength member passes through the opening of the independent anchoring element and thus holds the independent anchoring element in place on a casing. The cover plate also includes a first insulating means, where the first insulating means prevents the first conducting strip from contacting other conducting materials. Light irradiated from a second main surface side is detected by a detector disposed on a first main surface side, thereby detecting the positions of first and second inner electrodes, and a conductive layer is formed in a portion on a first main surface, determined based on the detection result by the detector, thereby forming first portions of individual first and second outer electrodes. The method of the present invention comprises steps of use of the support shelf with various designs of racks and types and dimensions of equipment to be supported.

1459827214-1f1e2a66-bbf7-4e74-a086-bcddb77e51b6

An opposed pair of inwardly facing radiant energy detecting sensors is positioned to sight on freshly formed glass containers being conveyed on a side by side pair of conveyors to determine if any of the containers is misoriented from its desired orientation. A storage capacitor in the non-volatile memory cell is used to enhance programming efficiency by providing additional charge to the programming terminal of the MOS transistor during breakdown of the gate dielectric, thus avoiding soft programming faults. By utilizing multiple pointers within a buffer control structure, the file system may permit write operations to continue to a file undergoing write allocation. The movable element is movable in the tube.

1459827214-7c1dc22d-1cbd-4da4-9eb7-b908e5b351a2

Embodiments for a turbine-generator position in a compressor bypass flow path are presented. The catalyst composition is prepared from a washcoat slurry containing a high temperature catalyst support material, and a low temperature catalyst support material, each support material being of sufficiently large particle size so as to prevent each support material forming a solution or a sol with the liquid medium of the slurry. In particular, it relates to compounds that are selective factor XIa inhibitors.

1459827214-aa950b7f-a405-4ed2-82af-425dc7605e21

The micro-actuation element includes a movable unit, a frame and a coupler for connecting these, where the unit, the frame and the coupler are integrally formed in a material substrate having a multi-layer structure that consists of electroconductive layers, such as a core conduction layer, and insulation layers intervening between the electroconductive layers. The substrate may include through silicon vias, at least one redistribution layer having a 1st passive device pattern and stacked vias, and an under bump metal layer having a 2nd passive device pattern. When removing the data link module from the cage, by angularly turning a bail pivotally supported by the connector-fitting unit, the cage tongue is pushed down following to the housing tongue with the camming operation of a plate cam,

thus causing the lock hole to be disengaged from the lock pin. The drawn article may be used as a weld filler material. At least the base body is formed from a textile-reinforced polymer matrix structure.

1459827214-dd4e2027-492b-4310-a0a7-28ec4f2e9822

An assembling method for an assembly is provided: the assembly comprising a cell structure housed and held in a metal vessel via a compressible material having a cushioning property by arranging it between outer periphery of the structure and the vessel in a compressed state with applying a mounting pressure to the structure via the material to hold the structure in the vessel. The method may also include determining that the pending list is not empty before releasing the combined data transfer. The atmospheric chamber communicates with the atmosphere via an air hole formed in the annular disk. The composite pattern of the first nanoscale nested line structure and the second nanoscale nested line structure is transferred into an underlayer beneath the first layer to form an array of structures containing periodicity in two directions. The termination fixture provides an interface that exposes portions of the drive member to direct movement by an external system that may include a manipulator and a sterile barrier.

1459827214-e32c57e4-caf0-470d-8bf0-e132064cb5d3

Low density silicone-containing polyurethane foams with excellent surface characteristics are prepared by reacting a foamable composition containing a siloxane of the formula and an isocyanate, in the presence of at least one blowing agent. The signal circuit layer can transmit test signals from the antenna. An adjustable bed ruffle may be removably attached to the bed platform and be capable of being seated about an outer perimeter of the top mattress and the box-spring base. Whenever a difference does exceed a threshold, a clipped value based upon the central data value replaces the corresponding peripheral value, thereby producing a second set of data values. Appropriate warning signals are delivered and therapy is automatically adjusted. The method includes receiving a location of a mobile computing device, generating a listing of common searches associated with the location, and transmitting the listing of common searches to the mobile computing device.

1459827215-aa2d87ce-b69e-4b21-aa7a-62b2a144b8f9

A drive apparatus for a washing machine having a laundry drum and a suds container includes a stiff supporting star having a bearing sleeve for mounting the laundry drum of the washing machine in the bearing sleeve, a substantially horizontal shaft for connecting the supporting star to the rear wall of the suds container, a flat motor for directly driving the laundry drum, and a bearing. The synchronous rectifier is a parallel connection of a synchronous rectifier switch and a diode. The ferrule has a mating facet and an opposing rear facet located in the housing. The system also filters a set of rules with the intermediate event object to obtain a subset of rules. Thereby, the use of the resources of the searcher can be adapted to the radio environments in which the searcher will be used. A radiation source is situated facing the curved reflector and one or more radiating elements are provided on a top surface of the waveguide cavity.

1459827215-eaf8e264-a4c0-4c79-beab-79a92a858ead

System, including methods, apparatus, kits, and components, for bone fixation using a pair of slender spanning members to span a fracture outside bone. The electrical connector includes a terminal subassembly having terminals configured to be electrically connected to the electrical conductors. In addition, the device has a second display to provide a second image. The method may then perform edge walking on the major edge of the triangle, followed by span walking. The label resistance value is calculated from a fixed resistor current and a label resistor voltage. The movable member includes a flexure part that bends due to a load received from a head of an occupant, a frame part that supports the flexure part, and an engaging portion.

1459827216-9ae409c1-8ea9-44e2-b67e-8e3b3af80858

A drill having end-face major surfaces, contiguous faces descending from the major cutting edges and flanks contiguous to the major cutting edges. The housing may be configured to hold a humidifier pad in an operating position. A decompression of the actuation structure may be configured to gradually straighten the housing tube and the optic fiber. The invention also discloses a related bonus game, which in a preferred embodiment is based upon an Othello\xae-type game particularly for a gaming machine using outflanking game pieces, such that any game pieces with opponent's side or color showing are converted to game pieces with player's side or color, with an award or payoff according to the level of successful advancement in the game.

1459827216-9f26ab25-42ef-4984-b357-d91a6f29af1a

Disclosed herein are siloxane-based resins prepared by hydrolyzing and polycondensing cyclic and/or cage-shape siloxane compounds, optionally with at least one silane compound, in an organic solvent in the presence of a catalyst and water. A gateway unit is provided that will interconnect a ATM based accesscore network to an IP based. The invention also relates to methods for producing a soybean plant containing in its genetic material one or more transgenes and to the transgenic soybean plants and plant parts produced by those methods. Transmission resources for the communications devices are allocated based at least on said allocation rules. Overwrites may be allowed within a batch at the secondary facility to conserve space occupied by the transactions at the secondary facility. Second image data are produced block by block from first image data using several image processing procedures according to the outputting parameter of the outputting unit.

1459827216-bd31b161-745a-4f3e-bb46-08638f314634

A method for mounting a semiconductor package onto PCB includes a semiconductor package comprising a plurality of outer terminals exposed out of an encapsulant. The valve comprises elements arranged in rows and columns, each of the elements comprising a liquid crystal controlled by drive means so as to display video information relating to at least one image. A feed hose extends from a gas source, through the container to a hose end that projects axially from the open end of the container. The images may be preprocessed in a phase-encoded chequerboard pattern and binarised by thresholding based on the average value of neighbouring pixels. Alternatively, in one embodiment, the processor may use broadcast regions independent of the broadcast specifiers where the coprocessor is able to alter its functionality in response to the current broadcast region.

1459827217-2776ac7a-eae2-42b0-b422-e275dee22f91

A portion of the disclosure of this patent document contains material which is subject to copyright protection. A repair server polls multiple transmit servers to accumulate as many of the packets missing from the multicast session as possible. The fasteners fix the first and second pressers to each other so that a predetermined pressure is applied in a direction intersecting with the polarity period direction, to the piezoelectric crystal through the first and second pressers. Large disks 20A, 20B, are arranged at respective portions not forming the upright walls, and small disks 21A, 21B smaller than the large disks 20A, 20B in radius by an amount corresponding to the height of the upright walls are arranged at respective portions for forming the upright walls.

1459827217-daf9f201-591d-4c21-bf62-3cbcd58d9356

A taper gauge that includes an elongate taper assembly that has a tip section and an electronics section that includes a location determining element that collects data related to a measurement area when the tip section is inserted in the measurement area and a power source. The method further including determining changes in the first and second SOC values. Under such conditions, it is economically feasible to produce large panel, bubble-free liquid crystal cells.

1459827217-e4e53880-ed20-4665-a05d-10a8e5a555c1

Methods and compositions are provided that relate to weighted elastomers. A material is deposited over the substrate including over the first and second gates. In a specific embodiment, the object may comprise a golf ball. Further, the present invention also provides a method for designing angles of micro-optic lenses. Further the information that the downstream on-road facility is in the faulty state is displayed on information board which can be recognize by vehicles having the possibility of entering a zone under control by the faulty on-road facility. In addition, an alpha value for the dummy region, a dummy data of the dummy region and the OSD data of the OSD regions at the search line are transmitted to the mixer.

1459827218-1bc5319d-3adb-44a3-9791-ef335c661766

This invention provides, but is not limited to, methods of using metal-organic frameworks having repeat units of the formula M2 for acetylene storage. The sensing device may be an in-vivo autonomous capsule with an imager, but may be another type of sensing device. The baseband signal is sampled to produce a received vector. Cavities corresponding to the location of the locking tabs are provided by the intersection of separate pieces of the molding assembly.

1459827218-65c00ea2-229f-467e-9f49-9fc8178fc24f

A serviceable gasliquid separator is provided. The clip retention apparatus may comprise a clip, first and second plug bodies, and a retainer element. In another embodiment, the brightness enhancement film comprises: a diffusing film comprising a front surface and a back surface, a coating on the front surface, and light redirecting structures disposed in the coating. The lock core defines the rest position for the lever handles at an angle slightly above horizontal. In one embodiment, a cartridge comprises a cartridge case, the propelling system, and the projectile attached to the cartridge case. The apparatus includes an introducer having a detachable and re-attachable sheath disposed about a deployment catheter.

1459827218-8627fc2e-1377-4227-8b25-f4c866a2dc28

A method is disclosed for performing message payload processing functions in a network element on behalf of an application. A slider for a concealed slide fastener comprises a slider body having at least a lower blade, left and right side wall portions and left and right first flanges, and slider upper plate member engaged with the slider body and having at least a second flange projecting toward at least the left and right side wall portions. As ions are generated in accordance with the temperature and humidity, airborne fungi can efficiently be killed. Where the session can use a virtual IP address, the server returns a virtual IP address and the client component binds the socket call to the virtual IP address. The tire is prepared by using a natural rubber instead of a synthetic rubber; an inorganic filler and/or a biofiller instead of carbon black; vegetable oil instead of petroleum oil; and natural fiber instead of synthetic fiber so that the tire comprises a non-petroleum raw material in an amount of at least 75% by weight based on the total weight of the tire. A color feature vector data store includes a variable-length color feature vector for each image in the image data store.

1459827219-39cf74da-7623-4cfd-af5b-421bb6675d7f

An appliance development toolkit includes an editor configured to create one or more test scripts having steps with each step being separated from its adjacent steps by a transition condition. The radio receiver has a first reception path for processing of the first section and a second reception path for processing of the second section. The device includes a strap with fasteners at each end that are matingly engageable with each other to secure the lid to the container. In the prosody modification value search, a prosody modification value sequence that minimizes a modified prosody cost is searched for. When in use, the positioning portion partially extends through the through hole, selectively extends through one of the holes, and then is positioned by a force of the resilient section, such that

the extension-length of the second support member relative to the first support member is adjusted. Bandgap engineering may be achieved by the method by adjusting reaction parameters of the GSMBE process and the relative concentrations of the constituents of the quaternary alloy films.

1459827219-d7dee9c0-d48b-4977-abfb-3b9244e3a381

A lift axle parallelogram suspension system. Based on a servo sector signal, a data sector generator circuit generates a write data sector signal indicating a timing of data recording in a data recording area, and outputs the write data sector signal to a delay circuit and a selector having two input ports and one output port. The system also includes a gateway capable of mapping communications between a packet-switched network and at least one circuit-switched network. The roller members are positioned in spaced relationship to each other whereby the roller members are adapted for frictionally engaging a tube of paste such that paste is dispensed from the tube as the tube of paste passes between the pair of roller members. Methods of preparing the compounds, compositions containing the compounds and methods of treatment using the compounds are also disclosed.

1459827220-672423f5-03df-4b30-8a21-92003c609e69

A method for operating a hybrid vehicle having an internal combustion engine and an electric machine, wherein the hybrid vehicle can be driven purely electrically if the internal combustion engine fails because, for example, a fuel tank for supplying the internal combustion engine with fuel is empty. The adsorbents of the present invention and the method of producing such adsorbents maximize the working adsorption capacity through  $\pi$ -complexation. First cavities are formed in a masking layer applied to a test substrate, filling the cavities with a conductive material, and planarizing the top surfaces of the conductive material portions to form lower level portions. The fob is structured to respond to the user input device and determine if the fob is in range or out of range of wireless communication with the base station. Reusing the TA command value introduces negligible error, which can be corrected in existing error correction capabilities. After encapsulation and before solder ball placement, a half-etching process is performed to remove the bottom leads to make the top soldering pads electrically isolated, exposed and embedded in the encapsulant for solder ball placement where the soldering area of the top soldering pads is defined without the need of solder mask to solve the diffusion of solder balls on the leads during reflow.

1459827220-aa37f3de-7008-481a-9291-d80f2179f31c

Golf balls consisting of a dual core and a dual cover are disclosed. The present invention allows mobile subscriber IMSIs to be transmitted to a new target MSCVLR or SGSN before a source MSCVLR or SGSN fails. The pinching pressure is prevented from constantly increasing because the transmission torque variation during travel is estimated, and the pinching pressure for the belt is changed based on the estimation. Also, the second revolution may include a variety of data which is selected or customized to match the user data submitted in the first revolution. It is safe in use without the risk of the electric motor sliding out. Related methods are also discussed.

1459827221-3b11ebd0-7ceb-42b2-bb6b-d3f5c8c4200c

A roller conveyor includes opposite sidewalls and at least two tandem zones. The plural electronic options include electronic option terms established by one or more suppliers who can supply the goods or services or events. The first diagram may have a first diagram type.

1459827221-58c51b19-e845-4d48-8cb4-d2da107bffe0

An antenna comprising an IMD element and one or more parasitic and active tuning elements is disclosed. A bit map developing part converts the document file into bit map image data. The VLIW is itself comprised of four identical processing units that are interconnected by a crossbar switch.

1459827221-9bbea690-fca5-475e-9d2c-c71c8fecefe7

Methods and apparatuses are disclosed for closing a patent foramen ovale. In one embodiment, a disk drive to chassis coupler is formed and a disk drive to chassis coupler engaging mechanism is created. The two guides are positioned a selected distance from the winch toward the rear of the boat trailer and spaced apart from each other. Therefore, dark defects of the image sensor are reduced. The method may include creating a user configurable tracking token that relates an email to a CRM object, attaching the tracking token to an outgoing email, sending the outgoing email to recipients, receiving an incoming email, determining whether the incoming email has a tracking token and if the incoming email has a tracking token, associating the incoming email with the matching CRM object.

1459827221-a1182b4b-62a7-41ce-a6ca-ca6e552d7359

Systems and methods of the present invention allow a file owner to upload and store a file to a File Storage Area. Also disclosed in the embodiments of the present invention are a method for uplink synchronization control at the UE side, and a base station and a UE for implementing the above methods. A screening pattern is written to at least one screening column in the memory block and a first memory integrity test is performed. The resulting lithographic printing plates have good resistance to pressroom chemicals.

1459827222-250d1add-061e-451e-b46a-1e5a3b7ee32e

According to one embodiment, a method for implementing computer security is provided. A fastener such as a screw or bolt passes through the sealing washer and the main washer, into a hole in a mounting surface. The initial indicator bit is assigned a binary value by the base station. During normal operation the memory elements may be powered with a power supply voltage that is larger than the programmable core logic power supply voltage. Application to electronic payment. Various designs for capacitive and/or inductive couplings are provided, resulting in improved crosstalk performance.

1459827222-7b0af3c2-6c76-45ed-a438-ac76eb841071

Disclosed herein are isoxazole derivatives and uses thereof. The module is provided with plugs and/or sockets compatible with those of the apparatus so that the module is capable of forming a connector in series with the signal input or output leads. The plurality of layers may be of the same polymer or different, same concentration or viscosity or different and may be subjected to the same processing conditions or different ones to form unique structures. One or more memory cells and one or more reference cells are connected to the word lines, where the one or more reference cells include an erased reference cell connected to each word line. The stitched manifest is provided to a client and used by the client to request the combination of video assets for playback as one continuous video stream in an order specified by the stitched manifest.

1459827223-ac857027-635e-4b69-a96f-31e309cd6f4a

A method of exchanging digital public-key verification data whereby a first computing entity enables a second computing entity to obtain probabilistic evidence that a given public-key number  $n$  is the product of exactly two odd primes  $p$  and  $q$ , not known to the second party, whose bit lengths,  $l$ ) differ by not more than  $d$  bits. In a particular embodiment, the system includes a repository configured to store information comprising classification components. A central hub allows selective connection of one or more headsets to each other, or allows an instructor to selectively connect an instructor headset to one or more instructee headsets. If this high compression results in unacceptable fault coverage loss, the top-up patterns for additional coverage are generated using the low compression codec.

1459827223-bbcc07ec-00a3-4f37-a689-2ac00ad28f79

A method and a system are provided for encoding and processing digital information.

A coupling coefficient between a first inductance element and a second inductance element, an inductance of the first inductance element, and an inductance of the second inductance element are determined. The access device may be used to create a passageway to an anatomical structure, such as the patient's bladder. In another embodiment, the transmitter selectively transmits security codes at a default frequency which is selected because of a recorded count of prior apparent successful transmission. The second intermetallic layer is located on the second metal thin film layer, and the first intermetallic layer is located on the second intermetallic layer. The solder portions of the terminals extend beyond the rear face of the insulation housing.

1459827223-beff0e06-6244-4b23-a45e-556c5f91b2d3

UV curable compositions and methods for depositing one or more metal or metal alloy films on substrates are disclosed. The structural plate defines at least one degassing chamber and a half cell chamber opening. In one embodiment, each component of each motion vector is divided by two and used to generate an interpolated frame half way between the first and second frames. Each panel further includes a first side and a second side, with the first side of one panel coupled to the second side of an adjacent panel, and with the bottom panel resting on the surface.

1459827223-e8f65a73-8fab-418d-a531-ead17043cf3a

A semiconductor integrated circuit device, and method of manufacturing the same, having a conventional-type lead frame with the die paddle removed. A liquid pesticide coating is applied to the particle surface. The assembly of the fibers into a network is based on interactions of nucleotide chain portions of different fibers. Next, the system searches in a database of icons, which are labeled according to type.

1459827224-3cdc2da8-a3c9-4db6-a373-7f35974d859a

The present invention is an electronic table tennis apparatus including an electronic scoreboard, a plurality of touch sensors disposed on a table tennis table for sending sensor signals to the scoreboard. The service providers are then sorted based on the scores to generate a list of service providers. Moreover, in the pressure-sensitive adhesive tape package, the release sheet is bent along a predetermined bending line with the adhesive tape, and the adhesive tape is sealed inside of the bent release sheet. The membrane is deflectable away from the bottom opening when the valve is in an open condition to permit any liquid in the vessel to flow through the bottom opening to an outlet port of the valve for dispensation into a suitable collection vessel.

1459827224-4bc00d91-c4f2-48de-81ac-f6fcc06aad11

A voltage-controlled oscillator comprising an odd number of delay stage circuits. In one embodiment, the present invention provides a device for measuring a body-tissue water content metric as a fraction of the fat-free tissue content of a patient using optical spectrophotometry. The bipolar instrument is connectable to a source of electrical energy having a first electrical potential connected to one of the jaw members and a second electrical potential connected to the other of the jaw members such that the jaw members are capable of selectively conducting energy through tissue held therebetween to effect a seal. From the selected net's topological route, this method then generates a geometric route for the selected net.

1459827224-6de35a2b-eab6-4217-a9fc-bed70df231ec

A process is disclosed for making CF<sub>3</sub>CF<sub>2</sub> or a mixture thereof with CF<sub>2</sub>. Compressed scan data subsets are stored, one at a time, in a memory of the test system. Text data associated with the video stream is parsed to identify a string in the text data that identifies boundaries of the portions of the video stream that are to be skipped during presentation by the DVR.

1459827225-9afea686-d67d-4641-9ca1-51aa50495366

An optical transmission substrate includes an optical transmission body provided in a through hole which has excellent and uniform propagation characteristics. The inputs include modifications to the manifest, updates regarding weather or traffic conditions, or other factors impacting the remaining deliveries. The present invention is also related to silicone hydrogel contact lenses made from this class of silicone-containing prepolymers and to methods for making the silicone hydrogel contact lenses. The second surface includes a second microreplicated structure having a plurality of second features. With this configuration, it is possible to peel a device from a substrate and also form a flat resonance mirror with less damage of crystal by laser abrasion, and further to easily form a high quality resonance mirror without increasing the number of fabrication steps.

1459827225-da1d999d-04d5-49f0-a784-cf8633ed87e8

This disclosure relates generally to valves, and more particularly, to gas valve assemblies. In some examples, a tumid implant device may comprise an enclosed sack membrane adapted to fit between bones in a joint. The capacitor voltage generated by the filter capacitor sets the bias point of the second FET such that the second FET comprises characteristics of an integrated precision resistor. An excitation input assembly is interconnected with the blade support and includes first and second actuators that act to concurrently apply forces or loads to the blade support. The liquid feedstock is delivered to a distillation column having two heating zones to effect dissociation of the feed stock thereby liberating the organometallic compound, which is collected as a vapor from the top of the column.

1459827225-e5070ba6-32a6-4e79-ada0-ac62b7c0b065

The present invention provides compounds capable of binding to an Fc receptor and modulating Fc receptor activity comprising a core lipophilic group in the form of an Aryl ring substituted with a group rich in p-electrons. The method can include at least one annealing step after the deforming step to produce the biaxially textured substrate surface. A plurality of eligible information sources that are capable of providing data at least partially responsive to the information request are identified. A detent assembly comprised of notches on the plug and a detent carried by the receiver permit the plug to be selectively indexed. In this state, the wiping member does not slide on the nozzle forming surface. The first guide member is movable between a third position where the first guide member is spaced apart from the second guide member at a predetermined distance and a fourth position where their distance is less than the predetermined distance.

1459827226-2bea5c28-b1af-4368-81aa-468b61bedb49

This invention relates to co-crystals and salts of CCR3 inhibitors of formula 1, pharmaceutical compositions containing the same, and methods of using the same as agents for treatment and/or prevention of diseases related with the CCR3-receptor. The industrial machine includes a dipper, a crowd motor, and a hoist motor. The camera having a lens is provided in the revolvable case, and the lens is exposed through the opening of the revolvable case. The plurality of plane mirrors are disposed between the avalanche-type photosensitive device modules. An insulating film formed on the surface of the inspection electrode is broken by utilizing a fritting phenomenon so as to bring the inspection electrode into electrical contact with the inspection electrode. The head may be an integral member and may include a self-reinforcing wedge which joins the helix to the head.

1459827226-a03bea55-17a5-4785-bf63-16ea395c73cf

A device of dynamic communication of information allows, on the average, non-integer bits per symbol transmission, using a compact code set or a partial response decoding receiver. An implant is introduced into a large end of the sleeve and extruded into a surgical pocket of minimal access incision size through a small-sized end of the apparatus. A slidable vacuum seal maintains a vacuum in a

sample chamber for tools that require a vacuum. A green gamma voltage generator has at least one variable resistor to generate a plurality of green gamma voltages and control the plurality of green gamma voltages such that said brightness value can be changed in correspondence with each of said various modes. The lid has a first section overlying the first chamber and a second section overlying the second chamber.

1459827226-c3fb33c5-54ba-45a2-b6c3-acab2b9d7dfb

A method is disclosed for a device to interdependently validate a digital content package having a piece of digital content in an encrypted form, and a corresponding digital license for rendering the digital content. The mid-package film layer has laser ablated holes and an adhesive layer on both faces providing adhesion between the upper micro-molding, the mid-package film layer and the lower micro-molding. Alternative manners of coupling orifices in the fluid flow besides an orifice holder can be employed.

1459827227-42d94651-a011-4ebc-9c61-ec7400365220

A process for replacing a first soft-top of a convertible-top of a motor vehicle with a second soft-top includes separating the first soft-top from a headliner of the convertible-top and removing the first soft-top from the convertible top. The more than one wind outlets respectively work in coordination with each diffusion plate sets. It is aft to allow an auxiliary control in the elevator signal to cancel the unwanted pitch up moment caused by the spoilers only going up and being aft of the center of gravity of the aircraft. The tile also includes a first formation at or adjacent one side edge, and a second formation at or adjacent an opposite side edge that, in use, interlocks with a corresponding said first formation of an adjacent roof tile. The control circuit is coupled to the data path and is configured to select one of the timings responsive to a detected phase difference.

1459827227-a672815f-99bf-485e-8e6e-92ebb37ff74e

The present invention relates to methods and systems for densifying liquids, specifically the densification of cryogenic propellants. 2,9-dichloroquinacridone is added to the milling composition of the crude gamma or crude beta quinacridone. The rear end of each of the running boards is attached to a fender. is supplied to a contaminated object to oxidize and dissolve a chromium oxide film by an oxidizing dissolving process.

1459827227-a73ed3e2-56e0-4ae2-91a0-206239f94ba1

A roasting oven having a large capacity heating well including a wrap-around heating element for heating the side walls thereof and a top heating element for browning. The main controller subsystem includes a one dimensional sliding mode controller subsystem to determine an estimated net wheel torque signal, an adaptive threshold subsystem for generating an adaptive threshold based upon the modified slip ratio signal and a clock signal, integral gain subsystems, a proportional controller subsystem, and a pressure limiter. The circumferential conduction block is also formed in a pulmonary vein in order to bridge the adjacent ends of two linear lesions, wherein each linear lesion is formed to extend between the pulmonary vein and another adjacent pulmonary vein in a less-invasive \u201cmaze\u201d-type procedure.

1459827227-b016fae2-62f3-4915-aa10-b2767f8a5c33

The connection topology of input terminals 2, elements 4a, 4b, 4c and 4d and load 5 is designed similarly to a so-called \u201cseven-segment display\u201d, which is often used to display numerals on an electronic calculator or a digital watch. The coarse wavelength response is achieved by utilizing an optical filter. The tool also includes a logic circuitry configured for receiving a set of meta-data wherein each meta-data includes identification data about the substrate and the process recipe being executed. The compressible seal member is molded around a portion of

the frame construction. Nucleic acid molecules encoding DcR3, chimeric molecules and antibodies to DcR3 are also provided.

1459827227-e9d2f395-98b5-439e-9f3e-f8d9cd99fb8e

An apparatus including a switch and a push-button coupled to the switch. In a particular embodiment, in response to receiving a user instruction to execute an application associated with a wireless protocol over a MIMO transmit antenna system, a method provides transferring a wireless probe signal to identify whether an external MIMO antenna element is available over another wireless protocol. The chemostat may also include a nutrient supply-line to supply growth medium to the growth chamber, and an output port to remove fluids from the growth chamber. By building historical profiles of the applications running on the multi-node computer system, the system can analyze the trade offs between power consumption and performance. This may be done by creating a smaller gastric pouch within the stomach directly from the interior of the stomach itself. It then brings about a further operation of the gas burner by igniting the gas burner.

1459827228-22bd2710-d049-40ea-81b7-57860793265d

A water jet assembly for in-ground pools or spas that includes a first chamber with a water inlet and a second chamber with an air inlet and a plurality of water outlets. In the event it is determined that the MEMS device is possibly operating in an unsafe mode, the laser may be turned off and/or the MEMS device may be shut down. The structure includes an organic first material and a second material different from the first material. The first memory cells and the second memory cell are arranged to irreversibly change their electrical resistance when the data is stored in them. A resulting glycoside Frondoside A stimulates lysosomal activity of peritoneal macrophages, phagocytosis and oxidative burst in the macrophages at concentrations significantly less than for acute toxicity, hemolysis and sea urchin embryo toxicity.

1459827228-28342693-3176-4227-bba3-ed1e8b827d90

This invention relates to novel analogs of the DNA-alkylating agent CC-1065 and to their conjugates. Each fiber array is inserted in a separate half of the connector, where each individual fiber is then supported through an aperture in a fiber array connector piece part. A user control apparatus, such as a remote controller, is utilized by a viewer to choose user control commands and transmit signals in response to the data processor which receives the signals in response to user control commands. The side portions cooperate with the bend surface to form the staples. The composition is both stable and environmentally acceptable. Further, the present invention is directed to a method of manufacturing the same.

1459827228-b883741c-19f5-4f13-84ee-10366944d4a9

The present invention provides sensor generating measurement information based upon a patient parameter measured by the sensor and a processor managing local output of the measurement information according to automatically detected control signals locally and wirelessly transmitted from a transmitter entering a local area of the sensor from a remote area. The invention more particularly relates to the design of adsorbent zones to be used in PSA prepurification processes that are expected to provide for extensions in PSA cycle time, thereby reducing blowdown loss and operating costs associated with the process. Brakes are provided to brake the extension and retraction of the portions of the arm, to brake the pivoting movement of the arm relative to the support structure, and to brake the pivoting movement of the patient care equipment support relative to the arm.

1459827229-9260c617-6697-4a88-9945-1a9e0b99f5de

The invention relates to an energy efficient, environmentally favorable process for the preparation of halogenated rubbers, in particular chloro- and bromobutyl rubber, that uses a common aliphatic medium of specific composition for both solution polymerization and subsequent halogenation of the rubber. The basic body

comprises at least 65% by weight of silicon carbide, and from 12 to 30% by weight of a constituent selected from silicon oxide or nitride. The inner panel is then positioned on the outer panel so that an outer edge of the inner panel is adjacent the bend line. To allow for a relatively fast network read cycle, cells that are spaced far enough away from each other as to not interfere with each other are allowed to transmit at the same time. a cable break, occurs on the main path, the optical signals are transmitted to the nodes over a reserve path. The above need can be addressed by, for example, determining an off-track condition has occurred when a light spot is located at least half-way from the track being recorded toward another track adjacent the track being recorded, and stopping a recording operation.

1459827229-dd391f4f-73c5-4fcd-8d3d-095f593ed8b8

A lid operating device for switching a lid between a closed position and an open position relative to a main body includes a first urging device for urging the lid from the closed position to a mid position before reaching the open position, and a second urging device for urging the lid from the open position to the mid position. A test tone having a first frequency is provided to the circuit for use in calibrating the circuit. The singulating and drive belts define a throat or singulating a mailpiece from the stack of mailpieces. The injection device further includes a flow regulator to control the flow rate of fluid in fluid connection with the outlet. The method further provides a method of controlling a hearing aid. The receptacle includes a dilatant material.

1459827230-10774fe2-9661-4059-b54b-e68f496867eb

The invention relates to a process for the isolation of -mesquitol in substantial yields from *Dichrostachys cinerea* and also the usage of -mesquitol as an antioxidantfree-radical scavenger. A traffic slot map is generated. Torque is increased as a plurality of driver discs eccentrically rotate about a central shaft member and engage an output member via low-friction, roller means.

1459827230-130fd77a-2396-49b8-97cd-466bda8b37d5

The invention relates to a compressed gas container comprising a block flange that is provided on an upper opening in its wall, a flange cover that is equipped with two extraction valves being screwed onto said flange. The radiant heating device includes a controller that differentiates a radiant energy amount of the radiant heater when the introduced air into the air-conditioner is the air outside the passenger compartment from when the introduced air is the air inside the passenger compartment. A first wing can extend outwardly from the first portion of the fuselage and the second wing can extend outwardly from the second portion of the fuselage, with the second wing being positioned above and forward of the first wing. Gathered data can be retrieved by an agent at a time just prior to communication. The filtering device is buried in the semiconducting substrate at a depth depending on the wavelength of the undesired radiation.

1459827230-3478f344-02de-4040-a552-fcccccfffd1b3

A replaceable ink container of an ink supply device includes an opening plug for plugging an insertion opening into which a male connector is to be inserted. The size of the restriction is selected to achieve a desired capacity reduction for the refrigerant system compressor. The controller can monitor the temperature within each processor core. The protruding head has a length along the longitudinal axis and a maximum width transverse to the longitudinal axis such that the length divided by the maximum width defines an aspect ratio for the protruding head that is equal to or greater than 1. The answer selection unit analyzes a correspondence relation among extension words included in a second search result, determines the feature word and a constructive part of an answer equivalent word in the second search result based on an analysis result, and selects a word determined to be an answer.

1459827230-4f8939dc-6e55-4c83-b5ba-31fdfcc068d8

Apparatus for stacking bales of hay into large bundles such as, for example, three bales high and seven bales wide, positions bands about the stacked array to provide a tightly bound, compressed stack of bales. Furthermore, a plurality of supply ports are provided to supply ink to channels and pressure chambers and separated from one another by beam portions. When the processor is interrupted, multiple packets aggregated on the network interface may be indicated to the operating system all at once to increase the device's power efficiency. The user is intended to perform certain flexibility exercises with the belt in contact with the fastening band.

1459827230-7972cf38-ba28-4c20-9bea-deb3fc05cf32

An apparatus is described for measuring surface topography of a three-dimensional structure. The image display apparatus includes a light source, a spatial light modulator, a total internal reflection prism, a projection lens set, and a reflector. The core network includes a shared label switching over SONET network.

1459827230-af864763-72e5-45fd-95f0-bfb9b512e888

A wavelength tunable filter capable of being driven such that reflecting mirrors move more distant as well as closer by using the principle that a direction of the electromagnetic forces changes depending on the direction of the current flowing perpendicular to the external magnetic field. In some embodiments, a method is devised for a client to synchronize information with a server. Scaled near-parallax and scaled far-parallax values are calculated, the calculation depending on the whether the focal length is greater than, less than, or within the range of focal lengths. The trip arm is part of a pivotably mounted actuator assembly having a movable end portion spaced from the pivot disposed adjacent a motion transfer member. Accordingly, the mistakenly judged static pixels can be found and modified to moving pixels, such that the accuracy of motion detection can be increased.

1459827231-8991deb1-5f16-42fd-925e-b2015325b1ef

A system and method for intra-device data protection in a RAID array. The negative feedback path contains two resistors which are connected in series and whose common circuit point is connected to the inverting input of the operational amplifier. The door may be lifted at any time without power and after a set amount of lift powered movement is triggered moving the door to a preset height, pausing the door at that height, and then resuming gravity deployment. The intrusion detection module then determines whether the packet is an intrusion attempt.

1459827232-12a2da95-c1c9-489f-b243-8d3b10905b38

A blade root extender for a wind turbine assembled between the blade root and a hub fixed to the wind turbine's nacelle. The spot welding apparatus is capable of firmly spot welding workpieces made of high tension steel even if there is opening between the workpieces. The clips and methods of the present invention may be used, for example and without limitation, for repairing tears and other defects endoscopically. As the telescoping cylinder is lowered back into the columbarium, a push arm forces the pivotal plate to pivot causing the urn to roll off the pivotal plate and onto a ramp that allows the urn to continue by gravitational force to the base of the ramp for permanent storage. Further more, the rows of base matrix Hb can be permuted such that every two consecutive rows do not intersect. Using the contact pads, which are generally formed with a large area, the evaluation signals can easily be tapped off by a tester.

1459827232-2bc491eb-b0bb-4a1f-aea0-dc51beaa8c72

Irradiation devices and methods of amplification and irradiation are disclosed for displaying pixels and Surface Enhanced Raman Spectroscopy analysis. In one example embodiment, such a method includes first selecting a sub-window of a digital image. The first component defines a channel extending between the two opposing ends. The user may then input data into the form, and receive a new advertisement in the same

location as the old advertisement upon completing the form.

1459827232-77d3442b-82fc-410a-b4c8-ae681fe63f9a

Apparatus for clearing of an obstacle if the smooth transfer of a head is interfered with in an apparatus for reproducing data recorded in a recording medium having address information. The network device has a plurality of ports, with each port of the plurality of ports having a plurality of priority queues. Image elements are stored in the computer memory in an order defined by the offset of each image element.

1459827233-142d7ad3-4d60-412e-8f5b-b7007dd895fc

In general, this disclosure describes techniques of determining a backset for client devices attempting to download data of a live transmission. In order to enable such a device to change the orientation of slice images during the treatment in a simple and interactive manner, according to the invention adjusting means are provided on the part of the medical instrument which projects from the object to be examined in order to change the orientation of the slice images reproduced. Along the exterior side of the flux return pieces, is a magnet that is between a top plate and a bottom plate. While the cellular telephone is docked, a charging circuit recharges the cellular telephone battery.

1459827233-2c993760-b78d-4883-8704-e9c04121f2a4

The present invention relates to methods, materials, and products for forming a foamed product, comprising the steps of combining an epoxy-based component with an amine-based component. The resilient member includes a plurality of arms including a medial arm extending along the medial side of the sole and a lateral arm extending along the lateral side of the sole, wherein an end of the medial arm is connected to an end of the lateral arm. While a mobile terminal 110 is present in a service area of an exchange 131, a subscriber profile is changed only in the exchange 131. In alternate embodiments the sensor apparatus includes integrated optical elements, free-space optics, and direct laser-diode sensing. The packaging film can be subsequently lidded by conventional sealing methods to produce packaged dosage units which are suitable for sublingual and other oral applications. The invention further relates to assays for the identification of agents that modulate GPR43 ligand binding and signaling activity, as well as compositions consisting essentially of an isolated GPR43 polypeptide and an isolated short chain fatty acid.

1459827233-c6cd4d85-4f48-4257-96be-7ea597353f5d

A jewelry box including a pair of clamshell members joined by a hinge, a jewelry holder in one clamshell member and a display device in one clamshell member. The apparatus determines at least one data length in accordance with each receiver based on a number of symbol for the frame to be transmitted, determines a maximum data length among the at least one data length, and determines a length of the frame in time domain based on the maximum data length. A next step includes transmitting symbols carrying the non-quantized weight information and non-precoded pilot symbols by the BS. A threaded rod is rotatably mounted to the cover and engages the threaded surface of the squeezing device when the cover is closed and disengages the threaded surface when the cover is opened.

1459827233-f888c0cd-7f15-45f3-8e4a-0c599ce8d4ea

The invention relates to a vector capable of being replicated in cultures of unicellular organisms, this vector containing a gene coding for a eukaryotic protein having the biological activity of a membrane receptor and interacting with a regulatory protein called the G proteinable to bind molecules of guanosine triphosphate. The insert and ginning rib have an outer profile so that seed-cotton in contact therewith is urged away from the ginning zone formed between the ginning rib and saw. The antibiotic additive prevents surface dry, improves storage stability and inhibits propagation and growth of bacteria in an ink and has

excellent compatibility with a general dye or pigment. The baseband frame includes a deleted null packet field indicative of the number of deleted null packets, and the DNP field comprises at least one of a first DNP or a second DNP.

1459827234-1a6283d2-5948-4e6d-baf0-4d1e5e115cfc

An apparatus including an electrical switching device to control current to a load and a second case arranged to substantially encapsulate the electrical switching device. The clock recovery circuit is configured to output a data recovery stream and a data recovery clock based on an input signal and a clock signal. Bolts may be pre-located through the closed holes, with nuts threaded onto the bolts, but not tightened.

1459827234-c8984e78-c822-4f9d-bd31-b8f2b7b779e1

A method and apparatus is used to provide DC stabilization and noise reduction in a multistage power amplifier. The fluid-delivery conduits receive liquid from the chambers in the reservoir and deliver it to the dispensing head. A plurality of closely-spaced barbs are disposed on the body from the pointed end of the connector to a predetermined location on the body. The grooves open radially outwards and extend at least partially in the longitudinal direction of the fixture member, and each groove is, at a forward end thereof, connected to one of the cutting recesses for collecting cut-off bone material circumferentially around the inner wall of the cavity during the insertion of the fixture.

1459827235-1b805f30-f648-4f37-a7f6-58d0ac545186

A lubricating oil composition is disclosed which comprises a major amount of an oil of lubricating viscosity; one or more non-halogen-containing oil-soluble titanium complexes comprising at least one ligand comprising an anion of a carboxylic acid; one or more dispersants; and one or more detergents, wherein the lubricating oil composition is free of any zinc dialkyldithiophosphate. User networks connected to respective interfaces IF-A to IF-D are connected to the control function parts 41C1, 41C2 to which they are previously associated, thus implementing communications between a plurality of user networks with a single system. Additionally, the method includes directing the EM radiation through one of the first and second substrates and onto a region of the thin film until the first and second substrates are fused in the region. Another aspect provides a bioreactor having a plurality of gas permeable, closed-loop chambers for cell or tissue culture. The contact interface is moveable between a connection position, wherein the contact interface engages the wire, and a release position, wherein the contact interface is disengaged from the wire to enable the wire to be removed from the receptacle. Metered quantities of such particles are admitted into a stream of fragmentized tobacco leaves before the stream is draped into a web of cigarette paper or the like.

1459827235-575df7a7-3ad8-4367-b7ac-78c581eca82d

A coating device for coating a coating solution on a web has a roller and a weir which partially constructs a solution store space. The marine seismic data is generated from an underwater seismic sensor that is subject to an interference effect. The pivot arms rotate or pivot in response to moments generated by accelerating or decelerating the wheelchair thereby raising or lowering the front caster through the rotational movement of the pivot arms.

1459827236-92a88c3c-9b88-41d6-b39e-1612b7ecce81

A driver is provided to manage launching of tasks at different levels of priority and within the parameters of the firmware interface. A sleeve may be disposed around the torch head body to define a flow channel over the torch head body. A nearly symmetric parametrically-disciplined inertial wave gyroscope that can oscillate in any transverse direction and has more than one bias electrostatic electrode that can be independently driven at twice its oscillation frequency at an amplitude and phase that disciplines its damping to zero in any vibration

direction. Then a set of phase variances for each carrier of the number of carriers is obtained, where each phase variance is a difference of phases of a carrier in different symbol durations. A driving force from a driving motor is transmitted to the conveying gear via a planetary gear. A contact cell aspect of the porous medium and a method aspect are also provided.

1459827236-996d9b38-02a5-4bd4-b3b5-9e8f925fafa4

Methods and apparatus for selecting digital coding and/or decoding technology for programming and data delivery over, e. The header information associated with each packet, together with a routing algorithm, routing topology information and internal OPTR state, is used to route each packet to the appropriate destination channel and to make timing decisions. The sidewall may have recessed columns to resist bending, leaning, crumbling, and/or stretching.

1459827238-5eeb7ef6-7bd0-4b49-a662-f66eb359623b

A deployment module of a RAID deployment management system integrates vendor-specific RAID configurations into a vendor-independent infrastructure with a RAID configuration utility that translates vendor-specific formatted configuration information to vendor-independent formatted configuration information. The developing roller includes a developer carrying member in the form of a hollow cylinder, a flange member provided at an end of the developer carrying member, and a magnet provided in the developer carrying member. The user group includes a user that inherits the user-level access privileges of the user group. One temple bar encloses the top half of the frame. Further provided are methods of treating a neurodegenerative or peripheral organ disease in a subject by administering a therapeutically effective amount of the disclosed GDNFOS nucleic acid molecules, peptides or compositions. The engaging device leaves the second energy absorbing member unengaged with the attachment bracket under a low-impact load condition, and has the second energy absorbing member engaged with the attachment bracket under a high-impact load condition.

1459827238-e093e9e4-fa53-47d1-827a-20c4f52a7955

A system and method to control imaging devices in a single-pass multi-color electrophotographic printing machine that includes a photoconductive member having a timing aperture, the photoconductive member moving along a path in the printing machine, and a plurality of imaging devices, each one of the plurality of imaging devices writing a latent image on the photoconductive member. In one embodiment, the watercraft lift includes a pair of longitudinally extending and approximately parallel floats with an apparatus for supporting and lifting the watercraft positioned between the floats. The simplified connection matrix is used to determine a probabilistic data flow through the components without data flowing from any component to itself. When spraying the fluid, the invention pulses the fluid at desired rates to create a substantially uniform layer of ozone-rich fluid on the workpiece.

1459827239-27261899-3f07-4a4b-9f50-d83ac6660015

An article acquisition game apparatus includes a storage unit storing articles, and an article transferring unit enabling a player to hold the articles in the storage unit and transfer the articles to a predetermined transfer position when the player operates an operation input unit. The P device learns the address of a local CE device by monitoring the control messages, such as address resolution messages, originating from the local device. Additionally, position information can be used to determine the probability that the signal received will be a reflected signal. The method further includes repeating the first pass until each of the pixels of the selected image tile is processed, performing a second pass to process the blocks of pixels, and repeating the second pass until each of the blocks of pixels is processed.

1459827239-961a2c72-68dd-4ec8-8bd1-f48dcf46f6d0

A semiconductor structure with reduced inter-diffusion is provided. The single-piece swirler includes a center body extending axially along the single-piece swirler, a first fuel passage inside the center body, and a plurality of vanes extending radially from the center body. When the traffic exceed a predetermined threshold value, traffic is adjusted on the inner or outer cell. Iron sulfide agglomerations also provide consistent and improved sulfur recoveries compared to granulated iron sulfide additions with little to no sulfur odor.

1459827239-9cd65e0d-209a-4423-8b3e-7fa60fd66656

A method for large scale manufacture of photovoltaic devices includes loading a substrate into a load lock station and transferring the substrate in a controlled ambient to a first process station. The pre-chamber is designed to promote faster ionization resulting in more efficient spark to flame ignition, or beat to flame ignition and, in each instance, results in faster propagation of flame within the compressed cylinder, thereby achieving more efficient and consistent output in combination with lower exhaust temperatures. The internal diameter of the axially extending segments of the external body is adapted to the external diameters of the internal body. An annular projection is formed on an axial face of a second metallic ring. In addition, the subject invention provides a method of stimulating proliferation of lymphocytes. A main unit has a conveyance path that conveys sheets, and a processing unit that applies a specific process to the sheets conveyed through the conveyance path, and a multifeed detection unit is removably disposed to the main unit.

1459827239-acd9dfa8-380f-49df-9d81-3b253a1ee9b9

An image rendering device holds a table which contains color and brightness values at positions specified by two-dimensional coordinates, where the color values are aligned so as to express a gradation of color tone along one coordinate axis of the two-dimensional coordinate, and the brightness values are aligned so as to express a gradation of brightness along the other coordinate axis. A first image is produced and then overlapping additional images may be produced by the positioning one or both of the target object and the optical device to the pre-determined locations. Then, after a silicon oxide film is formed so as to cover the silicon gate electrodes, a surface of the silicon oxide film is polished by CMP, thereby exposing the surface of the silicon gate electrodes. The classification data may be used to select and generate the graphical objects. The Medley signal generator then generates a Medley signal which includes a set of Medley tones encoded based on the output bit sequence from the PRBS generator.

1459827239-b5327a10-9f53-4646-bc9c-4050066d2908

The present invention relates to salts of 2--2-methyl-1-pyrrolidin-1-yl-ethyl}-2-naphthalen-2-yl)-2H-pyridazin-3-one, processes for their preparation, pharmaceutical compositions comprising such compounds, method of using them, and a process for preparing the active agent. The data signal includes first and second sets of data, and the electronic device includes first to fourth receiving units and corresponding first to fourth registers. The method comprises: determining if a temperature of an electronic component is higher than a specific temperature; and if so, then reversing the computer fan for a specific amount of time as indicated by a timer. The user identification data includes compressed image data. A primary manual power control mechanism is configured to adjust the primary timing regulation circuit between the minimum power setting and the maximum power setting. The agent is essentially an amino-modified polydimethylsiloxane.

1459827240-015cc004-22e5-4fb0-8a0e-f7afdbe2c155

A magnetic recording medium of the perpendicular type, for a disc drive. One embodiment of the system includes an attenuator that controls gain of signals received from a radar receiver. A slot in the body's bottom surface, that is, the surface facing the ball, accommodates the shaft portion of the ball stud, adjacent the ball, as the ball moves into or out of the connector body through the opening.

1459827240-1785f349-3648-4466-bb89-247e78fcd73

A packaging 1 comprises a carton tray 3 provided with a flange 17 to which a relatively thick separating ring 15 is sealed. The clamping mechanism is adapted to clamp the strand within the exterior housing. An oxidizing gas is supplied directly into the inlet channel for the mixed gas flow. This prevents the insulating substrate from breaking when the chip-type component 11 is vacuum-sucked by a collet nozzle 19 to be supplied to a printed circuit board 17. The nitride-containing isolation liner reduces segregation of the boron in the channel region, as compared to an essentially nitrogen-free oxide-containing isolation liner.

1459827240-22266de1-c7f3-466d-a0bd-518e5475b5de

An object of the present invention is to provide a method for manufacturing 2,6-DMN, in which even when a mixture containing DMN isomers which includes 5 wt % or more of 2,7-DMN is used, a highly pure 2,6-DMN can be obtained. A selected cell is then written to one of two storage states, and second readout is then carried out. Certain embodiments of the present invention may transmit different information on the different modulation layers. A scanner with a small maximum scan range is used as the probe-side scanner 10; a scanner with a large maximum scan range is used as the sample-side scanner 11; and both can be switched between each scanner for use according to the observed targets or purposes. During a time period while the display instruction correspondence screen is being displayed, the display control unit displays the execution correspondence screen when receiving the first execution instruction, but doesn't display the execution correspondence screen when receiving the second execution instruction.

1459827240-8b66a543-4afb-406f-a3f7-19dca24aa739

The present invention provides rapid diagnostic assays for the detection of Leishmania which can readily be used in the field, leading to more rapid treatment. The system is implemented by establishing a communications interface to each process sharing the resource data. At least one logical device and at least one host are assigned to a cluster group.

1459827241-1115ecf1-8e85-4cfb-9e43-8fb55f5bf00c

Pixel image sensors with lateral photodiode elements and vertical overflow drain systems. The blocking outlet installs in a conventional wall-mounted electrical box, providing access to building electrical wiring. At this time, the orifices each have a diameter of 100 to 300  $\mu\text{m}$ , a length of 200 to 2400  $\mu\text{m}$ , and a ratio of the length to the diameter of 2 to 8, and are spaced apart from each other at intervals of 2.

1459827241-9277fff0-44c0-4f3a-9177-ac3853f1fd9e

Non-corroding cleaning compositions for cleaning exterior surfaces of a vehicle are disclosed. The cartridge includes a rotating internal barrel that is loaded with a plurality of seeds, where the internal barrel has a plurality of conduits for accepting the seeds. The wave spring and the snap ring are rotatable with respect to each other. The strip-form body and the inflation insertion portion are displaced from each other by a step formed by the bracket, thereby forming a gap disposed between the strip-form body and said inflation insertion portion. If so, a database associated with the second messaging service is populated with the matching user identities. Specifically, the present disclosure relates to ATVs having an ergonomically designed footwell leg recess to allow the rider's leg to be received therein while standing.

1459827241-ba566fc9-f773-4a7d-a06b-94c64a48614d

Bang or bang-bang control is applied to interleaved power converters. Each of the first and second splitting devices have respective first and second input ports, respective first and second output ports, and a respective transfer matrix. Some embodiments include override switches which permit the window to be made

transparent at night and/or during cooler months when sunlight is falling directly on it, and some include an override switch which permits the window to be darkened during daylight hours in warmer months. The modulator provides a first voltage when the data signal is at a first level and provides a second voltage when the data signal is at a second level.

1459827242-481609d0-b5dd-4a17-9c9d-1eb16b4541c7

A combination floor structure includes multiple main boards, and multiple connecting boards. Accessories that attach to the front, sides, rear and bottom of the vehicle can connect to the chassis via a tab and slot system. The peripheral may communicate sensor data from its sensors to the data processing system, which may be a wireless PDA, and the data processing system analyzes the sensor data from its sensors and from the peripheral's sensors to decide how to configure the peripheral and/or the data processing system based on the sensor. It is preferable that the content of the at least one kind of a monomer selected from among aromatic aminocarboxylic acids, aromatic hydroxyamines and aromatic diamines is from 0.

1459827242-6cc6a50f-6643-42d7-a701-ef31762bd3d8

A Robust Model-Free Adaptive controller is disclosed for effectively controlling simple to complex systems including industrial processes, equipment, facilities, devices, engines, robots, vehicles, and appliances. The time-out counter is programmable up to 16-bits and allowing the software selection of the time-out length. A detecting processor detects an amount of change of an image sensed by an imaging sensor mounted in the optical device. The rotational speed command value calculation portion controls the pressurized oil to be supplied to the hydraulic motor at a flow rate required. In one embodiment, a zone thermostat is configured to provide thermostat information to the ECRV.

1459827242-a8a85d81-fccc-4cd9-b03b-01ed0694f5d7

A life jacket provided with a heating unit, capable of preventing a person wearing the life jacket from dying due to hypothermia after the person has fallen into water. Each document of C has a timestamp and an associated timestamp index. 0\xd71017 to 20\xd71017 atomscm<sup>3</sup>, and a nitrogen concentration of 1. The mobile device may determine and utilize an opportunistic transport based on a data usage and/or an access. A system and method for binding a GUI element in a program to a data target for live measurement data are also described.

1459827243-00a54141-38c8-437f-9c69-d5878d40fd1f

A multi processor task allocation method is described that considers task dependencies while performing task allocation in order to avoid blocking of a task's execution while waiting for the resolution of the dependency. As an example, some embodiments of the present invention provide methods that include receiving a data set to be written to a plurality of multi-bit memory cells that are each operable to hold at least two bits. The structural part is at least partially heated and quenched in a holding tool acted upon with a coolant.

1459827243-0c3f4c1a-7572-4796-8f2e-0a1b70709143

Methods for roll-to-roll deposition of optically transparent and high conductivity metallic thin films are disclosed. The ordered set of m memory banks includes a first and a last memory bank, wherein m is an integer greater than 1. A gap of the wound conductor of the coil body varies as the charging area of the case varies.

1459827243-35d46b61-44ac-41f1-b6f8-cba938935cd0

A backlight system for a liquid crystal display includes a substantially planar, refractive waveguide having a first major face and a second major face opposite the first major face. The plunger holder provides drainage to avoid mildew and a removable drip tray for easy cleaning. The retainer permits rotatable movement of the first detector about the axis of observation centerline. The silicon-comprising surface is exposed to activated nitrogen for a time of at least about 20 seconds to

convert the silicon-comprising surface to a material comprising silicon and nitrogen. At least part of the real-time traffic of the second traffic class is re-transmitted by the transmitter if the transmitter has received an error report from the receiver within a predetermined time period.

1459827243-5fc4599d-e1d3-4ade-a1ee-f3fc5303e633

In addition to the contactor and reactor arrangement, a hydrothermal treatment system includes an effluent stream splitting arrangement for receiving hydrothermal reaction effluent and splitting this effluent to produce two separate effluent streams. In the step of exposing the light pattern is formed by illuminating a mask with excimer laser light having an annular shape. The tracking server then uses the unique identifier to correlate the information on the downloaded application with the information originally stored at the time of clicking on the web advertisement. The tool also includes a piston concentrically aligned with the rotor and shaft to engage the shaft.

1459827243-b4fffa2a-42f7-41e3-bcc7-bb0a4dd8bf55

A rotating display holder for VCR tapes, DVD's, and video games. The suture snag is moveable between a deployed position in which two distal arm portions thereof radially extend away from the elongated body and a retracted position in which the two distal arm portions are disposed within the elongated body. The invention further relates to genetic complements of plants of variety CH254441. During focusing, the first lens group G1 is moved along the optical axis X.

1459827243-d5b8ee8c-d6cf-4861-bd33-8401f88ba58b

The present invention provides an image processing unit capable of differentiating two images with a difference which the user expects to see, an imaging processing method thereof, and an image processing program thereof. Said brake actuator comprises a service brake unit with an electromotive drive system for clamping and releasing the brake, a safety brake unit with a pre-loaded spring device for clamping the brake, and a brake spindle for converting the movements of the electromotive drive system into a translatory movement for activating a brake clamping mechanism; especially for activating brake calipers. The die includes an active surface and a back surface, wherein the die is attached facedown to the first surface of the carrier substrate with conductive bumps therebetween. Each preprocessing unit feeds a delay unit that time-aligns the input to take into account dead time effects. A 2-hydroxyacetylaminopyridine compound represented by formula, and a method for producing a cyclic diamine derivative represented by formula or a salt thereof from compound through 1) Step A-1, 2) Steps B-1 and B-2, or 3) Steps B-1, B-3, and B-4. Electrical connectors can be positioned near to each other.

1459827244-3060cb3d-6a0d-4f6d-9407-05d37b6951c7

A method of identifying a valid version of a data value and voting on separate instances of the data value is described. The signals are de-multiplexed in the test apparatus and specific amounts of echo delay, echo magnitude, and line delay can be introduced for any selected signals within the group on the trunk. Movement of the actuation rod produces an output motion of the first bell crank which in turn drives movement of the first component. The result is subtle changes in sounds, in addition to synthesis of a variety of sounds, all from a small set of models.

1459827244-4c53f473-dbe6-4c45-a8cf-4e8dd5a01836

The invention relates to a method for the production of biosourced aliphatic polyester powder having a volume median diameter of less than 30  $\mu\text{m}$ , comprising: a step consisting in supplying an aliphatic polyester having an inherent viscosity of less than 0. In the most preferred configuration, the force transfer mechanism comprises two inter-connected first class levers that are driven by four pistons. A guide panel extends along a longitudinal edge of the outer

sleeve and has a length equal to or greater than a combined length of the stop panel and extension panel. The interface is connected to the optical part and to the control module, and the block for measuring basic operational parameters of the whole device is connected to the power supply part and to the control module. The two or more mass selection windows across the mass range can have fixed or variable window widths.

1459827244-61b21c4f-bd70-45fd-8de3-a4bea88719b7

Methods and apparatus for embedding and recovering an image for use with video content are disclosed. Based on an analysis of the average number of packets received at a receiver over a period of time, a buffer monitor cooperating with the receiver can trigger an adjustment to the playback sampling rate to account for mismatches in the sampling rates of the transmitter and receiver. The first and second substrates are aligned so that respective first and second component elements are each mutually aligned, and the first and second substrates are fixed together, so that the first and second elements are operatively connected one to another, thereby forming a substrate sandwich. The sensor heads make measurements at given sampling locations on the test object as the test object is moved through the gap. A speed measuring circuit that includes an input having a set of position signals and an output having a set of speed signals may include the method for measuring a rotary position of an electric machine.

1459827244-87d393f7-3abc-4f34-9f6e-5b7f2127ebb8

A method for generating a 400 Gbs single channel optical signal from multiple modulated subchannels includes carving respective modulated subchannels into return-to-zero RZ modulated subchannels having non-overlapping peaks with intensity modulators having a duty cycle less than 50%, and combining the subchannels into a single channel signal aggregating the bit rate of each of the subchannels. The access points are coupled by a LAN to the switch so that upon receiving at one or more of the access points an uplink signal transmitted over the WLAN by the mobile station on the common frequency channel, the one or more of the access points convey messages responsively to the uplink signal over the LAN to the switch. A processor in the communications device or on a network accessible by the communications device can generate the phone number register from frequently dialed numbers. The kava plants are grown in the mound material. The calculated response is then compared with an expected response to determine if the secondary actuator has failed. Then, the information communication terminal registers the extracted informations in its phone book in one registering operation by a user of the terminal.

1459827244-a958bdb9-7e4e-4dbb-9cf5-f9f2a6ed5a71

The present invention relates to a novel I-FLICE-1 or I-FLICE-2 protein which is a novel inhibitor of INFR-1 and CD-95 induced apoptosis. What can be achieved given a suitable setting of the object surface curvature is that a gravitation-dictated bending of a mask does not have a disturbing effect on the imaging quality. The PTT mobile numbers are validated and a PTT SDG call sequence is generated using the plurality of validated PTT mobile numbers when a call initiator input is received.

1459827245-86ebcbf4-2c58-4721-928a-e7a71689df73

A variable output assembly including a hydraulic pump disposed on a pump running surface located on a center section, end cap or other hydraulic mounting member. The molded unitary shell has a bottom portion and a back portion. The second bias generating circuit generates a second substrate bias voltage of N-channel transistor.

1459827245-973c0e34-65a0-4655-9925-706fdea9cddd

The present invention discloses an optical device comprising a container enclosing an insulating liquid and an electrically susceptible liquid, the insulating liquid and the electrically susceptible liquid being immiscible and being in contact with

each other via an interface, at least one of the liquids being at least partially placed in a light path through the container. A reaction unit having a biased fitting engagement attached to rail guides is movably maintained through the head, and a probe and switch are associated with different ones of the reaction unit and the head. The processing speed in image formation using the image forming apparatus can be about 1,000 mmsec or more.

1459827245-d1c54975-d69a-44b2-aed2-6c1b3e919e55

An infusion catheter includes a catheter body having a proximal end, a distal end, and two or more lumens extending therethrough. In one embodiment, the portable power module includes a container housing a gaseous fuel motor, an electrical generator drivably connected to the motor, and a motor coolant radiator. The present invention also discloses a variety of in vitro and in vivo uses for the compounds and compositions, including the treatment of arrhythmia and the production of local analgesia and anesthesia.

1459827245-e7d85bcc-4d70-4326-b165-6f98e64f1224

An adaptable cryptographic method and system provides updated digital signature key pairs in a public key system by providing, through a multi-client manager unit, selectable expiry data such as digital signature certificate lifetime data, public key expiry data and private key expiry data as selectable on a per client basis. An indexed rotatable multi-port valve is adapted to place the product end of each vessel in sequential flow communication with the product end of each of the other vessels. The antitheft apparatus includes an intruder detection part for detecting intrusion of an intruder, and an intrusion detection control part for controlling the detecting function of the intruder detection part during a period when the vehicle component is being controlled by the remote control device. The method further comprises displaying a randomly selected outcome of the primary wagering game, and in response to at least one triggering event associated with the first and the second bonus features, conducting the first or second bonus feature if the first and second bonus feature is active. The at least one tensioning component secures alternating ones of the plurality of compression components in adjacent ones of the plurality of interlocking structure sections in end-to-end, interlocking compression with each other.

1459827245-f6e51ba4-8489-4c03-8147-3cf359ff532e

The method and apparatus of data communications for a transmitter in a millimeter wave network are provided. The first polysilicon layer, oxide layer, and semiconductor substrate are cascade etched to define a first portion of a floating gate region of the cell and at least one trench bordering an active area of the memory cell. The first winding is capacitively coupled to the second winding. Second-precursors that do not become reactive intermediates or have an incomplete conversion to reactive intermediates are also transported to a deposition chamber and become an inclusion of the deposited film.

1459827246-2814feff-bae9-48ce-9a04-3365f07ec852

A method for using differential imaging for applications involving TEM samples by allowing operators to take multiple images during a procedure involving a focused ion beam procedure and overlaying the multiple images to create a differential image that clearly shows the differences between milling steps. The connector body may include a first layer adjacent the passageway, a second layer surrounding the first layer, and a third layer surrounding the second layer. In certain example embodiments, the anti-etch layer is formed using at least one ion beam.

1459827246-2bc093d7-adb8-4b5d-bb5b-5b739d534b2e

Mycotoxin adsorbents are produced containing an organically modified layered silicate, in which quaternary onium compounds contain at least one C10 to C22 alkyl group and at least one aromatic substituent, or containing a mixture of not organically modified silicate and a layered silicate organically modified at least

to 75%, referring to the total cation exchange capacity of the layered silicate. The apparatus includes a housing defining a chamber and a pair of light sources positioned on opposite sides of the chamber. A phase detector generates early-or-late indication bits for clock versus data transition times, which are accumulated and applied to a second order feedback control with two distinct feedback paths for frequency and phase, combined for correcting the controllable oscillator, selecting a sub-phase and/or determining an optimal phase at which the bit stream data values are sampled. The switching DC/AC conversion circuitry provides the variable supply voltage based on an adjustable power control signal.

1459827246-bb8a76dd-0d21-455a-a321-4088ff86e9f0

A mold having a pattern of a concavo-convex surface including protrusion and recess is prepared and the pattern is transferred to a resist layer formed on a substrate by an imprinting method. The upper platform can be removed and substituted for another; this allows the rider to replace worn parts for another such as the upper platform. The shared IO subsystem also includes a plurality of IO interfaces and a forwarding function.

1459827246-bc844c42-703b-462b-ad3b-8bc59d1b8462

An apparatus and method of addressing data losses when power to a digital recorder is unexpectedly interrupted during recording, and the file management information needed to play back digital content is not completely written to a disc. The sensor assembly further comprises circuitry for writing data to the data storage disk and circuitry for reading data from the data storage disk. The assay device allows the assay to be performed entirely in a flow strip format. The channel region between the two pn-junctions is photo-conductive to a second color. The pad-making device comprises at least one cutter by which a continuous band of absorbent material is divided up to produce the succession of pads, and the feed path follows a convoluted trajectory substantially of a C configuration. The resilient body is inserted into a service opening of a plumbing system to be pressure tested.

1459827247-744c92d4-7de4-4fc3-af87-7b156c8be4f0

A system for activating an object actuating system coupled to a movable object such as a gate or garage door includes a user command transmitter that is manipulable by a person to generate a signal representing an identification and a command. The tool mount and tool cooperate to provide the hand tool with a variable angle of attack with an enhanced power ratio for accommodating aged, arthritic and otherwise handicapped people. In general, such methods involve the attachment of chemical moieties to the sidewall and/or end-cap of carbon nanotubes such that the chemical moieties react with either the epoxy precursor or the curing agent during the curing process. The aileron uprigger includes left and right actuators actuatable in response to command inputs received from an operator through the operator interface and are connectable into respective left and right aileron control linkages of an aileron actuator assembly. An excitation apparatus associated with the receptacle to create a vibration within the receptacle.

1459827247-b078c3d5-785a-4126-8468-13db94141c6e

A slide switch includes a glider constrained by a housing which is mounted on a printed circuit board. The mechanism is placed between a processing element and a memory system such that write data is buffered and information based upon reads and writes is recorded. The internal electrode includes a main portion and a lead-out portion extending from the main portion to a side surface of the multilayer composite, and the internal electrode includes a ceramic powder at least in the lead-out portion. Also added to the output encapsulated frame is an encapsulation header that includes security information, such as a security packet index value used to identify a security association.

1459827247-ff17bb58-fde8-4d56-8ace-588b52fb4956

An apparatus for an ion trap includes a semiconductor or dielectric wafer with

front and back surfaces, a sequence of alternating conductive and dielectric layers formed over said front surface, and a bottom conductive layer. A set of pulse peaks having about the same amplitude and an amplitude greater than any other set of peaks are processed to determine a subject's heart rate, while data having an amplitude below that of the set of peaks is ignored. The system enables Application Service providers to set up customized Service Level Agreements with customers, and monitor, modify and control all aspects of these agreements, including billing, sales, Customer Relation Management, customer support and Quality of Service.

1459827248-1720eec1-3dc6-4ee4-932d-8e3f6ffcb559

The disclosure describes an external sensor attached to an undergarment worn by a patient that detects voiding information. The lookup table provides a match for a key in a single search cycle. The anode lead is connected to an \u201cupstanding\u201d portion of a leadframe. In one example, the persistent identifier may be a large random number assigned to a record at its creation. A trace analysing apparatus can then be used to reconstruct such omitted information based on a copy of the relevant storage element.

1459827248-18dc853e-e77e-4969-bd18-57d8d29351ea

A portable computer includes a housing containing a circuit component, and a temperature adjusting arrangement which has a thermally conductive section with a side facing approximately along an axis and thermally coupled to the component. A fluid-absorbing insert may be coupled to the inner layer for use in absorbing fluids. A processor is included for performing steps of the method. The control logic is adapted to introduce a substantial time difference between an end point of a first scan mode activation period of the input latching logic and a start point of a second scan mode activation period of the output latching logic. Based on the overall motion vector estimated between the reduced pictures, a correction motion vector calculating unit calculates a motion vector between two reduced pictures as a correction motion vector. The mask is disposed at a distance from a build plane and an optical imaging system is used to produce a reproduction of the mask on the build plane.

1459827248-971fa149-9bbc-4303-b791-af8ab75318a1

A method for manufacturing an organic thin film transistor having excellent characteristics by a simple process, and an organic thin film transistor are provided. The optical film laminate formed as a continuous web with the predefined slit lines for use in a continuous manufacturing system by laminating optically functional film sheets to liquid-crystal panels. The plate is positioned in proximity to the object such that the plate, which has a second temperature, and the object, which has a first temperature, are substantially separated by a space. The drawer presents the platform to an imaging device or system internal to the housing when in a closed, or imaging, state. A drink-through channel is prescribed from the chamber through to the spout. Humidifier includes controller that delivers flow rate, temperature and humidity of gases and then determines required power input to deliver gases as required.

1459827249-07505359-c699-423c-8d53-9510e85023f1

A method for making a sample for evaluation of laser irradiation position and evaluating the sample, and an apparatus which is switchable between a first mode of modification of semiconductor and a second mode of making and evaluating the sample. In practice different seals are known which are produced as three dimensional structures and then given to the customer. The restriction device is operable to form a restriction within the anatomical structure. Audio pitch is unchanged as it is slowed, and video frame rate is slowed as necessary.

1459827249-22b4af58-78c3-44e1-954e-0b41c4cbfd4c

A semiconductor memory device includes a sense amplifier that compares intensities of currents flowing through a first node and a second node with each other, a first

MOSFET having a drain terminal connected with the first node, a second MOSFET having a drain terminal connected with the second node, a memory cell connected with a source terminal of the first MOSFET, and a reference cell. The stitch holder allows for using smaller materials, a locking fastener and string, that are portable and take little storage room. To release the cover from the base, the second cover portion is moved to an extended position where the second cover portion is disengaged from the base.

1459827249-51828437-4a23-4046-ae44-d6111aede25f

Media-driven browsing methods, systems, and machine-readable instructions are described. For example, a semiconductor structure includes a first semiconductor device. Furthermore, the invention relates to food stuff, e. The methods, apparatus, media and signals described herein may provide improvements to DC to AC maximum power point tracking in an energy conversion system such as a photovoltaic power generation system. Based on the CSI, the AP performs MU-MIMO encoding and applies transmit beamforming. When a person steps on the rug one or more of a plurality of pressure activated switches are energized which, in turn, activates the circuitry and energizes the LEDS.

1459827249-8162cb88-8fd3-41b7-9efc-fd210eb360

Corneal epithelial pocket formation systems include a cutting head and a blade coupled to the cutting head. In accordance with the method, a feed stream composed of the carbon dioxide is cooled to effect at least in part, liquefaction of the carbon dioxide containing gaseous mixture. Similar approach is applied to a donor ENB as well as to corresponding methods and computer program products. The scenario analysis processing unit then reads a determined number of steps of the selected text scenario from the scenario storage unit and executes them.

1459827249-9ca623a7-84f0-42a9-8c67-03740e872382

A precipitated silica with the following physicochemical properties: BET surface area 35 m<sup>2</sup>/g to 350 m<sup>2</sup>/g BET CTAB surface area ratio 0. In one embodiment, the ignition coil comprises a housing, an outer core, an inner coil, and a coil assembly. In the illustrative implementation, the feedback cancellation loop can receive signals as input from a cooperating antenna array and provide output signals such as a feedback leakage signal to a cooperating. A first set of data that indicates how changes to a value associated with the first attribute are to affect a value associated with the second attribute is then stored. In a first mode when the light-emitting elements are energized, the photo active or photochromic material of the affixing layer is excited by the light-emitting elements.

1459827250-32cbf038-7fed-42a4-97be-d53a1eb152df

The present invention relates to compositions for the treatment of subterranean formations, and methods of using the same. This network monitoring system and method employ flow monitoring to analyze the traffic flow inside a switching device. In this case, a space between the cylinder and the hermetically sealed container is set smaller than a distance from the O ring to an end of the plug on the hermetically sealed container side.

1459827250-6deec6ff-9961-45f4-92c1-05e48892129d

Generally, the subject matter disclosed herein relates to repairing anomalous stiff pillar bumps that may be detected above a metallization system of a semiconductor chip or wafer. The epoch consists of a virtual instantaneous snapshot marking a consistent and valid file system image and a set of undo records that enable the file servers to roll-back to this fully consistent image associated with the file system. In some embodiments an output device, for example a center channel speaker, transmits audio signals to other output devices. The detection unit is disposed at least partially downstream from the shearing unit along the media conveyance path to measure the image densities of the shorn and unshorn image areas. The resonator element has an inner face which is radiation transparent facing an examination

region and a plurality of other faces disposed facing and spaced from an RF screen. The air flow path has a bypass segment passing ambient air to the evaporator coil in parallel with the noted first air flow path segment.

1459827250-c84dc079-b011-4419-b2ef-524ad3b26930

A method as well as a bonding installation for machining of wood workpieces. The hard film in accordance with the present invention includes in terms of composition, in which the L is at least one of Si and Y, and the a, b, c, d, x, y, and z each denote the atomic ratio, and satisfy:  $0$ . So that the pin does not protrude when a movable part is removed from a vehicle, in a further development, a ring is provided with bore holes and an annular spring which ensure that all primary-side transformer parts terminate flush with the vehicle floor. The conductors of each pair are clamped, in a direction transverse to the axis, by first and second forked contact elements, which are secured in the shell and are directed towards the cover. Upon the condition that the internal error is the multiple-bit error, the method records error information of the multiple-bit error in the storage system.

1459827251-40192739-293c-427c-82fd-df6deaa164b3

Described are herbicide compositions, in particular, herbicide compositions that are prepared from microemulsions containing herbicide compound in acid form, and methods of their preparation and use. The plurality of first small lenses is made eccentric in a certain direction while the plurality of second small lenses is made eccentric in one of the certain direction and a direction orthogonal to the certain direction. It is preferably the case, furthermore, that a positioningmounting unit which retains the tool in a radial position relative to the tool holder is arranged on a further carriage, which is guided such that it can be displaced in the longitudinal direction of the rails of the rail system independently of the first-mentioned carriage. For any given transaction within the transaction-based system a command handler and a protocol handler are dynamically acquired and bound to the processing flow to execute a desired operation on a remote and heterogeneous host system. The invention is also directed to a system, apparatus, and method for identifying data or transaction characteristics that may be used to most effectively identify a point of compromise in a payment transaction system.

1459827251-45b14046-b6c8-43cb-b471-54baa82c1d8f

An automatic cutting liquid supply apparatus which automatically supplies a cutting liquid to each tool of a machine tool in accordance with predetermined optimal cutting liquid supply conditions that include variations over time during operation. In particular, a forward error correction coding rate is adapted for individual channels while at the same time maintaining a fixed block size independent of the FEC coding rate. and does not react with water and also has an oxidation potential of about 4. A tensioning mechanism such as a spool mechanism or a lace keeper is attached to the flexible upper and engages the cord, such that the user can releasably tension the cord. When worn around the waist, it allows 360 degrees of movement by the dog. A correct angle of inclination of a line linking the lowest point on each respective razor blade and the lowest point on the rounded elongated lower member can be easily adjusted to between 20 and 30 degrees to fit the razor blades on the face of the skin for safe shaving of hair.

1459827251-d30e5629-13b5-40bd-95a5-e4b4f4c15aac

Apparatus and systems, as well as methods and articles, may operate to compare a set of desired power states associated with components included in an applications subsystem and one or more operations with a set of actual power states. Additionally, the industrial automation proxy server includes a protocol transformation component that converts the data associated with the legacy protocol to a disparate protocol. Debris removed from the filter element during the backwash process are immediately discharged from the system through a drain port.

1459827251-fc4a8d13-b044-4cdc-8ed3-fc5c323c6f5c

There is provided herein a membrane or film comprising one or more aromatic ionomers covalently crosslinked through aryl-aryl, aryl-ether-aryl, aryl-sulfide-aryl, aryl-sulfone-aryl bonds, or any combination thereof, wherein said one or more aromatic ionomers further comprises at least one electron withdrawing group adapted to improve oxidant resistance of said membrane or film. A reader having a reader head is mounted to the frame for receiving a data signal from a data-associated item to be read when the article is brought within a proximal distance to the reader head without requiring handling of the reader head by the user during scanning of articles. A method include identifying a peak of a plurality of peaks in a motion cycle of a noisy cyclic signal having irregular periodicity, wherein the peak corresponds to a point lying between two points with amplitudes below a predetermined threshold, comparing points before and after the peak with the peak, and identifying the peak as a local maximum when the peak is greater than the points. The invention also relates to a photosensitive detector in which the temperature gain drift correction means are included, independently of the gain image.

1459827251-ffb5668c-267c-4fd5-a313-61a72c5ad6cd

A motor-assisted bicycle and a power unit therefor in which the power unit is after-mounted on an existing bicycle frame without largely changing the design of the bicycle frame so that an assist power generated from the power unit is input into a chain drive. The context and spectral images are then combined to form a fused image. The first lens has a concave surface and a convex surface, and the concave surface of the first lens faces a reducing side of the projection lens.

1459827252-1e97e890-b63f-4175-a3dc-99b1d9f4fbb7

A method and system for identifying alternate contact information of a specific type; particularly, by providing an inputted Email address in a query, one or more alternate Email addresses can be returned to the query, using an automated database. The document scanner includes a document bed including a document positioning surface, and a scanning module slidably connected to the document bed, the scanning module manually movable across the document positioning surface. The method also includes obtaining magnitude and frequency data related to the reflected portion of the light signal at the first end of the multi-mode fiber; and analyzing the magnitude and the frequency data to determine a bandwidth of the multi-mode optical fiber. Processes for making the touch sensitive devices that include a touch sensor having an opaque passivation layer are also disclosed. The construct comprises at least chondrocytes incorporated into a support matrix processed according to the algorithm comprising variable hydrostatic or atmospheric pressure or non-pressure conditions, variable rate of perfusion, variable medium composition, variable temperature, variable cell density and variable time to which the chondrocytes are subjected. The elongate body defines a high head loss lumen in fluid communication with a first set of side ports defining a proximal infusion zone.

1459827252-9afecaee-fe0f-4f55-b234-56a069bbbef4

The oxygen transport reactor-based oven is an oven for heating articles, such as bread, using oxygen transport reactor-based combustion in order to recycle carbon dioxide, rather than releasing the carbon dioxide into the environment. The software stack can be stored on a flash memory device on a target device. The invention uses a set of diffraction gratings as the test patterns, and thin film metrology equipment, such as spectroscopic ellipsometer or spectroscopic reflectometer. Jetting streams promote washing of voids within the bit and of cutting surfaces.

1459827252-aa935d6b-617e-4a11-92a3-fe9a36b33f4f

This disclosure describes systems and methods for creating monolithically integrated electrochromic devices which may be a flexible electrochromic device.

Each channel may have a number of converters being parallel-input parallel-output connected converters, series input parallel-output connected converters, and parallel-input series output connected converters. It creates proxy objects based on the bi-directional relationship information for selected bi-directional relationship objects having bi-directional relationships.

1459827253-bb7a0459-51e0-400d-8752-5777dcb58387

A Gen-Set control system is disclosed. Terminal fittings are fixed to ends of wires and are held by the housing. A classifier is configured to classify the one or more the files into a classification category, where  $\theta$  is feedback position and  $\dot{\theta}$  is feedback velocity. The invention further relates to a system of safety switching devices of this kind. In this manner, the data stored on the array grows in a linear manner.

1459827253-d4e64a72-e84f-4d7e-90b9-a28c04846592

An improved ASIC design support system is described. The output of the apparatus is coupled to the gate of a switching element. One or more crush initiating apertures are formed in one or more of the walls of the ends of the beam to provide more controlled energy absorption upon corner impact so as to reduce or better control damage to the vehicle's frame. After a certain period of treatment the anodes and cathodes are reversed so that all anode of even wells are connected to the positive terminals of the source, whereas the cathodes of the odd wells are connected to the negative terminal of the source. Said aim is achieved, by using a back transformation, which determines a compensation value for each length change, resulting from the application of the weight impinging on the movable element in each kinematic chain.

1459827254-06304d18-90e5-4b21-8164-81e9a8699d11

A method and apparatus for forming an electrically and/or thermally conducting interconnection is disclosed wherein a first surface and a second surface are contacted with each other via a plurality of nanostructures disposed on at least one of the surfaces. In one embodiment, the intermediate dielectric layer is removed and the plates are shorted with a conductor. The reactor can further include a product removal system positioned within the reactor vessel and positioned annularly inwardly or outwardly from the delivery system. If the third transistor is not activated, the pre-driver logic provides the output signal. The layer has a saturation magnetization  $M_s$  ranging from about 1 to about 2,000 emu/cm<sup>3</sup>, preferably below about 400 emu/cm<sup>3</sup>, more preferably below about 200 emu/cm<sup>3</sup>, and may overlie, underlie, or at least partially fill spaces between adjacent magnetic elements.

1459827254-43c1cbbd-c24f-4d91-8770-e031bb9c0545

Method and apparatus are disclosed to enable rapid TV camera and computer based sensing in many practical applications, including, but not limited to, handheld devices, cars, and video games. The stopper includes a movable stopper member attached to a saddle and stationary stopper members attached to a bed. The information indicates that the user device wishes to access the secure server. If the message usage exceeds the threshold limit, the method includes adjusting one or more trading strategies at the client entity in attempt to not violating the exchange-based transaction message policy. By doing so it becomes possible to adequately reduce the density unevenness and graininess according to the duty of the image data. The current control signal is used to control a bias current of the LNA, so that cross modulation associated with the received RF signal is reduced.

1459827254-6c0594bc-2f92-48c1-9c2f-5fe295573714

A communication network having multiple codecs communicating voice calls between an originating network and a terminating network. The pin carrier includes a circular array of pins engaged with a driven cycloidal gear. A third exemplary method for designing an API includes: deriving an API for a scenario responsive to at least

one code sample written with regard to the scenario; performing one or more usability studies on the API utilizing multiple developers; and revising the API based on the one or more usability studies. A cheap and very small multi-purpose camera or sensor module can thereby be provided.

1459827254-7cc8138c-e4d4-485e-8afb-da64be273905

Ink is stored in a data structure that includes a mapping of the ink's coordinates from one space to another. The column comprises external protrusions that vary a girth of the column. The stopper block is held in place by a wedge-type stopper clamp which applies a clamping force to the stopper block in a direction transversely of the axis.

1459827254-fa71694b-8ad5-49d8-bf09-4cda570fee50

A spinal surgical system includes at least one extender mounted to an anchor engaged to the spinal column. In use the reinforced concrete hexahedral module can be cast-in-place or pre-cast and transported to its final position on the construction site and used as part of a building defining the space and ambience of said building. in a first recording medium, and retrieving corresponding anatomical chart data from a second recording medium, in which plural kinds of anatomical chart data are recorded, to transmit the retrieved anatomical chart data to the client terminal.

1459827255-2e3eca42-ea09-4dd0-a432-8beb2c7bf634

Provided herein are cleaning compositions that are particle-free. Preferably the interface is between plasma and red blood cells. An interconnect is formed by etching a recess into the dielectric layer, where the etching utilizes a hard mask that includes a first layer deposited over the dielectric layer. The beta can be adjusted by changing the size of the output transistor. A flexible scheme allows control to be shifted to be resident in various entities.

1459827255-60e3647a-4055-42c5-ad80-92b937e5c12f

A mounting unit that can be worn easily and in which size adjustment and lock release can be operated with a natural hand position is disclosed. Position of blades in flight guarantees they will always make a lethal cut on contact with an animal even before expansion. First and second resistors are electrically connected between the first balanced input terminal and the first balanced output terminal and between the second balanced input terminal and the second balanced output terminal, respectively. The molar ratio of the sum of strontium and calcium to the sum of the manganese, iron, strontium, and calcium is 0.

1459827255-ec2c494d-28dd-4f74-9d14-24f7791b106c

Method and apparatus for generating cryptographic credentials certifying user attributes and making cryptographic proofs about attributes encoded in such credentials. A list of available servers accessible for monitoring by persons, devices, and applications via a remote monitor device can be provided. During a contact opening as stipulated by an overcurrent, a contact separator automatically travels into the space between the opened contacts, and can be returned from its contact-separating position by the external exertion of a force acting counter to the spring pressure. Upon detecting a second coupling of the portable sensor module to the patient monitor, the portable sensor module and the patient monitor resynchronize with one another to remove any differences in the configuration settings and to provide copies of any patient data missing from either the portable sensor module and the patient monitor. The drive cable has opposing free ends that are received in the first and second grooves of the mounting plate.

1459827256-184391ca-558b-4719-a3a4-abcd6a354262

Disclosed herein are various genes that can be included in immunogenic compositions specific for pathogenic E. The open shape of the gas flow rate adjusting portion has a portion that does not coincide in a plan view with the open shape of the vent

portion, and the overall open area of the vent portion is set larger than the open area of the gas flow rate adjusting portion. When the gateway of one network receives a data packet from a device in the opposite network, the packet's header is modified by changing the destination and source addresses, which belong to address spaces valid in the opposite network, into addresses belonging to address spaces valid in the present network. These assays are useful for diagnosing and monitoring a gastrin-promoted disease or condition, or for monitoring the progress of a course of therapy. The rack may be straight or curved.

1459827256-34fa9722-749f-455f-890b-ac6d25838081

A capstan motor for a magnetic recording and reproducing apparatus includes a stator having a coil disposed on outer peripheral direction thereof, and a rotor having a magnet to correspond to coil and rotated by an electromagnetic interaction between the coil and the magnet. An XML -based specification referred to as BPCL is used to describe business commitments. The MOS transistor circuit reads out a signal corresponding to charges generated in the photoelectric conversion layer and then collected, and that is formed in the semiconductor substrate, the charges having a given polarity. The annular band is connected to the radiating end of each rib-like structure such that the rib-like structures and the band together form a cup-shaped enclosure operable to seat therein a bottom portion of an exercise ball.

1459827256-7c1b1c06-b1ef-47f8-8069-264fbda3b289

A method for manufacturing a spark plug that can calculate, in measurement of a gap, an accurate gap regardless of inclination of a workpiece with respect to a measurement device and can manufacture the spark plug at high accuracy as well. An image and a search term are input to a pure adversarial OCR module, which searches the image for presence of the search term. The leg assembly includes a housing having a leg that extends downwardly from the support member to contact the floor on which the bed frame or bed rails are located. The drive system may be driveably engaged with the motor. The lever can be moved further after the housings are connected for moving the rear holder.

1459827256-8b67ba85-9dad-4393-a540-55a673be599d

Charging a secondary battery provided within wireless headphones is carried out in a reliable manner by a charger when the wireless headphones are not in use. The wireless telephone device displays the message on the display device when the wireless telephone device receives a call from the predetermined telephone number and then the call is cut off within the predetermined time period. The drawing device forms two-dimensional projected images by projecting the plurality of three-dimensional graphics onto predetermined planes. When the containers are collapsed and/or erected, the containers interlock for shipment. The second section has a pair of spaced openings of a size and shape to receive the pins, the openings being aligned with the openings in the brackets when the channel is mounted to the rail.

1459827256-9ef777bd-9432-4fa2-a3f5-6e903f880b23

Compression bonding tools having a CVD-formed pressing member with a non-reactive working surface are disclosed and described. The carbon-metal composite material which includes carbon and metal, has a sheet resistance of  $8\text{ m}\Omega/\text{sq}$ . The metal can be magnesium and the metal hydride can be magnesium hydride. The input signal size and FFT size are advantageously designed so that the output signals can be continuous with some overlap between two successive frames. For that purpose, a pair of airflow guides are provided at intermediate positions between each adjacent two of the printing heads arrayed in a travelling direction of a carriage, the pair of the airflow guides respectively located right and left in a direction perpendicular to the travelling direction of the carriage. Thus, the image bearing member for collecting remaining toner on the intermediate transfer member differs according to the mode, thereby suppressing the collection of remaining toner being concentrated on one image bearing member.

1459827256-cf7ff0a8-03e2-4fba-a75a-8e086977a389

A disk drive is disclosed comprising a disk having a plurality of tracks, and a head actuated over the disk. The sealant sheet has a tacking surface and a sealing surface. The tracks include periodic characteristics, e.

1459827257-0131b2a4-99f5-4155-ab8b-2758dd180691

A system and method for slack determination in a logic integrated circuit. The external cavity may employ a Littrow or Littman cavity arrangement. Internal olefin compounds, specifically beta-substituted styrenes, are used as ligand precursors. The first angular velocity sensor detects a first angular velocity value about a first axis in the first direction. The apertures provide fluid communication between an inner portion of the roll and a surface thereof.

1459827257-4949858f-3cab-452d-8ddf-7e27403cddb5

A system and method for capturing, displaying, and navigating text annotations in a non-modifiable document is disclosed. The trainline support casting is capable of partial rotational movement during use and is supported on a mounting bracket adapted to mount directly to a coupler head of a cushioned car coupler, insuring a constant distance from the end of the coupler to the trainline support casting and a constant distance of the brake hoses above the ground according to AAR standards. A cover closes the opening and comprises an elongated body of a resilient material including an upper region having a passage sized to accommodate the tailgate rod and lower region having a U-shaped slot intersecting the passage. A concentration of the first semiconductor layer is higher than that of the second semiconductor layer. A hand-operated mouth washing unit is connected to the control box through a hose capable of allowing the mouth washing unit to reach a desired position remote from the toilet bowl.

1459827257-e1fca3a0-d8ab-4f3b-b1f9-cbd6f1d2ac91

Flooring material comprising board shaped floor elements which are provided with edges, a lower side and a decorative upper surface. In preferred embodiments, a rear sight unit comprises windage and elevation adjustments for each of two sight elements, so that multiple ammunition types having different trajectories may be fired accurately from a single firearm after zeroing-in one of the plurality of sight elements for each of the different ammunition types. The assembly may include a pair of spaced apart packers for straddling the area of interest, an injection port disposed between the packers for injecting fracturing fluid into the area of interest, and an anchor for securing the assembly in the wellbore. The fingers or ribs of the liner of the invention may be oriented leftward or rightward in direction of cant, and oriented such as to face or incline toward the centerline of the transport vehicle, and behave or act as leaf springs.

1459827258-eeec6d00-6c20-4588-a93d-d2e1d4bf0393

An electrical power supply system connected to an electrical grid, includes at least one source of electrical power, an inverter which receives power from the electrical source and delivers power to a local load, and a connection to the electrical grid. A first embodiment detects on-hand inventory problems. The elementary active component is located in the elementary well or in and on the elementary well.

1459827259-00da3d63-1348-4e6c-b67e-e93ba29a6e7f

A radio circuit may be driven by a high frequency oscillator such as a crystal oscillator that may have sleep and wake time intervals. A site-specific mutagenesis method includes the step of: mutating the forty-first amino acid or the twenty-first amino acid of the xylanase gene by transforming asparagine to aspartic acid so as to form the mutated xylanase gene. The sensors may be positioned in the device such that the sensors may detect appropriate biometric information as the user operates the device, without requiring the user to perform a step for providing the biometric information. The headlamp is intended to generate a light

beam exhibiting high intensity along the optical axis and a limited extension below the optical axis. Bidders and sellers may not find such opportunities on their own in typical two-way trading systems. The compounds according to the invention are suitable for use as active compounds in pharmaceuticals, in particular in pharmaceuticals for treating arteriosclerosis and also dyslipidaemias.

1459827259-1d8a9d8a-6591-41f5-8542-6023c86ae5d2

A method of fabricating wafer level package is provided. The battery case is produced by deep-drawing, DI-forming, DTR-forming a surface-treated steel plate having glossy nickel or glossy nickel-cobalt alloy plating on the outermost layer corresponding to the external face of a battery case of a plated original plate consisting of a steel plate. Upon exposure to UV-C radiation, the halogenated polymer undergoes degradation and produces HCl. 25 diopters and covers an angular sector focused on the optical centre and whose angle is equal to  $160^\circ$ . Thus, a thicker second microlens with a short focal length is aligned above a thinner first microlens having a long focal length. The second contact plug is disposed in the second ILD layer and electrically connected to the first contact plug.

1459827260-31b87f5b-bab8-487f-b3b5-55100b0c0aa4

Disclosed is a multiple-gate transistor that includes a channel region and source and drain regions at ends of the channel region. Accordingly, compounds of the present invention are useful for the prophylaxis or treatment of 5HT<sub>2C</sub> receptor associated diseases, conditions or disorders, such as, obesity and related disorders. A gate bias voltage circuit section supplies a gate bias voltage to the high frequency power amplifier circuit.

1459827260-79ae3607-871f-4450-b8ab-edceea45a05a

Techniques for facilitating evaluation, in connection with the procurement or delivery of products or services, in a context of at least one of a financial transaction and operation of an enterprise, are disclosed. A carpet backing is heated to achieve a fluid or semi-fluid state and then subjected to intense vacuum to draw air through the carpet backing to create a porous structure. A handle is disposed around the gimbal assembly. With a view to increasing the joints' durability and reliability of welding seams the thickness  $\theta$  of the first coating layer as function of thread conicity K is adjusted according to the following formula:  $\theta=0$ .

1459827260-f12743fc-62b2-40cc-9705-5d12e9b147d1

A method and system that allows the user to fetch a subsequent web page while maintaining the current web page as the active web page. The SMD clock recovery and skew adjustment circuit incorporates a delay segment into the forward delay line and backward delay line that accounts for all or some of the non-variable portion of the asserted clock signal time period. A grounding probe may be placed at a first location on the transaction card.

1459827261-97d4101d-d4fe-47ba-ae13-9c25965fa081

Depletion-mode ferroelectric transistors are adapted for use as non-volatile memory cells. The laser emitter is formed with an exciting lamp and a laser rod. Thereby, the pattern densities of color pixel circuits respectively corresponding to the pixels for R, G, and B become even to each other, and the pattern defect rate as the whole pixel circuit is decreased. The graphics controller further includes a state controller configured to invalidate the state control data stored in the register and designating the low power-consumption state, thereby to maintain the logic unit in the working state. The large circular antisense molecule is used to treat any human disease in which modulation of gene expression can be beneficial to intervene in the disease initiation and progression. The demodulator, coupled to the signal processor, demodulates the processed data into a processed data according to at least one processing function of noise reduction, interference reduction, and signal compensation.

1459827261-bc251216-d160-4958-b33f-644ee97286f3

Systems, apparatuses, and methods for providing a consumer with an alert or other information regarding a payment transaction. The openings can vary in response to the heat of the medium passing through the openings. The taper angle of the tapered shape is such an angle that decrease electric field concentration around a junction portion between the source and drain regions and the amorphous semiconductor layer. An organic light-emitting device incorporates such a composite article to provide an extended life thereto. If a state of the model contains both controlled and observable invocations, a timeout transition is added to the FSM to give an implementation time to come up with an observed method invocation before continuing to controlled invocations. Importantly, the head suspension maintains the slider at a negative pitch static attitude.

1459827261-d0c28790-c4d1-4114-ae73-1ae0a2176e5f

The present invention provides nucleotide sequences from Coryneform bacteria which code for the PtsI protein and a process for the fermentative preparation of amino acids using bacteria in which the ptsI gene is enhanced. The method comprises at least the steps of providing a substrate having a first main surface and producing simultaneous at least one a TSV hole and a trench-like structure surrounding the TSV hole and separated by remaining substrate material. The tank safety valve release member is configured to be inserted into the tank outlet and move the tank safety valve to an open position so that pressurized gas can escape to atmosphere. The surface of the aft section decreases in curvature and becomes concave towards a rear end of the engine. The probe beam and the reference beam are polarized in different directions with respect to each other. Low-density silica coated magnetic particles in a display device allow for particles to move easily through a dispersion fluid in response to a magnetic field.

1459827261-dc487b3d-8d90-49a2-8e72-975d78ab493b

A process and apparatus for producing titanium metal is described herein. Thus making the hardmask optically planarized with respect to the photo-resist. , to enable an improvement in the color purity and to enhance the luminous efficiency.

1459827261-fe6da3f2-e87d-4ada-80ba-3b7110a70703

Electronic circuitry is described having a first transistor having a first gate dielectric located between an electrically floating gate and a semiconductor substrate. The paper feed assembly according to the present invention comprises a motor, a cage, a gear train, and a roller arm. % of a mixture of madecassoside and terminoloside relative to the extract total weight and their use for regulating inflammatory mechanisms. The method comprises the steps of:.

1459827262-09591c79-c350-4f9b-a439-80059c88c881

A semiconductor device in which defects in characteristics due to electrostatic discharge is reduced and a method for manufacturing the semiconductor device are provided. The user may then visit advertiser web sites and/or view/purchase products at their leisure instead of while immersed in the digital experience. The heat resistant cast steel comprises, by weight percent, C: 0. The mounting assembly may be adapted to fit the frames of Harley Davidson V-Rod model motorcycles by using arm extensions that connect the swing arm shaft assembly to the frame of the motorcycle. Other embodiments include a vehicle-mounted support. The methods involve assessing the stability and/or the conformation of an RNA target in the presence and absence of test ligands, and identifying as a ligand any test ligand that causes a measurable change in target RNA stability and/or conformation.

1459827262-4eef89f7-5753-4362-9bff-44077287f4a8

The invention relates to a visual content signal display apparatus comprising a receiver which receives a visual content signal. A photosensitive drum and a transfer roller are rotatably disposed in a space surrounded by the bottom wall,

the upper wall, and the side walls. The aspect ratio of the area of selected pixels is determined and a bottle reject signal is issued in the event that the determined aspect ratio exceeds a predetermined value. The secure agent has a secret key drawn at random from a large domain embedded in the agent by the first device. In accordance with the method, a period of time for adjusting the focus bias is very short, on the order of  $\mu$ s to several hundred milliseconds, in comparison with periods of time for adjusting the focus bias in conventional methods, such that the focus bias can be quickly adjusted. The control unit controls the ON time and the OFF time of each pixel of the liquid crystal panel, and then a low pass filter operation on the captured image as an image processing can be optically replaced.

1459827262-a309ffd9-aa71-47f4-a648-da4004130eca

An inkjet printer cartridge that has a. The illustrative embodiments bridge the mobile user into the conversation of the closest telephone operator for which the mobile user has bridging authority. The computer is also configured to receive health care data of a type related to claims information. The determination unit determines whether the article specified by the article identification data having its input accepted by the input unit is an article to be separately packaged or not.

1459827263-4819cba5-0976-4a96-83fb-d2d8773560b1

A vehicular electrochromic interior rearview mirror assembly includes a mirror casing and an electrochromic mirror reflective element. The elastic cord has a fixed end, the first handle located adjacent to the fixed end. The uop is to be executed by an execution system of a processor. In an exemplary application, signals are modulated using either Gaussian Minimum Shift Keying or Offset Quadrature Amplitude Modulation, and the decoder adjusts its operations to either one of these modulating methods based on its detection of the particular method used.

1459827263-d2d0e052-2f78-4f90-adc9-bc924ac57fd5

An item is stored by placing the item within an opaque sleeve with opposed open ends and inserting into each of the open ends a bottle holding a consumable liquid. The input or output, as the case may be, is linked to a coupling opening at the outer surface of the device via a channel. The driver stage is configured to generate a voltage potential at a driver output depending on an input current at the driver input and to provide a charging current to the capacitive element being higher than the input current. The rear plate and intermediate plate are supported by a linear slide guide on the slide table. In particular, the disclosure provides a nanocrystal having a CdTe core, a CdS coating over the core, and a ZnS core over the CdS coating, where the nanocrystal has a photoluminescence maximum between about 650 nm and 900 nm.

1459827263-d7e1dfe9-810e-40b0-8e7f-f2452dc2a4b9

A miniature image capturing lens includes an aperture diaphragm; and a lens system consisting of a first lens having a positive refracting power in which a convex surface of the first lens is directed toward an image; and a meniscus-shaped second lens in which a concave surface of the meniscus is directed toward an object. Scales are provided on the ends of the two legs and one long side of the first leg, respectively. A trench is formed in the multi-layer device stack. The residue can be generated by rectifying the input, multiplying it by two, and level-shifting it by half the span. The inactive selection devices are coupled to a current steering device. The heterojunction stack includes an undoped gallium nitride layer and a doped aluminum gallium nitride layer on the undoped GaN layer.

1459827264-4954b060-3419-44ef-848a-1aa053ad9648

A receiver for processing a VSB modulated signal containing terrestrial broadcast high definition television information and a pilot component includes an input

analog-to-digital converter for producing a datastream which is oversampled at twice the received symbol rate, and a digital demodulator with a data reduction network in a phase control loop. One of the antennas is selectively connected to the first receiver branch or to a transmitter circuit. The layer thicknesses of the structure may be spatially varied to modify the emission spectrum versus emission angle.

1459827264-7bc81dbb-2e54-4654-a98f-1387c02185ef

Disclosed are novel polyorganosiloxane, a polycarbonate resin composition comprising the same and a modified polycarbonate resin. Each spinal insert has a generally planar top surface having a leading edge and a trailing edge, a generally planar bottom surface disposed generally parallel to the top surface and including a leading edge and a trailing edge, and a beveled surface extending from at least one of the leading edge of the planar top surface and the leading edge of the planar bottom surface. In another aspect of the present invention the connection signal may be configured to shift a configuration of a peripheral device in response to one or more errors. Related methods and memory devices are also described. In an aspect, such tools can provide a wireless device with a temporary addressing number to allow the wireless device to send data to the network; this temporary addressing number, then, can be recycled to be used by another wireless device for accessing the network. In order to prevent occurrence of the non-existence region of the sealant due to the blocking of the sealant by the insulating portion, the insulating portion is constructed of a plurality of separated convex portions in contact with the plurality of the connecting terminals respectively to form a groove between the convex portions for allowing the passing of the sealant.

1459827264-a2b715f0-f094-4b1d-810a-14c8433ee190

A bumper adapted for mounting to a trailer is provided. The apparatus for reducing the electronic wave includes: a screening unit for screening the electronic wave; a rectifying unit for converting a ripple into a direct current; an accumulating unit for accumulating the rectified current, and a consuming unit for consuming the accumulated energy. The inner container may include a bottom inner wall, the opposing inner sidewalls, and a back inner wall to define a second cavity. Animals vaccinated with such a strain are protected against subsequent challenge with the parent wild type strain. The at least one stacked layer includes a floating body region of the second conductivity type provided on top of a floating body region of the first conductivity type.

1459827265-18e01651-bf77-4f4e-b6c1-7f687e37526b

Systems and methods for combining signals from multiple active wireless receivers are discussed herein. During operation, one of the vanes is positioned between the inlet and outlet to permit pressurization of meat chunks in a chamber communicating with an outlet opening. Even more particularly the invention relates to voicemail messaging with mobile terminals. Functions and settings in the secondary device are then adapted to the first user, based on the received identity information, to provide personalized usage of the secondary device by the first user. The network device may also generate a system response based on the P2P activity of interest probability.

1459827265-2ebb4db7-372f-405d-b580-d6b5630ab793

A voltage monitoring arrangement including a number of comparison devices, which corresponds to a prescribed number of voltage ranges, compares the value of an input voltage with a reference voltage and outputs a prescribed signal if the input voltage is within one of the prescribed voltage ranges. The laser also includes a semiconductor device having a gain region which is operative to amplify the optical radiation, and a wavelength tunable filter region which is adapted to filter the optical radiation. The tubular member is fixedly attached to the rear thrust end section of the fluke with the slot being positioned to permit the stock assembly to

be received by the stock assembly mount. The channel of communication for delivery of the offer is also characterized and combined with the consumer and consumer-offer characteristics to arrive at a net present value of the offer to be made. The two cryptographic secrets may be stored in separate storage locations, one accessible to the user and the other accessible to administrators. Also provided are methods of use and preparation of the polymeric indicator films.

1459827265-6d414a38-1799-4f92-b11a-b4a2d4904a2f

The invention relates to ranking Service Level Agreement violations. This disclosure describes methods of generating representations of credentials for groups of users or for individuals. The tilting means is arranged for tilting the body about a tilting axis extending substantially perpendicularly to both the first axis and the second axis. After assigning the initial bit value, it is determined whether a corresponding portion of the further channel is available for the message. The ratio of the outer diameter of the boss part to the outer diameter of the collar part is 4.

1459827265-c91c6334-c510-41e9-a332-bcda9c8aaede

An X-ray radiation detector is disclosed for detecting ionizing radiation, in particular for use in a CT system, with a multiplicity of detector elements. The surface of the zirconia ceramic material is first cleaned of contaminants. The priority and dependency data are stored in an LDAP callback configuration entry or set of entries. The compact disc could include a series of light reflective areas and a series of light transmitting areas. The invention can be used at any renewable energy site employing inverters wherein improved dynamic control performance is needed, including solar, wind, and tidal energy sites.

1459827266-9a37a24d-47fa-494c-9090-b0331a8f2027

A sheet presence detecting apparatus includes a plurality of dots including a control area whose display state can be controlled and at least one dot with a bright point including the control area whose display state is controlled to be in an always black state and a bright point area which is always bright. The fabric is a two end fleece fabric having a weight of between about 8 to 12 oz. The encoder and decoder process the binary information and, in some embodiments, switch coding modes.

1459827266-d6b90047-0d62-45e6-8052-53097c5e0f86

The present invention relates to a control method of a DA converter, a DA converter, a control method of an AD converter, and an AD converter that can suppress an existing n-th harmonic without using a large-scale circuit, such as a bootstrap. A first insulator and a second insulator extend over and encapsulate first electrode and second electrode. Bit lines corresponding to respective columns of the array are formed on the substrate and can be coupled to a modulation doped QW interface of the MC thyristors for the corresponding column.

1459827266-ebd1eb86-1bc0-4cf6-867f-2936cebebd26
